Matthew O'Donnell, Schenectady; Kenneth B. Welles, II, Scotia, both of N.Y.; Carl R. Crawford, Milwaukee; Norbert J. Pelc, Wauwatosa, both of Wis., and Steven G. Karr, Scotia, N.Y., assignors to General Electric Company, Schnectady, N.Y.

Filed Jun. 16, 1988, Ser. No. 207,532
Int. Cl.[5] G01N 29/04
U.S. Cl. 73—626 55 Claims

1 A medical imaging system for generating a stream of digital data signals with a vibrating energy beam having increased dynamic range which represents at least one object point detected in the object region including

(a) an array of transducer elements which produces bipolar analog echo signals from impingement with at least one object point in the object region,

(b) means to process the analog echo signals with at least one analog-to-digital converter device so that a stream of digital data signals is obtained from the analog-to-digital converter device bearing a mathematical relationship to the analog echo signals which approximates a non-linear amplitude compression function,

(c) means to non-linearly process the stream of compressed amplitude digital data signals from the analog-to-digital converter device in accordance with the inverse of the previously employed mathematical function and thereby gain expanded amplitude digital data signals which are linearly related to the analog echo signals,

(d) means for delaying the stream of digital data signals after amplitude compression by respective predetermined time intervals corresponding to the distance of the detected object point from the respective transducer elements which causes each data signal to occur at substantially the same time, and

(e) means to obtain a summation of the delayed expanded amplitude digital data signals.

ULTRASONIC METHOD FOR MEASUREMENT OF DEPTH OF SURFACE OPENING FLAW IN SOLID MASS

Takeshi Miyajima, Ibaraki, Japan, assignor to Hitachi Construction Machinery Co., Ltd., Tokyo, Japan

PCT No. PCT/JP87/00358, § 371 Date Mar. 30, 1989, § 102(e) Date Mar. 30, 1989, PCT Pub. No. WO88/[illegible]31, PCT Pub. Date Dec. 15, 1988
PCT Filed Jun. 8, 1987, Ser. No. 381,684
Int. Cl.[5] G01N 29/04
U.S. Cl. 73—629 4 Claims

1. A method for ultrasonic measurement of the depth of a surface opening flaw which may be present in a solid mass, comprising the steps of

scanning an ultrasonic probe which emits an ultrasonic wave at a wave angle back and forth on a surface of the solid mass toward and away from a position of a suspected

surface opening flaw in the solid mass for transmitting an ultrasonic wave into the solid mass

forming values of the echoes of the ultrasonic wave reflected from the surface opening flaw at the different positions of movement of said probe and which are above a predetermined level into a curve of the echo levels above said predetermined level and at said probe positions

integrating the area beneath said curve and above said predetermined level for the range of movement of said probe and

using the value of said integrated areas as an evaluation index for determining the depth of said surface opening flaw.

METHOD AND APPARATUS FOR MEASURING SUBSIDENCE

Mario Ruscev, Issy Les Moulineaux, and Patrick Vandenabeele, Clamart, both of France, assignors to Schlumberger Technology Corporation, New York, N.Y.

Filed Sep. 14, 1989, Ser. No. 407,138

Claims priority, application France, Sep. 14, 1988, 88 11955

Int. Cl.' G01B 7/16

U.S. Cl. 73—784 **5 Claims**

1 A method of measuring subsidence in subsurface formations traversed by a borehole, the formation having at least two radioactive markers previously implanted therein, the markers spaced apart along the longitudinal axis of the borehole, the method comprising the steps of

inserting a measuring apparatus into the borehole, the measuring apparatus comprising at least two nuclear detection assemblies spaced apart along the longitudinal axis of the apparatus, wherein the distance between the detection assemblies is substantially equal to the distance between the radioactive markers, each of the assemblies including

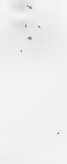
a position sensitive detector to perform position determination along the longitudinal axis of the apparatus

positioning the apparatus in the borehole such that each of the detection assemblies is substantially opposite a corresponding radioactive marker

during the apparatus in said position, and

performing measurements for localizing the radioactive markers while the apparatus is thereby secured.

5,005,423



CRACK GROWTH RATE MEASURING INSTRUMENT

Mark L. Poormon, Palm City, Fla., assignor to United Technologies Corporation, Hartford, Conn.

Filed Sep. 13, 1990, Ser. No. 582,812

Int. Cl.' G01N 19/08

U.S. Cl. 73—799 **5 Claims**

1 Test apparatus for screening alloys dimensioned in a prescribed notched specimen to ascertain a specific ratio of the crack growth rate to a given stress intensity comprising a horizontal table, vertical support columns, a cross head horizontally supported to said support columns, a platen supported horizontally by said cross head, a die set supported on said table underlying said platen, a motor supported to said platen, an eccentric driven by said motor, a fulcrum lever supported to said cross head being pivoted at one end and driven by said eccentric on the other end, a load rod interconnected to said fulcrum lever and bearing against said notched specimen, an adapter holding said notched specimen in a predetermined spacial relationship, and said adapter being supported to said die set and being in cooperating relationship with a load cell, means for imparting movement from said motor for driving said eccentric and load rod to cyclically apply a constant displacement to said notched specimen and means for recording the cycles of said eccentric varying load imposed on said load cell whereby the differential of the crack length and cycles (da/dN) can be calculated and plotted against the stress intensity (ΔK) to obtain a single point to be compared with a base line curve indicative of a given da/dN v ΔK and where the load will seek its own value

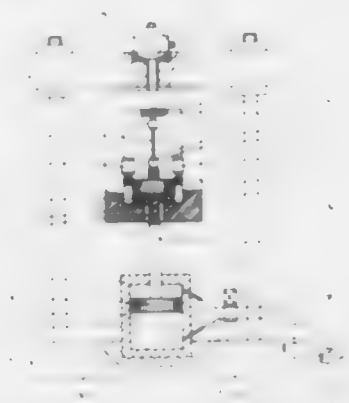
MACHINE AND METHOD FOR UNIAXIAL MECHANICAL MATERIAL TESTING



Winfried Markowski, Berlin, Fed. Rep. of Germany, assignor to Bundesanstalt für Materialforschung und -prufung (BAM), Berlin, Fed. Rep. of Germany

Filed Apr. 6, 1990, Ser. No. 505,275

Claims priority, application Fed. Rep. of Germany, Apr. 10, 1989, 3912075

Int. Cl.' G01N 3/08

U.S. Cl. 73—834 **23 Claims**

1 Testing machine for the mechanical testing of material samples comprising

a first and a second force engagement device,

a first and a second sample engagement device,

a first force measuring device positioned between said first sample engagement device and said force by-pass device together with said first force engagement device,

an actuator for creating the force to be applied,

a force by-pass device connected to said first force engagement device for transferring an applied prestress force acting from one of said force engagement devices to the other whilst by-passing the sample positioned between said two sample engagement devices,

whereby

said force by-pass device is rigid,

said second sample engagement device being, by way of a length adjustment device, slideably mounted in the direction of the application of force relative to the end of said force by-pass device not being connected to one of said force engagement devices and whereby said length adjustment device is connected to said second force engagement device and

said second force engagement device is connected to said actuator for creating the force to be applied whereby a device for defining the prestress force to be applied during testing is connected to said actuator

MASS-VOLUME VORTEX FLOWMETER

Hyok S. Lew, 7890 Oak St., Arvada, Colo. 80005

Continuation-in-part of Ser. No. 208,739, Jun. 20, 1988, Continuation-in-part of Ser. No. 368,406, Jun. 19, 1989. This application Mar. 13, 1990, Ser. No. 492,943

Int. Cl.' G01F 1/32

U.S. Cl. 73—861.22 **6 Claims**

1. An apparatus for measuring flow of fluid comprising in combination

(a) a body including a flow passage,

(b) a first vortex generator of elongated shape with fixed width disposed across a first cross section of the flow passage, and means for measuring frequency of vortex shedding from the first vortex generator,

(c) a second vortex generator of elongated shape with a variable width disposed across a second cross section of the flow passage wherein said variable width of the second vortex generator varies as a function of flow rate of fluid moving through the flow passage, and means for measuring frequency of vortex shedding from the second vortex generator,

(d) means for determining volume flow rate of the fluid from the frequency of vortex shedding from the first vortex generator, and

(e) means for determining mass flow rate of the fluid from a combination of the frequency of vortex shedding from the first vortex generator and a function of the frequency of vortex shedding from the first vortex generator and the frequency of vortex shedding from the second vortex generator.

5,005,427

KARMAN VORTEX FLOWMETER WITH SIGNAL WAVEFORM SHAPER CIRCUIT

Katsuhiko Ohmae, Himeji, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 340,206, Apr. 19, 1989. This application Aug. 10, 1990, Ser. No. 565,084

Claims priority, application Japan, Apr. 19, 1988, 63-97869

Int. Cl.' G01F 1/32

U.S. Cl. 73—861.22 2 Claims

1 A vortex flowmeter for measuring an amount of a flow of a fluid, comprising

vortex generation frequency detector means for detecting a frequency of vortex generation in the flow of the fluid by an obstruction positioned in the flow, said vortex generation frequency detector means outputting an electrical signal including an essentially sinusoidal signal component having a frequency corresponding to the frequency of vortex generation,

peak level holding circuit means, coupled to an output of said vortex generation frequency detector means, for holding a highest level of said electrical signal which occurs after said peak level holding circuit means is set into a holding operation,

bottom level holding circuit means, coupled to the output of said vortex generation frequency detector means, for holding a lowest level of said electrical signal which occurs after said bottom level holding circuit means is set into a holding operation,

positive level shift circuit means, coupled to an output of said vortex generation frequency detector means, for shifting a level of said electrical signal by a positive predetermined amount, and outputting the positively shifted signal therefrom,

negative level shift circuit means, coupled to an output of said vortex generation frequency detector means, for shifting a level of said electrical signal by a negative predetermined amount, and outputting the negatively shifted signal therefrom,

first comparator means, coupled to outputs of said peak level holding circuit means and said positive level shift circuit means, for outputting a pulse when a level held by said peak level holding circuit means crosses with a level of the positively shifted signal outputted from said positive level shift circuit,

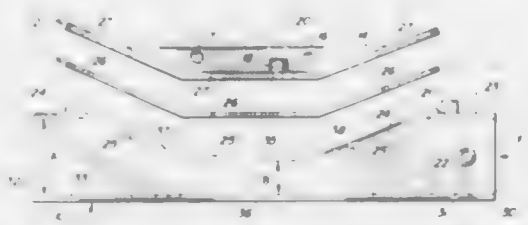
second comparator means coupled to outputs of said bottom level holding circuit means and said negative level shift circuit means, for outputting a pulse when a level held by said bottom level holding circuit means crosses with a level of the negatively shifted signal outputted from said negative level shift circuit,

bistable multivibrator circuit means having a pair of inputs coupled to outputs of said first and second comparator means, respectively, for outputting a pulse-shaped signal taking a first and a second level, wherein the pulse-shaped signal outputted from said bistable multivibrator circuit means goes to a first level in response to a pulse outputted from said first comparator means, and to a second level in response to a pulse outputted from said second comparator means,

peak level resetting means, coupled to an output of said bistable multivibrator means, for resetting a level held by said peak level holding circuit means each time after the level held by said peak level holding circuit means crosses with the level of the positively shifted signal outputted from the positive shift circuit, and

bottom level resetting means, coupled to an output of said bistable multivibrator means, for resetting a level held by said bottom level holding circuit means each time after the level held by said bottom level holding circuit means crosses with the level of the negatively shifted signal outputted from the negative shift circuit.

5,005,428



INVERTED WEIR FOR CONDUIT

Steven W. Tanis, 6507 S. Alder, Tempe, Ariz. 85283

Filed Feb. 14, 1990, Ser. No. 479,868

Int. Cl.' G01F 1/40

U.S. Cl. 73—861.52 1 Claim

1 In combination with an elongate conduit, the conduit including

a central space through which fluid normally moves by laminar flow along the conduit, said central space having at each point along the length of the conduit a generally constant cross sectional area perpendicular to the direction of fluid flow through the conduit,

a wall having an inner surface circumscribing the central space, and

one end through which fluid flows out of said conduit,

the improvement comprising an elongate weir, said weir including

(a) an inner space through which fluid normally flows through the weir, said inner space having at each point along the length of said weir a cross sectional area perpendicular to the direction of fluid flow through said weir,

(b) a wall having an inner surface circumscribing said inner space of said weir,

(c) a first end shaped and dimensioned to be connected to said one end of said conduit, and

(d) such that fluid moves by laminar flow from said one end of said conduit through said first end said weir,

said first end including a first section of said inner surface said first section circumscribing a first portion of said inner space, said first portion having a cross sectional area generally equivalent to said cross sectional area of said conduit to facilitate the laminar flow of fluid from said one end of said conduit through said first end of said weir,

said inner surface of said wall of said weir including

(a) a flat elongate surface portion,

(b) an arcuate portion opposing and parallel to said flat elongate surface portion, said flat elongate portion and said arcuate portion circumscribing a second portion of said inner space and being shaped and dimensioned such that the cross sectional area of said second portion of said central space is less than said cross sectional area of said first portion, and

(c) to produce laminar flow in fluid flowing through said weir intermediate said flat elongate surface portion and said arcuate portion and deflect fluid outwardly from the highest of the conduit, and

(e) means for measuring the pressure of said weir.

WEIGH MODULE

Rolf P. Haggstrom, East Walpole, Mass., assignor to BLH Electronics, Inc., Canton, Mass.

Filed Sep. 21, 1989, Ser. No. 410,301

Int. Cl.' G01L 1/22

U.S. Cl. 73—862.65 11 Claims

10 A strain gage transducer for measuring a force applied to a weighing

an elongated support bar,

a base support comprising

a base portion,

a base support bar receiving portion mounted on said base portion which includes an interior surface defining a passageway dimensioned to receive a first end of said support bar, said passageway receiving said first end of said support bar thereby supporting said support bar but permitting a second and opposite end of said support bar to flex downwardly toward said base portion where the load force is applied,

a load portion comprising

a support bar receiving portion including an interior surface defining a passageway dimensioned to receive said second end of said support bar,

an upper load support portion mounted on said support bar receiving portion for said load portion,

a recess provided in the interior surface of said support bar receiving portion which permits said support bar to flex downwardly toward said base portion when the load force is applied,

a load support including a load pad which has an upper surface for receiving the load force and a lower surface having a centrally-located attachment means, and further including a support means in contact with said attachment means for transmitting the load force received by said load pad to said upper load support portion which causes said second end of said support bar to flex into said recess, the degree of flexure being measured by a measurement means whereby the amount of the load force can be determined.

AUTOMATED MEMBRANE FILTER SAMPLER

Jack M. Kibler, Minerva; Jack K. Schmotzer, Alliance, and Charles C. Stauffer, Beloit, all of Ohio, assignors to Electric Power Research Institute, Inc., Palo Alto, Calif.

Continuation of Ser. No. 355,147, May 16, 1989, abandoned, which is a continuation of Ser. No. 113,780, Oct. 26, 1987, abandoned. This application Jan. 11, 1990, Ser. No. 463,047

Int. Cl.' G01N 1/24

U.S. Cl. 73—863.01 2 Claims

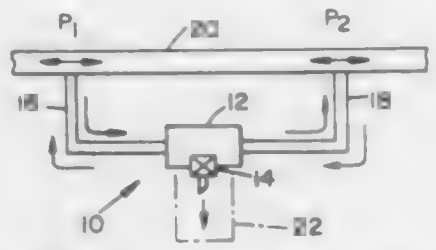
1 An apparatus for collecting samples of ionic and particulate impurities from a fluid stream, comprising

a sample line connected to said fluid stream,

a vertical manifold fluidically connected to said sample line for upwardly conveying a sample stream taken from said fluid stream, a plurality of filter holder pairs, each filter holder pair having a first filter holder for removably securing a first filter for removing particulate impurities from said sample stream and a second filter holder located downstream of said first filter holder for removably securing a second filter for removing ionic impurities from said sample stream,

a plurality of isolation valves located between said manifold and each of said filter holder pairs, for fluidically isolating each of said filter holder pairs from said manifold,

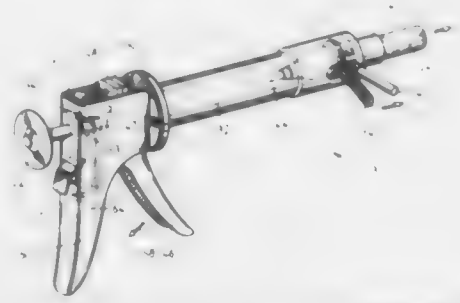
a single automatic valve device fluidically connected to and downstream of said manifold and each of said filter holder pairs, for permitting the flow of said sample stream through only one of said plurality of filter holder pairs at a time while preventing flow to the remaining filter holder pairs,



means for determining the flow rate of said sample stream through each of said filter holder pairs, and

a computer, connected to said single automatic valve device and to said means for determining the flow rate of said sample stream, for controlling the single automatic valve device to allow said sample stream to flow through each of said plurality of filter holder pairs, in a desired sequence, for a desired length of time through each filter holder pair, and with a desired time interval between flow occurring in one filter holder pair and flow occurring in another filter holder pair, and for determining the total volume of sample stream sampled by each filter holder pair.

5,005,431
FLOWABLE MATERIAL DISTRIBUTION SAMPLING METHOD AND DEVICE
Robert J. Cordera, East Amherst, N.Y., assignor to Nabisco Brands, Inc., East Hanover, N.J.
Division of Ser. No. 163,539, Mar. 3, 1988, Pat. No. 4,873,103. This application May 25, 1989, Ser. No. 356,770
Int. Cl.' G01N 1/00
U.S. Cl. 73—863.53 14 Claims



1. An apparatus for coating food articles and determining the distribution of a flowable coating material being dispensed onto a moving lower surface containing edible food articles which are to be baked comprising means to uniformly distribute a flowable coating material downwardly onto a continuously moving lower surface, and a multi-sectioned collection means received on said continuously moving surface disposed below said means to distribute said flowable coating material to collect a representative sample of said flowable coating material in each section of said multi-sectioned collection means to determine distribution, wherein said multi-sectioned collection means comprises a plurality of substantially uniform collections chambers and wherein said collection chambers are of a size corresponding substantially to the food articles whereby each sample collected in each section corresponds to an amount of said coating material dispensed onto said food articles.

5,005,432
SAMPLING VALVE
Douglas L. Faulkner, 281 Gerry Ct., Walnut Creek, Calif. 94596
Continuation-in-part of Ser. No. 312,471, Feb. 21, 1989, abandoned. This application Apr. 18, 1990, Ser. No. 510,600
Int. Cl.' G01N 1/00
U.S. Cl. 73—863.86 12 Claims

1. A Tee-body for use in a system for sampling process fluids flowing through a conduit of a process stream, wherein a continuously fresh sample of said process fluids within said Tee-body is desired and wherein said Tee-body is attachable to said conduit of said process stream between portions of said conduit wherein a pressure differential exists so as to cause continuous flow of a portion of said process fluids through said Tee-body, said Tee-body including a closely coupled sample exit conduit means and a valving system attached to and forming a part of said Tee-body, said Tee-body comprising
(a) a body element having areas definable as two end areas and a central gallery area between said end areas,
(b) a restrictive axial passageway of predeterminable size through said body element between said end areas establishing flow controlling restricting orifices at each of said two end areas with said axial passageway opening into and exiting from said central gallery area,
(c) means at each of said two end areas of said body element for attaching said body element to a portion of said conduit of said process stream between said portions of said conduit where said pressure differential exists whereby a portion of said process fluids within said conduit flows continuously through said restrictive axial passageway into said central gallery area and out of said central gallery area through said body element,
(d) a lateral opening from the exterior of said body element extending at least partially through said body element between said two end areas and extending into said central gallery area so as to closely couple said exterior and said central gallery area, said lateral opening having a size in cross-sectional dimensions at least as large as the size in cross-sectional dimension of said axial passageway to form an unobstructed open volume portion of said central gallery area within said Tee-body, the intersection of said lateral opening and said axial passageway defining said unobstructed open volume portion at said central gallery area within said body element, said unobstructed open volume portion and said lateral opening at said central gallery area adapted to be flushed by said process fluid flow through said predetermined controlled axial passageway of said Tee-body to establish continuously vena contracta turbulant process fluid flow within and a fresh sample of said process fluids within said unobstructed open volume portion of said central gallery area and said lateral opening, said predetermined size of said restrictive axial passageway and the size of said lateral opening being proportioned to cause said vena contracta turbulant flushing, fluid flow so as to produce said fresh process fluid sample within said unobstructed open volume portion of said central gallery area and said lateral opening at a manageable pressure and flow rate,
(e) a valve means including means for attaching said valve means to said exterior of said body element at said lateral opening,
(f) and an exit conduit means,
(g) said valve means being positioned between and closely coupled to said gallery area and said exit conduit means from said Tee-body at said lateral opening and at said exterior of said body element whereby said valve means may control passage of said fresh process fluid sample between said flushed central gallery area and said exit conduit means through said flushed lateral opening.

AUTOSAMPLER WITH A MEANS FOR DETECTING AIR BUBBLE IN SPECIMEN
Yoshio Watanabe, Hitachi; Mamoru Taki, Oomiya; Junkichi Miura; Masao Kamahori, both of Hitachi; Hiroyuki Miyagi, Kokubunji; Yasuhide Matsumura, Hachiouji, and Masafumi Kanetomo, Tokyo, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan
Filed Aug. 8, 1989, Ser. No. 390,720
Claims priority, application Japan, Aug. 27, 1988, 63-213356
Int. Cl.' G01N 35/06
U.S. Cl. 73—864.21 8 Claims

1. An autosampler with apparatus for detecting an air bubble in a liquid specimen, comprising:
a container for containing the specimen,
a needle for drawing the specimen from the container into a passage in the needle,
a needle fixing member supporting the needle,
a block upon which the needle fixing member is detachably connected, the block having a passage therein having a cross section almost equal to the cross section of the needle passage;
a suction means for drawing in the specimen by suction through the passages in the needle and the block,
a discharge means for discarding a specimen containing an air bubble drawn in by the suction mechanism, and
a detecting means arranged in the block to face the passage in the block for detecting an air bubble in the specimen based on optical changes in the specimen flowing through the passage in the block,
whereby the discharge means is activated by the detecting means.

PINION SHIFT LEVER STARTER WITH WATERPROOF BOAT
Takeshi Sugiyama, Himeji, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan
Filed Jan. 18, 1990, Ser. No. 466,791
Claims priority, application Japan, Jan. 19, 1989, 1-12789
Int. Cl.' F02N 15/00; F16J 15/00
U.S. Cl. 74—7 A 7 Claims

1. A vehicle starter motor assembly, comprising
(a) a motor (2) having a rotary output shaft (3) extending outwardly from one end thereof,
(b) a shifting member (4) including a pinion (11) slidably fitted to the output shaft,
(c) an electromagnetic actuator (5) disposed below the motor,
(d) a shift lever (8) having an upper end portion engaged with the shifting member and a lower end portion engaged with the actuator,
(e) a front housing (9) including an upper portion (9a) surrounding the motor and defining an opening (12) for externally exposing the pinion, and a lower portion (9b) surrounding the actuator and defining a fulcrum support (13) for pivotally supporting the shift lever at an intermediate position thereof, the fulcrum support defining an aperture (14) through which the upper end portion of the shift lever extends, and

(f) an elastic waterproofing boot (21) having a central opening (21a) sealingly surrounding the upper end portion of the shift lever and a skirt surrounding the central opening and overlying the fulcrum support aperture to prevent water entering through the pinion exposure opening from reaching the actuator via the fulcrum support.

RECIRCULATING BALL SCREW-NUT SCREW COUPLING
Enzo Brusasco, Torino, Italy, assignor to R.G.B. S.p.A., Turin, Italy
Filed Feb. 10, 1989, Ser. No. 308,825
Claims priority, application Italy, Feb. 11, 1988, 67099 A 88
Int. Cl.' F16H 25/22
U.S. Cl. 74—459 15 Claims

1. A recirculating ball screw-nut screw coupling, comprising
(a) a screw including a first helical groove formed on the outer surface thereof,
(b) a screw-nut including a second helical groove formed on the inner surface thereof and coaxial with said screw,
(c) said first and second helical grooves defining a helical track,
(d) a plurality of balls mounted between said screw and said screw-nut in such a manner as to roll along said helical track,
(e) said screw-nut having at least a pair of substantially radial holes axially spaced from each other for defining therebetween a length of said helical track,
(f) each of said holes having a diameter equal to at least twice the width of said helical track so as to intersect within each of said holes adjacent outer and inner turns of said second helical groove,
(g) a longitudinal member extending outside said screw-nut and including a plug disposed at opposite ends thereof.

(h) each of said plugs being disposed within each of said radial holes, respectively,

(i) said member including a recirculating channel extending therethrough and connecting the ends of said length of said helical track,

(j) each of said plugs including a hole forming a respective end portion of said recirculating channel, and

(k) each of said plug holes communicating with one of said inner and outer adjacent turns such that said balls are diverted to said recirculating channel for return to said length of said helical track when said balls reach the end of said length of said helical track.

Int. Cl.' B62D 5/06

U.S. Cl. 74—467 7 Claims

1 A device for cleaning lubricating oil within a gearbox comprising

an input shaft positioned within said gearbox,

a gearbox main shaft mounted within said input shaft,

a detent integrally molded onto said input shaft,

a lubricating oil pump driven by said input shaft,

a container receiving lubricating oil delivered from said pump,

a filter receiving said lubricating oil from said container,

a rotation chamber inside of said input shaft,

a lubricant channel arranged transversely to and entering radially into said rotation chamber, said channel communicating with said filter for receiving lubricating oil therefrom, and

a discharge tube extending into a center of said rotation chamber, said discharge tube delivering lubricating oil centrifugally cleaned within said chamber to shaft bearings, gear bearings and gears.

SHIFT MECHANISM

Ernest H. Marshall, 30 Saulters Rd., Manchester, Conn. 06040

Division of Ser. No. 273,474, Nov. 21, 1988. This application Jun. 25, 1990, Ser. No. 542,973

Int. Cl.' G05G 5/06

U.S. Cl. 74—538 2 Claims

1 A shift mechanism for manipulating an actuator of a transmission having a second gear between a first gear and a third gear to shift the transmission from any of the gears to an adjacent gear, said shift mechanism comprising a fixedly mountable shift segment plate, a shift arm pivotally mounted about a main axis which is fixed with respect to said shift segment plate and providing an additional axis parallel to said main axis, a shift rod pivotally connectible to the transmission actuator and pivotally connected to said shift arm at said additional axis, said shift segment plate having an arcuate surface confronting and coaxial with said main axis, a plurality of like barrels spaced from each other and having free ends projecting toward said main axis from said arcuate surface and crests projecting upwardly from said shift segment plate, said barrels including one said barrel which is adjacent and spaced from one end of said arcuate surface and another said barrel which is adjacent and spaced from the other end of said arcuate surface, whereby each said barrel has a portion of said arcuate surface on each side thereof, said shift mechanism further comprising a shift lever pivotally mounted with respect to said shift arm and having a forwardly facing surface overlying said shift arm and generally facing said shift segment plate, a pawl mounted for limited movement lengthwise of said shift arm and having a trailing end of width sufficiently narrow to fit between said free ends of adjacent ones of said barrels and between said free end of said barrel which is adjacent said one end of said arcuate surface and between said free end of said barrel which is adjacent said other end of said arcuate surface, spring means urging said pawl away from said main axis, a pusher block mounted for limited movement lengthwise of said shift arm and having a trailing end, pusher block resilient means urging said pusher block against said forwardly facing surface of said shift lever, a pusher carried by said pusher block and movable therewith lengthwise of said shift arm and having a forward end confronting said main axis and engageable with said pawl, said pusher being pivotally mounted to said pusher block about a pusher axis perpendicular to said main axis, and resilient means urging rotation of said pusher about said pusher axis in the direction urging said forward end of said pusher toward said shift segment plate, said forward end of said pusher being engageable in abutting fashion with said trailing end of said pawl and with said shift segment plate and liftable away from said shift segment plate by passing over said crest of any said barrel during shifting and into overlapping engagement with said trailing end of said pawl, permitting said trailing end of said pawl to engage said arcuate surface and preventing further shifting until said shift lever is released to allow said pusher block resilient means to push said pusher block and said pusher away from said main axis to move said forward end of said pusher past said trailing end of said pawl and said resilient means which urges rotation of said pusher to move said forward end of said pusher into engagement with said shift segment plate and abutting relationship with said trailing end of said pawl.

INERTIA FORCE GENERATING DEVICE

William S. Jensen, Canoga Park, and David Ng, Arcadia, both of Calif., assignors to Barry Wright Corporation, Watertown, Mass.

Filed Jul. 14, 1989, Ser. No. 379,881

Int. Cl.' F16F 15/10; G01H 11/00

U.S. Cl. 74—574 17 Claims

1 An inertial force generating device for producing periodic forces to cancel undesired vibrations, comprising

a stationary housing,

first and second pairs of eccentric rotors disposed within said housing for rotation around an axis common to all of said rotors, each rotor having an imbalanced portion with a respective eccentric center of mass, said imbalanced portions being nested radially, so as to develop force vectors in a common plane perpendicular to said axis,

means for rotating said rotor pairs in opposite directions,

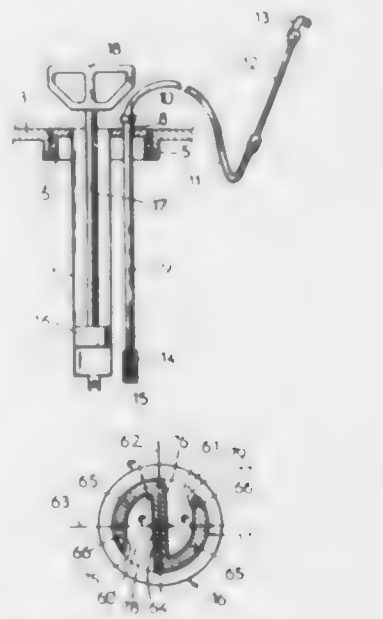
means for controlling the angle between the mass centers of the rotors within each rotor pair, so as to vary an effective mass eccentricity of each, and

means for adjusting the phase angle between the rotor pairs so as to control the direction of the cancelling force generated by the device.

5,005,440

PORTABLE LIQUID SPRAYER, PARTICULARLY FOR THE TREATMENT OF PLANTS

Patrick J. Ballu, Reims, France, assignor to Tecnoma, Epernay, France



Division of Ser. No. 209,197, Jun. 20, 1988, Pat. No. 4,886,187. This application Oct. 11, 1989, Ser. No. 419,661

Claims priority, application France, Jun. 27, 1987, 87 09126

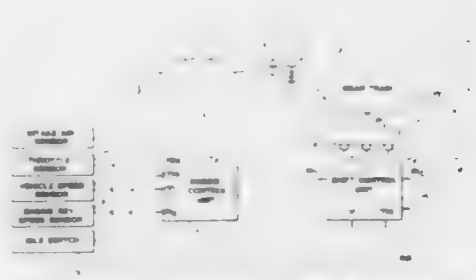
Int. Cl.' G05G 1/00

U.S. Cl. 74—579 R 5 Claims

1 A piston pump having a piston rod comprising a casting with a cross-section of external circular shape and having at least two longitudinal, parallel open grooves each of a predetermined depth such that each said groove extends beyond an axial plane lying perpendicular to a median plane of said rod.

5,005,441

LINE PRESSURE CONTROL FOR AUTOMATIC TRANSMISSION



Yasushi Narita, Yokohama, Japan, assignor to Nissan Motor Co., Ltd., Yokohama, Japan

Filed Apr. 17, 1989, Ser. No. 339,101

Claims priority, application Japan, Apr. 15, 1988, 63-91814; Apr. 26, 1988, 63-101318

Int. Cl.' B60K 41/06

U.S. Cl. 74—866 7 Claims

1 An automatic transmission for an automotive vehicle including an engine with a throttle which opens in degrees, the automatic transmission including a gear train with an input shaft and an output shaft, the gear train including a frictional device that is hydraulically activated by a hydraulic fluid pressure supplied thereto to effect a predetermined shift from one gear position to another gear position, the automatic transmission, comprising

hydraulic circuit means for start supplying a servo activating hydraulic fluid to the frictional device at the instant when the predetermined shift is required, causing a ratio of a revolution speed of the input shaft to a revolution speed of the output shaft to vary toward a new gear ratio for the another gear position,

an accumulator having an accumulator piston means for defining an accumulator chamber which forms a part of

said hydraulic circuit means and an accumulator back-up pressure chamber.

means for generating an accumulator back-up pressure supplied to said accumulator back-up pressure chamber;

a control unit, said control unit including means for generating a control signal supplied to said accumulator back-up pressure generating means, said control signal having a predetermined variable factor, said accumulator back-up pressure generating means varying the magnitude of said accumulator back-up pressure in response to a variation of said predetermined variable factor.

said control unit including means for varying said predetermined variable factor during the predetermined shift in a predetermined schedule.

said control unit also including means for changing said predetermined schedule of variation in response to a magnitude of a load on the engine

5,005,442

CONTROL SYSTEM FOR STEPLESS BELT TRANSMISSIONS

Shiro Sakakibara; Norio Imai; Hidehiro Kondo, and Kazuo Kamiya, all of Anjo, Japan, assignors to Aisin AW Co., Ltd., Anjo, Japan

Filed Dec. 8, 1988, Ser. No. 281,352

Claims priority, application Japan, Dec. 11, 1987, 62-313257; Dec. 28, 1987, 62-333032; Dec. 28, 1987, 62-333033; Dec. 28, 1987, 62-333034; Dec. 28, 1987, 62-333035; Dec. 28, 1987, 62-333036

Int. Cl.' B60K 41/12

U.S. Cl. 74—866 6 Claims

1 A control system for a stepless transmission unit, comprising

stepless transmission means for variably controlling torque ratio in a stepless manner,

stepless transmission operating means for variably controlling said torque ratio of said stepless transmission means,

auxiliary transmission means combined with said stepless transmission means and having a low-speed mode in which a shift control-enable region becomes a comparatively high torque ratio region and a high-speed mode in which a shift control-enable region becomes a comparatively low torque ratio region,

mode changeover means for changing said auxiliary transmission means between said low-speed and high-speed modes,

torque ratio detecting means for detecting torque ratio of said stepless transmission means, and target torque ratio setting means for setting a target torque ratio based upon a traveling condition of a vehicle,

shift decision means, having a stepless shift decision means and a mode changeover decision means, for outputting signals to said stepless shift operating means and said mode changeover means based upon signals received from said torque ratio detecting means and said target torque ratio setting means,

stop control decision means for determining whether a stop control state is in effect by detecting said traveling condition

means for stopping operation of said stepless transmission operating means based upon signals from said stop control decision means when a shift region is changed while downcoating, and

means for setting output of said auxiliary transmission means to a neutral state

5,005,443

SHIFT CONTROL SYSTEM FOR AUTOMATIC TRANSMISSION

Kazuhiko Sugano, Yokohama, Japan, assignor to Nissan Motor Co., Ltd., Yokohama, Japan

Filed Jul. 25, 1989, Ser. No. 384,694

Claims priority, application Japan, Jul. 25, 1988, 63-183632

Int. Cl.' B60K 41/06

U.S. Cl. 74—868 7 Claims

1 A shift control system for an automatic transmission, the automatic transmission including a main gear train and an auxiliary gear train operatively coupled therewith, the auxiliary gear train including a first friction element for low gear position and a second friction element for high gear position, the shift control system comprising

a source of hydraulic fluid,

a first hydraulic passage connected with the first friction element through an orifice

a second hydraulic passage connected with the second friction element,

a third hydraulic passage,

a shift valve directly connected with said source, said first hydraulic passage and said second hydraulic passage and including a spool movable between a first position where said first hydraulic passage is directly connected with said source via said shift valve and hydraulic fluid is discharged from said second hydraulic passage, and a second position where said second hydraulic passage is directly connected with said source via said shift valve and hydraulic fluid is discharged from said first hydraulic passage,

an accumulator including a working pressure chamber and a back pressure chamber, said working chamber being connected with said first hydraulic passage between said shift valve and the first friction element, said back pressure chamber being connected with said third hydraulic passage; and

means for supplying a hydraulic pressure to said third hydraulic passage when an engine brake is required

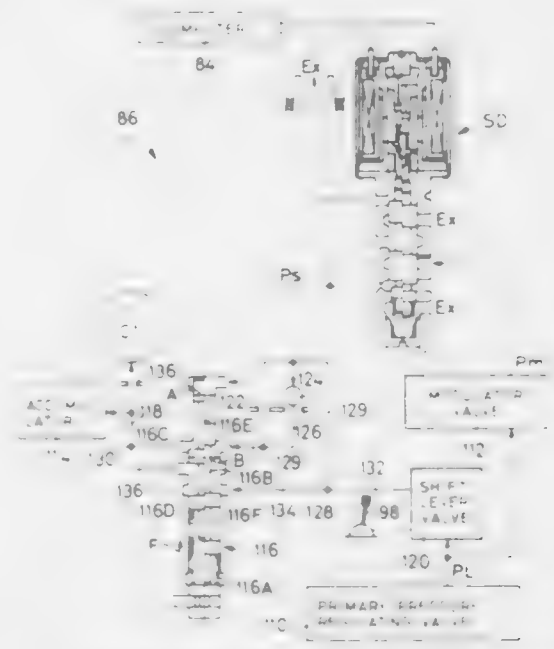
5,005,444

HYDRAULIC CONTROL APPARATUS FOR AUTOMATIC TRANSMISSION FOR MOTOR VEHICLE



Hiromichi Kimura; Kunihiro Iwatsuki; Hiroji Taniguchi, all of Toyota; Takuji Taniguchi, Okazaki, and Kazunori Ishikawa, Toyota, all of Japan, assignors to Toyota Jidosha Kabushiki Kaisha and Aisin AW Co., Ltd., both of Aichi, Japan

Filed Feb. 22, 1989, Ser. No. 313,638

Claims priority, application Japan, Mar. 7, 1988, 63-52896

Int. Cl.' B60K 41/06

U.S. Cl. 74—868 15 Claims

1 A hydraulic control apparatus for controlling a shifting action of a hydraulically operated frictional coupling clutch of an automatic transmission connected to an engine of a motor vehicle, to shift the automatic transmission between a neutral position thereof and a first-speed forward drive position, in response to an operation of a shift lever, with a minimum shifting shock, said clutch being engaged to establish said first-speed position, said hydraulic control apparatus comprising

a shift lever valve operable in response to the operation of said shift lever between a first position for supplying a fluid to said fractional coupling clutch for engagement thereof to establish said first-speed forward drive position and a second position for discharging the fluid from the frictional coupling clutch for disengagement thereof

flow control means lever valve and said frictional coupling clutch, for controlling a rate of flow of the fluid therethrough,

a fail-safe fluid passage disposed between said shift lever valve and said frictional coupling clutch for always maintaining fluid communication between the shift lever valve and the frictional coupling clutch irrespective of an operating position of said flow control means and even in the event of a trouble with said flow control means, and

electronic control means for controlling said flow control means so as to restrict the rate of fluid flow into or from said frictional coupling clutch after an engaging or disengaging action of said frictional coupling clutch is actually started and while a torque transmitted by the frictional coupling clutch is changed

---

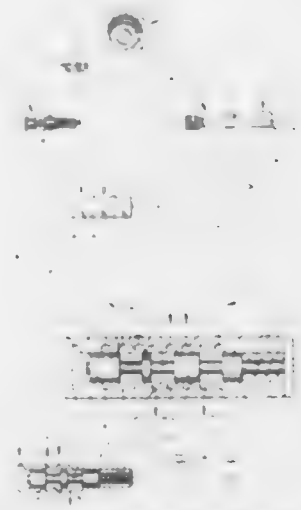
ELECTRIC-HYDRAULIC CONTROL FOR AUTOMATIC TRANSMISSION

Georg Gierer, Kressbronn, Fed. Rep. of Germany, assignor to Zahnradfabrik Friedrichshafen AG, Friedrichshafen, Fed. Rep. of Germany



PCT No. PCT/EP87/00220, § 371 Date Oct. 26, 1988, § 102(e) Date Oct. 26, 1988, PCT Pub. No. WO87/06670, PCT Pub. Date Nov. 5, 1987

PCT Filed Apr. 23, 1987, Ser. No. 272,701

Claims priority, application Luxembourg, May 2, 1986, PCT/EP86/00261

Int. Cl.' F16H 61/12, 61/16

U.S. Cl. 74—878 9 Claims

1 An automatically shiftable transmission for a vehicle having a plurality of forward speeds and including a gear mechanism having a first clutch effective to switch the gear mechanism into a low forward speed and a second clutch effective to switch said gear mechanism into a reverse speed, and an electrohydraulic control system, said system comprising

a pressure medium source supplying a system pressure to said control system

a manual selecting valve connected to said source and receiving said system pressure for selecting between a first forward drive position actuating said first clutch, other forward drive positions, a reverse drive position and a neutral position,

an electronic control device connected with said manual valve and provided with a sensor detecting an output speed of said transmission,

electrohydraulic control means connected with said electronic control devices and including a first solenoid valve and a second solenoid valve for supplying a control pressure to control shifting between said speeds, said first solenoid valve switching said first solenoid valve on in said first forward drive position of said manual valve

a control valve receiving said control pressure from said first and second solenoid valves, and

a hydraulic switch valve connected with the first and second clutches for controlling actuation thereof and with said manual valve for receiving said system pressure therefrom, said hydraulic switch valve being agreeable to shift said speeds in response to said solenoid valves and being connected with said control valve for receiving said control pressure, said switch valve being provided with means for preventing an automatic shifting of said gear mechanism into said reverse drive position by blocking flow of the system pressure between said switch valve and the second clutch or forward speed of the transmission and for unblocking the system pressure connecting said

switch valve and said second clutch upon switching off of said first solenoid valve and effecting thereby the engagement of the second clutch controlling said reverse drive, said first solenoid valve being switched off by said sensor when a forward speed of the vehicle falls below a given speed regardless of the drive position selected by said manual valve.

5,005,446

PRESSURIZED CORK-REMOVAL APPARATUS FOR WINE BOTTLES AND OTHER CONTAINERS

Edward R. Mackey, 28 Nottingham Rd., Dracut, Mass. 01826

Continuation of Ser. No. 2,871, Jan. 13, 1987, abandoned. This application Jul. 21, 1988, Ser. No. 222,163
Int. Cl.[5] B67B 7/08
U.S. Cl. 81—3.48 2 Claims

1 In apparatus for removing a stopper from a container of the type including a housing, an exit port in the housing, a gas cylinder, and valve means for directing gas from the cylinder to the exit port, the improvement of a needle assembly comprising,

A hollow needle means connected at a first end to the exit port for penetrating a stopper and conducting gas under pressure into the container through a second end of said needle means thereby to force the stopper out of the container,

B open-ended cylindrical cover means rigidly attached to said first end of said needle means and extending coaxially with said needle means, said cover means including longitudinal slots formed therein,

C stripper plate means having a central section with a planar surface for abutting the stopper, a central aperture for receiving said needle means through said central section and transversely extending ears extending through said longitudinal slots thereby to enable an operator to push the stopper off said needle means after a stopper is removed from a container, said needle thereafter being completely encased by said cover means and said stripper plate means,

D capture means mounted to said cover means at the open end thereof to capture said stripper plate means, the longitudinal dimension of said cover means and said capture means exceeding the length of said needle means, and

E spring means mounted in said cover means solely for biasing said stripper plate means toward said capture means, said capture means being positioned so said stripper plate means and said cover means normally encase all of said needle means

HAND TOOL OR IMPROVED BAR CLAMP

Joseph A. Sorensen, and Dwight L. Gatzemeyer, both of Lincoln, Nebr., assignors to Peterson Manufacturing Co., Inc., DeWitt, Nebr.

Filed Feb. 14, 1990, Ser. No. 480,098
The portion of the term of this patent subsequent to May 22, 2007, has been disclaimed.
Int. Cl.[5] B25B 13/12 5/02
U.S. Cl. 81—152 20 Claims

1 A hand tool comprising

a fixed jaw

a movable jaw

a slide bar, said movable jaw being mounted to said slide bar

support means for supporting said slide bar, said fixed jaw extending outwardly from said support means and having at least a front portion facing said movable jaw, said support means having a handgrip extending longitudinally along said slide bar,

receiving means in the vicinity of the junction between said front portion of the fixed jaw and said support means, a braking lever pivotable at said receiving means and having an engaging portion extending outwardly from said support means,

one-way drive means for releasably engaging and, when engaged, for advancing said slide bar and movable jaw, said one-way drive means having at least a driving lever, and

a trigger handle pivotably mounted at said support means and contacting said driving lever, said trigger handle having a gripping portion extending longitudinally along said slide bar

ANGLE STOP INSTALLATION TOOL

Roger W. Lee, 20899 Maureen Way, Saratoga, Calif. 95070, and Richard J. Ramirez, 1380 Navarro Dr., Sunnyvale, Calif. 94087

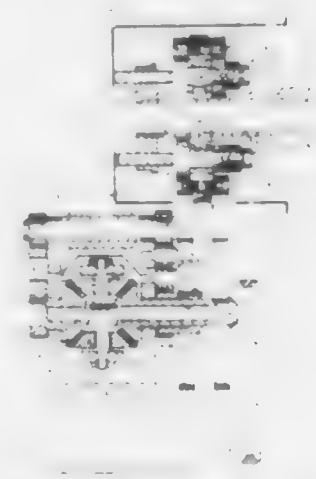
Filed May 22, 1990, Ser. No. 526,890
Int. Cl.[5] B25B 27/24
U.S. Cl. 81—487 11 Claims

1 A tool for use in the installation of angle stop valves and the like, comprising

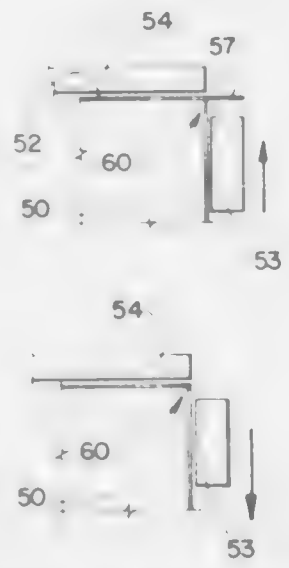
holder means including a generally fork shaped member forming a receptacle for receiving the body of a valve, the facing inner walls of said fork shape member being adapted to engage flats on the outer walls of a valve body, said fork shaped member including first and second openings on opposite ends of said receptacle and at least one side opening through which an outlet stem of the engaged valve may be extended,

means forming a cavity proximate one of said opposite ends for receiving an unengaged part of the engaged valve; and

means forming an elongated handle extending from the lower surface of said holder means.



5,005,452
HIGH PRODUCTION MACHINING DEVICE
David B. Wood, III, Mason, Ohio, assignor to Cincinnati Milacron Inc., Cincinnati, Ohio
Filed Aug. 10, 1989, Ser. No. 391,929
Int. Cl.[5] B23B [illegible]
U.S. Cl. 82—132 20 Claims



1 A high production machining device comprising
a headstock
first and second spindles rotatably mounted on said headstock
a carriage
first drive means for sliding said carriage along a transverse axis of said machining device,
first and second slides slidably mounted on said carriage for movement in a direction normal to said transverse axis said first and second slides each adapted to carry a machine tool and each being independently and directly connected to a common second drive means for moving said slides on said carriage
means for monitoring the positions of said first and second slides along said normal direction and
independent compensating means for adjusting the position of one of said slides relative the other slide in said normal direction, whereby the positions of said first and second slides in said normal direction can be effectively independently controlled

5,005,453
DRIVE FOR RELATIVELY AXIALLY SHIFTING CHUCK PARTS
Günter H. Röhm, Heinrich-Rohm-Strasse 50, D-7927 Sontheim, Fed. Rep. of Germany
Filed Feb. 1, 1990, Ser. No. 473,448
Claims priority, application Fed. Rep. of Germany, Jun. 23, 1989, 3920612; European Pat. Off., Nov. 4, 1989, 89120452.1

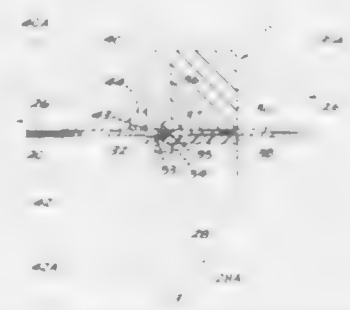
U.S. Cl. 82—142 11 Claims

1 In combination with a machine tool having a housing normally rotated about a housing axis and having a part that is axially movable relative to the housing to adjust the tool, an adjustment apparatus for relatively axially displacing the housing and the part of the tool, the apparatus comprising
drive means having two oppositely rotating drive outputs
two respective wheels coupled to the drive outputs and rotatable coaxially on the tool housing, and
two respective axially extending screws rotationally coupled to the respective wheels, axially fixed on the tool housing, and both threaded axially in the movable part of the machine tool, one of the screws having a screwthread of a predetermined hand and the other of the screws having a screwthread of opposite hand

5,005,454
LAMINA CLIPPING DEVICE AND METHOD
M. Ray Fletcher, Lexington, N.C., assignor to Fletcher Machine, Inc., Lexington, N.C.
Filed Aug. 21, 1989, Ser. No. 396,096
Int. Cl.[5] B26D *5/12*
U.S. Cl. 83—13 17 Claims



14 A method for clipping excess lamina which extends beyond the corner formed by two intersecting edges of a laminated substrate, the lamina having a complex profile with a back surface and a front surface, comprising the steps of
(a) positioning the corner of the substrate with excess edge lamina between a first movable blade having a cutting edge contoured to the front surface of said lamina and a second rigidly fixed blade having a cutting edge contoured to the front surface of said lamina,
(b) moving the first blade towards said second complementary blade,
(c) engaging the excess edge lamina between the blade edges along the entire length of each of said blade edges simultaneously, and
(d) cutting the excess lamina as the blade edges enclose the substrate corner

5,005,455
METHOD AND APPARATUS FOR MANUFACTURING PREFORM PANELS WITH PREFORMS FOR REPAIRING INTERCONNECTS
Guenter Dederer, Munich, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany
Filed Mar. 23, 1989, Ser. No. 327,[illegible]
Claims priority, application Fed. Rep. of Germany, May 26, 1988, 3817901
Int. Cl.[5] B21D *28/10* H05K *3/24*
U.S. Cl. 83—50 9 Claims

1 A method for manufacturing preform panels having at least one preform for repairing interconnects with a preform plated with hard solder, comprising the steps of
providing at least two successive punch events on a metal band with a die, and
performing a predetermined feed (V) of the metal band relative to the die between the two punch events, whereby the length of the feed (V) is greater than a die width of the die, a length of the die being shorter than a width of the metal band, and the preform being formed by a residual web of the metal band after the two successive punch events

5,005,456
HOT SHEAR CUTTING OF AMORPHOUS ALLOY RIBBON
Donald E. Ballard, Conover, N.C.; Peter G. Frischmann, Scottsdale, Ariz., and Alan I. Taub, Schenectady, N.Y., assignors to General Electric Company, Schenectady, N.Y.
Filed Sep. 29, 1988, Ser. No. 250,805
Int. Cl.[5] B23D *15/08, 33/00* B26D *7/10*
U.S. Cl. 83—170 1 Claim

1 Apparatus for shearing a stack of amorphous alloy ribbons which comprises,
means for supplying a plurality of ribbons to be sheared as a stack,
means for compressing the stack of ribbons in a heating zone to reduce the electrical resistance between confronting surfaces of the ribbons of said stack,
resistance heating current supply means,
means for passing said resistance heating current through said heating zone for a time to induce heating by diffusion in a diffused heat zone adjacent said heating zone at a rate and to a temperature which conforms to the hatched areas of FIGS. 1 and 2 of the drawings of the subject application, and
means for shearing said stack of ribbons in said diffused heat zone the width dimension of the means for passing resistance heating current to the heating zone, oriented in the length dimension of the stack, is no greater than 0.025 inches.

5,005,457
METHOD AND APPARATUS FOR WASTE COLLECTION AND STORAGE
William E. Thornton, Jr., Friendswood, and Whitemore, Henry B., San Antonio, both of Tex., assignors to The United States of America as represented by the United States National Aeronautics and Space Administration, Washington, D.C.
Division of Ser. No. 35,401, Apr. 7, 1987, Pat. No. 4,870,709.
This application Aug. 10, 1989, Ser. No. 392,174
Int. Cl.[5] B26D *1/00, 7/02*
U.S. Cl. 83—206 4 Claims

1 A device for feeding a sheet onto a piston face, comprising
a grabber bar which is generally elongated and includes a first jaw and a second jaw, said first and second jaws being generally opposed to open and close on said sheet to secure and release said sheet thereby
a track having said grabber bar mounted thereon, said track alternately moving said grabber bar in a first direction across said piston face, to a first terminus above said piston face and, subsequently reversing said first direction and moving said grabber bar in a second direction to a second terminus below said piston face
a gripper bar having a first plate and a second plate, said first and second plates being generally identically shaped and having fingers extending therefrom, said first and second plates being demountably coupled, said gripper bar applying pressure great enough to hold said sheet sandwiched therebetween, yet weak enough to allow said sheet to slidably move therebetween, said gripper bar being located at said second terminus
trip means alternately urging said jaws of said grabber bar to an open position from a closed position, releasing said sheet thereby when said grabber reaches said first terminus, and back to a closed position securing said sheet therebetween, when said grabber bar reaches said second terminus,
cutting means for severing said sheet from a sheet source at

a point just above said gripper bar when said first and said second jaws are at said first terminus

a hollow mounting member integral with said grabber bar having a first and a second end and a channel therethrough, said mounting member fixedly attached at said first end to said track and at said second end to said first jaw, and

a guide member with a first and a second end, said guide member sized to slidably fit within said channel in said mounting member and attached at said first end to said second jaw and at said second end to said trip means, wherein said trip means urges said first and second jaws alternately from said open position to said closed position

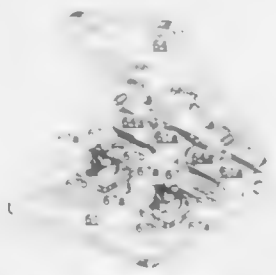
LOW COST PUNCH MECHANISM



Robert G. Merrick, Cupertino, Calif., assignor to Merrick Industries, Incorporated, Sunnyvale, Calif.

Continuation-in-part of Ser. No. 225,638, Jul. 27, 1988, Pat. No. 4,869,143, which is a continuation of Ser. No. 743,559, Jun. 11, 1985, abandoned, which is a continuation-in-part of Ser. No. 623,799, Jun. 22, 1984, abandoned. This application Sep. 22, 1989, Ser. No. 411,143

The portion of the term of this patent subsequent to Sep. 26, 2006, has been disclaimed.

Int. Cl.[5] B26D 1/12

U.S. Cl. 83—599 3 Claims

1 A punch mechanism for providing openings in a paper object,

said punch mechanism having a punch plate member movably hinged to a die plate member;

said punch plate member carrying a pair of spaced punching teeth adapted to engage openings in said die plate member when said punch plate member is moved closely adjacent said die plate member;

each of said punching teeth having a maximum of two sharp peak-like portions or crests diametrically opposite to each other for producing initial penetration of said paper object;

each of said punching teeth having rounded wider cutting portions or roots contiguous with said peak-like portions to produce further and sequential cutting of said paper object after said initial penetration by said peaklike portions, while providing additional wear surfaces for said teeth,

said punch plate member being hinged along an axis extending through at lest two cylinders in said punch plate member and a plurality of cylinders in said die plate member,

a cam slot in one of said cylinders of either said punch plate member or said die plate member,

said cam slot having a shoulder therein,

a lug on the other of said members, said lug being positioned to engage and disengage said cam slot only when said members are

a in a predetermined physical relationship to each other, and

b when manual force is applied along the direction of the hinge axis to snap said lug over said shoulder of said cam slot, thereby resulting in a structure having a semipress fit assembly, whereby said lug in cooperation with said cam slot guides said members into a coarse alignment and prevents disassembly of said members when said members are in other than said predetermined physical relationship

thereby resulting in a structure which can be assembled and disassembled using only manual force, yet which, because of said semipress fit assembly, is not subject to inadvertent disassembly even when said members are in said predetermined physical relationship

LASER CONTROLLED SEMICONDUCTOR ARMATURE FOR ELECTROMAGNETIC LAUNCHERS

Louis J. Jasper, Jr., Fulton, Md.; Maurice Weiner, Ocean, and Lawrence J. Bovino, Eatontown, both of N.J., assignors to The United States of America as represented by the Secretary of the Army, Washington, D.C.

Filed Jan. 16, 1990, Ser. No. 466,142

Int. Cl.[5] F41B 6/00

U.S. Cl. 89—8 10 Claims

1 A railgun including a pair of opposing elongated parallel stator members coupled to a source of electrical current, comprising

an armature comprising an optically activated semiconductor switch device including a body of semiconductor material located between said stator members and

a source of optical energy periodically energized to direct light energy to at least one surface of said semiconductor switch device,

whereby light energy from said optical source increases the conductivity of said semiconductor body to initiate and control current flow between said stator members, causing an electromagnetic Lorentz type driving force to be built up behind said switch device which is then set in motion and accelerated in a predetermined direction between said stator members

said stator members of said railgun comprising a pair of linear rails

said pair of rails additionally including a plurality of spaced

means coupled to said source of optical energy located between opposing inner side surfaces thereof and extending a predetermined distance along the length thereof and

said body of semiconductor material

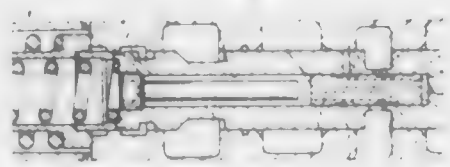
CAVITATION-PREVENTING PILOT VALVE CONTROL SYSTEM FOR POWER SHOVEL HYDRAULIC CIRCUIT
Satoshi Miyaoka, Hiroshima, Japan, assignor to Kabushiki Kaisha Kobe Seiko Sho, Kobe, Japan
Filed Mar. 20, 1989, Ser. No. 326,017
Claims priority, application Japan, Apr. 7, 1988, 63-86500
Int. Cl.' F15B 11/...
U.S. Cl. 91—420 6 Claims

1. A hydraulic operating circuit of a power shovel including a hydraulic cylinder for driving a working component, comprising

a hydraulic change-over valve having a spool moving from a neutral position to forward and reverse directions for selectively supplying said cylinder with a discharge oil pressure of a hydraulic pump driven from an engine,



a pair of first signal receiving portions provided on said hydraulic change-over valve and comprising means for moving said spool in the forward and reverse directions away from a neutral position, respectively, and a second signal receiving portion provided on said hydraulic change-over valve and comprising means for pulling back said spool toward said neutral position,

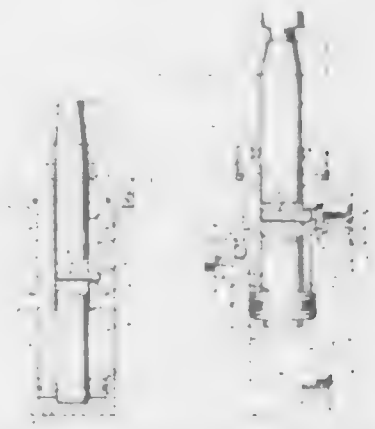
a pressure detector means adapted to produce a signal commensurate with the pressure in an oil chamber of said cylinder where a vacuum pressure is developed by the weight of said working component,

a signal producing means for producing a signal for pulling back said spool toward said neutral position in response to a detection of a vacuum pressure in said cylinder by said pressure detector means, and

signal supplying means for supplying said signal from said signal producing means to said second signal receiving portion of said hydraulic change-over valve.

5,005,467
PILOT-OPERATED FLOW CONTROLLING DIRECTIONAL CONTROL VALVE WITH COPYING SPOOL
Orjan E. V. Wennerbo, and Bo Nilstam, both of Boras, Sweden, assignors to Atlas Copco Aktiebolag, Nacka, Sweden
Filed May 17, 1988, Ser. No. 195,119
Claims priority, application Sweden, May 18, 1987, 8702019
Int. Cl.' F15B 13/...42
U.S. Cl. 91—461 8 Claims

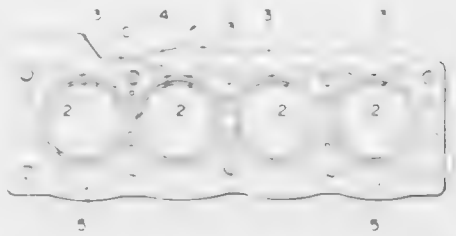
1. A hydraulic power system connected to and controlling a rod driving hydraulic motor (18, 32) apparatus, comprising



a pilot-operated flow controlling directional valve means (1, 29) comprising a fluid inlet port (21), two alternatively pressurized service ports (19, 20) for alternatively connecting communication ports of the load driving hydraulic motor (18, 32) to a pressure medium source and a tank, two oppositely located and pilot pressure activated activating means (3, 4), and a pilot pressure means (84) for pressurizing and activating one at a time of said activating means (3, 4) while draining the other one of said activating means (3, 4) to the tank through a flow restriction (5, 7),

at least one control flow circuit means (10, 12, 72, 83, 37, 44) for communicating with one of said activating means (3, 4), and

load pressure responsive compensating means including a control valve means (11, 12, 71, 31) for accomplishing a flow through said at least one control flow circuit means (10, 12, 72, 83, 37, 44) in relation to the load pressure of the motor, for causing a counter pressure from said flow restriction (5, 7) to be built up in the non-activated activating means for thereby generating a compensating force which is related to the load pressure on the motor, on the non-activated activating means, said built up counter pressure being proportional to the load pressure but not proportional to the pilot pressure,



said control valve means comprising a continuously variable copying valve (71, 81) which has a first surface (85) for pressure loading the copying valve in one direction and a second surface (86) for pressure loading the copying valve in an opposite direction, and a first passage means (76, 77) for connecting said first surface (85) with one of said pressurized service ports (19, 20) of said directional valve means (1) and a second passage means (79, 80) for connecting said second surface (86) with said fluid inlet port (21) of said directional valve means (1), said second surface (86) also communicating with said non-activated activating means (3) via said at least one control flow circuit means, whereby said copying valve provides a continuously variable control flow which is proportional to the load pressure on the motor from said pressure fluid inlet port (21) to said non-activated activating means (3).

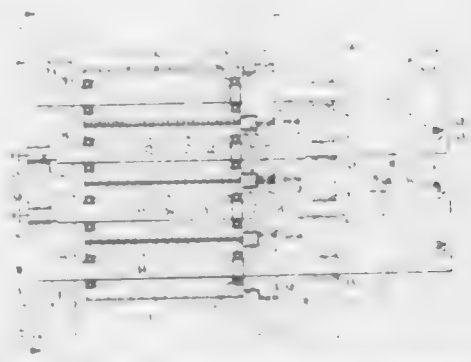
ROTARY PRINTING MACHINE CONSTRUCTION



Peter Knauer, Rain Lech, Fed. Rep. of Germany, assignor to Man Roland Druckmaschinen AG, Offenbach am Main, Fed. Rep. of Germany

Filed Jul. 25, 1989, Ser. No. 385,205

Claims priority, application Fed. Rep. of Germany, Jul. 28, 1988, 3825600

Int. Cl.[5] B41F 5/22 7/28

U.S. Cl. 101—218 **7 Claims**

1. A rotary printing machine having a plurality of cylinders (30, 41, 54, 66) and constructed to permit axial access to at least one of said cylinders for resurfacing thereof,

said machine further having

a first side wall

a second side wall

the plurality of cylinders being secured for rotation between said side walls,

wherein said first side wall comprises a composite wall formed of a plurality of severable wall parts (10, 11) which are separable along at least one separating line (12) and movable relatively towards and away from each other, and

holding means (35, 47, 60, 70) are provided for supporting the cylinders when the severable parts of the first side wall are separated.

wherein all the cylinders of the plurality of cylinders (30, 41, 54, 66) are constructed as hollow cylinders

a plurality of cylinder shafts (27, 38, 51, 63) are provided, retaining said hollow cylinders for rotation thereon

means for retaining said cylinder shafts in said side walls while being slightly movable in at least one of rotary position, axial position,

cylinder operating and control means are provided for, selectively, controlling operation of said cylinders with respect to at least one

cylinder register,

lateral register,

diagonal register,

drive or stop of cylinders,

said operating and control means for all said cylinders being located adjacent the second side wall (2), and

wherein the first side wall includes openings (13, 14, 15, 16) receiving, only, the cylinder shafts (27, 38, 51, 63).

U.S. Cl. 101—415.1 3 Claims

1. In a rotary printing press having a plate cylinder with two aligned locking means in a peripheral channel in the plate cylinder for releaseably locking a respective one of a pair of side by side printing plates to the plate cylinder, one of said locking devices being provided for each printing plate, and each locking means having registration means engaged with complementary registration structure in its printing plate for orienting its printing plate laterally on the plate cylinder, the improvement being in that a housing as in said channel for each of said locking means, an elongated spindle pivotally mounted to a bar in each of said housings, said registration means being secured to said spindle, means for shifting said bar and said spindle with said registration means to two positions, one of said two positions being a single truck position and the other of said two positions being a double truck position, said double truck positions of said two registration means being disposed toward each other and said single truck positions of said two registration means being disposed away from each other, the adjacent sides of said side by side printing plates being spaced from each other when both of said registration means are in their single truck positions for standard printing, and said adjacent sides of said side by side printing plates abutting each other when both of said registration means are in their double truck positions for double truck printing to permit the forming of a continuous joint image from said side by side printing plates.

BLANKET WASH SYSTEM WITH SUB-AMBIENT PRESSURE CIRCULATION

Edward M. Goldberg, Waterford, Conn.; Daniel Bettencourt, Jr., West Warwick, R.I.; James C. Tosti, Jr., Pawcatuck, Conn., and Norman S. Jones, Peacedale, R.I., assignors to Precision Engineered Systems Inc., Westerly, R.I.

Continuation-in-part of Ser. No. 134,218, Dec. 16, 1987, abandoned, which is a continuation-in-part of Ser. No. 86,330, Aug. 17, 1987, abandoned, and a continuation-in-part of Ser. No. 926,379, Oct. 31, 1986, Pat. No. 4,686,902. This application Jul. 25, 1989, Ser. No. 384,966

Int. Cl.' B41F 35/00

U.S. Cl. 101—425 28 Claims

1. A system for automatically cleaning a component of a printing press, the system being located in an environment having an ambient pressure, the system comprising

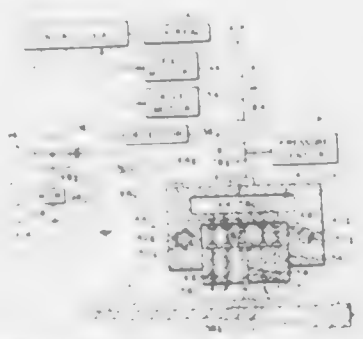
source means for providing a reservoir of a fluid wash mixture;

supply and return lines in fluid communication with the source means,

spray means for spraying wash mixture onto the component, the spray means being in fluid communication with the source means and receiving wash mixture from the source means via the supply line,

circulation means for circulating wash mixture around a path including the source means and at least a portion of each of the supply and return lines in such a way that pressure in the supply line can never exceed the ambient pressure outside the system.

5,005,479



METHOD AND APPARATUS FOR IMAGING PRINTING PLATES BY SPARK DISCHARGE

Thomas E. Lewis, E. Hampstead; Bradley W. Davidson, Merrimack; Richard A. Williams, Hampstead, all of N.H.; Michael T. Nowak, Gardner, Mass., and John F. Kline, Hudson, N.H., assignors to Presstek, Inc., Hudson, N.H.

Division of Ser. No. 234,475, Aug. 19, 1988, Pat. No. 4,911,075. This application Sep. 27, 1989, Ser. No. 413,172

Int. Cl.' B41N 1/14

U.S. Cl. 101—467 30 Claims

1. A method of imaging a lithographic plate having a printing surface comprising the steps of mounting said plate to the plate cylinder of a lithographic press having at least one plate cylinder, a corresponding number of blanket cylinders and an impression cylinder, exposing said printing surface to spark discharges between said plate and an electrode spaced close to said printing surface produced in response to picture signals representing an image, said spark discharges producing sufficient heat to physically change the affinity of said printing surface for printing liquid selected from the group consisting of water and ink at the points thereof exposed to said spark discharges thereby producing directly on said plate image spots suitable for inking and reproduction, moving said electrode and said plate relatively to effect a scan of said printing surface, and controlling the spark discharges to the plate in accordance with picture signals so that they occur at selected times in the scan thereby forming an array of said image spots on said printing surface which make the plate press ready.

5,005,480

OPTICAL FUZE

Robert M. Szewczyk, Acton, Mass., assignor to Raytheon Company, Lexington, Mass.

Filed Dec. 1, 1989, Ser. No. 444,331

Int. Cl.' F42C 13/02

U.S. Cl. 102—213 7 Claims

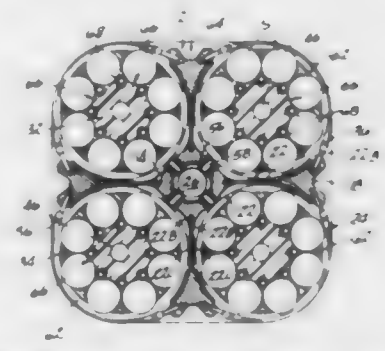
1. A radar system comprising

(a) a plurality of directional antennas disposed at equally spaced positions about a body of a guided missile to produce overlapping beams that, taken together, form a substantially conical coverage pattern and individually provide a beam overlapping each adjacent beam by an amount equal to a portion of the beam that is not overlapping each adjacent beam,

(b) means for separately actuating each one of the directional antennas and for processing any received signals for producing a logic true signal whenever echo signals are received and otherwise a logic untrue signal, and

(c) logic circuitry means, responsive to the logic true and logic untrue signals, for producing control signals for a warhead, said control signals being representative of a particular sector of the substantially conical pattern.

5,005,481



INFLATABLE BLADDER SUBMUNITION DISPENSING SYSTEM

Mark D. Schneider, Woodinville; Randy L. Hoskins, Bothell; Lyle D. Galbraith, Redmond, and Gary L. Dusenberry, Bellevue, all of Wash., assignors to Olin Corporation, Cheshire, Conn.

Filed Jun. 26, 1989, Ser. No. 370,978

Int. Cl.' F42B 12/58, B64D 1/02

U.S. Cl. 102—393 7 Claims

1. In combination with a carrier frame having a plurality of cavities disposed about and extending along a central axis of the frame, a submunition dispensing system comprising

(a) a plurality of dispersing subsystems each disposed in one of said cavities of said frame, each subsystem including an

inflatable central dispersal member expandable from a collapsed to an inflated condition in response to fluid pressure against said member disposed in said collapsed condition for supporting a plurality of elongated submunition stacks thereabout, first means for retaining the submunition stacks to said central dispersal member in said collapsed condition, and a first fluid pressure-generating means being actuatable for delivering pressurized fluid to said member to expand it from said collapsed condition to said inflated condition and cause dispersing of the submunition stacks therefrom and

(b) an ejecting subsystem including a plurality of inflatable metallic bladders, each being expandable from a collapsed to an inflated condition in response to fluid pressure against said bladder and each being mounted in said collapsed condition to said frame in one of the cavities so as to underlie one of said dispersing subsystems disposed therein, second means for releasably retaining the said dispersing subsystems in said cavities adjacent said bladders in said collapsed conditions, and second fluid pressure-generating means being actuatable for delivering pressurized fluid to said bladders to expand them from said collapsed to inflated conditions and cause ejection of said dispersing subsystems from said cavities

5,005,482

COMBINED MINE SAFETY DEPLOYMENT AND ACTIVATION SYSTEM

William H. Reams, Keedysville, Md., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed May 21, 1984, Ser. No. 612,286
Int. Cl.[5] F42B 22/36
U.S. Cl. 102—420 **8 Claims**

1 A device for aiding deployment of a naval mine from an aircraft and initiating its activation at beyond predetermined water depth, comprising

a pair of biased plungers restrained in respective initial positions by a releasing lanyard adapted for connected to the aircraft,

a first plunger of the pair adapted upon lanyard release to be moved by its bias to a second position for initiating battery activation and closing a circuit adapted to actuated means to deploy a parachute for slowing air descent of the mine

a pair of facing members, one being rotatable and carrying a detonator and the other carrying an explosive lead which is in communication with an explosive charge;

a second plunger of the pair when in its initial position locking the rotatable member from rotation with the detonator out of communication with the explosive lead in the other member;

a second plunger upon lanyard release adapted to be moved by water pressure at beyond a predetermined depth against its bias to a second position for unlocking the rotatable member, thereby freeing the rotatable member for rotation and,

means responsive to the second plunger when in its second position for causing rotation of the rotatable member for aligning the detonator and explosive lead in communication and,

means for activating a target detecting device after the rotatable member is rotated to align the detonator and explosive lead

said target detecting device once activated adapted to fire the detonator upon detecting a target

---

5,005,483

METHOD FOR THE EJECTION OF SUB-MUNITIONS AND PROJECTILE APPLYING SAID METHOD

Jean Deffayet, Chaville, France, assignor to Thomson-Brandt Armements, Boulogne Billancourt, France

Filed Jun. 7, 1989, Ser. No. 362,661
Claims priority, application France, Jun. 10, 1988, 88 07767
Int. Cl.[5] F42B 12/58
U.S. Cl. 102—489 **5 Claims**

1 A method for the ejection of sub-munitions from a projectile that carries them, which comprises

connecting a casing to a nose forming a front part of said projectile, and connecting said front part by locking means to a rear part forming a base portion of said projectile

positioning a tube in said casing connected to one of said nose and said base portion;

positioning a rod connected to the other of said nose and said base portion within said tube so as to act as a piston under the effect of a pyrotechnical charge in order to separate the rear part from the front part,

unlocking said locking means;

firing the pyrotechnical charge so as to rotate the front part of the projectile with respect to the base portion of said projectile through the combination of grooves formed on one of said tube and said rod in cooperation with a rotating band which is located on the other of said tube and said rod wherein, upon firing the pyrotechnical charge, an initial transversal speed for each of the sub-munitions is generated so as to generate a controlled transversal speed to each of the sub-munitions in one direction by rotation in one direction of the nose and rotation in an opposed direction of the base portion as to obtain an optimum dispersal of the sub-munitions, and

holding the sub-munitions to the rear part by a holding band which surrounds said sub-munitions.

2 A projectile for the ejection of sub-munitions from a projectile carrying said sub-munitions, wherein said projectile comprises

a nose portion forming a front part of said projectile

a casing connected to said nose portion

locking means for locking said front part to a rear part of said projectile forming a base portion of said projectile,

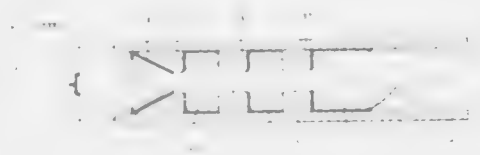
a tube positioned in said casing and connected to one of said nose portion and said base portion

a rod connected to the other of said nose portion and said base portion and movably mounted within said tube so as to act as a piston under the effect of a pyrotechnical charge so as to separate the rear part from the front part of said projectile

means for unlocking said locking means

means for firing said pyrotechnical charge so as to rotate the front part of the projectile with respect to the rear part of said projectile by means of grooves formed on one of said tube and said rod in cooperation with a rotating band on the other of said tube and said rod such that, upon firing of said pyrotechnical charge, an initial transversal speed is generated so as to generate a controlled transversal speed to each of the sub-munitions in one direction by rotation in one direction of the nose and rotation in an opposed direction of the base portion so as to obtain an optimum dispersal of the sub-munitions and

holding means for joining the sub-munitions to the rear part said holding means including a holding band surrounding said submunitions



---

5,005,485

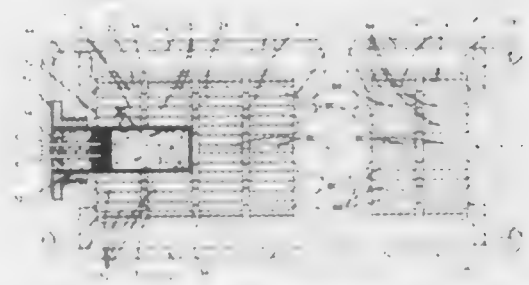
POWER BOOSTER BUSHING

Kenneth J. Woo, Manchester, and Robert K. Annan, Merrimack, both of N.H., assignors to Burndy Corporation, Norwalk, Conn.

Filed Feb. 22, 1990, Ser. No. 483,904
Int. Cl.[5] C06D 5/10
U.S. Cl. 102—531 **3 Claims**

1 A power booster for power activated tools comprising a cartridge case having a tubular wall with open muzzle and breech ends, a booster bushing and a power cell with a firing rim subassembly slidably fitted into the cartridge case, and a power piston in the cartridge case ahead of the subassembly, the cartridge case having a generally cylindrical inner surface divided by a radially extending shoulder into a forward cartridge chamber and a rear cartridge chamber, the booster bushing being generally cylindrical and having an outer surface of greater and lesser diameters defined by a radially extending shoulder, the bushing having an axial bore for receiving the power cell, the bushing being slidably fitted into the cartridge case with its lesser diameter portion received by the rear cartridge chamber positioning the power cell rim at the open breech end of the cartridge case, and with the greater

diameter portion of the bushing fitted in the forward cartridge chamber with radial shoulders of cartridge case and bushing in abutting relation and with the front end of the power cell in confronting relationship with the power pistor, the greater diameter portion of the bushing having a plurality of grooves on its outer surface defining a forward series of ribs thereon having annular flat surfaces and a rear rib wider than forward ribs for accommodating axial collapse of the greater diameter portion of of the bushing against the cartridge case shoulder for obturating power cell gases tending to flow past the outer surface of the bushing and out the open breech end when the cartridge case is fired



---

5,005,486

IGNITER FOR AIRBAG PROPELLANT GRAINS

Reiner Lenzen, Almont, Mich., assignor to TRW Vehicle Safety Systems Inc., Lyndhurst, Ohio

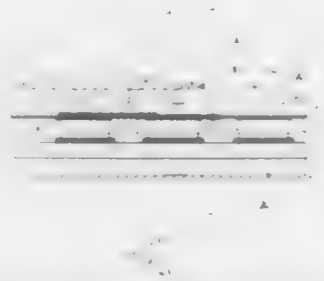
Filed Feb. 3, 1989, Ser. No. 306,877
Int. Cl.[5] C06D 5/10
U.S. Cl. 102—531 **28 Claims**

1 An apparatus for igniting a gas generating propellant grain which shatters when suddenly exposed to pressure above a shattering level greater than approximately 1500 psi, said apparatus comprising

a housing having a longitudinal axis, a closed axial end wall, and a closed peripheral side wall

an ignitable material contained in said housing, said ignitable material developing hot gases, flame and pressure within said housing upon combustion of said ignitable material and

means for containing said hot gases, said flame and said pressure within said housing until said pressure reaches a



rupturing level equal to approximately 750–800 psi, and for permitting said side wall of said housing to rupture when said pressure reaches said rupturing level to direct said hot gases and said flame radially out of said housing through said side wall to ignite said propellant grain.

LINEAR MOTOR DRIVEN CONVEYING APPARATUS

Kazumi Ohmura, Tokyo; Jun Nishiyama, Amagasaki, and Yukio Chayama, Yawata, all of Japan, assignors to Tsubakimoto Chain Company, Osaka, Japan

Filed Mar. 9, 1990, Ser. No. 491,344
Claims priority, application Japan, Mar. 17, 1989, 29796
Int. Cl.[5] B60L 13/00
U.S. Cl. 104—292 4 Claims

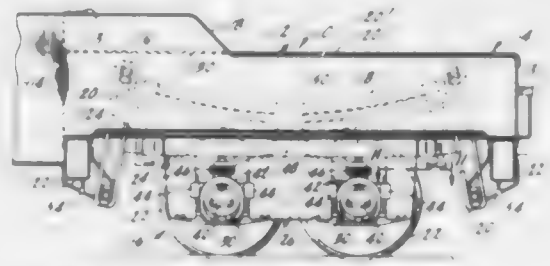
1. A linear motor driven conveying apparatus for conveying trucks by means of linear motor comprising primary members provided on a traveling path of the trucks and secondary members mounted on the trucks, characterized in that a water tank is provided between the primary members and the secondary members such that said secondary members are submerged in said tank.

5,005,488

METHOD FOR THE TRANSFER OF AN OVERHEAD CONVEYOR CARRIAGE FROM ONE TRACK ONTO ANOTHER AND AN OVERHEAD CONVEYOR SYSTEM

Kai Lainio, Tureaki, Finland, assignor to Oy Partek Ab, Toijala, Finland

Filed Nov. 13, 1989, Ser. No. 435,278
Claims priority, application Finland, Nov. 11, 1988, 885227
Int. Cl.[5] B61B 3/02
U.S. Cl. 105—148 18 Claims



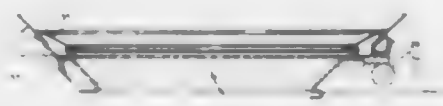
5. An overhead conveyor system, comprising
at least one conveyor carriage provided with sets of transfer wheels including carrying wheels,
a first track having guide rails with running faces thereon,
a second track, also having guide rails with running faces thereon, said second track placed parallel to said first track at a certain distance from said first track, and
means for alternating height positions of the sets of transfer wheels such that the sets can be alternated between a grasping position and a detached position.

5,005,489

STAND ALONE WELL CAR WITH DOUBLE AXLE SUSPENSION SYSTEM

Boris S. Terlecky, Woodridge, Ill., assignor to Trailer Train Company, Chicago, Ill.

Continuation of Ser. No. 290,693, Dec. 27, 1988, abandoned, which is a continuation of Ser. No. 946,054, Dec. 24, 1986, Pat. No. 4,817,535. This application Feb. 26, 1990, Ser. No. 485,275
Int. Cl.[5] B61F 5/24
U.S. Cl. 105—158.2 17 Claims



1. A railroad car comprising
a carbody having end sections which include carbody connectors attached thereto,
suspension means disposed at each end section of the carbody, each suspension means including
a plurality of axles disposed transversely to the carbody, and under the carbody, the axles being adjacent to each other and intermediate the carbody connectors, a plurality of rail-engaging wheels disposed on the axles,
a plurality of leaf springs, disposed above the axles, parallel to the longitudinal axis of the carbody,
a plurality of rigid swing hangers, each swing hanger being pivotally connected at one end to one of the carbody connectors and pivotally connected at its other end to an end of one of said leaft springs, the pivotal connections of the swing hanger ends being about horizontal axes transverse to the carbody such that said pivotal connections in combination with the rigid swing hangers permit said left springs to move only in a direction parallel to the longitudinal axis of the carbody,
a pair of bridging means which are separate and unconnected to each other, one on each side of the carbody and connecting adjacent axles, and
means for rotatably connecting each bridging means to a leaf spring.

5,005,490

RAILWAY HOPPER CAR SLIDING GATE SEALING MECHANISM

Robert P. Overheidt, Geneva, Ill., assignor to Miner Enterprises, Inc., Geneva, Ill.

Filed Jul. 26, 1989, Ser. No. 558,906
Int. Cl.[5] B61D 7/22
U.S. Cl. 105—282.2 3 Claims

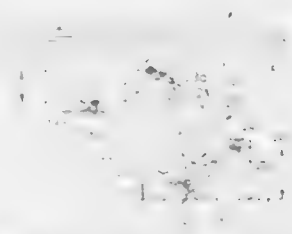
2. In a railway hopper car having discharge opening walls, a slide gate and a seal for sealing said discharge opening walls against said slide gate irrespective of the relationship of the discharge opening walls to each other and to the slide gate, said sealing comprising
flange section means joined together to form a flexible rectangular frame having inside and outside portions, said inside and outside portions being joined by a downwardly sloping cantilevered section, a pliable sealing strip means occupying a plane parallel and contiguous with a plane swept out by said slide gate,
a series of channel means having strength substantially greater than that of said flange section means and having higher section modulus than said flange section means whereby said series of channel means have lower stresses and better resists deformation, and having first and second openings, said first opening being an elongated slot running the length of said channel means, said pliable sealing means being positioned in each of said channel means whereby portions thereof are directly adjacent said gate, said second opening being generally opposite said first opening whereby providing access to remove said pliable sealing means from said channel, and
means securing said outside portions of each of said flange section means to said discharge opening walls whereby said flange section means can flex so that said pliable sealing will contact said slide gate around the peripheral thereof.

5,005,491

AUTOMOTIVE TRAY APPARATUS

Kathryn R. Waterman, 951 Promontory Dr. West, Newport Beach, Calif. 92660

Filed Apr. 4, 1990, Ser. No. 504,408
Int. Cl.[5] A47B 23/00
U.S. Cl. 108—46 3 Claims



1. An automotive tray apparatus for securement within a window slot within an automotive door, wherein the apparatus comprises,
a planar tray, wherein the planar tray includes a surrounding wall, and
an aligned series of walls directed below the planar floor, and
wherein the tray and the surrounding wall include spaced sides and spaced ends, the sides orthogonally arranged relative to the ends, and a first hook pair mounted to one of said ends directed outwardly therefrom and a second hook pair mounted to one of said sides directed outwardly therefrom, wherein the second hook pair is arranged orthogonally relative to the first hook pair, and
wherein the first hook pair includes a first hook with a first horizontal leg integrally and orthogonally mounted to a first vertical leg, and further including a second hook with a second horizontal leg integrally and orthogonally mounted to a second vertical leg, wherein the first and second vertical legs are arranged for reception within the window slot, and
wherein the second hook pair includes a first and second hook member, the first hook member includes a first extensible and retractable linkage and the second hook member includes a second extensible and retractable linkage.

5,005,492

TABLE MECHANISM

Sumihito Ogino, and Ryo Takahashi, both of Tokyo, Japan, assignors to Yokogawa Medical Systems, Limited, Tokyo, Japan

Continuation of Ser. No. 432,766, Oct. 23, 1989, abandoned. This application Sep. 24, 1990, Ser. No. 587,628
Claims priority, application Japan, Apr. 28, 1987, 62-64373[U]
Int. Cl.[5] A47B 9/00
U.S. Cl. 108—145 1 Claim

1. A table top tilting mechanism comprising
a pair of links disposed parallel to each other and each having a first end and a second end,
first fitting means for rotatably fitting said pair of links by said first end of each of said pair of links to said table top with one of said pair of links being disposed at a higher vertical position than the other of said pair of links with a predetermined vertical distance therebetween,
second fitting means for rotatably fitting said pair of links by said second end of each of said pair of links to a base structure with one of said pair of links being disposed at a higher vertical position than the other of said pair of links with the same predetermined vertical distance therebetween, and
driving means having one end thereof rotatably secured to one of said pair of links, and another end thereof secured to said base structure,
wherein each of said pair of links comprises a U shaped member in section with the longitudinal dimension extending the length of said links,
wherein the open ended part of one U-shaped member is fitted longitudinally over the open ended part of the other U-shaped member along the length of said links so as to overlap along the length during the entire time there is movement of the links during lifting operation, and
wherein said driving means is concealed by said U shaped members.

5,005,493

HAZARDOUS WASTE MULTI-SECTIONAL ROTARY KILN INCINERATOR

Gregory M. Gitman, Duluth, Ga., assignor to American Combustion, Inc., Norcross, Ga.

Filed Nov. 8, 1989, Ser. No. 434,018
Int. Cl.[5] A47J 36/00, 36/24
U.S. Cl. 110—246 66 Claims

1. A device for incinerating solid waste, comprising
(a) a first rotating section for transporting solid waste within the device, the first rotating section having a forward opening at a first end thereof for introducing waste into the device and an exit opening at a second end thereof,
(b) first burning means for heating and at least partially volatizing components of the waste in the first rotating section to produce flue gases and hot residue,
(c) a second rotating section for further transporting waste residue within the device, and second rotating section

having a forward opening at a first end thereof and an exit opening at a second end thereof, wherein the exit opening of the first rotating section is in flow communication with the forward opening of the second rotating section

(d) means for providing first oxidizing gas to the first rotating section to at least partially burn the volatized components of the waste

(e) second burning means for increasing the temperature of waste residue in the second rotating section to further convert said waste residue into substantially decontaminated solid residue and flue gas

(f) means for collecting substantially decontaminated solid residue from the device; and

(g) means for removing flue gases from the device

5,005,494

APPARATUS AND METHOD FOR HIGH TEMPERATURE DISPOSAL OF HAZARDOUS WASTE MATERIALS

Max P. Schlienger, Ukiah, Calif., assignor to Retech, Inc., Ukiah, Calif.

Continuation-in-part of Ser. No. 173,968, Mar. 28, 1988, abandoned, which is a division of Ser. No. 46,483, May 4, 1987, Pat. No. 4,770,109. This application Aug. 16, 1989, Ser. No. 394,738

Int. Cl.[5] F23B 7/00

U.S. Cl. 110—341 21 Claims

15 A method of incinerating and melting waste materials comprising

directing waste materials into a region closed to the atmosphere and having a bottom hole;

rotating said region with the waste materials therewithin at a speed sufficient to cause centrifugal distribution of the waste materials;

directing a high temperature plasma into the region to incinerate and melt the waste materials; and

directing the products of combustion as an effluent through region through said hole

5,005,495

APPARATUS AND METHOD FOR REMOVING VOLATILE ORGANIC CONTAMINANTS FROM PARTICULATE MATERIAL

Frederick F. Heitel, P.O. Box 255, Saline, Mich. 48176

Filed Nov. 28, 1989, Ser. No. 442,133

Int. Cl.[5] F23J 7/00

U.S. Cl. 110—344 17 Claims

1 Apparatus for removing volatile organic contaminants from particulate material such as soil, sludge or the like comprising

a particulate material processor including a heating unit having a housing defining a heating chamber in which the contaminated particulate material is heated to remove the organic contaminants therefrom as contaminated gas emissions, and said housing having an inlet end at which the contaminated particulate material is fed into the heating chamber and having an outlet end through which the processed particulate material is delivered from the heating chamber separate from the contaminated gas emissions; and

an emissions processor including

(a) a recirculating emissions pretreatment circuit having an inlet that receives the emissions from the heating unit and a fan that draws the emissions into the pretreatment circuit through its inlet, the pretreatment circuit having a condenser for removing condensible gases from the emissions and also having an outlet through which the pretreated emissions are returned back to the heating unit, and the fan of the emissions pretreatment circuit being located between the condenser and the outlet of the pretreatment circuit, and

(b) a final treatment system having an inlet from the pretreatment circuit at a location between the condenser and the outlet thereof, the final treatment system including a fan for drawing off through its inlet a portion of the pretreated emissions flowing along the pretreatment circuit, and an emissions treater for treating the emissions to reduce the concentration of the organic contaminants

5,005,496

METHOD FOR DISPOSAL OF MEDICAL WASTE MATERIALS

Hirofumi Nagata, Osoda, Japan, assignor to Kyoei Steel Ltd., Osaka, Japan

Filed Jul. 6, 1989, Ser. No. 376,092

Claims priority, application Japan, Jul. 7, 1988, 63-169757; Sep. 2, 1988, 63-123282; Sep. 13, 1988, 63-229644; Oct. 12, 1988, 63-257963; Dec. 12, 1988, 63-314650; Dec. 28, 1988, 63-170795

Int. Cl.[5] F23G 7/00

U.S. Cl. 110—346 4 Claims

1 A method for disposing of medical waste materials comprising the steps of

placing medical waste materials into a container

sealing the container

placing the sealed container into a metal melting furnace together with metal; and

heating the furnace to a temperature sufficient to completely combust or melt the container and the medical waste materials

5,005,497

DEEP BANDING KNIFE WITH ROD ATTACHMENT

Albert Kolskog, Box 56, McCord, Saskatchewan, Canada (S0H 2T0)

Filed Jun. 18, 1990, Ser. No. 539,708

Int. Cl.[5] A01C 23/00, 5/06

U.S. Cl. 111—123 8 Claims

1 In a deep banding knife comprising a knife element including means for mounting the element on a shank and having a leading edge facing forwardly of a direction of travel which leading edge is substantially vertical for cutting a furrow in the ground so that a vertical height of the leading edge is greater than a width of the leading edge, and a material supply duct mounted on the knife element rearwardly thereof relative to the leading edge so as to deposit said material into the furrow as the knife element is moved forwardly in the ground, the improvement of a horizontal rod member, mounting means fixedly mounting the rod member through a hole transversely through the knife element so as to extend transversely of the direction of travel and such that rod member portions project outwardly to each side of the knife element, the rod member being spaced above a lowermost point of the leading edge and below a top edge of the knife element so as to run along the ground just below the surface on either side of the furrow, said mounting means being arranged such that the rod member is held fixed against rotation relative to the knife element, such that the rod member is wholly supported solely by the mounting means, and such that the rod member portions extend from the mounting means in cantilever manner

5,005,498

COMPUTER CONTROLLED TUFTING MACHINE AND A PROCESS OF CONTROLLING THE PARAMETERS OF OPERATION OF A TUFTING MACHINE

Brooks E. Taylor, Lookout Mountain, and Marshall A. Neely, Soddy-Daisy, both of Tenn., assignors to Card-Monroe Corporation, Chattanooga, Tenn.

Continuation of Ser. No. 388,604, Jul. 1, 1989, which is a continuation of Ser. No. 284,939, Dec. 15, 1988, Pat. No. 4,867,080. This application Sep. 28, 1990, Ser. No. 590,122

Int. Cl.[5] D05C 15/14

U.S. Cl. 112—80.32 8 Claims

1 A tufting machine assembly of the type having reciprocating needles for inserting yarns carried by the needles through a backing material as the backing material is progressively fed through the tufting machine and across the path of reciprocation of said needles and so that said needles produce tufts in said backing material, the improvement comprising:

(a) a first means for controlling the feed of said backing material through the tufting machine

(b) a computer means coupled to said first means

(c) second means for generating signals indicative of the speed of reciprocation of said needles

(d) means coupling said second means to said computing means; and

(e) input means connected to said computer means for prescribing to said computing means the number of stitches per prescribed length of backing material to be produced

by said needles, whereby said computing means controls through said first means, the speed of said backing material through said tufting machine.

5,005,499

DEVICE FOR DISABLING AND ENABLING STITCHING NEEDLES IN A QUILTING MACHINE OR A MULTI-NEEDLE EMBROIDERY MACHINE

Giannino Landoni, Strada Prov. Busto-Cassano, 1, Fagnano Olona (Varese), Italy

Filed Nov. 21, 1989, Ser. No. 439,764
Claims priority, application Italy, Apr. 27, 1989, 20277 A/89
Int. Cl.[5] D05B 11/00, 21/00
U.S. Cl. 112—117 15 Claims

1. A device for disabling and enabling one or more stitching needles in a machine provided with at least one needle carrier bar having a plurality of stitching needles arranged thereon characterized in that it comprises a linear actuator (24) for disabling a needle (22), adapted to control the raising thereof relative to fabric (10) to be sewn, and to keep it in said position, and return means (38) for stitching yarn (44) of the disabled needle (22), adapted to subject to a limited tension the portion of the stitching yarn lying between the disabled needle (22) and fabric (10) to be sewn, said stitching yarn return means being enabled simultaneously to the disabling of a yarn tensioning device (48) which was operating when the disabled stitching needle (22) was sewing.

5,005,500

AUTOMATIC EMBROIDERING MACHINE WITH PATTERN INPUT MEANS

Kenji Kato, Hachiohji; Mikio Koike, Oume; Akira Orii, Hachiohji, and Shinichi Fuchigami, Fussa, all of Japan, assignors to Janome Sewing Machine Co., Ltd., Tokyo, Japan

Filed Jul. 27, 1990, Ser. No. 558,742
Claims priority, application Japan, Jul. 28, 1989, 1-193910; Jul. 28, 1989, 1-193911; Jul. 28, 1989, 1-193912
Int. Cl.[5] D05B 21/00
U.S. Cl. 112—121.12 11 Claims

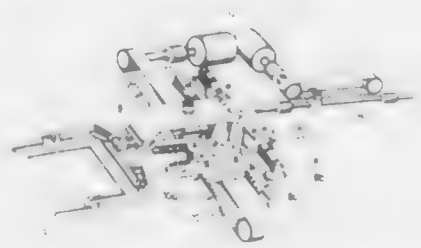
1. An automatic embroidering system comprising:

a sewing machine having a vertically reciprocating needle, a loop-taker means cooperating with said needle to form a stitch on a fabric, an embroidery frame located between said needle and said loop-taker means for supporting the fabric and a drive control means for shifting, under control, said embroidery frame in two perpendicular directions to provide a specific point at which the needle penetrates the fabric to form the stitch;

input means for inputting a first series of data representing coordinates of substantially continuous points on an original pattern to be reproduced with said sewing machine, said input means being arranged separately from said sewing machine but connectable thereto;

first memory means for storing said first series of pattern data;

converting means for converting said first series of pattern data into a second series of data representing coordinates of stitch points of a pattern to be actually produced on the fabric with said sewing machine as a boldfaced representation of the original pattern; and



second memory means for storing said second series of pattern data, said second series of pattern data being sequentially read out from said second memory to control operation of said drive control means provided in said sewing machine which is thus operable to produce the boldfaced pattern on the fabric.

5,005,501

X-Y TABLE DEVICE IN AUTOMATIC SEWING MACHINE

Fujio Kita, Aichi, Japan, assignor to Mitsubishi Denki K.K., Tokyo, Japan

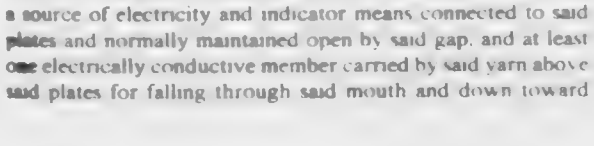
Filed Sep. 19, 1989, Ser. No. 409,368
Claims priority, application Japan, Sep. 27, 1988, 63-241381
Int. Cl.[5] D05B 21/00
U.S. Cl. 112—121.12 5 Claims

1. An X-Y table device in an automatic sewing machine in which a cloth retainer is moved according to a pattern stored in a memory medium, to embroider the pattern, which comprises:

a moving body provided on an X-Y table, said moving body being moved by first and second drive means two-dimensionally in respective first and second directions;

a support secured to said moving body, to transmit the two-dimensional movement to said cloth retainer;

a guide rail having a plurality of rail surfaces which, together with said support, forms one unit high in rigidity, said guide rail being extended to guide movement of said moving body in said first direction; and



guide block means engaged movably with said plurality of rail surfaces of said guide rail, to guide said guide rail in said first direction, and coupled to said second drive means to move said guide rail in said second direction whereby said moving body also is moved in said second direction.

5,005,502

SEWING MACHINE FOR HEMMING ARTICLES

Patrick Gerardis, Guildford, and John Tester, Mt Pritchard, both of Australia, assignors to Adapt Engineering Pty. Limited, New South Wales, Australia

Filed Jun. 2, 1989, Ser. No. 360,322
Int. Cl.[5] D05B 35/02
U.S. Cl. 112—141 10 Claims

1. An automatic feeder unit, adapted for operation with a sewing head having a rotatable main shaft, comprising:

a feed conveyor;

a top feed conveyor located above said conveyor;

a stepping motor which drives said top feed conveyor;

microprocessor means for controlling the speed of the top feed conveyor at various ratios relative to the speed of the main shaft, and

a synchronizer which is coupled to the main shaft to control the speed of the motor in relation to the speed of the main shaft, said synchronizer feeding a signal to said microprocessor means to achieve said controlling of speed.

5,005,503

BROKEN YARN DETECTOR FOR MULTIPLE YARN MANIPULATING MACHINES

Alain Trahan, Wickham; Paul-André Grondin, Acton Vale, and Luc Bilodeau, Drummond Ville, all of Canada, assignors to Peerless Carpet Corporation, Quebec, Canada

Filed Dec. 12, 1989, Ser. No. 449,555
Int. Cl.[5] D05B 69/36, D05H 63/024
U.S. Cl. 112—277 18 Claims

1. A yarn break detector for detecting the occurrence of a yarn having a broken end at a location between a yarn supply and yarn manipulating instrumentalities of a machine to which said yarn end is fed, said detector comprising first and second electrically conducting plates, mounting means for mounting said plates below said yarn end at a location where the broken yarn is to be detected, each of said plates having an upper edge and a lower edge, said plates being disposed at a downward inclination relative to each other to form a substantially V shape configuration therebetween with a small gap intermediate said lower edges and with said upper edges spaced apart to form a mouth therebetween, electrical circuit means including a source of electricity and indicator means connected to said plates and normally maintained open by said gap, and at least one electrically conductive member carried by said yarn above said plates for falling through said mouth and down toward said gap upon breakage of said yarn, said member being sized to short said plates together across said gap and close said

circuit means to energize said indicator means irrespective of any disposition of said member after it has fallen.

5,005,504

THREAD CUTTING DEVICE HAVING A TRANSLATABLY SLIDABLE KNIFE AND CATCHER, BEING DRIVEN FOR FORMING UNIFORMLY SHORT STITCH THREAD ENDS IN A ZIG ZAG SEWING MACHINE

Ernst Albrecht, Hochspeyer, and Harald Dinges, Kaiserslautern, both of Fed. Rep. of Germany, assignors to G. M. Pfaff Aktiengesellschaft, Kaiserslautern, Fed. Rep. of Germany

PCT No. PCT/EP88/00329, § 371 Date Dec. 28, 1989, § 102(e) Date Dec. 28, 1989, PCT Pub. No. WO88/08894, PCT Pub. Date Nov. 17, 1988
PCT Filed Apr. 19, 1988, Ser. No. 438,438
Claims priority, application Fed. Rep. of Germany, May 9, 1987, 3715603
Int. Cl.[5] D05B 65/00, 65/02
U.S. Cl. 112—292 4 Claims

1. A thread cutting device on a zigzag fabric sewing machine, comprising:

a needle bar with a needle being movable to a maximum overstitch width;

a needle plate, having a stitch hole adapted to accommodate the maximum overstitch width of the needle;

a rotating shuttle below said needle plate;

a thread catcher, moveable as a function of an angular position of said shuttle and having a separating tip, a barb for a leg of the needle thread loop leading to a fabric to be sewn and a shuttle thread, a cutting edge;

a cutting knife for cutting the threads, in cooperation with said thread catcher's cutting edge, said cutting knife is moveable in a plane parallel to said thread catcher;

a gear mechanism having stopping segments and connecting said thread catcher and said cutting knife such that said thread catcher and said cutting knife are movable together from a resting position located to a side of said stitch hole into a cutting position located in an area under the middle of said overstitch width;

said gear mechanism moving said thread catcher farther than said cutting knife, wherein said thread catcher separates and engages the threads, while said cutting knife

remains in said cutting position, after separating and engaging the threads, said thread catcher is moveable back in the direction of said cutting knife to cut the threads, and

after cutting the threads said cutting knife can again be returned into said resting position together with said thread catcher.

5,005,505

METHOD OF SUPPLYING THREAD FROM A REEL TO SEWING MACHINE AND HANGER USED THEREIN

Ryoichi Muragaki, Osaka, Japan, assignor to Muragaki Co., Ltd., Osaka, Japan

Filed Sep. 27, 1989, Ser. No. 413,562

Claims priority, application Japan, Oct. 3, 1988, 63-130378[U]

Int. Cl.' D05B [illegible]

U.S. Cl. 112—302 **12 Claims**

6. A hanger for supporting a thread being supplied to a sewing machine from a reel having a reel axis whereabout said thread is wound, comprising

a case body,

a shaft projecting from said body and rotatably mounted to said body, one end of said shaft being formed as a hook to catch said thread,

a dial rotatably mounted to said case body for rotation about a body axis

coupling means connecting said dial to said shaft for rotating said hook when said dial is rotated

RECREATIONAL WATER VEHICLE

Charles Handmer, Killarney Heights, Australia, assignor to Powerboard Australia Pty Limited, Australia

PCT No. PCT/AU87/00359, § 371 Date Jun. 19, 1989, § 102(e) Date Jun. 19, 1989, PCT Pub. No. WO88/03109, PCT Pub Date May 5, 1988

PCT Filed Oct. 23, 1987, Ser. No. 378,573

Claims priority, application Australia, Oct. 23, 1986, PH8651

Int. Cl.' B63B [illegible]

U.S. Cl. 114—270 **6 Claims**

1. A recreational water vehicle which comprises

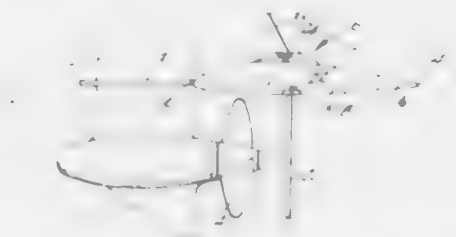
a longitudinally extending hull

an engine housing attached to a rear of the hull and having means for non-steerably mounting a motor so that propulsion of the vehicle is always directly forward, the housing extending upwardly from the hull so as to provide a back rest for a seated driver, and

handle means mounted on the hull to enable the driver to keep a hold on the vehicle

the vehicle being steerable by weight transfer of the driver from side to side of the vehicle and wherein a laterally extending portion is provided at each side adjacent the rear of the vehicle to increase drag on one side upon leaning of the vehicle so as to assist slow speed turning of the vehicle, each laterally extending portion being substantially within the perimeter of a plan view of the hull and scooped inwardly of each respective side of the vehicle.

5,005,507



HYDROFOIL WITH RETRACTABLE PLATE

William B. Dyer, 3358 Taylor Rd., Central Point, Oreg. 97502

Filed Sep. 25, 1989, Ser. No. 412,151

Int. Cl.' B63B [illegible]

U.S. Cl. 114—280 **10 Claims**

1. An attachment for securement to the lower housing of an outboard motor or outdrive unit of a boat proximate the propeller of same, said attachment comprising,

a hydrofoil having a leading edge and a trailing edge and a curved upper surface providing a camber, said leading edge defining a rearwardly extending recess to receive a portion of said housing,

a plate pivotally mounted on the hydrofoil and having a retracted position and a deployed position rearwardly of the propeller for affecting propeller efficiency and boat speed, and

locking means acting on said plate to maintain same in an upright deployed position against displacement by water impingement

---

5,005,508

ANCHOR ASSEMBLY

Peter W. Crosby, and Henry W. Schenk, both of Buffalo, N.Y., assignors to The Crosby Company, Buffalo, N.Y.

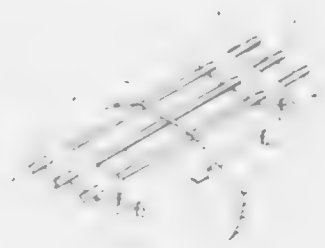
Filed Sep. 20, 1989, Ser. No. 409,807

Int. Cl.' B63B *21/44*

U.S. Cl. 114—309 **6 Claims**

1. An anchor assembly having a crown box, a stock extending through and to either side of the crown box, a pair of opposed flukes, and a shank assembly having one end pivotally secured to the stock within the crown box characterized in that each fluke of the pair of opposed flukes is substantially identical with the other, each fluke being formed from a single piece of sheet metal, the sheet metal after forming including a triangular flat plate portion and a flange portion to one side of the triangular plate portion, a section of the flange portion being at substantially right angles to the flat plate portion, the flange portion being bent in such a manner that it extends equally either side of the flat portion, the base of the triangular plate portion of each fluke being secured to the stock to one side of the crown box with the flange portion being disposed adjacent the shank assembly.

5,005,509



DINGHY SPAR AND EQUIPMENT CARRIER

D. Scot Williams, 123 E. Churchwell, Knoxville, Tenn. 37917

Filed Oct. 24, 1988, Ser. No. 261,127

Int. Cl.' B63B [illegible]

U.S. Cl. 114—343 **7 Claims**

1. A dinghy spar and equipment carrier for removable mounting on a dinghy boat, said dinghy boat defining a cockpit, said carrier comprising

an enclosure for receiving equipment related to the operation of a dinghy boat, said enclosure having a top portion and a bottom portion, said bottom portion defining a bottom surface, said enclosure also having first and second opposite end portions,

a pair of selectively spaced yoke members mounted on said enclosure for cooperatively engaging and carrying oars-spars and

support means for mounting said enclosure on said dinghy-boat, said support means including at least on support member mounted on said bottom surface of said enclosure for being received in said cockpit so as to restrict lateral movement of said enclosure as it is mounted on said dinghy boat, said support member being positioned upon said bottom surface such that at least a portion of said bottom surface supportively engages said dinghy boat proximate the perimeter of said cockpit

5,005,510

HIGH STRENGTH BOAT HULL STRUCTURE

Robert D. Schad, 110 Bloor Street West, Suite 2104, Toronto, Ontario, Canada

Filed Dec. 18, 1989, Ser. No. 451,580

The portion of the term of this patent subsequent to Jan. 9, 2007, has been disclaimed.

Int. Cl.' B63B *5/24*

U.S. Cl. 114—357 **6 Claims**

1. A method of fashioning an impact resistant boat hull structure comprising the steps of

supporting at least one elongated batten-like, wear strip on a frame of the type used to lay up a fiberglass reinforced plastic skin,

said wear strip having an internally projecting rail or rib interrupted by cutouts, and,

applying layers of fiberglass reinforced plastic material upon said frame and upon said wear strip so that a composite body is developed wherein the rail and the cutouts mesh with said reinforced plastic material to define a first and a second key means.

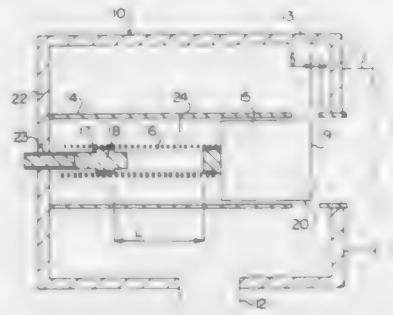
5,005,511

AIR-DRIVEN LOW-FREQUENCY SOUND GENERATOR WITH POSITIVE FEEDBACK SYSTEM

Mats A. Olsson, Bromma, Sweden, assignor to Infrasonik AB, Stockholm, Sweden

PCT No. PCT/SE88/00172, § 371 Date Oct. 6, 1989, § 102(e) Date Oct. 6, 1989, PCT Pub. No. WO88/07894, PCT Pub. Date Oct. 20, 1988

PCT Filed Apr. 8, 1988, Ser. No. 424,206



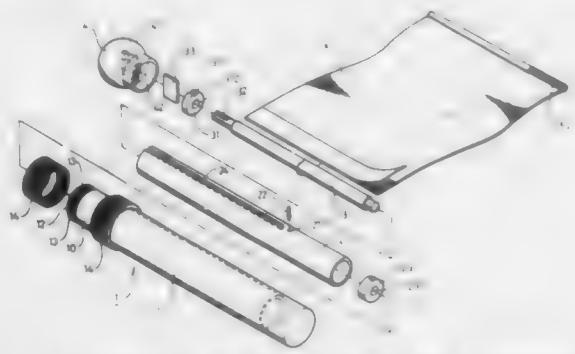
Claims priority, application Sweden, Apr. 8, 1987, 8701461

Int. Cl.' B06B [illegible]

U.S. Cl. 116—137 R **4 Claims**

1. In an air-driven, low-frequency sound generator with a positive feedback system, including, as a sound emitter, an open end tubulator resonator for generating standing, gas-borne sound waves which produce a varying gas pressure in the resonator and a feeder connected to one end of the resonator for regulating and supplying pressurized gas to the resonator from a source of pressurized gas and in which the feeder comprises a tube open at one end that communicates with the

interior of the resonator and a reciprocable, resilient slide valve located in the tube that regulates the flow of pressurized gas from the feeder to the resonator while creating a modulated flow of gas to the resonator, the improvement comprising a surge tank surrounding said tube that is connectable to the source of pressurized gas, a piston slidably mounted in said tube and having a first end surface communicating with the interior of the resonator and spring means acting on an opposite end of said piston, said piston having a side surface be-



tween said ends and being moveable back and forth inside said tube under the competing influences of variations in the pressure inside the resonator and the force of the spring means and an opening in the tube controlled by the side surface of said piston that communicates the interior of the surge tank with the interior of the tube and the interior of the resonator, the side surface of said piston periodically opening and closing said opening as it moves back and forth in the tube to thereby modulate the flow of gas to the resonator.

5,005,512

PORTABLE EXTENSIBLE FLAG POLE WITH A FLAG

Shan C. Fu, No. 38, Alley 316, Ta Shun 3rd Rd., Kaohsiung, Taiwan

Filed Mar. 29, 1990, Ser. No. 500,941
Int. Cl.[5] G09F *17/00*
U.S. Cl. 116—173 **2 Claims**

1. A portable extensible flag pole with a flag comprising:
an extensible tubular pole assembly having at least two pole tubes of different diameter, including a smaller size pole tube telescopically mounted in a bigger size pole tube, each of said pole tubes having a distal male-threaded portion a female-threaded ring on each of said male-threaded portions, said distal male-threaded portion of each pole tube having several vertical split gaps useful for the female-threaded ring on the bigger tube to screw tight the bigger size pole tube around the smaller size pole tube, and the smallest size pole tube being able to contain an inner tube therein;
an inner tube having a lengthwise straight slot for the body of a flag to pass through, a pin hole near the inner end of said slot for a pin to connect a shaft ring with the inner tube and the shaft ring having a central hole for the lower end of a shaft to fit and be able to rotate in the inner tube;
a shaft having both ends of smaller size than the shaft body, a shaft ring rotatably mounted on each end of the shaft, one end of the shaft having a vertical slot located beyond the respective shaft ring and having a moving plate inserted therein;
a spherical cap having a groove in the interior for the moving plate and said one end of the shaft to insert therein and a round opening for the inner tube to fit in, said cap being able to be rotated manually to rotate the shaft at the same time for rolling a flag around the shaft for storing it away in the inner tube; and
a flag having an inner end glued on the shaft body and an outer end thicker than the width of the straight slot in the inner tube the flag being rolled around the shaft with the outer end being located outside said slot, to allow unrolling and rolling up of the flag by rotating the cap and so as to prevent the flag from being completely rolled onto the shaft

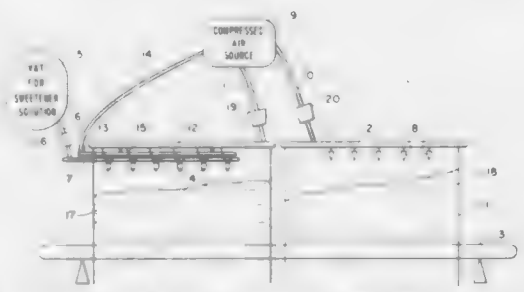
HYDROGEN GAS-FILLED BALLOON SIGNALLING SYSTEM

Norman Van Patten, 584 S. 1st East, Springville, Utah 84663; Blaine Van Patten, 16 LaVesta Verde-Rancho, Palo Verde, Calif. 90274, and Vernon Dillenbeck, Orem, Utah, assignors to Norman Van Patten, Springville, Utah and Blaine Van Patten, Palo Verde, Calif.

Continuation-in-part of Ser. No. 345,363, May 1, 1989. This application Feb. 23, 1990, Ser. No. 483,630
Int. Cl.[5] B64B *1/50*
U.S. Cl. 116—210 **12 Claims**



1. A balloon signalling system comprising
a hollow resilient casing having a container section with an upper open end and a bottom closed end, and a cap placeable on and removable from the upper end of the container section,
a hollow resilient flask having an opening and removably disposed in the container section of the casing,
a reactable material disposed in the flask,
a breakable cartridge disposed in the flask with the reactable material and containing a solution which, when it contacts the reactable material, produces hydrogen gas, wherein said casing is bent until the cartridge breaks to release the solution,
an inflatable balloon having an opening for receiving hydrogen gas to be inflated thereby, said balloon being collapsible to fit within the casing above the flask,
a nozzle means disposed in the balloon opening for allowing hydrogen gas to enter and inflate the balloon, and for preventing the escape of hydrogen gas from the balloon, said nozzle including receiving means for releaseably receiving the end of a tube,
a tube coupling the opening of the flask to the receiving means of the nozzle means for carrying to the balloon hydrogen gas produced in the flask, to thereby inflate the balloon and cause it to rise from the casing and pull the nozzle means off the tube, and
tether means attached to the balloon or nozzle means for holding the balloon from rising above a certain altitude.

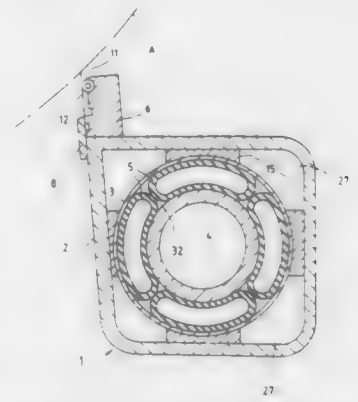
5,005,514

METHOD AND APPARATUS FOR SPRAYING SNOW-LIKE FROSTING ONTO FOODSTUFF PARTICLES

Marsha K. Verrico, Fair Lawn, N.J., assignor to Nabisco Brands, Inc., East Hanover, N.J.

Continuation of Ser. No. 119,257, Nov. 6, 1987, Pat. No. 4,856,453, which is a continuation of Ser. No. 885,689, Jul. 15, 1986, abandoned, which is a division of Ser. No. 710,400, Mar. 11, 1985, Pat. No. 4,702,925. This application May 5, 1989, Ser. No. 348,883
The portion of the term of this patent subsequent to Aug. 15, 2006, has been disclaimed.
Int. Cl.[5] A23G *3/20;* **B05C** *5/00*
U.S. Cl. 118—16 **6 Claims**

1. An apparatus for applying a crystalline frosting on foodstuffs including a first section and a second section, consisting essentially of:
a means for conveying a plurality of foodstuff units through said apparatus;
a plurality of spray guns mounted in said first section and adapted to atomize and spray a sweetener solution to form crystalline particles on the surface of the foodstuff particles;
a plurality of air flow amplifiers mounted in said second section to direct a flow of compressed air and atmospheric air onto the foodstuff particles;
a liquid feed system adapted to supply a sweetener solution to said plurality of spray guns; and
a compressed air supply system for supplying food grade clean compressed air to said plurality of spray guns and said air flow amplifiers via manifolds and step down lines, such that compressed air is provided to said spray guns at pressures such that said spray guns atomize and spray said sweetener solution onto said foodstuff units to form crystalline sweetener particles having a snow-like appearance thereon, and compressed air is provided to said air flow amplifiers at pressures such that said air flow amplifiers direct a mixture of compressed air and atmospheric air onto the sprayed foodstuff units to dry the sprayed crystalline sweetener particles.



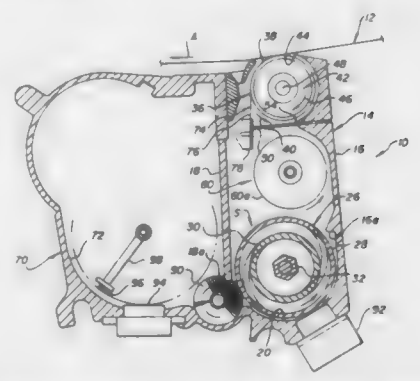
5,005,515

SMOOTHING DEVICE OF A COATING APPLICATOR UNIT

Hans-Peter Sollinger, Heidenheim, Fed. Rep. of Germany, assignor to J. M. Voith GmbH, Fed. Rep. of Germany

Filed Jun. 13, 1989, Ser. No. 365,475
Claims priority, application Fed. Rep. of Germany, Sep. 23, 1988, 3832325
Int. Cl.[5] B05C *11/04*
U.S. Cl. 118—100 **35 Claims**

1. A smoothing device for supporting a doctor element in engagement with a moving surface, the device comprising:
a hollow supporting beam extending across the width of the moving surface; a doctor element supported on the beam and projecting from the beam toward the moving surface;
a central supporting body extending through the hollow beam; an outer pipe also extending through the beam, disposed around the supporting body and radially spaced therefrom; a plurality of pressure elements disposed between the supporting body and the outer pipe and extending along the length of the beam, for transmitting force from the outer pipe to the supporting body within;
a plurality of connections from the exterior of the outer pipe to the supporting beam for transmitting forces applied by the beam and forces applied by the doctor element to the



beam, through the connections to the outer pipe, and the connections between the outer pipe and the beam being placed for defining elongate channels extending through the hollow beam and outside the outer pipe for transmitting a fluid medium along the channels for heat transmission.

5,005,516

DEVICE FOR AIDING IN MEASURING PIGMENTED MARKING PARTICLE LEVEL IN A MAGNETIC BRUSH DEVELOPMENT APPARATUS

Larry W. Speer, Hilton, N.Y., assignor to Eastman Kodak Company

Filed Dec. 1, 1989, Ser. No. 444,257
Int. Cl.[5] G03G *15/09*
U.S. Cl. 118—657 **4 Claims**

1. An improved magnetic brush development apparatus for applying developer material to a latent image on a moving image carrying member, said apparatus comprising:
a housing defining a sump portion adapted to contain a supply of developer material for a magnetic brush a developer material replenishment device including a reservoir for replenishment material adjacent to said sump portion, a flow communication path between said reservoir and said sump portion, means for selectively controlling flow of replenishment material through said path, and means for measuring level of replenishment material in said reservoir, said measuring means including a material monitor located in the bottom of said reservoir immediately upstream of said flow communication path, and means an agitator for stirring material in said reservoir, and a brush attached to the end of said agitator for periodically sweep-

ing the surface of said monitor to facilitate accurate measurement of replenishment material level.

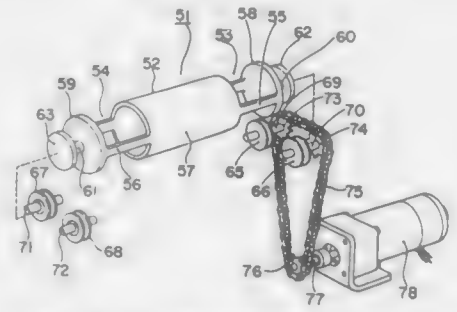
ARTIFICIAL HAIR FOR HAIR-IMPLANTATION AND PREPARATION PROCESS AND PREPARATION APPARATUS THEREOF

Shiro Yamada, No. 2-7-1-606, Mita, Minato-ku, Tokyo, Japan



Division of Ser. No. 352,447, May 16, 1989. This application Dec. 20, 1989, Ser. No. 453,898

Claims priority, application Japan, Aug. 4, 1988, 63-193445

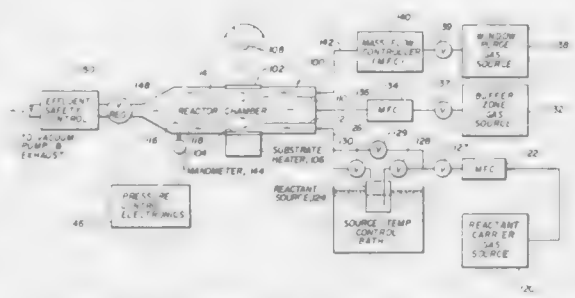
Int. Cl.[5] C23C *14/00, 14/04*

U.S. Cl. 118—716 **2 Claims**

1. An apparatus for the preparation of artificial hairs for hair-implantation, comprising: a vacuum vessel, a vacuum pump communicating with the vacuum vessel through an on-off valve, a crucible disposed in the vacuum vessel equipped with a heater for fusing silver, and a rotary container provided in the vacuum vessel adapted to receive monofilaments of a synthetic resin therein whereby amorphous silver is caused to adhere in spots to the monofilaments by subjecting said monofilaments to vacuum deposition of said silver at a vacuum degree of 10^{-3}–10^{-6} Torr at monofilament substrate

temperatures of 36° C. or lower upon rotation of said container;

wherein the rotary container is formed of a hollow cylinder having closed side ends and wherein said cylinder is provided with a plural number of openings which are made by cutting off a circumferential wall of said hollow cylinder in a vicinity close to said side ends or one side end of said hollow cylinder so as to expose free ends of monofilaments of artificial hairs held in said rotary container.



5,005,519
REACTION CHAMBER HAVING NON-CLOUDED WINDOW

John C. Egermeier; Janet Ellzey, both of Vienna, Va., and Delroy Walker, Mt. Rainier, Md., assignors to Fusion Systems Corporation, Rockville, Md.

Filed Mar. 14, 1990, Ser. No. 492,454

Int. Cl.[5] C23C *16/48*

U.S. Cl. 118—722 **17 Claims**

1. A reactor for performing a process in which a photoreactable gas is deposited on a substrate, comprising,

an enclosure having a window for allowing the passage of radiation to which said photoreactable gas is responsive,

the enclosure having two baffles therein which extend across the enclosure from wall to wall for dividing the space therein into three zones, the zone nearest the window being the window zone, the zone between the baffles being the buffer zone, and the other zone being the reactant zone,

each of said baffles having an opening in line with the window and the enclosure being adapted for receiving the substrate in the reactant zone at a position in line with the window and the baffle openings,

means for causing gas having a reactant to be deposited on said substrate to flow past said substrate in said reactant zone,

means for causing gas to flow in said buffer zone, and

means for causing gas to flow past said window in said window zone.

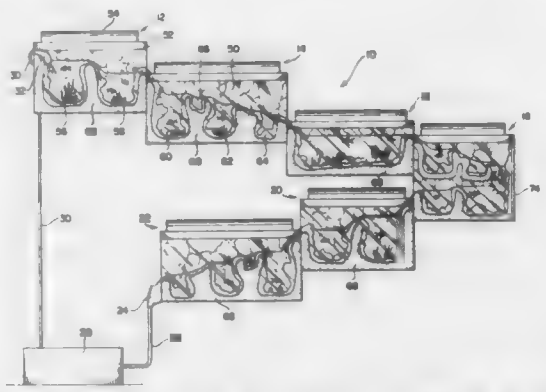
Int. Cl.[5] A01K *1/015*

U.S. Cl. 119—172 **6 Claims**

1. A method for deodorizing animal litter employing an oxidizing deodorizer substance which is a metallic double salt selected from a group consisting essentially of sodium percarbonate, sodium perborate, potassium percarbonate, and potassium perborate.



5,005,521
AQUARIUM ASSEMBLY

Finn A. Strong, 687 Fox Hill Rd., Chatham, Mass. 02633

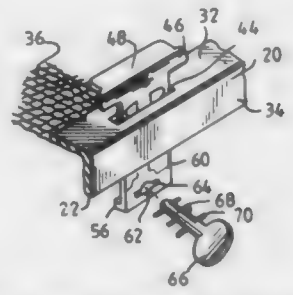
Filed Jul. 13, 1990, Ser. No. 552,104

Int. Cl.[5] A01K *63/00*

U.S. Cl. 119—5 **17 Claims**

1. An aquarium system comprising a plurality of discreet tanks, means mounting said tanks in stepped, gradually descending relation to each other whereby water introduced to the uppermost tank flows therethrough and then down into and through each succeeding tank, each tank having a base member comprising an inlet section located adjacent the tank upstream end, and an outlet flume extending outwardly from the tank downstream end, and complementary connecting means located on each inlet section and on each flume, whereby the flume of one tank can be releasably connected to the inlet section of the next succeeding tank in order to maintain adjacent tanks releasably interconnected to each other and at the same time permitting water to flow from one tank to the next.

5,005,522
TAB FOR ANIMAL TANK COVER



Richard A. Gordon, 95 W. 3rd St., Freeport, N.Y. 11520

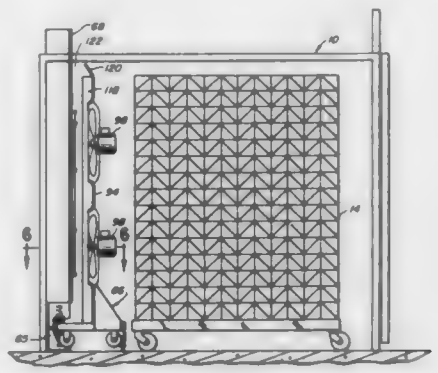
Filed Jun. 7, 1990, Ser. No. 534,443

Int. Cl.[5] A01K *63/00*

U.S. Cl. 119—5 **6 Claims**

1. In combination with a cover for an animal tank, fish tank, or the like, the tank defining a peripheral enclosure having an open top provided with a border having an exterior lip, said cover comprising a continuous frame, the cross section of which comprises a horizontal wall adapted to be positioned over the top of said tank and a vertical skirt wall adapted to fit loosely about the exterior lip of the border, said frame having a plurality of retaining clips depending therefrom, certain ones of said retaining clips depending fixedly from the vertical skirt of said frame on one side of said frame to engage the tank enclosure beneath said exterior lip and certain others of said retaining clips being separately removable, said removable retaining clips being located in respective slot openings in the horizontal wall of said frame opposite to the side of said frame having the fixed retaining clips, said removable retaining clips depending freely and loosely through said openings below the lip, each of said retaining clips being formed of a planar body having front and rear surfaces provided with laterally extending projections at its upper end to prevent said retaining clips from passing through the openings, a boss located adjacent the upper edge of said body adapted to engage below the upper surface of the horizontal wall in engagement with the border of

said tank, an upper shoulder located on the rear surface of the body adapted to engage the vertical skirt wall of the frame and a lower shoulder on the rear surface of the body to engage below the lower edge of the vertical skirt wall of the frame, an enlarged tab along the lower portion of the front surface of the body, and key means passing through said body adjacent said enlarged tab being operable to removably engage the face of the tank, said key means causing said body to flex on engagement of said key with said glass to secure said bosses and shoulders in engagement with said respective portions of said border and frame,.

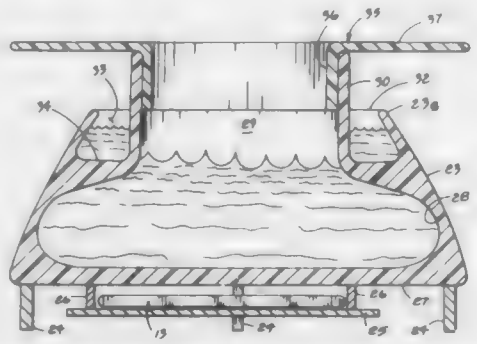


5,005,523
HATCHER WITH INTERNALLY MOUNTED EXHAUST DUCT AND EXHAUST DAMPER CONTROL MEANS

Matthew R. Foster, Cambridge, Canada, assignor to Marmon Corporation, Chicago, Ill.

Continuation of Ser. No. 145,608, Jan. 19, 1988, abandoned. This application Jan. 31, 1990, Ser. No. 473,118

Int. Cl.[5] A01K *41/00*



U.S. Cl. 119—37 **16 Claims**

1. An egg hatcher structure comprising a hatching chamber; airflow control means for creating a restricted area high pressure air zone within said chamber to control the flow of external air into the hatching chamber and to control the flow of internal air out of the hatching chamber; environmental adjustment means mounted on a moveable frame with wheels for heating, humidifying and circulating air within said chamber and alignment means for placement and removal of said environmental adjustment means; and environmental adjustment control means for monitoring the temperature, moisture and air circulation levels within the chamber and adjusting the environmental adjustment means and airflow control means to

maintain the temperature, moisture and air circulation at prescribed levels.

PET FEED BOWL CONSTRUCTION
Nancy K. Berry, 1980 W. Hibbard, Owosso, Mich. 48867
Filed Feb. 28, 1990, Ser. No. 486,286
Int. Cl.[5] A01K *7/00*
U.S. Cl. 119—51.11 **1 Claim**

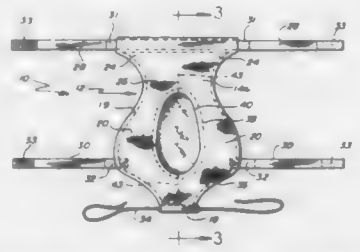
1. A pet feed bowl apparatus including an upper bowl cavity defined by cylindrical interior wall and a conically tapered exterior body wall coaxially arranged about the cylindrical wall, and

a fluid cavity for containing fluid defined between the conical wall and the cylindrical wall, and

a heating plate including a first and second heating element underlying the upper bowl cavity, the heating plate including a timer mechanism mounted thereto for providing selective heating of the heating plate, and

the heating plate and timer mechanism arranged for electrical communication relative to one another, and

said first and said second heating elements mounted within the heating plate, and



a switch means for selective actuation of the first and second heating elements to permit the elements to cooperate in concert or to effect actuation of the first and second heating elements individually, and

wherein the cylindrical wall is arranged to extend above the exterior conical wall, said upper bowl cavity defined by a lower elliptical cavity and a cylindrical upper cavity coaxially spaced above the elliptical cavity, the fluid cavity positioned above the elliptical cavity and in surrounding relationship to the cylindrical upper cavity to impart stability to the feed bowl, and

including a support grid underlying the elliptical cavity, and a floor defined coextensively between lower terminal ends of the conical exterior wall coaxially and orthogonally arranged relative to an axis defined by the conical wall and the cylindrical walls, and the support grid including a plurality of spacer legs orthogonally mounted to the floor and the spacer legs fixedly mounting the grid in a spaced relationship relative to the floor, and the heating plate selectively receivable on the grid and leg members extending below the grid spaced relative to one another at predetermined intervals and orthogonally mounted to the floor, and

including an insert slidably mounted within the cylindrical wall, the insert including an insert cylindrical wall defined by an external diameter substantially equal to an internal diameter defined by the cylindrical wall, and the insert further including an annular flange orthogonally and integrally mounted to an upper terminal end of the insert cylindrical wall, the insert annular flange including an outer peripheral end extending beyond the conical flange.

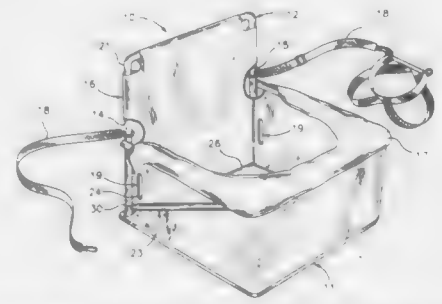
COLLAPSIBLE VEHICLE SAFETY APPARATUS FOR ANIMALS
Charles Parker, 9953 Blossom Valley Rd., El Cajon, Calif. 92021
Filed Sep. 14, 1990, Ser. No. 582,408
Int. Cl.[5] A01K *29/00*
U.S. Cl. 119—96 **5 Claims**

1. A collapsible vehicle safety apparatus for animals comprising:

a. a rigid base;

b. a collapsible support frame removably secured to the base;



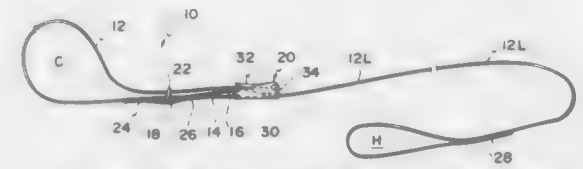
c. at least two blind insertion holes, in the base, to releasingly accept and retain a first leg and a second leg of the frame;

d. a pliable barrier cover attached to the frame;

e. a padded top restraint means, attached to the cover, to reduce trauma from impact due to abrupt forward movement;

f. an adjustable harness, attached to the frame, to restrict movement of the animal;

g. a first seat belt attachment means, in the cover, to attach a vehicular seat belt to secure the frame and cover to the vehicle;



h. a second seat belt attachment means, attached to the cover, to secure the frame and the cover to the vehicle;

i. an insertion port in the cover; and

j. a removable soil tray slidingly inserted through the port, over and in intimate contact with the base.

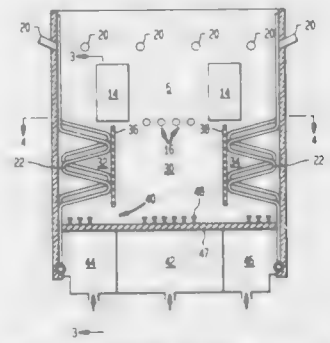
BUBBLING FLUID BED BOILER WITH RECYCLE
Michael J. Virr, Fairfield, Conn., assignor to Tampella Keeler Inc., Williamsport, Pa.
Filed Apr. 12, 1990, Ser. No. 508,841
Int. Cl.[5] F23D *1/00;* **F23G** *5/00*
U.S. Cl. 122—4 D **13 Claims**



1. A process for burning carbonaceous material to generate steam which comprises the following steps:

introducing carbonaceous material to a lower combustion region of a reactor chamber of bubbling fluid bed boiler, said lower combustion region comprising: a combustion zone disposed between at least a first heat transfer zone and a second heat transfer zone, wherein the zones are formed by at least two substantially vertical internal wall members disposed within said lower combustion region such that one internal wall member is disposed between said first heat transfer zone and said combustion zone, and another internal wall member is disposed between said second heat transfer zone and said combustion zone; said first and second heat transfer zones having heat exchange means disposed internally therein; and a means for individually controlling the fluidizing gas supplied to each zone;

heating said combustion zone to a temperature in the range between about 800 to 1200° F. prior to introduction of said carbonaceous material;

fluidizing said carbonaceous material within said combustion zone with a primary fluidizing gas introduced at the bottom of said reactor chamber and a secondary fluidizing gas introduced into said reactor chamber at a level above said primary fluidizing gas, wherein the velocity of said combustion zone is in the range between about 8–17 ft/sec;

fluidizing said carbonaceous material within said heat transfer zones with a primary fluidizing gas introduced at the bottom of said reactor chamber and a secondary fluidizing gas introduced into said reactor chamber at a level above said primary fluidizing bas when the temperature of said

combustion zone is between about 1500 to 1700° F., wherein the velocity within said heat transfer zones is in the range between about 2–6 ft/sec such that the fines of said carbonaceous material are carried up the center of said reactor chamber and down the sidewalls into said heat transfer zones;

burning said carbonaceous material in said reactor chamber;

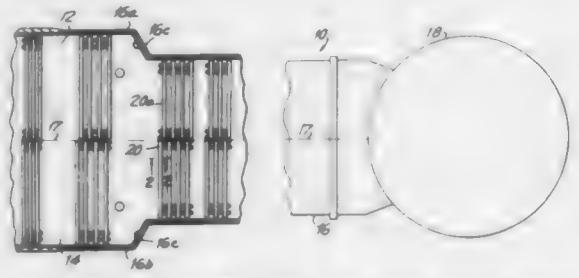
removing thermal energy from said reactor chamber by disposing heat exchange means substantially throughout the freeboard region and along the walls of said reactor chamber and also within said heat transfer zones, whereby water contained within said heat exchange means is heated to produce steam;

separating solid particles entrained in flue gas discharged by said reactor chamber; and

returning the separated solid particles to said reactor chamber via a recycle port disposed in a sidewall of said reactor chamber.

5,005,529
MODULAR HEAT RECOVERY STEAM GENERATOR HAVING PARALLEL OFFSET HEADERS
John Polcer, Morris, N.J., assignor to Foster Wheeler Energy Corporation, Clinton, N.J.
Filed Apr. 23, 1990, Ser. No. 513,416
Int. Cl.[5] F22B *15/00, 25/00*
U.S. Cl. 122—235.15 **10 Claims**

1. A modular heat recovery generator utilizing at least two parallel upper and lower pressurizable headers each connected together by tubes, which generator comprises:



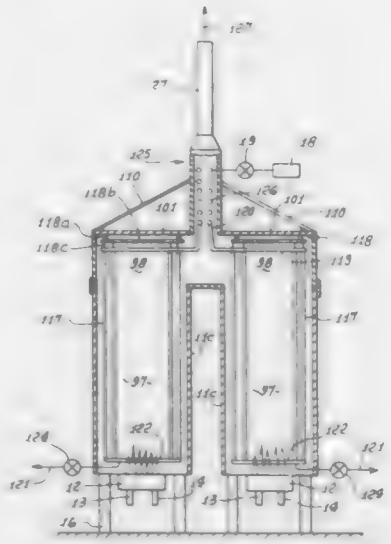
a horizontally extending casing;

a first elongated pressurizable upper header extending horizontally and transversely within said casing;

at least two rows of vertically-oriented tubes each connected pressure-tightly to said first upper header and also connected pressure-tightly to a corresponding elongated lower header; and

a second elongated pressurizable upper header located parallel to and offset from said first upper header, said second

upper header having at least two rows of vertically-oriented tubes connected pressure-tightly to the second header and also connected pressure-tightly to a corresponding lower header, wherein the tubes connected to said first upper header are located on a side opposite from



the tubes connected to said second upper header, and the adjacent ends of said first and second headers overlap each other, so as to provide dual adjacent tube banks within said casing of the modular heat recovery generator assembly.

FURNACE RADIANT SECTIONS WITH VERTICAL HEAT EXCHANGER TUBING, AND CONVECTION SECTION

Frank W. Tsai, 1842 Alpine Dr., San Marino, Calif. 91108

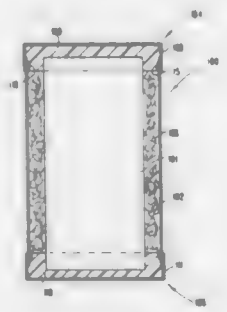
Filed Jun. 8, 1990, Ser. No. 535,408
Int. Cl.[5] F22B *31/00*
U.S. Cl. 122—240.3 **13 Claims**

1. The method of combining two furnaces into one, each furnace having a lower radiant section that includes upright walls and horizontal heat exchanger tubes, and an upper convection section, the lower section having associated fuel burners, that includes:

(a) removing said horizontal heat exchanger tubes from said lower section,

(b) extending said lower section upright walls vertically upwardly, and providing space between the vertically extended lower sections,

(c) providing top walls over said vertically extended lower sections, and providing vertically extending heat exchanger tubing and suspending said tubing vertically within said vertically extended lower radiant sections, to be heated by hot gases produced by combustion of fuel supplied via said burners,



(d) and providing and locating an upright furnace convection section in flow receiving communication with said lower radiant sections, via lateral passages therefrom.

THERMAL INSULATION JACKET

Thomas E. Nelson, 6100 Old La Grange Rd., Crestwood, Ky. 40014

Continuation of Ser. No. 412,923, Sep. 26, 1989, Pat. No. 4,972,759, which is a continuation-in-part of Ser. No. 309,658, Feb. 13, 1989, Pat. No. 4,878,459. This application Jul. 23, 1990, Ser. No. 557,171
The portion of the term of this patent subsequent to Nov. 7, 2006, has been disclaimed.
Int. Cl.[5] F22B *37/36*
U.S. Cl. 122—494 **9 Claims**

1. A water heater comprising:

a generally cylindrical inner tank arranged so as to have a top end and an oppositely disposed lower end;

a generally cylindrical outer shell disposed about said inner water tank and defining therewith an annular clearance space therebetween, said outer shell being arranged so as to have an upper edge and an oppositely disposed lower edge;

insulation means disposed in said annular space;

a top cover having an outer casing and a panel of insulation material disposed in said outer casing, said panel of insulation material being shaped so as to define a generally central recess which is suitably sized, shaped and positioned to fit over the top end of said inner tank; and

a bottom cover having an outer casing and a panel of insulation material disposed in said outer casing, said panel of insulation material being shaped so as to define a generally central recess which is suitably sized, shaped and positioned to fit over the lower end of said inner tank.

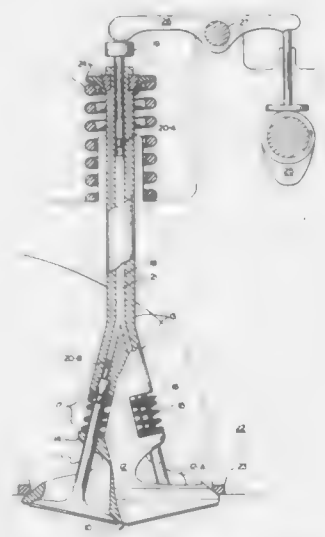
METHOD AND DEVICE FOR INTRODUCING A CARBURETTED MIXTURE UNDER PRESSURE IN A CHAMBER OF A TWO-STROKE ENGINE

Jean-Pierre Maissant, 12bis, rue du General Noel, 92500 Rueil Malmaison, France

Filed Dec. 29, 1989, Ser. No. 459,300
Claims priority, application France, Dec. 30, 1988, 88 17601
Int. Cl.[5] F02M *67/00, 69/10*
U.S. Cl. 123—65 VB **19 Claims**



1. A device for introducing a carburetted mixture under pressure into a chamber of a first cylinder of a two-stroke internal combustion engine, the device comprising a valve having a first end cooperating with a seat for closing a feed duct feeding the carburetted mixture into the chamber of the first cylinder, means for returning the valve, an assistance member comprising a separation element cooperating with one end of a stem of the valve opposite said first end, said assistance member separating a first volume and a second volume within each of which a pressure prevails, the separation element being displaceable and causing displacement of the valve under an action of a pressure difference between the pressure of the first volume and the pressure of the second volume, and means for connecting said feed duct to said first volume so that the pressure in said first volume is substantially equal to the pressure in said feed duct.

5,005,538

EXTENDED CIRCUMFERENCE INTAKE POPPET VALVE SYSTEM FOR OPENING AND SEALING A SINGLE VALVE SEAT

Charles W. Bergeron, P.O. Box 17, Putnam Hall, Fla. 32185

Filed Jul. 3, 1990, Ser. No. 547,810
Int. Cl.[5] F01L *1/28, 3/00*
U.S. Cl. 123—79 R **2 Claims**

1. An improved intake valve for an internal combustion engine to increase the volumetric efficiency of the engine comprising:

a primary poppet valve having a stem and a circular valve body with a valve seat face disposed around the perimeter of the circular valve body, said primary valve body having at least three apertures disposed there through, said apertures including annular valve seats;

at least three secondary smaller poppet valves each sized to fit sealably within each of the primary valve apertures respectively;

means for supporting at least three secondary poppet valves connecting said three secondary poppet valves to said primary valve; and

means for opening and closing said secondary and primary poppet valves.

5,005,539

ENGINE CYCLE CONTROL SYSTEM

Hideo Kawamura, Samukawa, Japan, assignor to Isuzu Ceramics Research Institute Co., Ltd., Kanagawa, Japan

Filed May 11, 1990, Ser. No. 522,320
Claims priority, application Japan, May 11, 1989, 1-118474
Int. Cl.[5] F02B *69/06*
U.S. Cl. 123—21 **3 Claims**

1. An engine cycle control system for controlling an engine so as to be selectively operable in different cycle modes depending on the rotational speed thereof, comprising:

a cylinder;

a piston reciprocally disposed in said cylinder and having a piston head surface;

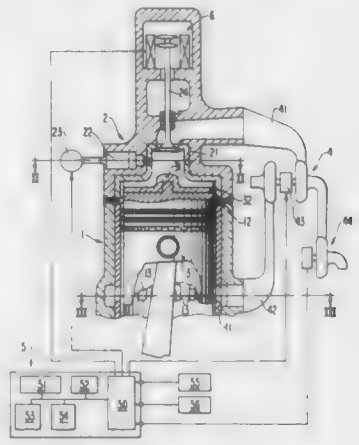
an intake port defined in a circumferential surface of said cylinder and positioned such that the intake port positionally corresponds to said piston head surface when said piston reaches a position near the bottom dead center thereof;

an exhaust port defined in an upper portion of said cylinder;

an exhaust valve for opening and closing said exhaust port;

rotation detecting means for detecting a rotational speed of the engine;

load detecting means for detecting a load on the engine;



valve actuator means for actuating said exhaust valve to open and close said exhaust port;

supercharging means for supplying intake air under pressure through said intake port into said cylinder;

supercharging assisting means for assisting in supercharging operation of said supercharging means;

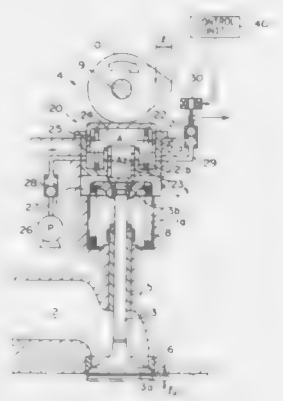
a fuel injection nozzle disposed in the upper portion of said cylinder and operable by a control signal for injecting fuel into said cylinder at a prescribed timing;

cycle mode selecting means for controlling said valve actuator means to operate said exhaust valve each time the engine makes one revolution and also controlling said fuel injection nozzle to eject fuel each time the engine makes one revolution, thereby operating the engine in a two-cycle mode, when the rotational speed of the engine detected by said rotation detecting means is lower than a predetermined speed, and for controlling said valve actuator means to operate said exhaust valve each time the engine makes two revolutions and also controlling said fuel injection nozzle to eject fuel each time the engine makes two revolutions, thereby operating the engine in a four-cycle mode, when the rotational speed of the engine detected by said rotation detecting means is higher than the predetermined speed; and

supercharging control means for operating said supercharging assisting means when the load on the engine detected by said load detecting means is greater than a predetermined load while the engine is being operated in the two-cycle mode by said cycle mode selecting means.

5,005,540

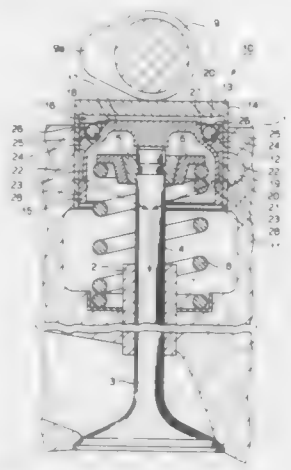
VALVE TIMING CONTROL SYSTEM FOR AN INTERNAL COMBUSTION ENGINE



Kenzo Watanabe, Fuchu, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

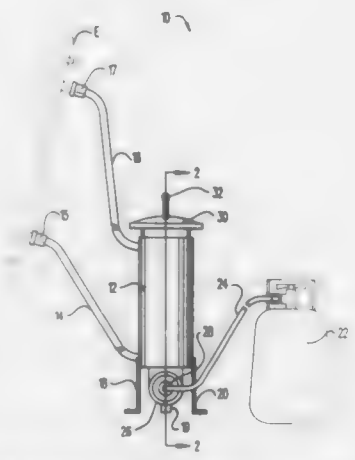
Filed Jun. 21, 1990, Ser. No. 541,711
Int. Cl.[5] F01L *9/02*
U.S. Cl. 123—90.12 **4 Claims**

1. A valve timing control system for an internal combustion engine having a cylinder, a valve for inducing air or exhausting burned gases, a cam for operating the valve, and a hydraulic valve lifter disposed between said cam and said valve, the system comprising:



said hydraulic valve lifter comprises a cylindrical lifter body secured to said engine, a cam piston having a large area for receiving hydraulic pressure and slidably mounted in said lifter body, and a lifter piston having a small area for receiving hydraulic pressure and slidably mounted in said lifter body to define an oil chamber together with the cam piston, an outer surface of the cam piston being engaged with said cam and an outer surface of the lifter piston being engaged with said valve;

a hydraulic circuit having an oil supply passage for supplying oil to said oil chamber and a relief passage;
an electromagnetic relief valve provided in said relief passage for draining said oil chamber; and



a control unit for operating said relief valve in accordance with engine operating conditions.

5,005,541
HYDRAULIC VALVE LIFTER
Takeomi Yamamoto, Nishio; Nariaki Endo, Osaka; Yasushi Kadota, Osaka, and Tadasu Yamakawa, Osaka, all of Japan, assignors to Otai Tekko Kabushiki Kaisha and Koyo Seiko Co., Ltd., Nishio and Osaka, Japan
Filed Jul. 24, 1990, Ser. No. 556,525
Claims priority, application Japan, Aug. 2, 1989, 1-91088
Int. Cl.[5] F01M *9/10*; F01L *1/24*
U.S. Cl. 123—90.35 **6 Claims**

1. A hydraulic valve lifter comprising:
an inverted cup-like body having a skirt and a tip;
an inverted cup-like plunger slidable axially within said body and having a side wall and an end wall;
a high pressure chamber defined between the tip of said body and the end wall of said plunger;
an oil passage through which an oil fed from the outside of the body is fed to the high pressure chamber, said oil passage being defined in said body and said plunger; and
at least one oil discharge hole formed in said plunger and extending from said oil passage to open to a valve stem.

1. An engine preheating device, comprising:
a hollow cylindrical housing;
a plurality of support legs spaced circumferentially around a bottom end of said housing for supporting said housing in an upright orientation;
a helical heat exchange coil in said housing;
an inlet conduit coupled to a bottom end of said coil, said inlet conduit having a quick connect coupling for fluid connection to an internal combustion engine water jacket;
an outlet conduit coupled to an upper end of said coil, said outlet conduit having a quick connect coupling for fluid connection to an internal combustion engine water jacket;
an arcuate tubular elbow having a first end secured in coaxial relation within said bottom end of said housing and a second open end;
a propane torch head inserted within a second open end of said elbow;
a conduit connecting said torch head to a propane supply tank;
a cover mounted in vertically spaced relation on an upper end of said housing bY a plurality of circumferentially spaced vertical tabs, a combustion gas outlet formed between said tabs and said cover;
a tube having a first end connected to said cover, said tube extending centrally and axially within said coil;
a flame diffuser secured to a second end of said tube, said flame diffuser having two semi-circular baffles connected at an acute angle; and
an insulated handle on an upper exterior surface of said cover.

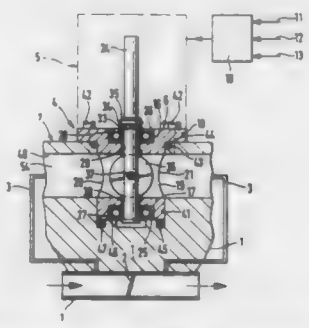
INTAKE AND EXHAUST SYSTEM WITH A ROTATING PORT SHAFT FOR FOUR-CYCLE INTERNAL COMBUSTION ENGINES
Felix O. Triguero, Virgen de la Fuencisla 33, 28027 Madrid, Spain
Filed Jun. 2, 1989, Ser. No. 360,435
Claims priority, application Spain, Jun. 6, 1988, 8801765
Int. Cl.[5] F01L *7/00*
U.S. Cl. 123—190 BD **14 Claims**

1. An intake and exhaust system with a rotating port shaft having both intake and exhaust means for internal combustion engines, said system comprising: a cylinder head having two halves, a first half and a second half, both said halves being provided with an axial, semi-cylindrical cut in their opposing faces which, when fitted together, form a longitudinal, cylindrical duct housing the rotating shaft, said cylinder head having a cooling duct for a cooling liquid circulation sleeve, aid first half having first orifices for coupling with intake and

exhaust manifolds, said second half having threaded second orifices for receiving spark plugs, said second half having third orifices which house static pistons for sealing each cylinder.



5,005,544
ROCKER SHAFT SUPPORT SYSTEM FOR INTERNAL COMBUSTION ENGINE
Earl M. Spangler, R.D. #5 - Box 5066, Spring Grove, Pa. 17362
Filed Feb. 6, 1990, Ser. No. 475,914
Int. Cl.[5] F01L *1/18*
U.S. Cl. 123—195 R **20 Claims**

1. In an internal combustion engine for racing cars adapted to be operated in relatively high RPM levels at which the rocker shaft of the engine supported upon the combustion head tends to flex or vibrate, the improvement comprising support means for said shaft upon the combustion head between each pair of rocker arms upon said shaft and including securing means which extend through the combustion head and into the cylinder block in which the pistons of the engine reciprocate and thereby secure said rocker shaft firmly to said cylinder block in a manner either to greatly reduce or eliminate said aforementioned vibration of said rocker shaft when said engine is operated at said relatively high RPM levels in racing cars when driven at high speeds.

FLOW REGULATOR
Friedrich Wendel, Weissach, and Dieter Dick, Muehlacker, both of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany
Filed Dec. 19, 1989, Ser. No. 452,669
Claims priority, application Fed. Rep. of Germany, Feb. 24, 1989, 3905655
Int. Cl.[5] F02D *9/08*
U.S. Cl. 123—337 **21 Claims**

1. A regulator for controlling an operating medium for an internal combustion engine comprising a throttle housing (16), a throttle unit in said throttle housing, a shaft mounted in a turning space and extending from said throttle housing (16), a throttle member (36) connected to said shaft in said turning space; and regulator serving to control the flow of a medium from an inlet opening (20) via the turning space to an outlet opening (21) provided in the throttle housing, the throttle housing (16) comprises a cylindrical housing part (17) which is insertable in a tight manner in a receiving opening (41) of a holder (7, 50) having incorporated in said holder a flow chan-

nel (40) for conveying the flow medium; said flow channel (40) being divided by the throttle housing (16) into an inflow portion (54) and an outflow portion (55) such that at a wall of the throttle housing (16) the inflow portion (54) is connected to the inlet opening (20) in the throttle housing (16) and the outflow portion (55) is connected at the wall of the throttle housing (16) to the outlet opening (21) in the throttle housing (16).

5,005,546
SETTING DEVICE FOR A FEED DEVICE OF AN INTERNAL COMBUSTION ENGINE
Arnold Mann, Biebergemünd, Fed. Rep. of Germany, assignor to VDO Adolf Schindling AG, Frankfurt am Main, Fed. Rep. of Germany
Filed Oct. 11, 1989, Ser. No. 419,642
Claims priority, application Fed. Rep. of Germany, Dec. 22, 1988, 3843147
Int. Cl.[5] F02D *9/02*
U.S. Cl. 123—339 **7 Claims**

1. A speed control system for an internal combustion engine, the system providing for control of an idling speed of rotation of the engine, the system comprising:
a feed device for feeding air into the engine, the feed device including an actuating lever;
a setting device for positioning the feed device, the setting device including a pretensioned return spring and an adjusting rod which are connected to the feed device;
an idle setting device;
an idling stop lever which cooperates with the actuating lever and is adjustable by the idle setting device;
a first stop and a second stop disposed on said stop lever and being operable with said actuating lever, the second stop limiting a range of adjustment of the first stop for a minimum setting of the feed device; and
wherein there are at least two abutment surfaces located at different places on the actuating lever; and
corresponding ones of said abutment surfaces of said actuat-

ing lever, and said stops of said stop lever can be brought alternatively into operative connection with each other.

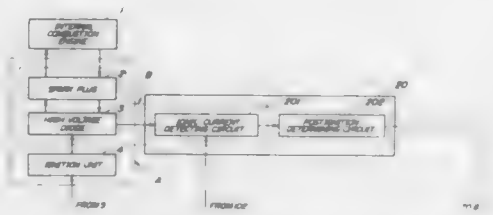
ABNORMAL COMBUSTION-DETECTING DEVICE AND COMBUSTION CONTROL DEVICE FOR INTERNAL COMBUSTION ENGINES



Toshiyuki Suga; Hideaki Arai, and Shinichi Kitajima, all of Wako, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 29, 1989, Ser. No. 373,946

Claims priority, application Japan, Jul. 1, 1988, 63-165585; Mar. 7, 1989, 1-54800

Int. Cl.[5] F02P *5/10*

U.S. Cl. 123—425 **20 Claims**

1. An abnormal combustion-detecting device for an internal combustion engine having cylinders, which detects abnormal combustion of an air-fuel mixture supplied to said cylinders to inhibit preignition of the mixture, comprising:

ignition timing-setting means for setting ignition timing for said cylinders in accordance with operating conditions in which said engine is operating;

ignition timing-retarding means for retarding the set ignition timing for at least one of said cylinders when said engine is in a predetermined operating condition; and

abnormal combustion-detecting means operable only when said ignition timing-retarding means has retarded the set ignition timing, for detecting abnormal combustion within said at least one cylinder.

METHOD AND APPARATUS FOR RECOGNIZING A FAULTY COMBUSTION IN AN INTERNAL COMBUSTION ENGINE

Alfons Pernpeintner, Langquaid, and Udo Frinzel, Oberkotzau, both of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

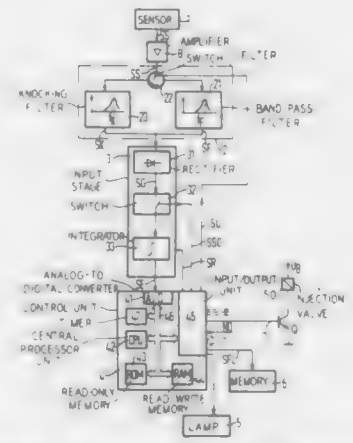
Continuation of Ser. No. 305,923, Feb. 3, 1989, abandoned. This application Jul. 23, 1990, Ser. No. 559,384

Claims priority, application Fed. Rep. of Germany, Feb. 4, 1988, 3803337

Int. Cl.[5] F02P *5/14*

U.S. Cl. 123—479 **15 Claims**

1. A method for recognizing the difference between a faulty combustion condition and a normal combustion condition for any particular internal combustion engine wherein said faulty combustion condition comprises one of lack of combustion, incomplete combustion, combustion occurring outside a time frame intended for combustion for any preselected engine operating condition, and



said normal combustion comprises lack of any of the aforementioned conditions, said method comprising:

sensing a frequency of vibration of the internal combustion engine using a sensor designed to output a sensor signal having spectrum components which are typical for a particular engine operating in said normal combustion condition;

passing said sensor signal through a bandpass filter which passes said typical spectrum components;

rectifying any signal portions passing through said bandpass filter to produce a rectified signal;

integrating said rectified signal during a period of time wherein the commencement of normal combustion occurs and ending said integration prior to a time during which knock may occur to produce an integrated signal;

comparing said integrated signal to a predetermined reference value for said particular engine; and

outputting a fault signal when said integrated signal remains below said predetermined reference value.

IN-LINE FUEL HEATER

Jerald R. McNelley, Rte. 2, Box 172, Benton, Tenn. 37307

Continuation-in-part of Ser. No. 306,641, Feb. 3, 1989, Pat. No. 4,926,830. This application May 7, 1990, Ser. No. 520,279

Int. Cl.[5] F02M *31/00*

U.S. Cl. 123—557 **8 Claims**

1. A system for preheating fuel for an internal combustion engine having a fuel line, comprising:

a fuel tank for storing fuel to be supplied to said fuel line, said tank having an access opening provided in an upper portion thereof;

an elongated first heat exchanger installed through and secured to said access opening, a substantial portion of said first heat exchanger being contained within said fuel tank;

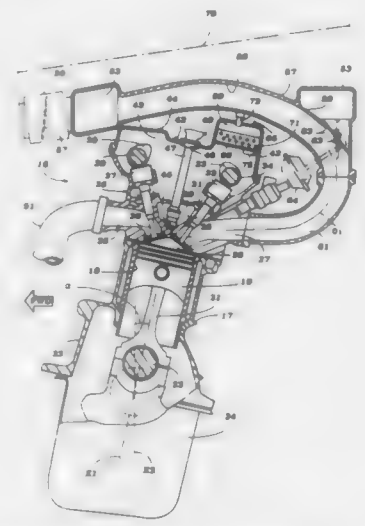
said first heat exchanger defining an inlet port and an outlet port proximate a first end portion of said first heat exchanger positioned externally of said fuel tank;

a heated fluid chamber defined by said first heat exchanger communicating between said inlet and outlet ports, said heated fluid chamber including a divider plate which separates said heated fluid chamber into an inlet section communicating with said inlet port and an outlet section communicating with said outlet port, said divider plate being positioned such that a heated fluid entering said inlet port flows toward a second end portion of said first heat exchanger where said heated fluid flows through said outlet section of said heated fluid chamber and exits through said outlet port;

a source of said heated fluid;

means for providing fluid communication between said source of heated fluid and said inlet and outlet ports of said first heat exchanger;

said first heat exchanger further comprising a fuel tube passing substantially axially through said heated fluid chamber and forming a portion of said divider plate, said fuel tube having a fuel inlet end positioned externally of said heated fluid chamber proximate said second end portion of said first heat exchanger in fluid communication with said fuel in said fuel tank, and said fuel tube having a fuel outlet end with ninety degree elbow positioned externally of said heated fluid chamber proximate said first end portion of said first heat exchanger in fluid communication with said fuel line of said internal combustion engine;



a second heat exchanger installed in series with said fuel line intermediate said fuel tank and said internal combustion engine;
a fuel storage means portion of said second heat exchanger for storing a quantity of said fuel;
a heat transfer means portion of said second heat exchanger for transferring heat from said heated fluid to said fuel stored in said storage means;
inlet and outlet means portions of said second heat exchanger for connecting to said second heat exchanger, to said fuel line, to said heated fluid source, and to a source for unused fuel returned from said engine;
attaching means for attaching said second heat exchanger to said vehicle;
whereby said fuel in said fuel tank is heated by heat transferred from said heated fluid contained within said heated fluid chamber through the walls of said first heat exchanger;
whereby fuel drawn from said fuel tank through said fuel tube into said fuel line is further heated by heat transferred from said heated fluid contained by said heated fluid chamber which surrounds said fuel tube in said first heat exchanger;
whereby fuel drawn from said fuel tank through said first heat exchanger is further heated in said second heat exchanger by heat transferred from said heated fluid through walls of a fluid-conveying pipe immersed in said fuel stored in said second heat exchanger storage means;
whereby said return fuel being returned from said engine is further heated while passing through said second heat exchanger; and
whereby said fuel in said fuel tank receives heat in the process of being mixed with said heated return fuel being returned from said engine.

EXHAUST GAS RECIRCULATION SYSTEM OF ENGINE
Hideo Kawamura, Samukawa, Japan, assignor to Isuzu Motors Limited, Tokyo, Japan
Filed Apr. 25, 1990, Ser. No. 514,456
Claims priority, application Japan, May 9, 1989, 1-114140
Int. Cl.[5] F02M *25/07*
U.S. Cl. 123—571 **10 Claims**

1. An exhaust gas recirculation system of an engine, comprising:
a cylinder block;
cylinders formed in said cylinder block;
a cylinder head fixed to said cylinder block;
combustion chambers defined by said cylinder head and said cylinders;
intake ports and exhaust ports formed in said cylinder head;
intake valves opening and closing for introducing intake air into said combustion chambers, each being disposed at each of said intake ports;
exhaust valves opening and closing either for exhausting a combustion gas of said combustion chambers from said combustion chambers to said exhaust ports or for introducing the exhaust gas from said exhaust ports into said combustion chambers, each being disposed at each of said exhaust ports;
electromagnetic valve driving devices for actuating said intake valves and said exhaust valves for opening and closing by electromagnetic force, respectively;
detection means each for detecting an intake flow rate flowing into each of said combustion chambers through each of said intake ports; and
a controller for actuating each of said electromagnetic valve driving devices to open and close each of said intake valves and said exhaust valves, detecting the intake flow rate under the state where exhaust gas recirculation is made and the intake flow rate under the state where exhaust gas recirculation is stopped, by said detection means, and comparing the detection signals of said intake flow rates so as to detect an exhaust gas recirculation flow rate.

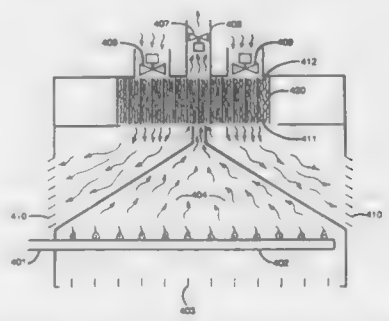
BOW HANDLE RISER
Pete Shepley; Richard Johnston, and Allan F. Smith, all of Tucson, Ariz., assignors to Precision Shooting Equipment Company, Tucson, Ariz.
Continuation of Ser. No. 920,080, Oct. 17, 1986, abandoned. This application May 23, 1988, Ser. No. 197,294
Int. Cl.[5] F41B *5/10*
U.S. Cl. 124—24.1 **18 Claims**



1. A bow handle for use with an overdraw arrow support having means for supporting an arrow with an arrowhead and vanes in an overdraw configuration, said handle having a hand grip, an upper limb mount, a lower limb mount and a pair of limbs, a bow string between the ends of said limbs, said bow string as drawn defining a bow string plane, said handle comprising,
a sight window face displaced from the plane of the bow string,
a sight window overdraw offset adjacent the hand grip and offset from the sight window face and the plane of the bow string to provide clearance for the arrowhead and the vanes of said arrow,
a sight window overdraw offset base adjacent said hand grip,
said sight window face being between said sight window overdraw offset and said upper limb mount,
said sight window overdraw offset having a sight window overdraw offset return remote from the base and terminating at the sight window face.

WOOD BURNING APPARATUS
Steven J. Vogelzang, 555 Bay View Ave., Holland, Mich. 49423
Filed Feb. 23, 1990, Ser. No. 483,741
Int. Cl.[5] F24C *1/00*
U.S. Cl. 126—60 **1 Claim**

1. A wood burning heater which operates at a high enough temperature to substantially reduce the amount of particulate matter contained in the exhaust products when consuming wood at the rate of at least 5 kg per hour comprising:
a fire box for containing wood to be burned having an exhaust port for the emission of the combustion products produced by the burning of wood in said fire box;
an access member for adding wood to said fire box;
an air controller for regulating the amount of air entering said fire box and which is normally in its closed position when burning wood at the rate of at least 5 kg per hour;
a cast iron collar having an outwardly extending peripheral flange having apertures therein, fastening means extending through said openings and attaching said flange to said fire box about said exhaust port;
a rotatable shaft extending through aligned apertures in said collar;
a handle on one end of said rotatable shaft and a spring positioned on said rotatable shaft between said handle and said collar, said spring holding said damper in position when moved;
a cast iron adjustable damper plate permanently installed in said collar, said damper plate being welded to said rotatable shaft so that it cannot be removed without destroying the usefulness of said damper plate or said collar, said damper plate having a peripheral edge of substantially the same inner configuration as said collar and having at least one aperture therein which, when said damper plate is in the closed position, normal to the flow of combustion products through said collar, will allow the passage of the combustion products produced during the burning of wood at the rate of at least 5 kg per hour.

5,005,556
EFFICIENT GAS HOT-AIR FURNACE AND HEATING PROCESS
William B. Astle, Jr., 146 Old Farm Rd., Leominster, Mass. 01453
Filed Jun. 8, 1989, Ser. No. 364,614
Int. Cl.[5] F24H *3/06*; F28D *19/04*
U.S. Cl. 126—110 R **31 Claims**

1. Space heating apparatus in which fuel gas is burned and heat is transferred from the resulting combustion gases to a cool air stream to produce heated air, said apparatus comprising:
a combustion chamber, said chamber comprising
an inlet for receiving combusion air and
a burner for burning fuel gas in said combustion air to produce combustion gases; and
a primary heat exchanger for receiving said combustion gases and for extracting the majority of the heat of combustion from said gases, said primary heat exchanger comprising
a porous heat sink member,
ducting for delivering said combustion gases to said heat sink member, said gases being delivered along a combustion-gas path,
a blower and ducting for directing cool air along a cool air path to said heat sink member, and
means for drawing said combustion gases and cool air through said porous heat sink member so that portions of

said member alternately pass through said combustion-gas path and said cool-air path, to transfer heat from said combustion gases to said cool air,

wherein said cool air is directed to said heat sink member along two separate cool-air paths, and wherein said means for moving said heat sink member includes means to pass most portions of said member alternately through said combustion-gas path and both said cool-air paths.

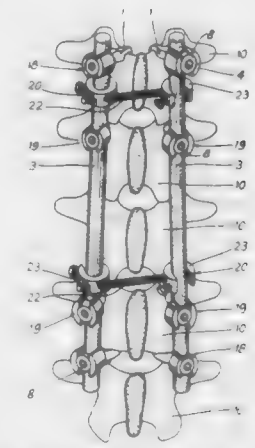
IMPLANT FOR SPINAL OSTEOSYNTHESIS DEVICE, IN PARTICULAR IN TRAUMATOLOGY



Yves Cotrel, Paris, France, assignor to Societe de Fabrication de Material Orthopedique, Berck Sur Mer, France

Filed Jun. 21, 1989, Ser. No. 369,701

Claims priority, application France, Jun. 24, 1988, 88 08538

Int. Cl.[5] A61F *5/00*

U.S. Cl. 128—69 **11 Claims**

1. Implant for an osteosynthesis device, in particular of the spine, comprising anchorage portion means for anchoring the implant to bone and body attaching means for attaching the implant to a rod, said body attaching means having two side branches defining a channel open at both sides of the body attaching means in order to be able to receive the rod and open to a rear portion of the body attaching means, and a threaded plug, a female thread formed in inner walls of said two side branches at the rear portion of the body attaching means, said threaded plug being screwed into said female thread to close the channel at said rear portion, the plug having a face directed towards the rod said face being equipped with means for gripping and attaching the plug to the rod in a manner in which the rod will be clamped to prevent translation and rotation.

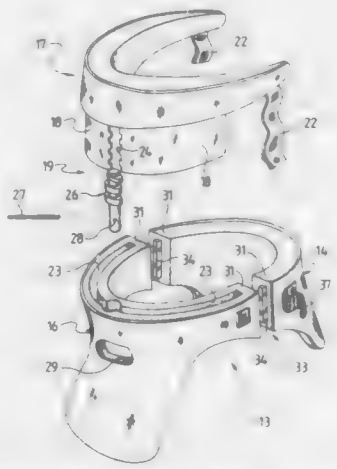
MOBILE-CERVICAL EXTENSION AND SUPPORTING APPARATUS

Charles J. Veale, 1456 Opelika Rd., Auburn, Ala. 36830

Filed Jun. 18, 1990, Ser. No. 539,541

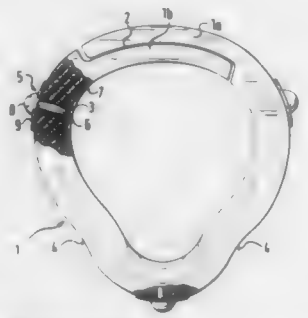
Int. Cl.[5] A61F *5/01*



U.S. Cl. 128—75 **13 Claims**

1. An apparatus for supporting and stabilizing the cervical vertebrae in a human patient under various levels of extension thereof comprising:

a. an anterior base member resting on the sternum, clavicle and anterior shoulder area with an upwardly extending arcuate portion adjacent to the anterior neck area;



b. a posterior base member resting on the scapula and posterior shoulder area of the patient with an upwardly extending arcuate portion adjacent to the posterior neck region;

c. connecting means securing said anterior base member to said posterior base member on both the right and left side of neck;
d. cranial support means adapted to be positioned beneath the mandibular bone and the base of the cranial cavity for support thereof and extending about the skull from the right chin area to the left chin area;

e. an extension means connecting said posterior base member and said cranial support means for moving said cranial support means to various positions relative to said posterior base member to selectively extend the cervical spine; and
f. a chin support detachably affixed to the cranial support means.

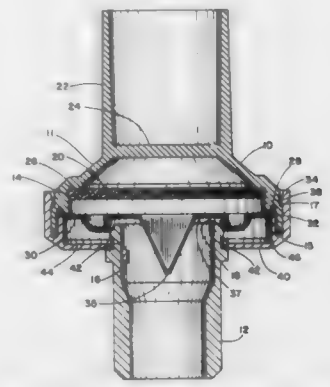
5,005,564
CERVICAL SUPPORT
Jaana Grundei, Lübeck, and Andreas Timmermann, Ekelsdorf, both of Fed. Rep. of Germany, assignors to ADEV Gesellschaft fur Entwicklung und Vertrieb von medizintechnishen Artikein mbH, Lubeck, Fed. Rep. of Germany
Filed Feb. 12, 1990, Ser. No. 479,090
Claims priority, application Fed. Rep. of Germany, Feb. 28, 1989, 3906232
Int. Cl.[5] A61H *1/02*; A61F *5/04*
U.S. Cl. 128—75 **6 Claims**

1. A cervical support comprising:
a substantially inherently stable support member of resilient foam material for encircling the neck of a patient and having a nape support rear region, two lateral jaw support regions extending from a larynx region, said jaw support regions terminating in free end parts which overlap each other in said nape support region; and jaw support regions having upper and lower edge contours adapted to the anatomical shape of the parts of the patient's body to which said contours are adjacent when the cervical support is in use;
means for adjustably and releasably connecting said free end parts together in said nape support region; and locally stabilizing support means releasably connectable to the support member, said stabilizing support means comprising at least one support element having a shank which has one end insertable into a radial opening in said support member to extend therethrough, said shank having a large area head for abutment against the inner circumference of the support member to locally stiffen the support member, the other end of said shank adapted to abut the outer circumference of said support member.

5,005,565
THIGH AND KNEE PROTECTIVE DEVICE
Gary R. Fratesi, 112-C Heritage Village, Southbury, Conn. 06418
Continuation-in-part of Ser. No. 203,092, Jun. 7, 1988, abandoned. This application Aug. 10, 1989, Ser. No. 392,426
Int. Cl.[5] A61F *5/00*
U.S. Cl. 128—80 C **10 Claims**

1. In combination with an article of athletic apparel of the type having at least one portion that encircles the wearer's thigh and that defines an inside pocket with an upwardly open entry to the pocket, a thigh and knee guard for use between the wearer's leg and the pocket defining article of apparel, said thigh and knee guard comprising:
(a) a molded plastic thigh guard having an upper portion of arcuate cross section conforming to the user's thigh and a lower portion of inverted U-shaped with inside and outside extensions adapted for placement alongside the inside and outside of the wearer's knee,
(b) a lower leg guard having an upper portion of U-shape with inside and outside projections adapted for placement alongside said inside and outside extensions respectively,
(c) means pivotably connecting said thigh guard extensions and said lower leg guard projections to provide limited pivotal movement of said lower leg guard relative to said thigh guard,
(d) pad means removably secured to said thigh and lower leg guards and including a medial portion for covering the wearer's kenn, said thigh and lower leg guards defining a knee opening for said medial portion,
(e) a plate secured to said upper portion of said thigh guard and extending downwardly in spaced relationship to said thigh guard upper portion, said plate shaped to fit into said apparel article pocket for supporting and locating said thigh guard and lower leg guard on the wearer's leg and inside said apparel article.

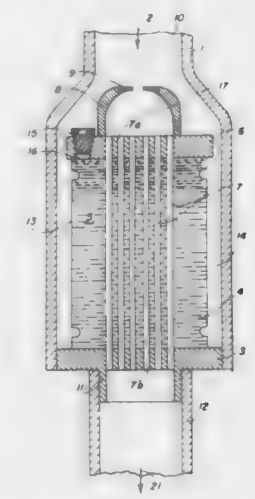
5,005,566
WATER-ACTIVATED ORTHOPEDIC CAST COMPOSITION HAVING COLORANT
William C. Klintworth, Jr., Tulsa, Okla., assignor to Carapace, Incorporated, Tulsa, Okla.
Division of Ser. No. 4,087, Jan. 15, 1987, Pat. No. 4,934,356. This application May 24, 1990, Ser. No. 528,156
Int. Cl.[5] A61F *13/04*; A61L *15/10, 15/14*
U.S. Cl. 128—90 **7 Claims**



1. A method of forming an orthopedic cast about the epidermis of a body member comprising the steps of preparing, in a substantially moisture free environment, a first premix "A" of an isocyanate resin, a defoaming agent and a stabilizer/preservative, preparing a second premix "B" comprising a polyol and at least one reaction catalyst, separating a minor portion, dissolving said colorant in said minor portion and recycling and mixing said colorant added minor portion into said major portion of said premix "B", mixing said resultant premix "B" with said premix "A" to create said resultant pre-polymer, coating a flexible fabric with said resultant pre-polymer, wetting said coated fabric with water, wrapping said body member with said water-wetted coated fabric, and allowing same to harden.

5,005,567
METHOD FOR TREATING LEG WOUNDS
Thomas H. Gilman, Mansfield, and Betsy C. Westlake, Norton, both of Mass., assignors to The Kendall Company, Mansfield, Mass.
Filed Aug. 24, 1989, Ser. No. 397,606
Int. Cl.[5] A61F *13/00*
U.S. Cl. 128—165 **17 Claims**

1. A method for treating leg wounds requiring both bandaging and the application of compressive pressure, comprising the steps of:
(1) applying a dressing covering the wound;
(2) putting a first stocking on the leg and over the wound, said stocking being characterized as being a loosely knit stocking which easily slips on the leg and over the wound; and
(3) putting a second stocking on over said first stocking, said second stocking being an elastic stocking which applies said compressive pressure to the wound, the coefficient of friction between the outer surface of said first stocking and the inner surface of said second stocking frictionally engaging one another in putting on said second stocking being relatively low as compared to the coefficient of friction between the inner surface of said second stocking and said leg and dressing, whereby greatly to facilitate putting on said elastic second stocking to apply said compressive pressure.



5,005,568
ISOLATION VALVE
Thomas C. Loescher, Encinitas; Thomas P. Shanks, Temecula, and Henry E. Garcia, Homeland, all of Calif., assignors to Hudson Respiratory Care Inc., Temecula, Calif.
Continuation of Ser. No. 105,726, Oct. 7, 1987, abandoned. This application Mar. 7, 1989, Ser. No. 320,868
Int. Cl.[5] A61M *16/00*
U.S. Cl. 128—202.28 **7 Claims**

1. An isolation valve assembly for use in administering mouth-to-mouth emergency artificial respiration comprising:
a housing assembly comprising an inlet member having a first cylindrical wall portion and an inlet pipe extending therefrom having an inside first diameter, and an outlet member having a second cylindrical wall portion with a plurality of exhaust ports therethrough and an outlet pipe extending therefrom having an inside second diameter, said first and second cylindrical wall portions being matingly engaged to define an interior chamber having a third diameter, which is greater than either said first or said second diameter,
a flexible diaphragm secured across said interior chamber, said diaphragm having a one-way valve therein for allowing gas to pass only from said inlet member to said outlet member and sealing means for forming a gas tight seal against said outlet member and closing said exhaust ports when gas is directed through said one-way valve, and

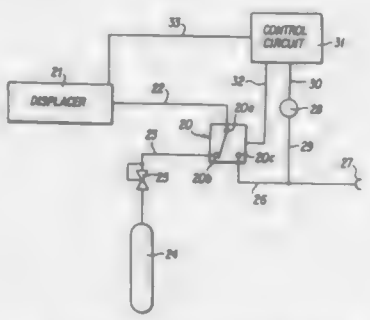
a cylindrical filter member spaced apart from said inlet pipe and secured in and extending across said interior chamber between said inlet pipe and said diaphragm, said filter member having a diameter greater than the inside diameter of either said inlet pipe or said outlet pipe, wherein said valve assembly has a back pressure of less than about 6 cm H_2O at a flow of 50 liters per minute.

5,005,569
VENTILATORY AIR HUMIDIFIER FOR A BREATHING EQUIPMENT
Adalbert Pasternack, Bad Schwartau, Fed. Rep. of Germany, assignor to Drägerwerk Aktiengesellschaft, Lübeck, Fed. Rep. of Germany
Filed May 11, 1989, Ser. No. 350,846
Claims priority, application Fed. Rep. of Germany, Jun. 11, 1988, 3819988
Int. Cl.[5] A61M *15/00*
U.S. Cl. 128—204.13 **8 Claims**

1. A humidifier for a respiratory device comprising an outer housing having a respiratory air outer housing inlet and a respiratory air outer housing outlet, at least one passage having a respiratory air passage inlet and a respiratory air passage outlet arranged in said outer housing with said passage outlet in a flow stream from said outer housing inlet, a pressure wall in

said outer housing, at least a portion of said wall being made of flexible material which is movable in response to pressure changes of said wall, water between said at least one passage and said pressure wall, said pressure wall being spaced inwardly from the interior of said outer housing and thereby defining an antechamber between said pressure wall and the interior of said outer housing, said antechamber being in communication with said passage inlet, and throttle means between said outer housing inlet, said passage inlet, and said antechamber.

5,005,570



METHOD AND MEANS FOR DISPENSING RESPIRATING GASES BY EFFECTING A KNOWN DISPLACEMENT

Warren E. Perkins, 9960 S A-1-A, Apt. 1901, Jensen Beach, Fla. 34957

Division of Ser. No. 112,117, Oct. 25, 1987, Pat. No. 4,873,971, which is a continuation-in-part of Ser. No. 783,121, Oct. 2, 1985, Pat. No. 4,705,034. This application Oct. 3, 1989, Ser. No. 416,511

Int. Cl.[5] **A62B** *17/04, 18/00, 7/00;* **A61M** *16/00*

U.S. Cl. 128—204.23 **14 Claims**

1. A device for supplying premeasured doses of respirating gas to a patient in synchronization with the respiratory cycle of the patient comprising:

a source of respirating gas at relatively high pressure;

containment means having a volume sized to measure a prescribed single dose quantity of said respirating gas at source pressure and to temporarily store said measured dose;

means for sensing the onset of inhalations of the patient and for producing signals in response to said sensing;

valve means arranged to move between a first position and a second position in response to said produced signals, said valve means comprising a three-way valve having two option ports and a common port;

cannula means;

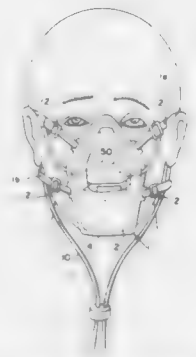
first gas flow routing means for connecting said gas source to one of said option ports;

second gas flow routing means for connecting said containment means to said common port;

third gas flow routing means for connecting one end of said cannula means to the other of said option ports; and

means connected to the other end of said cannula means and adapted for communication with the nasal cavity of the patient, said valve means in its first position connecting said first gas flow routing means to said second gas flow routing means and placing said gas source in communication with said containment means thereby filling said containment means with respirating gas at source pressure, said valve means in its second position connecting said second gas flow routing means to said third gas flow routing means and placing said containment means in communication with said means connected to the other end of the cannula means thereby releasing said measured dose quantity of respirating gas from said containment means and conveying said gas dose to the patient.

5,005,571



MOUTH NOSE MASK FOR USE WITH AN INHALATION THERAPY AND/OR BREATHING MONITORING APPARATUS

Henry G. Dietz, 80 Salisbury Ave., Garden City, N.Y. 11530

Filed Nov. 25, 1988, Ser. No. 276,293

Int. Cl.[5] **A62B** *18/02*

U.S. Cl. 128—205.25 **2 Claims**

1. A mouth nose mask which covers the mouth and nose in combination with a nasal cannula to function during breathing cycles of humans when breathing through the nose or mouth comprising:

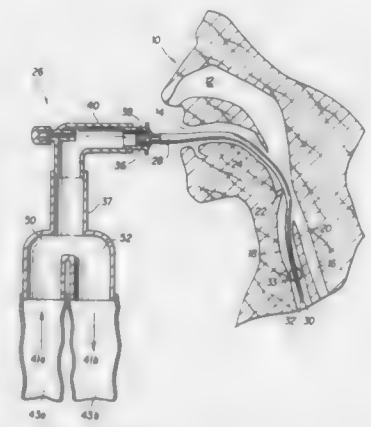
a formed seal of flexible material adapting to the contours of a human face and being supported by the chin and the upper nasal bone,

means within said formed seal for allowing the passage of outside air into the mask,

means bonded to said formed seal including a flat plate having an opening for the passage of outside air into the mask, a formed projection for nose clearance and means for supporting said mask on a human face including four holes within said plate and four straps,

means connectable operatively through said mask to the respiratory system of a human for sensing inspiration.

5,005,572



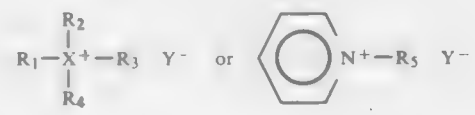
CO_2 INDICATOR AND THE USE THEREOF TO EVALUATE PLACEMENT OF TRACHEAL TUBES

Daniel B. Raemer, Brookline; David R. Walt, Lexington, and Christianne Munkholm, Salem, all of Mass., assignors to Brigham & Women's Hospital, Boston, Mass.

Continuation of Ser. No. 161,046, Feb. 26, 1988, abandoned. This application Jan. 31, 1989, Ser. No. 303,952

Int. Cl.[5] **A61M** *16/00*

U.S. Cl. 128—207.14 **8 Claims**



1. Apparatus, comprising:

means for enabling visual observation of proper placement of an endotracheal tube in the trachea of a patient, said means comprising:

a. an endotracheal apparatus which indicates a tracheal tube defining a gas path; and

b. a CO_2 detector disposed within said endotracheal apparatus at a location which is in said gas path of said tube and is visible when said endotracheal tube is inserted, said detector comprising a backing and an indicator material, said indicator material comprising a support material, a pH-sensitive dye, and a phase transport enhancer for enhancing a reaction between H_2CO_3 and said pH-sensitive dye, said phase transport enhancer having the formula:

wherein

X=N or P,

R_1, R_2, R_3 and R_4 are selected from the group consisting of C_1–C_{12} alkyl,

C_1–C_4 substituted alkyl wherein the substituent is a C_1–C_4 alkyl or phenyl group,

naphthyl,

benzyl, and

pyridine;

R_5 is selected from the group consisting of C_1–C_{12} alkyl and benzyl; and

Y^- is an anion selected from the group consisting of hydroxide, fluoride, chloride, bromide, iodide, carbonate and tetrafluoroborate.

5,005,573

ENDOTRACHEAL TUBE WITH OXIMETRY MEANS

Dale C. Buchanan, 4217 Horseshoe Bend, Matthews, N.C. 28105

Filed Jul. 20, 1990, Ser. No. 556,947

Int. Cl.[5] **A61M** *16/00*

U.S. Cl. 128—207.14 **7 Claims**

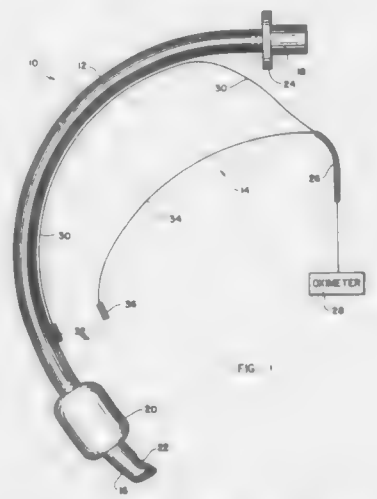


FIG. 1

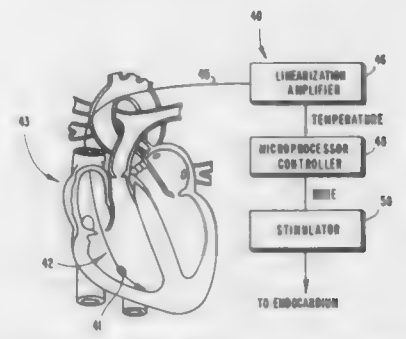
1. In an endotracheal tube for insertion within a surgical patient's trachea for assisting breathing during surgical and like procedures, the improvement comprising means for transmitting light outwardly from a predetermined location on said tube which resides within the patient's trachea during use, means for detecting light transmitted by said transmitting means, said detecting means being manipulable outside the patient's body for selective positioning on the patient's neck in disposition for receiving light transmitted by said transmitting means, and means for operatively connecting said transmitting means and said detecting means with an oximeter for measuring oxygen saturation in the patient's arterial blood as a function of the transmitted light received by said detecting means.

5,005,574



TEMPERATURE-BASED, RATE-MODULATED CARDIAC THERAPY APPARATUS AND METHOD

Neal E. Fearnot, and Merry L. Evans, both of West Lafayette, Ind., assignors to Medical Engineering and Development Institute, Inc., West Lafayette, Ind.

Filed Nov. 28, 1989, Ser. No. 442,224

Int. Cl.[5] **A61N** *1/362*

U.S. Cl. 128—419 PG **73 Claims**

1. A temperature-based, rate-modulated cardiac therapy device, comprising:

means for sensing central venous blood temperature; and

processing means coupled to said sensing means for calculating cardiac rate as a function of temperature conditions, one of said conditions including a dip in central venous blood temperature at the onset of exercise, said processing means including

means for calculating a first rate component proportional to the magnitude of said dip; and

means for increasing cardiac rate by said first rate component.

5,005,575

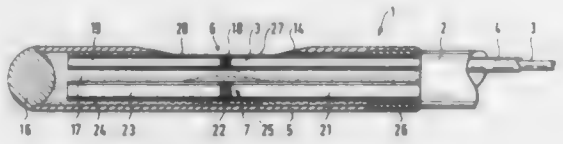
PLANTAR SUPPORT

Luciano Geri, Lungarna Simonelli No. 1, 56100 Pisa, Italy

Filed Oct. 31, 1988, Ser. No. 265,038

Claims priority, application Italy, Nov. 9, 1987, 9536 A/87

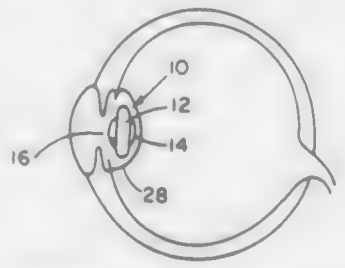
Int. Cl.[5] **A61F** *5/14, 5/32*



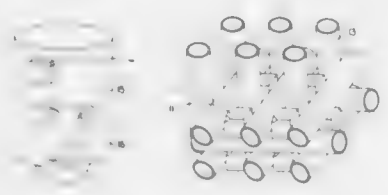
U.S. Cl. 128—581 **6 Claims**

1. A plantar support for use in a shoe comprising a unitary body including a plurality of cavities having elastically flexible walls and joined by a flat web, the cavities being sealed off from each other and containing dry, mobile fillings of granular material defining discrete, resiliently deformable, raised pads spaced apart by flat, unfilled, foot engaging portions of the web, the pads being for adjustment of selected spaced apart

bearing surfaces of the foot, a wall of each cavity being pierceable by a hollow needle and self-closing so that the filling material can be controllably introduced into or removed from the cavity through the needle to adjust the pad.



5,005,576
OPTICAL PROBE
Martin Günther, Wildberg, Fed. Rep. of Germany, assignor to Hewlett-Packard Company, Palo Alto, Calif.
Filed Mar. 30, 1989, Ser. No. 332,080
Claims priority, application European Pat. Off., Apr. 9, 1988, 88105676.6
Int. Cl.[5] A61B *6/00*
U.S. Cl. 128—634 **3 Claims**



1. An optical probe comprising:
an outer sheath having a first end, a second end, and at least one opening therethrough between said first end and said second end;
a blood gas sensor unit positioned within said sheath comprising an optical fiber having a first end and a second end, said first end terminating within said sheath, said blood gas sensor unit further comprising a portion of gel positioned adjacent said first end of said optical fiber, said portion of gel having at least one dye therein, said dye having an absorption spectrum dependent on the concentration of a blood gas selected from the group consisting of oxygen and carbon dioxide, and a reflector unit positioned adjacent said portion of gel for reflecting light from said optical fiber which has passed through said portion of gel;
a pH sensor unit positioned within said sheath comprising an optical fiber having a first end and a second end, said first end terminating within said sheath, said pH sensor unit further comprising a portion of gel positioned adjacent said first end of said optical fiber, said portion of gel having at least one dye therein, said dye having an absorption spectrum dependent on hydrogen ion concentration, and a reflector unit positioned adjacent said portion of gel for reflecting light from said optical fiber which has passed through said portion of gel; and
a portion of gas-permeable adhesive within said sheath, said adhesive entirely covering said blood gas sensor unit, and covering only part of said pH sensor unit in order to divide said pH sensor unit into an uncovered section and a covered section, said uncovered section being positioned directly adjacent to and in alignment with said opening in said sheath in order to allow blood passing through said opening to come in contact with said uncovered section.

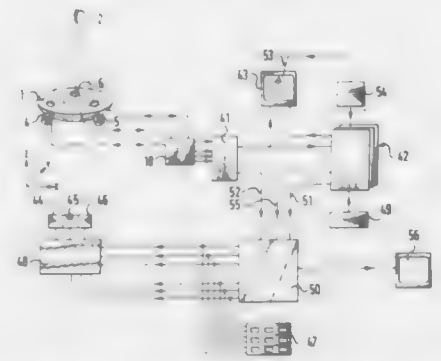
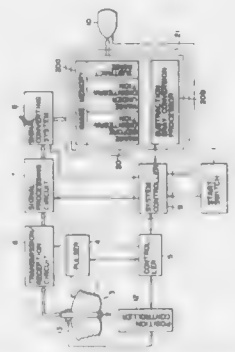
INTRAOCULAR LENS PRESSURE MONITORING DEVICE
Ronald E. P. Frenkel, 1501 Beacon St., No. 202, Brookline, Mass. 02146
Filed Aug. 23, 1988, Ser. No. 235,321
Int. Cl.[5] A61B *3/16*
U.S. Cl. 128—645 **10 Claims**

1. An apparatus for monitoring intraocular pressure comprising an intraocular lens implantable within the eyeball and at least one sensor apparatus affixed to said implantable intraocular lens and implantable therewith within the eyeball, said sensor apparatus being responsive to intraocular pressure.

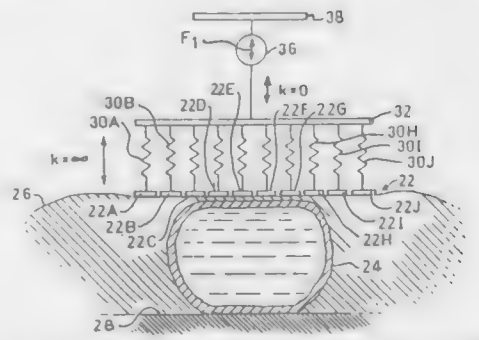


5,005,578
THREE-DIMENSIONAL MAGNETIC RESONANCE IMAGE DISTORTION CORRECTION METHOD AND SYSTEM
Douglas S. Greer, and Alan S. Gevins, both of San Francisco, Calif., assignors to SAM Technology, Inc., San Francisco, Calif.
Continuation-in-part of Ser. No. 287,138, Dec. 21, 1988, abandoned, which is a continuation-in-part of Ser. No. 177,681, Apr. 5, 1988, abandoned, which is a continuation-in-part of Ser. No. 942,204, Dec. 16, 1986, Pat. No. 4,736,751. This application Mar. 28, 1989, Ser. No. 329,792
Int. Cl.[5] A61B *5/055*
U.S. Cl. 128—653 A **4 Claims**



1. A method in nuclear magnetic resonance (NMR) for the correction of distortions in an NMR scanner, including the steps of:
(a) positioning a plurality of fiducial markers at selected locations on a helmet, said markers providing a readily determined distinctive image in an NMR scan;
(b) placing a phantom having a plurality of predetermined fiducial markers at selected locations therein in said NMR device and taking a scan of said phantom; and then removing said phantom from said device after taking the scan;
(c) placing the helmet on a subject within the NMR device and taking a scan of the helmeted subject;
(d) comparing the locations of the fiducial markers in the scans of the phantom and the helmeted subject by an automatic comparison using a computer system and pattern recognition algorithms;
(e) computing in the computer system a first set of distortion corrections providing three-dimensional corrections for the NMR scanner; and
(f) applying said three-dimensional corrections to the NMR scanner to produce corrected NMR scan images.

5,005,579
APPARATUS FOR SPATIAL LOCATION AND DESTRUCTION OF OBJECTS INSIDE THE BODY BY MEANS OF ULTRASOUND
Helmut Wurster, Oberderdingen, and Werner Krauss, Maulbronn, both of Fed. Rep. of Germany, assignors to Richard Wolf GmbH, Fed. Rep. of Germany
Filed Feb. 11, 1988, Ser. No. 155,149
Claims priority, application Fed. Rep. of Germany, Feb. 17, 1987, 3704909
Int. Cl.[5] A61B *17/22*
U.S. Cl. 120—660.03 **15 Claims**



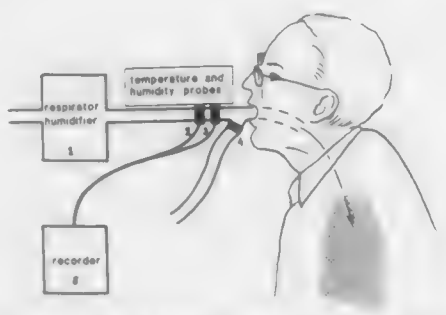
1. In an apparatus for destruction of an object inside a patient's body by means of ultrasound, of the type comprising a piezoelectric focusing transducer for generating ultrasound energy to destroy the object, and improvement for aligning the focusing transducer with the object comprising:
at least two ultrasonic locating transducers; and
means for mounting the at least two locating transducers remotely positioned from each other within said focusing transducer for generating ultrasound pressure waves along separate axes.

5,005,580
DESTROYING WAVE TREATMENT APPARATUS
Kiyoshi Okazaki, Takanezawa, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan
Continuation of Ser. No. 340,352, Apr. 19, 1989, abandoned. This application Dec. 6, 1989, Ser. No. 445,154
Claims priority, application Japan, Apr. 22, 1988, 63-98312; Feb. 22, 1989, 1-44845
Int. Cl.[5] A61B *8/00*
U.S. Cl. 128—660.03 **5 Claims**

1. A destroying wave diagnosis apparatus of the type which comprises a generating means for transit destroying wave to a subject a destructive wave to destroy an object within the subject, said apparatus comprising:
tomogram data collecting means for collecting tomogram data of the object obtained before a destroying wave is transmitted, and tomogram data obtained during the progress of transmitting the destroying wave; and
a display means for displaying simultaneously a tomogram of the object obtained before the transmission of the destroying wave and a tomogram obtained during the transmission of the same, on the basis of the tomogram data collected by said collecting means.

5,005,581
MOTION ARTIFACT DETECTION FOR CONTINUOUS BLOOD PRESSURE MONITOR TRANSDUCER
Kevin S. Honeyager, San Antonio, Tex., assignor to Colin Electronics Co., Ltd., Aichi, Japan
Filed Feb. 25, 1988, Ser. No. 160,790
Int. Cl.[5] A61B *5/02*
U.S. Cl. 128—681 **3 Claims**

1. A method for detecting motion artifacts in data obtained from a blood pressure monitoring transducer, comprising the steps of:
monitoring a plurality of pressure sensing elements overlying an artery, said pressure sensing elements each producing a pulse amplitude signal waveform indicative of the pressure in said artery during successive pulses;
calculating a predetermined percentage of the pulse amplitude signals produced by said pressure sensing elements during a first pulse;
measuring the pulse amplitude signals produced by said pressure sensing elements on a next successive pulse and comparing the respective pulse amplitudes produced by said pressure sensing elements with the pulse amplitudes produced by the respective pressure sensing element during said first pulse; and
indicating a motion condition if any of said pulse amplitude signals measured during said next successive pulse differ from the corresponding pulse amplitude produced during said first pulse, by more than said predetermined percentage.



5,005,582
NON-INVASIVE METHOD FOR MEASURING LUNG TISSUE VOLUME AND PULMONARY BLOOD FLOW AND A PROBE TO CARRY OUT THE METHOD
Vladimir Serikov; Mark Rumm, both of University of California, San Francisco, Medical School, CVRI, M-1327, San Francisco, Calif. 94143-0130, and Norman C. Staub, P.O. Box 965, Stinson Beach, Calif. 94970
Filed Jun. 28, 1990, Ser. No. 545,031
Int. Cl.[5] A61B *5/02*
U.S. Cl. 128—691 **3 Claims**

1. A method for carrying out pulmonary blood flow and airway thermal volume measurements of a body, comprising the steps of:
providing measurements of temperature of inspired and maximal temperature of expired gas and gas volume flow (VG) at an entrance of the upper respiratory tract, humidity of said inspired gas and recording a curve of maximal expired gas temperature versus time
measuring a temperature value (T_B) of said body, and measuring an expired gas initial temperature value (T_O) and an

inspired gas temperature (T_{Go}) and inspired gas absolute humidity (C_o) value during an initial period of deep spontaneous or artificial breathing

changing the rate of breathing with a tidal volume of breathing about 22 ml per kg body weight during a second period until steady-state lung heat exchange with constant maximal expired gas temperature is present

determining from the temperature-vs-time curve a variable

of temperature fall (ΔT), and a half-time of temperature fall ($t_{0.5}$), and

estimating pulmonary blood flow (q) and airway thermal volume (V) as a function of said temperature value (T_B), and said expired gas initial temperature value (T_o), and said inspired gas temperature (T_{Go}) and said inspired gas absolute humidity (C_o) and said variable of temperature fall (ΔT) and said half-time of temperature fall ($t_{0.5}$) and said gas volume flow (V_G).

DIAGNOSTICS PROCEDURES IN UNEXPLAINED FEMALE INFERTILITY

Maria del Carmen Bustillo, Cabin John, Md., assignor to Research & Education Institute, Inc. Harbor-UCLA Medical Center, Torrance, Calif.

Filed Jul. 22, 1987, Ser. No. 76,353
Int. Cl.[5] A61B *10/00*
U.S. Cl. 128—738 **13 Claims**

1. A method for the diagnosis and treatment of an infertile woman having a normal ovulatory cycle, comprising the steps of:

(a) tracking said woman's ovulatory cycle to determine estimated approximate time of ovulation;

(b) inseminating said woman with normal human semen at or around said estimated approximate time of ovulation;

(c) performing a nonsurgical transcervical uterine fluid lavage on said woman within two to seven days after said insemination and recovering and retaining the lavage fluid;

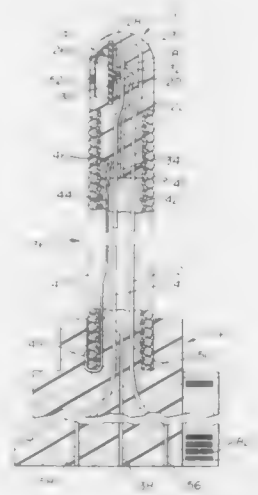
(d) scanning said retained lavage fluid for the presence of an ovum; and

(e) examining any ovum present within said retained lavage fluid for the purpose of rendering a diagnosis and treatment.

5,005,584

FIBER OPTIC PRESSURE TRANSDUCER

Richard L. Little, New Hope, Minn., assignor to MNM Enterprises, Inc., Minneapolis, Minn.



Continuation of Ser. No. 62,728, Jun. 15, 1987, abandoned. This application Jan. 5, 1990, Ser. No. 461,178
Int. Cl.[5] A61B *5/00, 5/02;* A61M *25/00;* C01L *7/08*
U.S. Cl. 128—748 **23 Claims**

1. A combination of a transvenously insertable guide wire, with a physiological pressure transducer assembly of the type having extended fiber optic paths for light transmission to and from the transducer, the combination comprising:

an elongated guide wire comprised of multiple coils of wire defining an elongated tubular passage, said guide wire being sufficiently flexible to bend sharply as required in traversing a patient's vascular system;

a pair of fiber optic paths contained within said tubular passage of said guide wire and extending longitudinally therein inside of said coils, each of said fiber optic paths having a proximal and a distal end; and

a pressure transducer mounted on said guide wire at the proximal ends of said fiber optic paths, said transducer comprising a housing within which the proximal ends of said fiber optic paths terminate adjacent to each other in

optical coupling relation, said housing being at least partially contained within said guide wire in restraining engagement between opposite sides thereof, and a flexible membrane means having an exterior portion exposed to sense pressure exterior of said housing and an interior portion positioned to interrupt light transmission between the proximal ends of said fiber optic paths due to movement of said membrane in response to changes in pressure exterior of said housing, said pressure transducer having a lateral dimension no greater than that of said guide wire on which it is mounted.

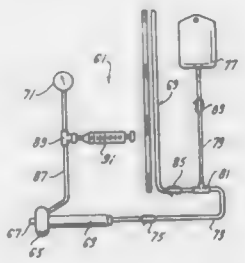
BIOPSY NEEDLE CONSTRUCTION

Joseph J. Mazza, Marshfield, Wis., assignor to Marshfield Clinic, Marshfield, Wis.

Filed Apr. 24, 1989, Ser. No. 342,540
Int. Cl.[5] A61B *10/00*
U.S. Cl. 128—754 **10 Claims**

1. A biopsy needle assembly, comprising an outer tubular cannula having a proximate end and a distal end, said distal end being disposed at an acute angle with respect to the longitudinal axis of said cannula, said cannula having an inner cylindrical surface disposed adjacent said distal end with said cylindrical surface having a uniform diameter throughout its length, an end of said cylindrical surface opposite said distal end being undercut to provide a sharp annular interior edge, the remaining portion of said cannula extending from said edge to said proximate end of said cannula having a larger internal diameter than the internal diameter of said cylindrical surface, and a solid stylus configured to be disposed within said cannula and having a proximate end and a distal end disposed at an acute angle to the longitudinal axis of said stylus, said stylus being in sliding contact with said cylindrical surface and spaced from said remaining portion of the cannula, the proximate end of said cannula being open, the distal end of said cannula after removal of said stylus acting to cut a specimen of tissue with



the specimen being collected interiorly of said cannula and being removed through the open proximate end.

METHOD FOR EXERCISING A PATIENT'S ANAL CANAL

Christopher J. Lahr, 103 Rutledge Ave., Charleston, S.C. 29401

Continuation-in-part of Ser. No. 174,203, Mar. 28, 1988, abandoned, which is a continuation-in-part of Ser. No. 51,636, May 20, 1987, Pat. No. 4,739,767, which is a division of Ser. No. 836,729, Mar. 6, 1988, Pat. No. 4,687,002. This application Apr. 14, 1989, Ser. No. 337,200
Int. Cl.[5] A61B *5/10*
U.S. Cl. 128—774 **4 Claims**

1. A method for exercising a patient's anal canal, comprising the following steps:

(a) inserting first and second balloons in the patient's relaxed anal canal;

(b) at least partially filling each balloon with fluid to preselected pressures;

(c) connecting the first balloon to a first pressure measuring device to measure the pressure in the first balloon and connecting the second balloon to a second pressure measuring device to measure the pressure in the second balloon; and

(d) repeatedly contracting the anal sphincter against the first balloon whereby the pressure measured by the first pressure measuring device is increased and relaxing the anal sphincter whereby the pressure measured by the first pressure measuring device is decreased, and repeatedly contracting the abdominal muscles whereby the pressure measured by the second pressure measuring device is increased and relaxing the abdominal muscles whereby the pressure measured by the second pressure measuring device is decreased.

BRAID ELECTRODE LEADS AND CATHETERS AND METHODS FOR USING THE SAME

Steven E. Scott, Miami, Fla., assignor to Telectronics Pacing Systems, Inc. Englewood, CA.

Filed Nov. 13, 1989, Ser. No. 434,246
Int. Cl.[5] A61N *1/05*
U.S. Cl. 128—786 **27 Claims**

1. A lead for implantation in a body for conducting an electrical current between an electrical device and a location in the body, said lead comprising:

an elongate tubular insulating member;

a first exposed portion of electrically conductive braid forming a closely fitting sheath around a portion of said insulating material;

a first electrical coupling means for coupling said device to said lead; and

a first electrically insulated connection means for electrically connecting said braid and said electrical coupling means,

said tubular insulating member having a part which extends distally with respect to said electrical coupling means from said braid, further comprising:

an electrode on said part, said electrode being spaced apart from said braid;

a second electrical coupling means for electrically coupling said device to said lead; and

a second electrical connection means for electrically connecting said electrode to said second electrical coupling means.

METHOD FOR INCREASING TUMOR SENSITIVITY TO CHEMOTHERAPY

David Rubin, 8949 Montrose Way, San Diego, Calif. 92122

Filed Oct. 13, 1989, Ser. No. 421,598
Int. Cl.[5] A61N *1/00*
U.S. Cl. 128—804 **14 Claims**

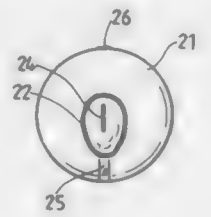
1. A method of rendering drug-resistant tumor cells drug-sensitive, comprising selectively administering only to said tumor cells a sufficient amount of a pump-affecting compound to suppress the pumping action of P-glycoprotein on said tumor cells, said amount being less than that amount necessary for such pump-affecting compound itself to kill said tumor cells.

5,005,589

CONDOM

Ying-Teh Hwang, No. 220, Ruey Feng Street, Kaohsiung, Taiwan

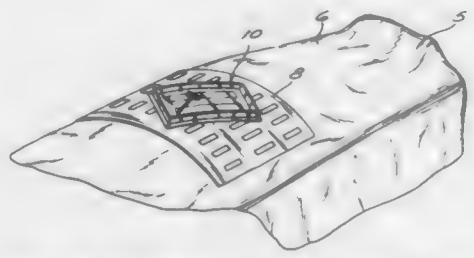
Filed Mar. 22, 1990, Ser. No. 497,610
Int. Cl.[5] A61F *6/04, 5/44*
U.S. Cl. 128—844 **5 Claims**



1. A condom comprising:

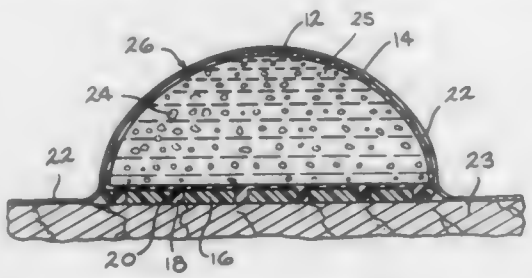
(a) an elongated body having a generally concavo-convex front portion and defining an interior space;

(b) a sperm cell having a generally oval shaped cross-sectional configuration with a width and a height, the cross-sectional configuration taken in a plane extending generally perpendicular to the elongated body; and,



(c) a neck portion connecting the sperm cell to the front portion of the elongated body, a slit extending from said neck portion into said elongated body, said slit having a width and height, the slit allowing communication between the interior space of the elongated body and the

sperm cell wherein the width of the slit is substantially smaller than its height, and wherein the width and height



of the slit are substantially smaller than the width and height of the sperm cell.

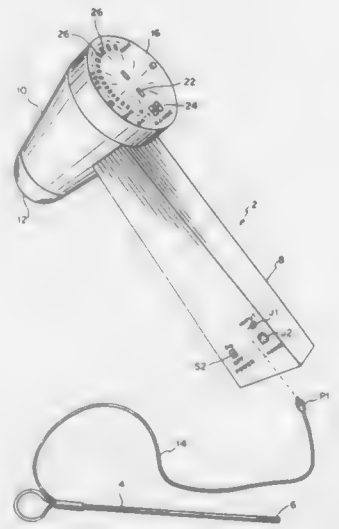
SURGICAL INSTRUMENT TRAY
John D. Eldridge, Jr., and Mary A. Morgan, both of Newport Beach, Calif., assignors to Jodel Medical Products, Inc., Santa Ana, Calif.
Filed Feb. 17, 1989, Ser. No. 312,135
Int. Cl.[5] A61B *19/00*
U.S. Cl. 128—849 **5 Claims**



1. A system for retaining surgical instruments, comprising:
a surgical instrument retainer including a base portion defined by a periphery;
a wall projecting from said periphery wherein said wall terminates at a distance from said base portion;
a flexible surgical drape; and
a means for selectively securing said surgical instrument retainer to said surgical drape, said means comprising:
a magnetic element incorporated in said base portion; and
a plurality of magnets incorporated in said surgical drape such that a magnetic attraction exists between said magnetic element and said surgical drape.

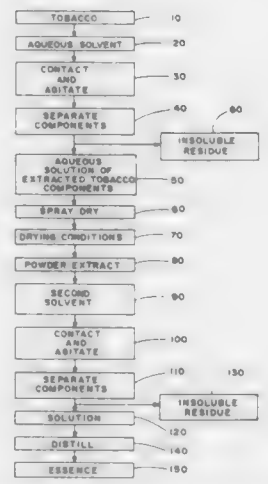
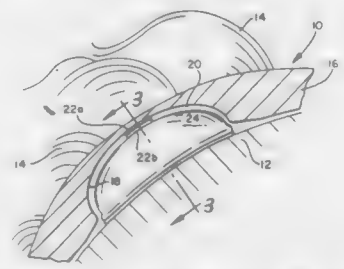
SELF-INFLATING TISSUE EXPANDER
Eric D. Austad, 309 Riverview Dr., Ann Arbor, Mich. 48104
Filed May 3, 1990, Ser. No. 518,489
Int. Cl.[5] A61B *19/00;* **A61F** *2/12, 2/02*
U.S. Cl. 128—899 **20 Claims**



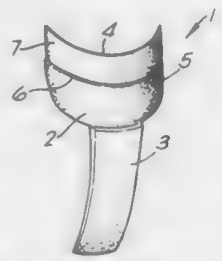
1. A surgically implantable self-inflating device for expanding soft tissue without substantial physician manipulation after implantation, said device comprising:
an expandable envelope portion being substantially impermeable to extracellular body fluids;
a window portion being readily permeable to extracellular body fluids; and
an osmotic material disposed within said device and providing an osmotic potential across said window for drawing extracellular fluid therethrough and into said envelope thereby forming a solution with said osmotic material and causing said device to inflate and the overlying tissue to expand.

5,005,592
METHOD AND APPARATUS FOR TRACKING CATHETERS
Robert L. Cartmell, Bellbrook, Ohio, assignor to Becton Dickinson and Company, Franklin Lankes, N.J.
Filed Oct. 27, 1989, Ser. No. 428,386
Int. Cl.[5] A61B *5/05*
U.S. Cl. 128—899 **13 Claims**



1. Apparatus for determining the location of an object adapted to be inserted into the body of a patient, which comprises:
a transmitter, the transmitter including an oscillator for generating a transmit signal, and a transmit coil coupled to the oscillator for transmitting a signal corresponding to the transmit signal;
a receiver, the receiver including a receive coil for receiving the signal transmitted by the transmitter by mutual inductance between the two coils, means for processing the signal received by the receive coil, one of the transmit coil and the receive coil being situated on the object adapted to be inserted into the patient's body, and the other of the receive coil and the transmit coil being located externally to the patient's body, the processing means providing an output signal which varies in accordance with the strength of the signal received by the receive coil and detecting the distance the transmit coil is form the receive coil based on the strength of the signal received by the receive coil, the receiver further including display means coupled to the processing means for indicating at least the relative distance which the transmit coil is from the receive coil, whereby the location of the object adapted to be inserted into the patient's body may be located; and
means for controlling the strength of the signal transmitted by the transmit coil in response to the output signal of the processing means of the receiver, the control means being operatively coupled to the processing means.

5,005,593
PROCESS FOR PROVIDING TOBACCO EXTRACTS
Barry S. Fagg, Winston-Salem, N.C., assignor to R. J. Reynolds Tobacco Company, Winston-Salem, N.C.
Continuation-in-part of Ser. No. 149,044, Jan. 27, 1988, abandoned. This application Oct. 26, 1988, Ser. No. 262,770
Int. Cl.[5] A24B *15/24, 15/26*
U.S. Cl. 131—297 **123 Claims**



1. A process for providing a concentrated tobacco extract, the process consisting essentially of the steps of:
(a) extracting components from tobacco material with a first solvent having an aqueous character, and then
(b) providing the tobacco components extracted by the first solvent in a low solvent form,
(c) providing a second solvent different from the first solvent,
(d) extracting a portion of the components from the tobacco components resulting from step (b) with the second solvent, and then
(e) isolating tobacco components extracted by the second solvent from the second solvent.

5,005,594
WIG ANCHOR
Geneva R. Dunagan, 804 Edwards Blvd., Big Spring, Tex. 79720
Continuation of Ser. No. 108,697, Oct. 16, 1987, abandoned. This application Sep. 26, 1989, Ser. No. 393,830
Int. Cl.[5] A41G *5/00*
U.S. Cl. 132—53 **7 Claims**

1. In combination with a wig having a frame forming a concave underside surface, and a shallow pocket formed by the frame and opening at said surface, the pocket having cross dimensions substantially greater than its depth, an article adapted to assist in positioning and maintaining said wig on the head of a wearer having little or no natural hair, said article having the shape of a shallow pad fitting loosely in said pocket and comprising an envelope to be disposed in retaining engagement with the head of said wearer, said envelope having a first side substantially conforming to the surface of the pocket and a second side adapted to substantially conform to that portion of the head of the wearer facing the pocket, and a mass of fibrous compressible filler material within said envelope, said filler material confined by the envelope to have a pad shape, and means for locally attaching said envelope to said frame interiorly of said pocket, said mass of fibrous material causing the pad to protrude from said pocket.

5,005,595
FINGERNAIL REPAIR
David H. Aylott, Tomarton, United Kingdom, assignor to Eylure Limited, Wales
Filed Jan. 18, 1989, Ser. No. 298,389
Claims priority, application United Kingdom, Jan. 19, 1988, 8801107
Int. Cl.[5] A45D *29/00*
U.S. Cl. 132—73 **11 Claims**

1. A method of repairing a split or broken natural fingernail or cosmetically enhancing the appearance of a natural fingernail comprising the steps of:
providing a nail means having a support portion and a handle portion by which the support portion may be manipulated;
applying adhesive to at least a portion of an underneath surface of the natural fingernail or the support portion;
manipulating the nail means so as to position the support portion in contact with the underneath of the natural fingernail with the adhesive therebetween so as to secure the nail means to the underneath of the natural fingernail; and
separating the handle portion from the support portion.

STREET CLEANING DEVICE FOR COLLECTING LEAVES AND DEBRIS

Maurice A. Popelier, East Moline; Myron L. McCunn, Orion, both of Ill.; David C. Winter, Johnston, Iowa; Dennis L. Marchael, Des Moines, Iowa; James W. Hall, Bettendorf, Iowa, and Ronald E. Rohren, Moline, Ill., assignors to Deere & Company, Moline, Ill.

Continuation of Ser. No. 103,227, Sep. 30, 1987, abandoned. This application Jan. 19, 1989, Ser. No. 302,091

Int. Cl.[5] E01H *1/04*

U.S. Cl. 134—25.1 **24 Claims**

1. A device adapted for movement forwardly over a street by a propelling vehicle having an operator station, the device for collecting material including leaves and debris arranged in piles of varying sizes lying in the street, comprising:

a frame supported for forward movement over the ground;

a cutting device rotatably supported by the frame for rotation about a transversely extending and generally horizontal axis, the cutting device including pivoting flails adapted for movement closely adjacent the surface of the ground;

means for rotating the cutting device to bring the flails in contact with portions of the piles and lift the material over the cutting device;

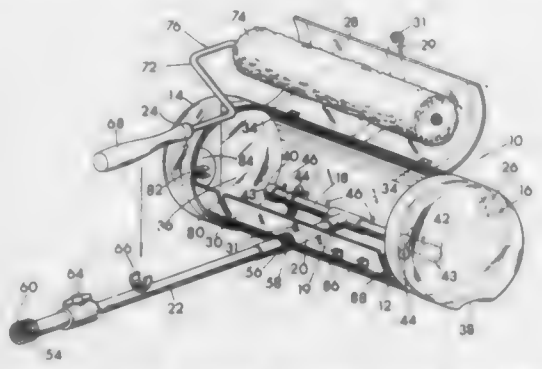
hood means including a forwardly opening and transversely extending throat for receiving the piles of material as the frame is moved forwardly, said hood means extending over the cutting device for retaining the material as the material is lifted;

moveable structure supported by the frame adjacent the throat;

means varying the size of the throat from a location remote from the hood means as the frame is moved forwardly to conform generally to the size of the pile being received by the throat to thereby restrict material from being thrown forwardly through the throat while facilitating entry of the pile into the throat, wherein said means varying the size of the throat includes motor means operably connected to the moveable structure and controllable from the operator station to change the position of the moveable structure while the frame is moved forwardly; and

means for delivering the lifted material to a receptacle.

5,005,598



PAINT ROLLER RINSER

Ronald E. Hodgdon, 3521 Timber La., Anderson, Calif. 96007

Filed Aug. 16, 1990, Ser. No. 569,210

Int. Cl.[5] B08B *3/02*

U.S. Cl. 134—138 **4 Claims**

1. A paint roller cleaning apparatus having two separate roller holding and cleaning positions to allow cleaning of at least two types of paint rollers, one paint roller at a time, comprising:

an elongated tubular housing for use in a lengthwise horizontally disposed position on a surface, said tubular housing having a housing first end and an oppositely disposed housing second end, a first end wall generally closing said housing first end, a second end wall generally closing said housing second end, a roller installation opening in said tubular housing, said roller installation opening sized to allow installation and removal of a roller brush and at least a portion of a roller support rod supporting the roller brush into said tubular housing, an openable door hingidly attached over said roller installation opening, releasable fastening means to temporarily maintain said door closed over said roller installation opening, an elongated fluid distributor affixed within said tubular housing, said fluid distributor having means to connect to and receive a supply of pressured cleaning fluid, a plurality of nozzles on said fluid distributor, said nozzles spaced apart from one another extending generally from adjacent a first end of said fluid distributor to adjacent a second end of said fluid distributor, said nozzles further positioned to dispense and aim pressured cleaning fluid toward a roller brush when within said tubular housing to cause the roller brush to spin, an elongated rigid member removably affixed to said paint roller cleaning apparatus and extending generally perpendicular and exteriorly to said tubular housing, said rigid member having a roller handle holding means affixed thereto, said roller handle holding means sized and shaped to removably accept and tightly retain a paint roller handle, a first notch in said tubular housing adjacent said housing first end, said first notch located in communication with said roller installation opening, said first notch sized to accept a portion of a roller support rod, a first roller support rod holding means affixed to said tubular housing adjacent said housing first end, said roller handle holding means useful in conjunction with said first notch and said first roller support rod holding means to hold a paint roller in a first of said two cleaning positions, a second notch in said tubular housing adjacent said housing second end, said second notch located in communication with said roller installation opening, said second notch sized to accept a portion of a roller support rod, a second roller support rod holding means affixed to said tubular housing generally adjacent said second notch, said roller handle holding means useful in conjunction with said second notch and said second roller support rod holding means to hold a paint roller in a second of said two cleaning positions, at least one fluid discharge opening in said paint roller cleaning apparatus providing exit means for paint contaminated cleaning fluid.

SERVOVALVE APPARATUS FOR USE IN FLUID SYSTEMS

Stephen C. Jacobsen; Edwin K. Iversen, and David F. Knutti, all of Salt Lake City, Utah, assignors to Sarcos Group, Salt Lake City, Utah

Filed Jan. 31, 1990, Ser. No. 472,701

Int. Cl.[5] G05D *16/20*

U.S. Cl. 137—83 **6 Claims**

1. A servovalve apparatus for use in fluid systems comprising

a flexible conduit having an upstream end and a downstream end;

means for connecting a source of fluid to the upstream end of the flexible conduit;

a receiving plate positioned adjacent the downstream end of the flexible conduit, the receiving plate having at least one fluid channel formed therein;

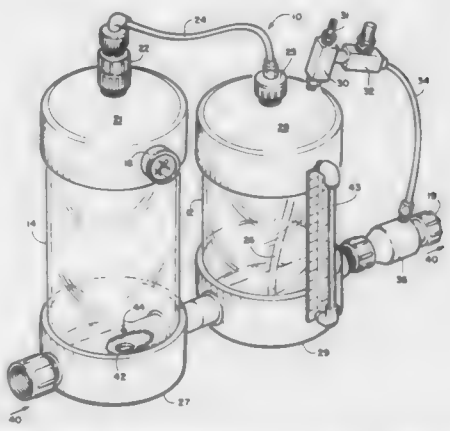
an armature affixed to the flexible conduit;

a conductive coil surrounding at least a portion of the flexible conduit adjacent its upstream end for magnetizing the armature when electrical current is supplied to the coil;

a magnet assembly positioned at the side of the armature for selectively attracting or repelling the armature to deflect the conduit, depending upon the direction of electrical current supplied to the coil; and

means for preventing magnetic particles from coming into contact with the magnetic assembly.

5,005,601



AUTOMATIC PROPORTIONING FERTILIZER INJECTOR

Thomas F. Strong, 8733 Magnolia, Ste. 100, Santee, Calif. 92071

Filed Nov. 3, 1989, Ser. No. 431,452

Int. Cl.[5] B01F *3/08*

U.S. Cl. 137—205.5 **9 Claims**

1. An apparatus for the automatic controlled dispensing of a liquid substance into a first conduit of flowing water under pressure comprising:

a first tank having a top and a bottom communicating with said flowing water through at least one opening in said first conduit;

a second tank having a top and bottom;

a first valve means located on the top of said first tank, said first valve means allows pressurized air to flow into said second tank and prevents any liquid from flowing from said first tank to said second tank;

a second conduit means interconnecting said first valve means with the interior of said top of said second tank;

a third conduit means extending from a location adjacent to the inside bottom of said second tank to a position exterior of the top thereof;

a second valve means communicating with the downstream end of said third conduit, said second valve means being normally open to the atmosphere and closed to said atmosphere when the inside of said second tank is pressurized;

a third valve means having and input and an output, said input connected downstream of said second valve means;

a normally closed pressure activated valve positioned in series with said first conduit, said pressure actuated valve having a calibrated leak therethrough when closed; and

a fourth conduit connected to said output of said third valve means and connected to said first conduit downstream of said pressure activated valve.

5,005,602

POPPET VALVE ASSEMBLY

Richard L. Fahl, Fairfield, Ohio, assignor to Dover Corporation, New York, N.Y.

Continuation-in-part of Ser. No. 312,888, Feb. 17, 1989, abandoned, which is a continuation of Ser. No. 90,617, Aug. 28, 1987, Pat. No. 4,813,449, said Ser. No. 90,617, is a division of Ser. No. 813,250, Dec. 24, 1985, Pat. No. 4,693,268. This application Jul. 18, 1989, Ser. No. 381,578

The portion of the term of this patent subsequent to Mar. 21, 2006, has been disclaimed.

Int. Cl.[5] F16K *1/12, 31/52, 35/02*

U.S. Cl. 137—219 **3 Claims**

1. A poppet valve assembly having a flow passage therethrough and comprising

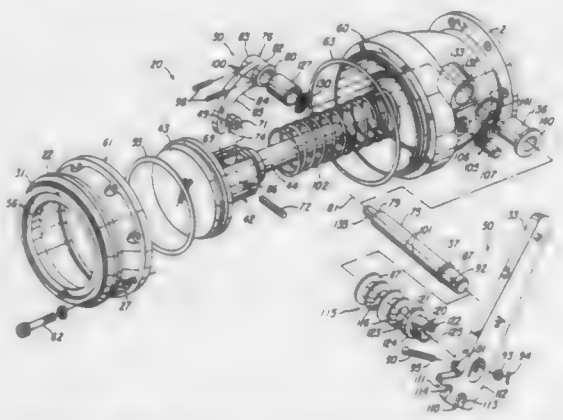
a housing comprising first and second parts compositely defining the outer bounds of the flow passage, which is formed concentrically of a central axis,

said housing parts being sealingly joined at a plane normal to said central axis,

one of said housing parts having, adjacent the outer end thereof, an annular valve seat defining a portion of said flow passage,

a single piece poppet structure having

a head, having an effective diameter, sealingly engageable with said valve seat and



a stem, having an outer end portion of a given diameter, projecting from said head in a direction away from said valve seat,

said head and stem being formed concentrically of a central axis, with the effective diameter of the head being no greater than five times the given diameter of the stem,

journal means for mounting said poppet structure for movement of the head towards and away from the valve seat,

said journal means being disposed centrally of the flow passage and connected to the second housing part by radially extending members,

said journal means having a bore concentric of the central axis of the flow passage,

said bore slidably receiving an end portion of the stem and aligning the central axis of the poppet structure with the central axis of the flow passage, and

actuator means for displacing said head away from said valve seat, said actuator means comprising

a transverse opening formed in said stem, intermediate said head and the end portion which is slidably received by the bore of said journal means,

a roller rotatably mounted in said slot on an axis normal to and intersecting the central axis of the poppet structure,

an actuator shaft pivotally mounted on said second housing part about an axis parallel to the roller axis,

a handle secured to said actuator shaft exteriorly of said housing, and

a cam finger secured to said actuator shaft and extending into said slot,

said cam finger having a curved cam surface engageable with said roller, the curvature of said cam surface being such that contact thereof with the roller is aligned with the central axis of the poppet structure, as the actuator shaft is rotated by the handle to cause the finger to displace the poppet structure head away from the valve seat.

FLOW CONTROL DEVICE FOR ADMINISTRATION OF INTRAVENOUS FLUIDS

Jerry L. Aslanian, 4247 E. Hazelwood, Phoenix, Ariz. 85018

Continuation of Ser. No. 630,632, Jul. 13, 1984, abandoned. This application Feb. 2, 1989, Ser. No. 305,078

Int. Cl.[5] F16K *37/00, 5/10*

U.S. Cl. 137—556 **6 Claims**

1. In an IV system having a source of IV fluid connected to an administration needle via a tubing line, an IV control valve connectable in said tubing line comprising:

(a) a housing defining a valving chamber having generally cylindrical side walls and an end wall, said housing defining an inlet and outlet spaced apart communicating with said valving chamber and connectable in said tubing line, said housing being molded of a first plastic material having sufficient rigidity so as not to flow or deform under application of hoop stress;

(b) a flow control member including a metering member having a generally cylindrical surface and an end surface, said flow control member having dial means external of said housing for manually rotating the flow control member relative to the housing;

(c) at least the cylindrical surface of said metering member being molded from a second plastic material which is relatively softer than said first plastic material and in an assembled position being pressed into said valving chamber to place all of said valving chamber walls and metering member surfaces in engagement to provide sealing

substantially along all surfaces of said metering member and being rotatable with respect thereto; and

(d) said metering member defining a continuous circumferentially extending flow passage on said cylindrical surface, said flow passage having a first regime in which the cross sectional area of the flow passage varies and a second regime in which the cross sectional area is substantially constant and further including flow blocking area whereby upon rotation of said flow control member, said flow passage and said blocking area may be placed in selective registry with said inlet and outlet to block flow, meter flow, or establish a purge flow rate.

CONDITIONING VALVE

Max Kueffer, Blue Bell, and Roy L. Feiss, Southampton, both of Pa., assignors to Keystone International Holdings Corp., Wilmington, Del.

Filed Jul. 10, 1989, Ser. No. 377,426

Int. Cl.[5] F16K *11/07*

U.S. Cl. 137—625.39 **2 Claims**

1. A conditioning valve for simultaneously reducing the pressure and temperature of incoming steam comprising:

a valve body having an interior divided into first and second chambers, said first chamber having an inlet port for introducing superheated steam flow under high pressure into said conditioning valve, said second chamber having an outlet port for expelling conditioned steam out of said conditioning valve;

an annular seat affixed to the interior of said valve body between said first and second chambers;

a perforated cylindrical outer casing affixed to said annular seat and extending into said second chamber, said outer casing permitting the flow of steam into said second chamber;

retractable cylindrical valve means slidably matable within said annular seat and said perforated cylindrical outer casing, said cylindrical valve means extending between said first and second chambers, said cylindrical valve means having a plurality of openings over a portion of its body to permit the flow of steam between said first and second chambers when said valve means is in a first position, said openings being closed off from said flow of steam when said cylindrical valve means is in a second position;

a water steam extending axially through the center of said cylindrical valve means and said outer casing, said water steam having a terminal end in said second chamber, said water steam transporting desuperheating water to said second chamber, said stem further being coupled to said cylindrical valve means and slidably adjusting said cylindrical value means between said firs and second positions; and

means located at the terminal end of said water stem for injecting atomizing water into said second chamber to be mixed with steam entering said second chamber.

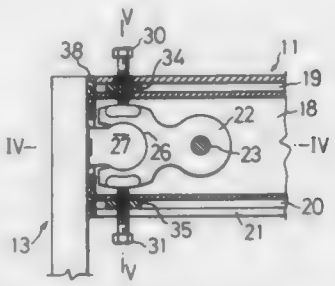
HEALD FRAME FOR LOOMS



Yoichi Shimizu, Osaka, Japan, assignor to Nankai Kogyo Kabushiki Kaisha, Osaka, Japan

Filed Feb. 21, 1990, Ser. No. 483,526

Claims priority, application Japan, May 22, 1989, 1-59412[U]

Int. Cl.[5] D03C *9/06*

U.S. Cl. 139—91 **7 Claims**

1. A heald frame for a loom comprising:

a hollow framestave having upper and lower walls;

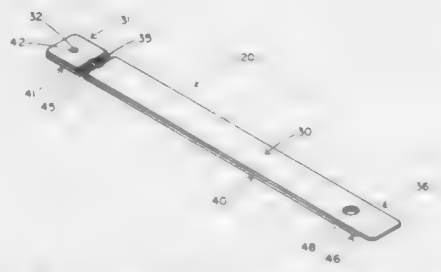
a holder supported in the hollow of said framestave;

a side stay having a jointing convex part thereon;

said jointing convex part extending into the hollow of said framestave;

means for adjustably engaging said jointing convex part to said holder in different positions;

means for adjusting and fixing said jointing convex part to said holder in a selected position;



whereby said hollow framestave can be vertically adjusted in relation to said side stay.

5,005,608

SPLIT HEDDLE WITH SUPERIMPOSED BLADES WITH ALIGNED APERTURES

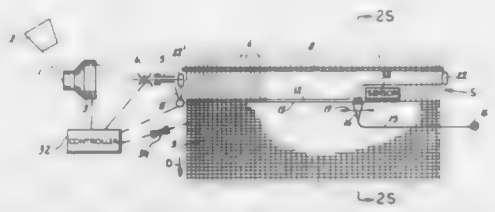
Larry D. Anderson, Appleton, Wis., assignor to Asten Group, Inc., Charleston, S.C.

Filed Jan. 31, 1990, Ser. No. 472,7[illegible]
Int. Cl.[5] D03C *9/02*
U.S. Cl. 139—93 16 Claims

1. A heddle for controlling the movement of a yarn, said heddle comprised of:

a first member having two apertures aligned one above the other at a first end thereof and a single aperture at the other end thereof, the lower aperture at the first end being intersected on one side thereof by a perpendicular slot and on the opposite side thereof by a perpendicular groove; and,

a second member which is the mirror image of said first member,



the first and second members being secured at their first ends with the respective grooves facing in opposite directions and defining a yarn capturing channel.

5,005,609

PNEUMATIC REMOVAL OF DEFECTIVE WEFT FILAMENT

Michel Volland; Gilles Grandvallet, both of Bourgoin Jallieu, and Roger Fourneaux, La Tour du Pin, all of France, assignors to S.A. Saurer Diederichs, Bourgoin Jallieu, France

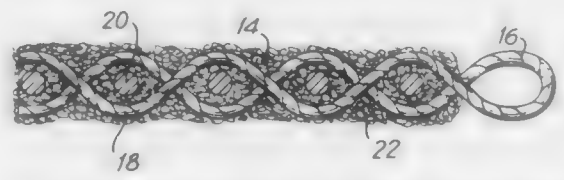
Filed May 25, 1989, Ser. No. 357,560
Claims priority, application France, May 25, 1988, 88 07257
Int. Cl.[5] D03D *47/30, 51/00*
U.S. Cl. 139—116.2 18 Claims

1. In a loom wherein a weft filament is inserted as a pick in a weft direction into a shed formed between groups of warp filaments extending and generally traveling in a warp direction, and is beaten into the warp filaments by a comb to form a woven textile, a system for removing a defective pick from the warp filaments, the system comprising:

at least one stripping nozzle directed generally upstream in the warp direction;

supply means for feeding a compressed gas to the nozzle so the gas is expelled therefrom as a jet directed generally upstream in the warp direction over the defective pick to dislodge same from the warp filaments;

guide means for displacing the nozzle in the weft direction as it directs the jet of compressed gas at the defective pick; and



means for withdrawing the defective pick from the shed after being dislodged from the warp filaments by the nozzle.

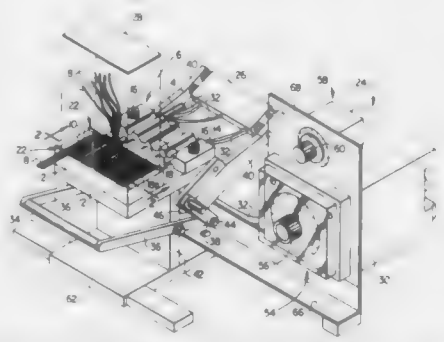
5,005,610

PAPERMAKING FABRIC PIN SEAM WITH BRAIDED YARNS IN JOINING LOOPS

Francis L. Davenport, Ballston Lake, N.Y., assignor to Albany International Corporation, Albany, N.Y.

Filed Jan. 3, 1989, Ser. No. 293,207
Int. Cl.[5] D03D *13/00, 15/00*
U.S. Cl. 139—383 AA 2 Claims

1. An open-ended press fabric, for use on the press section of a papermaking machine, and designed for pin-seam closure, comprising:



a system of machine direction (MD) yarns and a system of cross-machine direction (CD) yarns, said yarns of said system of machine-direction (MD) yarns being interwoven with said yarns of said system of cross-machine direction (CD) yarns to form said open-ended press fabric in a rectangular shape with a length, a width, two lengthwise edges, and two widthwise edges, said machine-direction (MD) yarns extending for said length of said open-ended press fabric between said two widthwise edges, said machine-direction (MD) yarns further forming loops along each of said two widthwise edges for joining said two widthwise edges to one another with a pin seam, said pin seam being integral to said open-ended press fabric, said machine direction (MD) yarns extending for the length of said open-ended press fabric being braided yarns formed by braiding a plurality of monofilament strands together, said braided yarns forming said loops so that said loops may maintain a preselected orientation along said two widthwise edges of said open-ended press fabric to facilitate the intermeshing of said lops when said two widthwise edges are brought together to form said pin seam.

5,005,611

APPARATUS FOR MODIFYING CABLES AND PRODUCTS THEREOF

Jack D. Hecker, 223 Johnson Dr., Duncanville, Tex. 75116

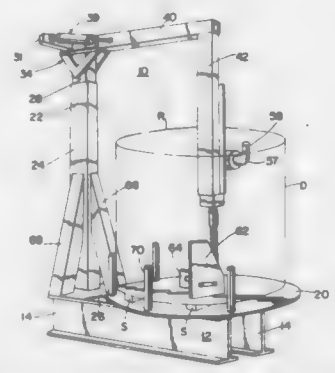
Filed Nov. 6, 1989, Ser. No. 432,558
Int. Cl.[5] H21F *1/02*
U.S. Cl. 140—147 6 Claims

1. A hand operated apparatus for modifying a round cable having a plurality of conductors so that said round cable is provided with a flat end portion to which a flat cable type conductor may be attached, said apparatus comprising:

a grooved template, said grooves designed to receive individual conductors; and

means for fixedly uniting said conductors when disposed in said groove, said means for fixedly uniting said conductors when in said grooves comprising:

a press plate; and



a hand operated toggle arm mechanism on which said press plate is mounted.

5,005,612

METHOD AND APPARATUS FOR TRANSFERRING HIGH VISCOSITY LIQUID WORK PRODUCT FROM A DRUM TO A WORK STATION

John M. Kurtz, 3175 Fulton Rd., Cleveland, Ohio 44109

Filed Dec. 14, 1989, Ser. No. 450,542
Int. Cl.[5] B01F *15/02*; B65G *53/14*
U.S. Cl. 141—7 7 Claims

1. The method of transferring high viscosity liquid work product to a work station from a cylindrical storage drum having an open top, a closed bottom, and a longitudinal axis, comprising the steps of:

(a) vertically aligning the longitudinal axis of said work product-filled cylindrical work product transfer drum and adapting said drum to rotate about said vertical axis;

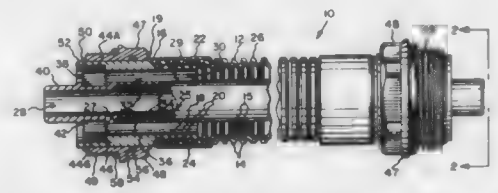
(b) rotating said work product transfer drum about said vertical axis;

(c) lowering a work product transfer tube into said transfer drum at a predetermined rate while said drum is rotating;

(d) scraping work product from the interior wall surface of said drum while said drum is rotating;

(e) pumping work product from said drum at a predetermined rate synchronized with the rate of lowering said work product transfer tube into said drum;

(f) setting said work product pumping predetermined rate to cause said drum to be emptied of work product coincident with the lowering of said work product transfer tube to the bottom of said drum; and



(g) lowering said work product transfer tube to the bottom of said drum.

5,005,613

LIGHT WEIGHT FLEXIBLE COAXIAL VAPOR RECOVERY HOSE

John H. Stanley, Uniontown, Ohio, assignor to The GoodYear Tire & Rubber Company, Akron, Ohio

Continuation of Ser. No. 498,153, Mar. 23, 1990, abandoned, which is a continuation of Ser. No. 272,611, Nov. 17, 1988, which is a continuation of Ser. No. 911,852, Sep. 26, 1986, abandoned.
This application Jun. 8, 1990, Ser. No. 536,052
Int. Cl.[5] B65B *3/18*; F16L *47/00, 9/18*
U.S. Cl. 141—45 5 Claims

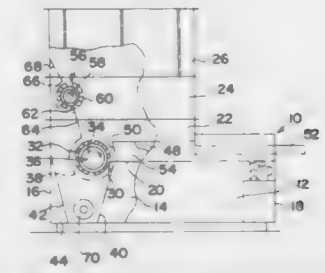
1. A coaxial vapor recovery hose assembly for dispensing volatile fuels wherein one hose carries fuel from a supply tank to a receiving tank and another hose carries fuel vapors from the receiving tank back to the supply tank comprising:

(a) an inner hose,

(b) an outer hose, and

(c) means for holding said hoses in concentric relationship;

wherein said inner hose is substantially reinforced with metallic wire to be relatively incompressible as well as to be capable of bearing tensile stress applied to the assembly, having an outside diameter and an inside diameter to define an inner hose wall thickness;



wherein said outer hose is lightweight, crust and kink resistant and is circumferentially corrugated, is selected from the group consisting of thermoplastics, thermoplastic elastomers, polyamides, thermoplastic polyurethanes and thermoplastic copolyesters and has an inside diameter larger than the outside diameter of the inner hose to define a vapor passageway therebetween and an outside diameter to define an outer hose wall thickness, and wherein the ratio of the inner hose wall thickness to the outer hose wall thickness is 1.67:1 to 5.0:1.

5,005,614

MACHINE FOR CRUSHING MATERIAL

Peter Rössler, Bustadtstr. 20, D-7129 Ilsfeld, Fed. Rep. of Germany

Filed Feb. 14, 1990, Ser. No. 479,951
Claims priority, application Fed. Rep. of Germany, Aug. 23, 1989, 8910075
Int. Cl.[5] B02C *18/08*
U.S. Cl. 241—73 11 Claims

1. A machine for crushing material remains, which includes in combination

(a) a storage container (20–26) for the material to be crushed,

(b) a lower crushing roller (36) located close to a base of the storage container,

which roller (36) comprises a plurality of crushing tools (32) projecting radially from a crushing roller core (34), and

which cooperates with a first stationary crushing rack (30),

(c) a first screen (38) disposed adjacent the lower crushing roller (36) through which crushed remains pass,

(d) a collecting chamber (46) located below the first screen (38) for material chips produced at the time of crushing,

(e) a slide (48) located above a base plate (44) of the storage container which is adapted to be moved across said base plate (44) intermittently towards said lower crushing roller (56) to initially feed material to the lower crushing roller (36),

(f) an upper crushing roller (56) above said lower crushing roller (36) which

is mounted on a crushing roller core (58) and supports a plurality of radially projecting crushing tools (60), and cooperates with a second stationary crushing rack (62),

(g) an active peripheral region of the upper crushing roller (56) having a speed component directed towards said lower crushing roller (36), and

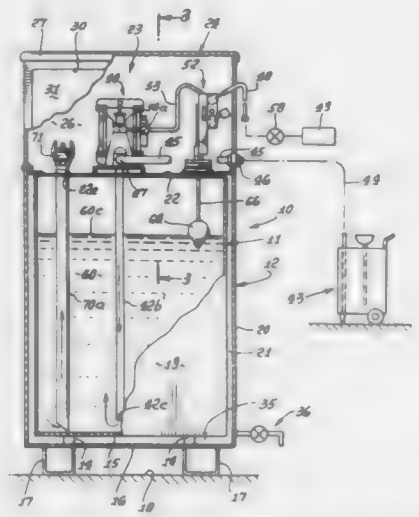
(h) a second screen (66) positioned adjacent said upper

crushing roller (56) through which crushed remains pass, and

(i) a space behind the second screen (66) that is also connected to the collecting chamber (46),

said upper crushing roller (56) thus crushing material not crushed by the lower crushing roller (36).

5,005,615



SAFETY TANK APPARATUS FOR LIQUID STORAGE

David C. McGarvey, San Gabriel, and David C. Whitman, Victorville, both of Calif., assignors to LRS, Inc., South El Monte, Calif.

Division of Ser. No. 462,634, Jan. 8, 1990. This application Aug. 6, 1990, Ser. No. 562,820

Int. Cl.[5] B67C *3/00*

U.S. Cl. 141—198 5 Claims

1. In a safety tank apparatus for installation to receive and store a liquid hydrocarbon or hydrocarbons, or the like, and from which the liquid may be withdrawn, the combination comprising:

(a) tank structure including an inner metallic tank, and an outer metallic tank protectively receiving the inner tank, the outer tank having a side wall, there being an upper interior space above the inner tank and within the tank structure,

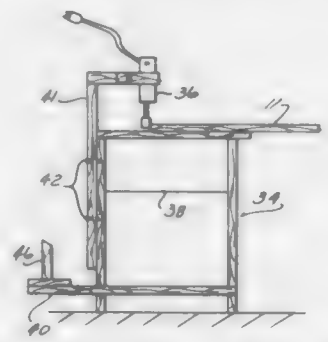
(b) the tank structure including a cover extending over said inner and outer tanks,

(c) an opening in an upper continuation of said side wall, and a locking closure closing said opening, the closure movable to expose said upper interior space to direct sideward access from the exterior,

(d) control means below said cover, and directly horizontally accessible through said opening, for automatically effecting flow of said liquid into the inner tank from the exterior of said safety apparatus via said upper interior space if the level of liquid in the inner tank is below one predetermined level and for preventing flow of said liquid into the inner tank via said upper interior space if the level of liquid in the inner tank is at or above another predetermined level,

(e) said opening at all times being above the level of liquid in the inner tank.

5,005,616



OVERARM ROUTER SHAPER

Bill L. Moshe, 868 Kettering, Pontiac, Mich. 48058

Filed Jun. 11, 1990, Ser. No. 535,776

Int. Cl.[5] B27C *5/00*

U.S. Cl. 144—134 A 2 Claims

1. A device to assist a machine operator in holding and feeding a piece of stock into a machine, the device comprising:

a base;

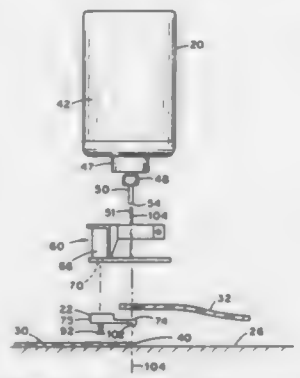
a support connected to said base;

a machine connected to said support;

a pair of parallel extensions connected to said base providing a vertical plane for said piece of stock; and

means for allowing rotation of said support.

5,005,617



ROUTER GUIDE

John Michaels, 7454 Shawnee Rd., North Tonawanda, N.Y. 14120-1368

Filed Apr. 17, 1990, Ser. No. 510,046

Int. Cl.[5] B27C *5/10*; B43L *13/02*

U.S. Cl. 144—134 D 15 Claims

1. A guide facilitating the guide of a hand-held router across a relatively thin workpiece so that the rotatable cutting tool of the router severs the workpiece along a prescribed cutting path and so that the prescribed cutting path corresponds with an edge of an object underlying the workpiece, said guide comprising:

a platen body fixedly securable to the router adjacent the cutting tool thereof so that as the router is manually moved across the top of the workpiece so that the cutting tool moves in cutting engagement with the workpiece, the platen body moves below the workpiece and above the object underlying the workpiece;

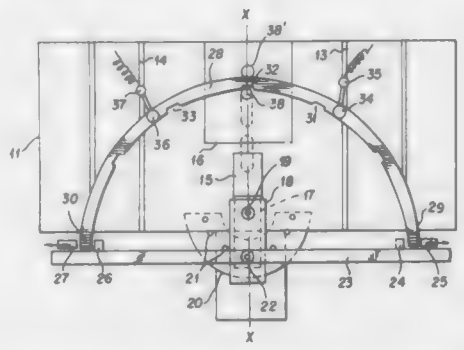
said platen body including abutment means providing an abutment surface positionable in abutting engagement with the edge of the underlying object so that by moving the router across the workpiece while maintaining the abutment surface in abutting relationship with the edge of the underlying object, the cutting tool moves in cutting engagement with the workpiece along a cutting path which corresponds with the edge of the underlying object;

said platen body having a forward portion for extending an appreciable distance along the cutting path in advance of the cutting tool and for a distance which is of least 1.0 inch forwardly of the router and a rearward portion for extending an appreciable distance along the cutting path so as to trail the cutting tool and for a distance which is at least 1.0 inch rearwardly of the router so that a user can easily view the platen body when positioning the abutment surface in abutting relationship with the edge of the underlying object at the outset of a cutting operation; and

said abutment surface extending along the length of the forward and rearward portions of the platen body for engaging the edge of the underlying object at two points therealong which are at least 4.0 inches apart so that as the abutment surface is maintained in abutting relationship with the edge of the underlying object, the likelihood that the platen body will pivot relative to the underlying object edge and thereby shift the cutting tool to one side of the desired cutting path is relatively small.

5,005,618

MEANS FOR POSITIONING ARCHED HALVING-JOINTS OF FRAME PORTIONS AND FOR MILLING BEVELS INTO THESE FRAME PORTIONS



Ludolf Stegherr, Fabrikstrasse 2, 8413 Regenstauf, Fed. Rep. of Germany

Filed Feb. 27, 1989, Ser. No. 315,711

Claims priority, application Fed. Rep. of Germany, Feb. 26, 1988, 3806116

Int. Cl.[5] B27C *5/00*

U.S. Cl. 144—136 R 3 Claims

1. An apparatus for positioning and milling arched halving-joint frame portions, which allow the milling of bevels into the inner and the outer surfaces of arches of window frames, door frames, which bevels are formed for receiving straight formed for receiving straight transverse struts, and the milling or recesses into said struts for connecting the arched frame portions with each other, said means comprising

a) a clamping rail which is fastened to the worktable so that it is rotatable and movable within the plane of the worktable, and which is provided with clamping elements being adjustable in the longitudinal axis of the clamping rail for taking up the two opposite arch ends,

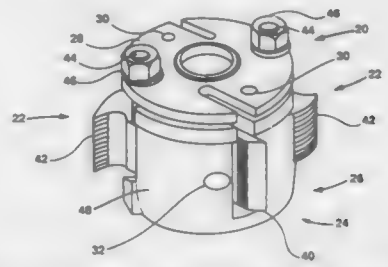
b) a gauge, which gauge is movably connected with the working table transverse to the clamping rail and is connected to the clamping rail so that latching means, such as a spring-loaded bolt, provided at the clamping rail is engageable with latching points, such as bores within said gauge one at a time, and so that the clamping rail together with the workpiece can be rotated over the required graduation step,

c) clamping means for determining the position of the workpiece in order to mill the bevels,

d) a milling tool unit comprising at least two milling tools for tool unit comprising at least two milling tools for milling the bevels, which unit is arranged at the worktable and is adjustable to different shapes of arches relative to the workpiece, and

e) pressure roller means connected with a tool support for engaging one surface of the arch to be milled, which roller means is adjustable relative to the arch in order to determine the depth of the bevel.

5,005,619



FINGER JOINT CUTTER HEAD

Raliegh J. Jensen, Boise, Id., assignor to Ace Company, Inc., Boise, Id.

Filed Feb. 9, 1990, Ser. No. 477,481

Int. Cl.[5] B27G *13/00*

U.S. Cl. 144—230 3 Claims

2. A finger joint cutter head assembly comprising:

a. a body portion;

b. a pair of cutter assemblies diametrically opposed and affixed to the body portion further comprising:

i. a plurality of removable cutter blades placed in a stacked configuration and having an aperture at an end opposite a cutting edge;

ii. a plurality of spacers interposed between the blades, having an aperture therethrough; and

iii. fastener means inserted through the blade apertures and interposed spacer apertures to adjustably affix the blades to the body portion;

c. a pair of adjustable trim knife assemblies diametrically opposed and affixed to the body portion further comprising:

i. a trim knife adjustment apparatus; and

ii. a knife clamp apparatus, and wherein the trim knife adjustment apparatus consists of:

(a) a pair of trim knife holders having a threaded tab;

(b) a pair of links pivotally connecting the trim knife holders to a rotary cylinder; and

(c) a knife fastener threadably engaged with one of the trim holder threaded tabs, and retained within an aperture in the body portion, such that rotation of the knife fastener extends or retracts the knife holders; and

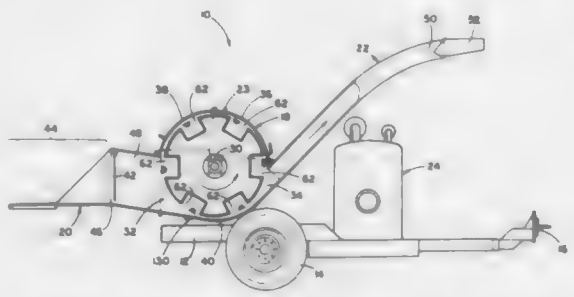
d. means to securely affix the body portion to a rotatable machine spindle.

5,005,620

DRUM-TYPE WOOD CHIPPER

Norval Morey, Winn, Mich., assignor to Morbark Industries, Inc., Winn, Mich.

Filed Apr. 17, 1990, Ser. No. 510,086



Int. Cl.[5] B27L *11/00*

U.S. Cl. 144—373 22 Claims

22. In a method of using a wood chipper for reducing wood products to wood chips, the chipper having:

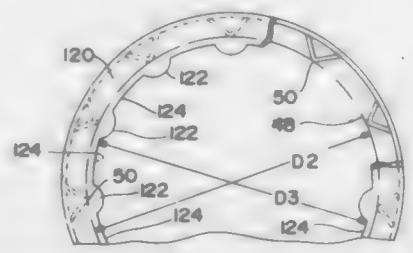
a chipper housing with an inlet for receiving material to be chipped and an outlet for chips, a chipper drum mounted within the housing between the inlet and outlet and having a perimetral portion, at least one knife mounted on the perimetral portion of the drum, mechanism mounting the drum and knife for rotation in the housing and driving it in a chipping direction of rotation, the knife having a generally tangential portion with a cutting edge disposed for-

wardly with respect to said direction of drum and knife rotation, an anvil mounted by the housing radially adjacent the rotary path of travel of the knife cutting edge to cooperate with the knife in cutting chips, the perimetral portion of the drum having a chip inlet opening forwardly of and adjacent the knife cutting edge for passing chips cut by the knife and a chip retention basket radially inward of the knife in communication with the drum chip inlet opening for receiving and circumferentially transporting the chips cut, the drum also having a chip outlet opening rearwardly of the knife cutting edge and communicating with the basket, and the housing having a curvilinear belly band between the anvil and chipper housing outlet conforming in shape generally to the path of rotation of the

cutting edge and spaced radially outwardly thereof and the basket a distance to retain chips in the basket, the steps of:

a. feeding wood material to said chipper housing inlet and into the path of rotation of said knife to chip the inner end portions of said wood materials;

b. collecting the chips cut by said knife in said basket and retaining them therein against the operation of centrifugal force by substantially blocking their free outward egress through sasid drum outlet opening by passing said basket along said retaining belly band in its path to said chipper housing outlet to cause the chips to accelerate to the speed of rotation of said drum; and



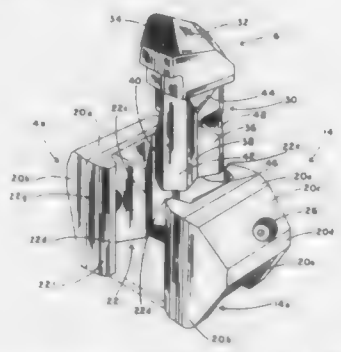
c. hurling them through said chipper housing outlet.

5,005,621

METHOD, SYSTEM, AND APPARATUS FOR DEBARKING ROUNDWOOD

Donald V. Woodham, Monticello, Ark., assignor to Price Industries, Monticello, Ark.

Filed Sep. 1, 1989, Ser. No. 401,407
Int. Cl.[5] B27L *1/02*
U.S. Cl. 144—208 B **18 Claims**



1. Apparatus for debarking roundwood, said apparatus comprising, a generally horizontal rotary drum debarker having a drum with an inside surface, an inlet end and an outlet end, means in front of the drum for feeding roundwood into the drum, a plurality of circumferentially spaced apart elongated lifter elements connected to the inside of the drum for rotation with the drum and having log engaging portions inwardly of the inside surface of the drum so that the roundwood fed into the drum is rotated and lifted by said lifter elements, and a reinforcing ring connected to the drum adjacent one of said ends, said reinforcing ring having an inside diameter greater than the diameter of a circle passing through the log engaging portions of said lifter elements, means adjacent the other end of the drum for reinforcing said other end of the drum, wherein said lifter elements have sloping ends adjacent an end of the drum which slope toward the inside surface of the drum, and cover plates secured to said sloping ends of said lifters.

5,005,622

BLOCK AND LOCKING MECHANISM FOR A STUMP GRINDING CUTTER BIT AND METHOD OF SECURING AND RETAINING

Wayner H. Beach, Roaring Spring, Pa.; Leroy E. Den Besten, Valatie, N.Y., and Don C. Rowlett, Bedford, Pa., assignors to Kennametal Inc., Latrobe, Pa.

Filed Feb. 16, 1990, Ser. No. 481,490
Int. Cl.[5] B27G *13/04*
U.S. Cl. 144—241 **14 Claims**

5. A block and locking mechanism for a stump grinding cutter bit comprising:

(a) a block having a shank receiving cavity and surrounding wall structure;

(b) a cutter bit having a shank adapted to be received within the shank cavity of the block;

(c) retaining notches formed on opposite sides of the shank;

(d) a pair of threaded throughbores extending through opposite sides of the surrounding wall structure of the block, each threaded throughbore extending at an angle with respect to the shank cavity formed within the block; and

(e) a pair of angled set screws threaded through the threaded throughbores for engaging the retaining notches formed on opposite sides of the cutter bit shank and retaining the cutter bit shank within the block such that the cutter bit shank is held within the block by the cooperative action of the set screws which extend from opposite sides of the surrounding wall structure of the block into engagement with the cutter bit shank. are likewise offset such that the notches formed in the shank align with the threaded throughbores.

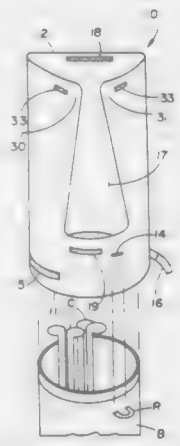
5,005,623

GOLF BAG RAIN COVER

James M. Webster, Jr., Baltimore, Md., assignor to Eru, Inc., Towson, Md.

Filed Feb. 6, 1990, Ser. No. 475,692
Int. Cl.[5] A63B *55/00*
U.S. Cl. 150—159 **37 Claims**

13. A rain cover for the top of a golf bag and for the golf clubs therein, the rain cover being compact, lightweight, flexible and waterproof, comprising:



a sleeve having a first open end, a second open end and a sidewall therebetween;

the first open end having at least one slit therein, the slit receiving therein a ring which is attached near the top of the golf bag such that the ring may be inserted through the slit and a carrying strap on the golf bag may be connected to the ring thereby retaining the cover on the golf bag and

preventing rotation of the cover about the top of the golf bag;

the first open end having a releasable fastening means attached thereto, the first open end further having a strap attached thereto, the strap having thereon a fastening means which cooperates with the releasable fastening means such that when the respective fastening means are engaged, the first end of the cover may be securely snugged to conform to the top of the golf bag, and when so secured the second end of the cover is disposed outwardly from the top of the golf bag and is draped over the top of the golf bag and the golf clubs therein; the cover hanging freely therefrom;

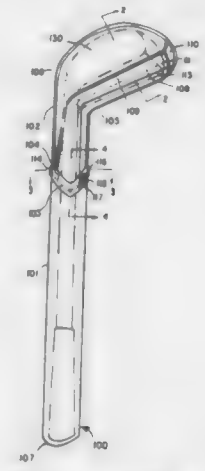
a panel opening in the side wall of the cover, the opening extending from the second end toward the first end of the cover such that when the second end is draped over the top of the golf bag, the second end may be lifted to provide ease of access to the golf clubs while providing cover

to the top of the golf bag; and a releasable first fastening means attached to the second end of the cover, a cooperating second fastening means attached to the first end of the cover near the panel opening such that when the second end of the cover is folded toward the first end of the cover over the top of the golf bag and the respective first and second fastening means are engaged, the top of the golf bag and the golf clubs thereon are protected from rain and wind-driven rain and further, when the first and second fastening means are disengaged, the second end may be lifted providing access to the golf clubs from an angle and preventing rain from entering the golf bag;

wherein the cover is fabricated from a multilayer material;

wherein the multilayer material comprises an outer layer, a center layer which is waterproof and an inner layer; and

wherein the inner layer has a reflectorized surface to improve visibility when the second end of the cover is lifted for access to the golf clubs.



5,005,624

DEVICE FOR PROTECTING GOLF CLUBS

Henry H. Sung, 19826 E. Vista Hermosa Dr., Walnut, Calif. 91789

Filed Mar. 14, 1989, Ser. No. 323,284
Int. Cl.[5] A63B *57/00;* **B65D** *85/20*
U.S. Cl. 150—160 **3 Claims**

1. A golf club protector comprising an elongated rigid tube adapted to assume a vertical position in a golf bag for housing the shaft of an inverted golf club; and a flexible cover secured to the upper end of said rigid tube to entirely surround the hitting head of the inverted golf club; said flexible cover comprising first and second generally parallel elongated flexible panels (**105** and **104**) configured to be slightly larger than the profile of the inverted golf club head; a third elongated flexible panel (**110**) extending between longitudinal edge areas of the first and second panels; said third panel having an upper end area adapted to extend along the toe area of the golf club head, a central area adapted to extend along the sole area of the club head, and a downwardly extending area connected to the upper end of the rigid tube; a fourth flexible panel (**108**) extending from the other longitudinal edge of the first panel partway across the space between the first and second panels; and a fifth flexible panel (**109**) extending from the other longitudinal edge

of the second panel partway across the space between the second and first panels; said fourth and fifth panels having confronting overlapped unconnected longitudinal edges that define a longitudinal slot extending along the undersurface of the club head cover; said longitudinal slot having a sufficient length as to expose the golf club head when the cover is pulled in a direction away from the fourth and fifth panels.

5,005,625

PNEUMATIC TIRE HAVING AIR RETENTION INNERLINER

Daniel F. Klemmensen, Tallmadge, and Roger N. Beers, Uniontown, both of Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio

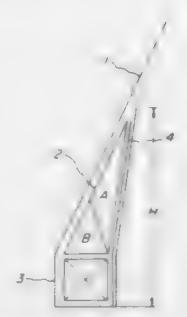
Filed Apr. 24, 1989, Ser. No. 343,776
Int. Cl.[5] B60C *5/14;* **B32B** *27/28*
U.S. Cl. 152—510 **5 Claims**

1. A pneumatic rubber tire having an integral innerliner of a sulfur cured rubber composition comprised of, based on 100 parts by weight rubber, a blend of (A) about 20 to about 90 parts by weight acrylonitrile/butadiene copolymer rubber with an acrylonitrile/butadiene ratio in the range of about 55/45 to about 20/80 and having a Tg in the range of about 20 ° C. to about −25° C.; and (B) about 80 to about 10 parts by weight of at least one additional rubber having a Tg in the range of about −40° C. to about −105° C. comprised of (i) at least one rubber selected from the group consisting of cis 1,4-polyisoprene rubber, styrene/butadiene copolymer rubber, cis 1,4-polybutadiene rubber, and styrene/isoprene/butadiene rubber or of (ii) at least one rubber selected from the group consisting of butyl rubber, chlorobutyl rubber and bromobutyl rubber wherein the resulting acrylonitrilecontent in the rubber blend of (A) and (B) (i) is in the range of about 20 to about 40 weight percent and in the rubber blend of (A) and B (ii) is in the range of about 5 to about 25 weight percent and wherein said innerliner is first constructed as an innersurface of an uncured rubber tire as an uncured compounded rubber gum strip having a thickness in the range of about 0.08 to about 0.2 centimeters and is then co-cured with the tire during a tire curing operation.

5,005,626

PNEUMATIC RADIAL TIRE HAVING A FOLDED BELT INCLUDING A POLYVINYL ALCOHOL CORDS

Kazuo Oshima, Higashiyamato, and Shizuo Iwasaki, Kodaira, both of Japan, assignors to Bridgestone Corp., Tokyo, Japan



Filed Dec. 15, 1987, Ser. No. 133,405

Claims priority, application Japan, Dec. 19, 1986, 61-305470

The portion of the term of this patent subsequent to Dec. 26, 2006, has been disclaimed.

Int. Cl.[5] B60C *9/26, 15/00*

U.S. Cl. 152—527 **4 Claims**

1. A pneumatic radial tire having a belt structure of at least two belt layers composed of at least one layer containing cords each obtained by twisting organic fibers and at least one layer containing steel cords, at least one of the organic fiber cord layers being interposed between the steel cord layer and a tread at a state that both transversely outermost end portions are folded inward, said organic fiber cord having a dynamic modulus at 100° C. and $30H_2$ of 0.8×10^{11} to 2.0×10^{11} dyn/cm^2 and obtained by twisting high strength, high modulus polyvinyl alcohol fibers and having, after removal from the tire, a twisting coefficent N_T represented by the following equation:

$$N_T = N \times \sqrt{0.139 \times D/\rho} \times 10^{-3},$$

wherein N is a twisting number per 10 cm of cord length, D is ½ of total denier number of cord and p is a specific gravity of cord and a strength S (g/d), which satisfy the following relations:

$$0.19<N_T<0.55 \quad (1)$$

$$S>15.5-12N_T \quad (2,)$$

and said tire satisfying the following relation:

$$H>2.5M+125 \quad (3),$$

wherein H is a height of a turnup portion of a carcass ply around a bead portion (mm) and M is tensile stress at 50% elongation of a bead filler rubber reinforcing the bead portion at room temperature (kg/cm^2).

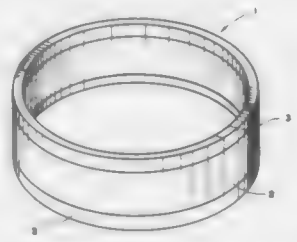
DEVICE FOR SEALING BETWEEN 4 TUBELESS TIRE AND A RIM DURING TIRE INFLATION PROCESS



J. C. Tannehill, Baton Rouge, La., assignor to Quick & Easy Tire Products, Inc., Mandeville, La.

Continuation-in-part of Ser. No. 659,949, Oct. 11, 1984, abandoned. This application Jul. 28, 1986, Ser. No. 889,306

Int. Cl.[5] B60C *25/00, 25/05;* **B27H** *7/00*

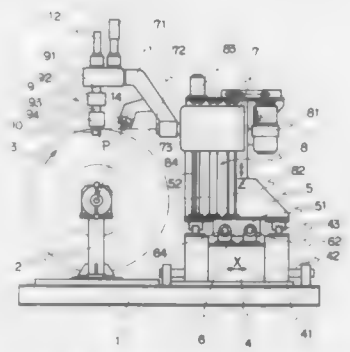
U.S. Cl. 157—001.1 **4 Claims**

1. An improved tubeless tire inflation device for sealing between a tubeless tire and a rim during the tire inflation process, comprising a cylindrical, flexible sleeve having an inside diameter not greater than the largest outside diameter of said rim, said sleeve having an axial length such that said sleeve may sealingly span between said rim and said tire, at least one axial end of said sleeve having a groove along the entire circumference of said sleeve, said groove housing a sealing insert therein, the sealing insert being formed of a softer, more compressible composition than the sleeve, said sealing insert being

securely attached within the groove along the bottom of the groove and extending circumferentially around the groove, said insert having a portion which protrudes outside the groove and beyond the axial end of the sleeve, such that the protruding portion sealingly contacts the tire.

5,005,628

METHOD FOR CORRECTING TIRE DEFLECTION IN TIRE GROOVING AND APPARATUS THEREFOR



Satoru Kinuhata; Masao Takami, both of Kobe; Eiji Shibata, Nakama, and Tadahiko Tamura, Kitakyushu, all of Japan, assignors to Sumitomo Rubber Industries Inc., Kobe, Japan

Continuation of Ser. No. 285,557, Dec. 16, 1988, abandoned. This application Nov. 6, 1989, Ser. No. 432,405

Claims priority, application Japan, Dec. 19, 1987, 62-322202; May 30, 1988, 63-134026; May 30, 1988, 63-134027

Int. Cl.[5] B29H *21/08*

U.S. Cl. 157—13 **9 Claims**

1. An apparatus for compensating a radial deflection and a lateral deflection of a tire to be applied to a grooving apparatus wherein a cutter movement is controlled by a plurality of operating shafts and desired pattern grooves are formed in a tire surface, characterized in that the apparatus comprises a radial deflection detector for detecting a radial deflection of a tire in a direction of a tire diameter,

a lateral deflection detector for detecting a lateral deflection of a tire in a direction of a tire width, a radially driving shaft which rotates under a control of a reference program to move a cutter in the direction of the tire diameter,

a laterally driving shaft which rotates under a control of the reference program to move the cutter in the direction of the tire width,

a radially correction shaft which is disposed in parallel with the radially driving shaft and rotates to radially move the cutter under a control of a correction program based on a detected value from the radial deflection detector,

a laterally correction shaft which is disposed in parallel with the laterally driving shaft and rotates to laterally move the cutter under a control of a correction program based on a detected value from the lateral deflection detector;

a radially driving device for superposing a movement of the radially correction shaft on a movement of the radially driving shaft, and

a laterally driving device for superposing a movement of the laterally correction shaft on a movement of the laterally driving shaft.

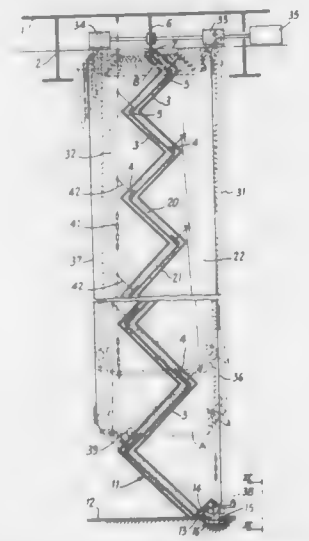
COMPACT CURTAIN FOR THE CLOSURE OF PASSAGES

René Caillet, B.P. 19, F-78101, Saint Germain En Laye, France



PCT No. PCT/FR88/00220, § 371 Date Mar. 6, 1989, § 102(e) Date Mar. 6, 1989, PCT Pub. No. WO88/08915, PCT Pub. Date Nov. 17, 1988

PCT Filed May 5, 1988, Ser. No. 309,768

Claims priority, application France, May 7, 1987, 87 6459

Int. Cl.[5] E06B *9/06*

U.S. Cl. 160—84.1 **14 Claims**

1. A curtain of small bulk for closing a passage, which comprises a succession of substantially planar elements comprising at one end a first element suspended to an upper part of the passage and at the other end a last element adapted in a closed position of the curtain to engage a lower part of the passage, said curtain moving for closure in a vertical plane from the upper part to the lower part of the passage, the elements are configured so that, while in an open position of the curtain, the elements fit into each other while being horizontally disposed, said elements each being formed by a shaped metal sheet section of high inertia and reduced size and each comprising:

(a) a wide central web and at least at one end a reinforcement forming an angle with said web, and

(b) hinge means connecting together one end of said element to a preceding element and the other end of said element to a following element, said elements having increasing dimensions from said first element to said last element, so that the most exposed lower elements can withstand hydrostatic pressure and shocks.

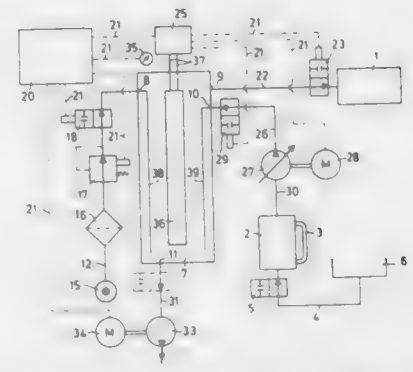
PROCESS FOR PRODUCING FOUNDRY MOLDS AND CORES FROM SAND AND A BINDER



Franz Gähler, Hub, 9534, Gähwil, Switzerland

Filed Sep. 28, 1988, Ser. No. 250,343

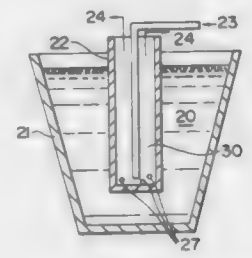
Claims priority, application Switzerland, Oct. 2, 1987, 3865/87

Int. Cl.[5] B22C *9/12*

U.S. Cl. 164—16 **11 Claims**

1. A process for the production of foundry molds and cores from foundry sand mixed with a binder, comprising the steps of placing sand and a binder in a mold casing; providing a first container filled with a liquid reagent; providing a second container connected to said first container and to said casing; providing a compressed carrier gas source connected to said second container; providing means for producing vacuum connected to said second container; producing vacuum in said second container by switching on said vacuum producing means after closing connections of said compressed carrier gas source and said first container to said second container and, after reaching vacuum in said second container, opening a connection between said first container and said second container to introduce said liquid reagent into said second container whereby said liquid reagent is rapidly evaporated; opening a connection between said carrier gas source and said second container whereby said vacuum in said second container is quickly changed into an overpressure; and feeding the evaporated reagent through a compressed carrier gas into said casing which results in hardening of the sand in said casing to a dimensionally stable mold or core.

5,005,631

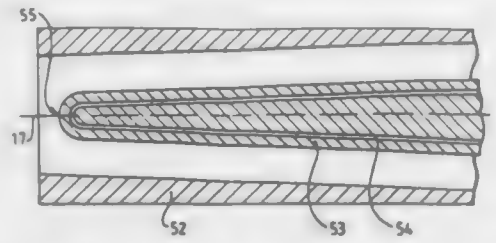


METHOD FOR FORMING A METAL MATRIX COMPOSITE BODY BY AN OUTSIDE-IN SPONTANEOUS INFILTRATION PROCESS, AND PRODUCTS PRODUCED THEREBY

Ratnesh K. Dwivedi, Wilmington, Del., assignor to Lanxide Technology Company, LP, Newark, Del.

Filed Nov. 10, 1988, Ser. No. 269,370

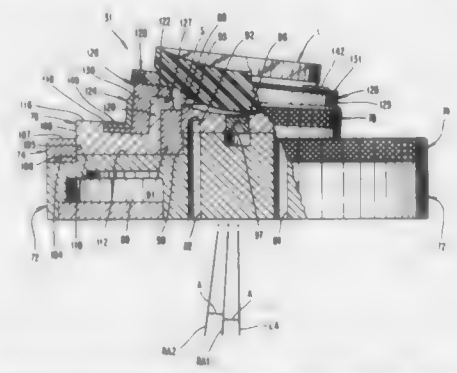
Int. Cl.[5] B22D *19/14*



U.S. Cl. 164—97 **42 Claims**

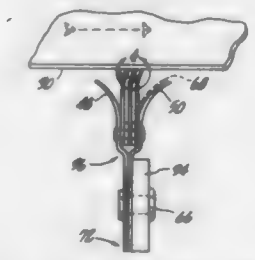
1. A method for making a metal matrix composite, comprising:

providing a substantially non-reactive filler, said filler including a cavity portion therein;
communicating a localized infiltrating atmosphere with at least a portion of said cavity in said filler; and
spontaneously infiltrating at least a portion of the filler with molten matrix metal.



5,005,632
METHOD AND APPARATUS FOR COOLING A FLOW OF MOLTEN MATERIAL
Steven Henderson, Middlesbrough, and Robert M. Perry, Egremont, both of England, assignors to British Steel Corporation, London, England
Continuation of Ser. No. 296,352, Jan. 10, 1989, abandoned, which is a continuation of Ser. No. 90,681, Aug. 20, 1987, abandoned. This application Oct. 10, 1989, Ser. No. 418,980
Claims priority, application United Kingdom, Dec. 30, 1985, 8531837
Int. Cl.[5] B22D *1/00*
U.S. Cl. 164—122 **17 Claims**

17. A heat transfer conduit for conveying molten material from a first station to a second station and for controllably extracting heat from the material as it passes through the conduit, the conduit including means for promoting turbulent flow conditions within molten material passing therethrough to generate within the molten material shear rates sufficient to maintain fluidity of the molten material emerging from the conduit, and the heat transfer conduit being constructed from at least two elongate separate segments separable along separation lines which lie generally in the direction of a longitudinal center line of the conduit and generally in a direction normal to the longitudinal center line which are releasably assembled together to define a unitary conduit which can selectively be disassembled prior to reuse for the removal of solidified material and other matter from an interior of the conduit; wherein an elongate mandrel is positioned within the conduit interior with a longitudinal axis of the mandrel generally co-incident with a longitudinal axis of the conduit, means being provided to convey a coolant medium along lengthwise extending passageways formed in the mandrel.



5,005,633
LENS BLOCKING APPARATUS
Herbert H. Mathews, Muskogee, and Joseph L. Welch, Jenks, both of Okla., assignors to Coburn Optical Industries, a Division of Pilkington Visionacare, Inc., Muskogee, Okla.
Filed Dec. 8, 1989, Ser. No. 447,844
Int. Cl.[5] B22D *19/00*
U.S. Cl. 164—334 **14 Claims**

1. A lens blocking apparatus comprising:
a base including means for removably receiving a block insert,
an axis ring mounted on said base for rotation about a first axis, said axis ring having a graduated axis scale,
a lower prism ring mounted on said base for rotation about said first axis and including a support surface defining a second axis inclined by a first acute angle relative to said first axis, said lower prism ring having a first prism scale graduated exponentially from zero to six diopters over a ninety degree region of said lower prism ring,
an upper prism ring mounted on said support surface of said lower prism ring for rotation about said second axis, said upper prism ring carrying a lens seat defining a third axis inclined by a second angle relative to said first axis, said second angle being equal to two times said first angle, said upper prism ring including a second prism scale graduated

exponentially from zero to nine diopters over a one hundred eighty degree region of said upper prism ring,
said lens seat arranged to define the upper edge of a space disposed between said seat and the block insert, and
means for conducting a molten alloy to said space for adherence to the lens and block insert.

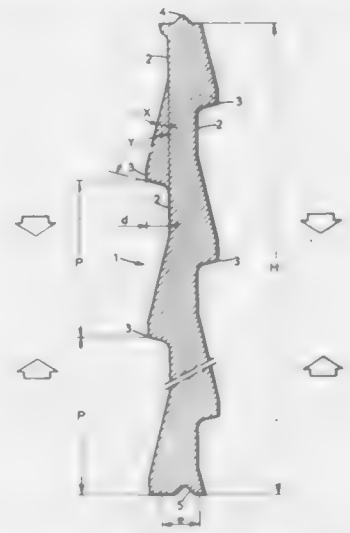
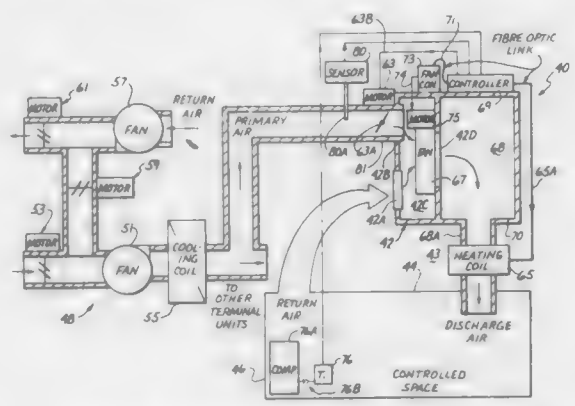
BI-DIRECTIONAL FLEXIBLE SEAL
Richard L. Reeves, 24265 Gradera Rd., Homeland, Calif. 92348, and Dennis Woodland, 19760 Temescal Canyon Rd., Corona, Calif. 91719
Continuation of Ser. No. 382,848, Jul. 20, 1989, Pat. No. 4,940,080. This application Dec. 12, 1989, Ser. No. 448,936
The portion of the term of this patent subsequent to Jul. 10, 2007, has been disclaimed.
Int. Cl.[5] F28D *19/00*
U.S. Cl. 165—9 **6 Claims**



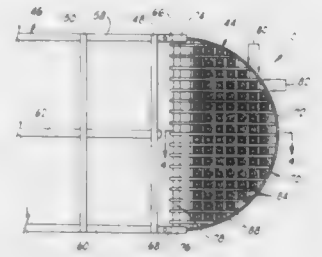
1. An air preheater having a flexible radial seal comprising:
a first base plate;
a second base plate attachable to said first base plate, said first and second base plates each have a planer section and a curved flange; and
at least one flexible leaf attachable at least partially in between and extending outwardly from said first and second base plates.

5,005,635
REFRACTORY ELEMENTS FOR THE CONSTRUCTION OF HEAT REGENERATORS
Alain P. B. Zanoli, Morieres, and Joseph Recasens, Sorgues, both of France, assignors to Societe Europeenne des Produits Refractaires, Courbevoie, France
Filed Jul. 26, 1989, Ser. No. 385,142
Claims priority, application France, Aug. 10, 1988, 88 10791
Int. Cl.[5] F28D *17/00*
U.S. Cl. 165—9.1 **10 Claims**



1. A ceramic element for equipping regenerators of glass

melting furnaces, having at least one vertical wall, the mean thickness of which is at the most 40 mm, characterized by the presence, on opposite faces of this vertical wall, of a plurality of obstacles forming an integral part of the element, the protrusion of the obstacles relative to the base surface of each face of the wall being at least 5 mm, the ratio of the distance separating two consecutive obstacles in the vertical direction to the said protrusion of each face being comprised between 3 and 15,and



the angle x formed by the obstacle with the base surface of each face of the wall in the given direction of movement of the fumes and the angle y formed by the obstacle with the base surface of each face of the wall in the given direction of movement of the air to be heated being such that x is less than y, the obstacles on one vertical wall face being staggered in a vertical direction relative to the obstacles on the opposite vertical wall face.

5,005,636
VARIABLE AIR VOLUME VENTILATING SYSTEM AND METHOD OF OPERATING SAME
David L. Haessig, Poway, Calif., assignor to Staefa Control System, Inc., San Diego, Calif.
Continuation-in-part of Ser. No. 150,247, Jan. 29, 1988, Pat. No. 4,942,921. This application Feb. 5, 1990, Ser. No. 475,034
Int. Cl.[5] F25B *29/00*
U.S. Cl. 165—16 **28 Claims**

1. A variable air volume ventilating system comprising:
motive means for supplying a given volume of air mixture to a space to condition the air therein to an approximate predetermined temperature;
terminal housing means for permitting a desired quantity of primary air to be mingled with a certain quantity of return air from said space to form an air mixture for conditioning the air in said space;
said terminal housing means including a hollow interior having inlet means and outlet means, said inlet means and said outlet means being in atmospheric communication with said space;
damper means in atmospheric communication with said inlet means for supplying a desired quantity of primary air to the interior of said terminal means;
said motive means including a fan, said fan being disposed between said inlet means and said outlet means for drawing said desired quantity of primary air into the interior of said terminal means via said inlet means and for discharging a given volume of air mixture from said interior via said outlet means into said space;
said fan further drawing said certain quantity of return air into the interior of said terminal means via said inlet means for facilitating the mingling of said return air with said desired quantity of primary air;
modulator means coupled to said motive means for starting said motive means and for varying its speed, to control the volume of air mixture supplied to said space;
controller means for causing said modulator means and said damper means to cooperate in a functionally related manner relative to the velocity of the primary air available for cooling the air in the space and a user selected predetermined air temperature for the air in the space; and
means coupled to said controller for sensing the velocity of said primary air available for cooling the air in the space and the temperature of the air in the space.

HEAT EXCHANGER U-BEND TUBE SUPPORT
Cecil C. Gentry, Bartlesville, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla.
Filed Nov. 5, 1986, Ser. No. 927,345
Int. Cl.[5] F28F *9/00*
U.S. Cl. 165—69 **23 Claims**

20. A heat exchanger comprising:
a housing defining a tube chamber therein;
a tube plate at an end of said tube chamber;
a plurality of substantially parallel tubes extending from said tube plate in a longitudinal direction in said tube chamber, said tubes being divided into a first pass and a second pass of tubes;
a plurality of U-bend tubes, each U-bend tube interconnecting a tube in said first pass with a corresponding tube in said second pass, said U-bend tubes defining a plurality of first lanes therebetween and a plurality of second lanes therebetween substantially perpendicular to said first lanes;
a tube support adapted for supporting said first and second passes of said tubes within said housing and having an end adjacent said U-bend tubes;
first and second mounting brackets positioned on said end of said tube support and aligned in a plane passing between said first and second passes of tubes;
a frame disposed around said U-bend tubes and in said plane between said first and second passes, said frame comprising:

a first end engaged with said first mounting bracket and longitudinally slidable therewith; and

a second end engaged with said second mounting bracket and longitudinally slidable therewith;

a plurality of first tube dividers attached to said frame and disposed in said first lanes; and

a plurality of second tube dividers attached to said frame and disposed in said second lanes.

THERMAL CONDUCTION MODULE WITH BARREL SHAPED PISTON FOR IMPROVED HEAT TRANSFER

Gary F. Goth, Pleasant Valley; Kevin P. Moran, Wappingers Falls, and Michael L. Zambrunnen, Poughkeepsie, all of N.Y., assignors to International Business Machines Corporation, New York, N.Y.

Filed Oct. 31, 1988, Ser. No. 265,065

Int. Cl.[5] F28F *7/00;* **H05K** *7/20*

U.S. Cl. 165—80.4 **10 Claims**

1. A circuit module of the type having:

a substrate, heat producing components such as semiconductor chips mounted in an array of component sites on a surface of the substrate, the substrate being oriented for terminology in a horizontal plane with the surface facing up, the components having an upper substantially flat surface,

a hat of thermally conductive material cooperating with the substrate to form an enclosure for the heat producing components, and means such as a cold plate for removing heat from the hat, the hat having blind cylindrical holes of a predetermined diameter each facing an associated component site. the axis of each hole being perpendicular to the upper flat surface of an associated component within a predetermined maximum angle of component tilt,

wherein the improvement comprises,

pistons each having a cylindrical section and a section tapered at a predetermined angle from the cylindrical section and having a lower flat face perpendicular to the axis of the piston, each piston including the cylindrical section and at least a portion of said tapered section being in one of the cylindrical holes, means for each piston against the associated component with the flat face of the piston in contact with the surface of the component for heat transfer,

the cylindrical section of each piston having a predetermined diameter related to the diameter of the cylindrical hole to provide sufficient clearance for motion within the cylindrical hole and having a predetermined length to permit the piston to tip to said angle of piston taper,

whereby if a component is tilted at an angle equal to or less than the angle of taper, the lower face of the associated piston is in parallel contact with the surface of the component.

FERROFLUID PISTON PUMP FOR USE WITH HEAT PIPES OR THE LIKE

John E. Leland, Loudonville, Ohio, assignor to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.

Division of Ser. No. 172,676, Mar. 24, 1988, Pat. No. 4,967,831. This application Apr. 2, 1990, Ser. No. 502,966

Int. Cl.[5] F28D *15/02*

U.S. Cl. 165—104.25 **11 Claims**

1. A pump, comprising:

(a) a conduit;

(b) a piston inside the conduit, wherein the piston includes a permanent magnet section; and,

(c) next to the permanent magnet section, a ring of ferrofluid surrounding the piston and held in place by the magnetic field of the permanent magnet, whereby the ferrofluid ring suspends the piston inside the conduit.

11. A heat pipe pump for pumping liquid condensate from a condenser section of a heat pipe to an evaporator section, the heat pipe having a transport section for flow of gaseous working fluid, comprising:

(a) a conduit, separate from the transport section, from the condenser section to the evaporator section for transporting liquid condensate;

(b) a piston pump, including a piston, operatively interconnected with the conduit to pump the liquid condensate through the conduit, wherein the piston includes permanent magnet sections;

(c) next to each permanent magnet section, a ring of ferrofluid surrounding the piston and held in place by the magnetic field of the permanent magnet, and;

(d) means for creating an oscillating magnetic field for moving the piston.

LOGGING TOOL CENTRALIZER

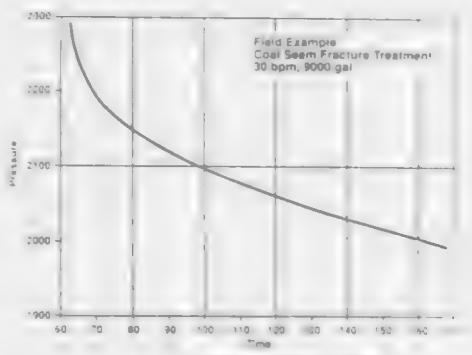
Boyd B. Moore, Houston, Tex., assignor to Shell Oil Company, Houston, Tex.

Filed Oct. 30, 1989, Ser. No. 428,528

Int. Cl.[5] E21B *17/10*

U.S. Cl. 166—241 **2 Claims**

1. An apparatus for centralizing an elongated tool in a tubular member comprising:



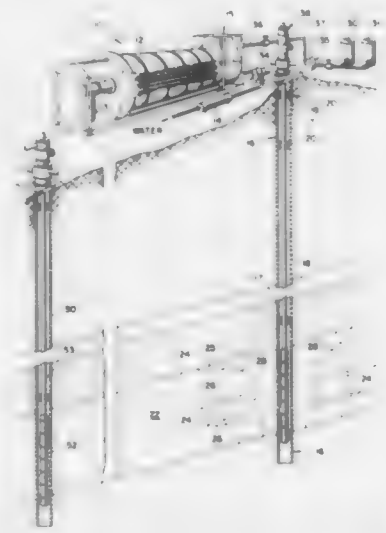
(a) two pairs of centralizing arms radially displaced about the elongated tool, each pair of arms being pivotally connected at adjacent ends to each other and pivotally connected at opposite ends to the elongated tool;

(b) means for causing said opposite ends of each pair of centralizing arms to move closer together, thereby forcing said pivotally connected adjacent ends of each pair of centralizing arms to move radially outward from a retracted position adjacent the elongated tool and into contact with the tubular member; and

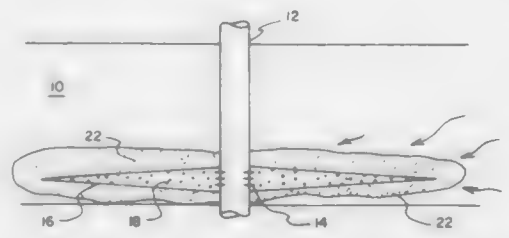
(c) pivot points set off-center for connecting said opposite ends of the centralizing arms to the elongated tool body, each pair of centralizing arms crossing to reach respective opposite off-center pivot points, said pivot points being

functional to prevent the centralizing arms from locking in said retracted position.

5,005,643
METHOD OF DETERMINING FRACTURE PARAMETERS FOR HETEROGENOUS FORMATIONS
Mohamed Y. Soliman, Lawton; Robert D. Kuhlman, and Don K. Poulsen, both of Duncan, all of Okla., assignors to Halliburton Company, Duncan, Okla.
Filed May 11, 1990, Ser. No. 522,427
Int. Cl.[5] E21B *43/26, 47/06*
U.S. Cl. 166—250 **7 Claims**



Pressure Decline vs Time



1. A method of determining the parameters of a full scale fracturing treatment of a subterranean formation comprising the steps of:
(a) injecting fluid into a wellbore penetrating said subterranean formation to generate a fracture in said formation;
(b) measuring the pressure of the fluid in said fracture over time;
(c) determining a leak-off exponent that characterizes the rate at which said fluid leaks off into said formation as a function of time from step (b);
(d) determining parameters of a fracturing treatment including fracture length and width using said leak-off exponent.

STEAM ENHANCED OIL RECOVERY METHOD USING BRANCHED ALKYL AROMATIC SULFONATES
Robert G. Wall, Pinole; Francois Friedmann, Laguna Beach, and Steven P. Current, Novato, all of Calif., assignors to Chevron Research Company, San Francisco, Calif.
Continuation of Ser. No. 338,397, Apr. 6, 1989, abandoned, which is a continuation of Ser. No. 55,148, May 28, 1987, abandoned. This application Oct. 6, 1989, Ser. No. 418,016
Int. Cl.[5] E21B *43/22, 43/24*
U.S. Cl. 166—272 **34 Claims**

1. A method of enhanced recovery of oil from a petroleum reservoir during gas injection into said reservoir which comprises:
periodically injecting gas comprising steam and a solution of an anionic surfactant into said reservoir from a known depth interval in a well to form a foam in the presence of residual oil in high gas permeable channels of said reservoir, said anionic surfactant solution including an effective amount of an alkyl aromatic sulfonate component which has an average molecular weight of from 400 to 600 and at least one of the alkyl groups has a carbon content of from 15 to 30 carbon atoms and said alkyl group is branched with at least three tertiary or quaternary carbon atoms;
contacting the reservoir fluids in said formation with the resulting foam and said [illegible] away from said injection interval to assist movement of said reservoir fluids toward a producing interval in said reservoir; and
recovering oil from said producing interval.

5,005,645
METHOD FOR ENHANCING HEAVY OIL PRODUCTION USING HYDRAULIC FRACTURING
Alfred R. Jennings, Jr., Plano, and Roger C. Smith, Dallas, both of Tex., assignors to Mobil Oil Corporation, Fairfax, Va.
Filed Dec. 6, 1989, Ser. No. 446,835
Int. Cl.[5] E21B *43/267, 33/134*
U.S. Cl. 166—280 **6 Claims**

1. A method for producing viscous substantially fines-free hydrocarbonaceous fluids from an unconsolidated or loosely consolidated formation comprising:
(a) drilling into said formation at least one well into a first productive interval of said formation;
(b) fracturing hydraulically said well with a viscous fracturing fluid containing a proppant therein which is of a size sufficient to prop a created fracture and restrict fines movement into the fracture which proppant comprises silicon carbide, silicon nitride, or garnet;
(c) injecting a pre-determined volume of steam into said well in an amount sufficient to soften said viscous fluid and lower the viscosity of said fluid adjacent a fracture face;
(d) producing the well at a rate sufficient to allow formation fines to build up on a fracture face communicating with said well thereby resulting in a filter screen sufficient to substantially remove formation fines from the hydrocarbonaceous fluids;
(e) injecting a second volume of steam into said well and producing substantially fines free hydrocarbonaceous fluids to the surface;
(f) repeating steps (c) through (e) until a desired amount of hydrocarbonaceous fluids have been produced from said first interval; and
(g) isolating mechanically said first interval and repeating steps (a) through (f) in a second productive interval of said formation.

5,005,646
ACCELERATING SET OF RETARDED CEMENT
J. Benjamin Bloys, Plano; Robert B. Carpenter, Hurst, and William N. Wilson, Plano, all of Tex., assignors to Atlantic Richfield Company, Los Angeles, Calif.
Continuation-in-part of Ser. No. 393,546, Aug. 14, 1989, Pat. No. 4,953,620. This application Jul. 12, 1990, Ser. No. 552,238
Int. Cl.[5] E21B *33/138, 33/14, 33/16*
U.S. Cl. 166—293 **11 Claims**

1. In a method of setting a volume of cement in a well completed in a subterranean formation in which a cement is or may become retarded and is pumped into said well and allowed to set to form a hard cementitious material therewithin, the improvement comprising:
contacting said cement with a solution of a compatible organic accelerator comprising a material that will produce formate ions in the cement slurry and selected from the group consisting of the first four carbon esters of formic acid, said esters including methyl formate, ethyl formate, normal-propyl formate, iso-propyl formate, normal-butyl formate, iso-butyl formate, and t-butyl formate.

9. In a method of setting a volume of cement in a well completed in subterranean formation, in which a cement is or may become retarded and is pumped into said well and allowed to set to form hard cementitious material therewithin at liner tops and in wellbore plugs, the improvement comprising:
contacting downhole said cement with a solution of a compatible organic accelerator comprising a material that will produce formate ions in the cement slurry and selected from the group consisting of formamide, and esters of formic acid, said esters including methyl formate, ethyl formate, normal propyl formate, isopropyl formate, normal butyl formate, iso butyl formate and t-butyl formate.

TREATING UNDERGROUND FORMATIONS
Robert H. Friedman, and Billy W. Surles, both of Houston, Tex., assignors to Texaco Inc., White Plains, N.Y.
Filed Jan. 2, 1990, Ser. No. 459,608
Int. Cl.[5] E21B *33/134, 33/138*
U.S. Cl. 166—295 **26 Claims**

1. A method for treating a subterranean permeable formation penetrated by a well in fluid communication with at least a portion of the formation to form an impermeable zone in the formation comprising introducing into the formation an effective amount of a treating fluid comprising a monomer or oligomer which can be acid catalyzed at the formation temperature to polymerize in the flow channels of the formation, said treating fluid also containing an ester and an effective amount of an acid catalyst, and an effective amount of a water swelling polymer to reduce shrinkage of the monomer or oligomer during polymerization.

MULTIPLE FRACTURE PRODUCTION DEVICE AND METHOD
John C. Smith, Pasadena, and William O. Jacobson, San Diego, both of Calif., assignors to Union Oil Company of California, Los Angeles, Calif.
Filed Feb. 28, 1990, Ser. No. 486,144
Int. Cl.[5] E21B *43/26, 43/267*
U.S. Cl. 166—308 **18 Claims**

1. A method for producing a tailored fluid pressure pulse in a borehole penetrating a subterranean formation from a pipe string, the tailored fluid pressure pulse sufficient to produce multiple fractures in the formation, the method comprising:
a. running the pipe string into the borehole, wherein the pipe string comprises a fluid conduit, a packer for isolating a portion of the borehole and a rupturable plenum capable of being filled with a pressurant fluid;
b. isolating a portion of the borehole containing at least a portion of the plenum with said packer;
c. filling the isolated portion with a fracture fluid and proppant mixture;
d. pressurizing a pressurant fluid within the rupturable plenum from a pressurant fluid pressurizing source located at the surface; and
e. rupturing the pressurized plenum so as to create a tailored fluid pressure pulse within the isolated portion.

11. A multiple fracture producing apparatus for generating a fracture fluid pressure pulse and fracture fluid flow within a borehole penetrating a subsurface formation comprising:
tubing capable of being located within said borehole and forming an annular-like space between said tubing and said borehole;
a plenum for containing a pressurized fluid, said plenum attached to said tubing;
means for isolating a portion of said borehole containing at least a part of said plenum from fluid communication with remaining portions; and
means for rupturing said plenum at relatively high pressure, so as to allow at least a portion of said pressurized fluid within to escape into said borehole containing a fracture fluid and generate said fluid pressure pulse and fracture fluid flow.

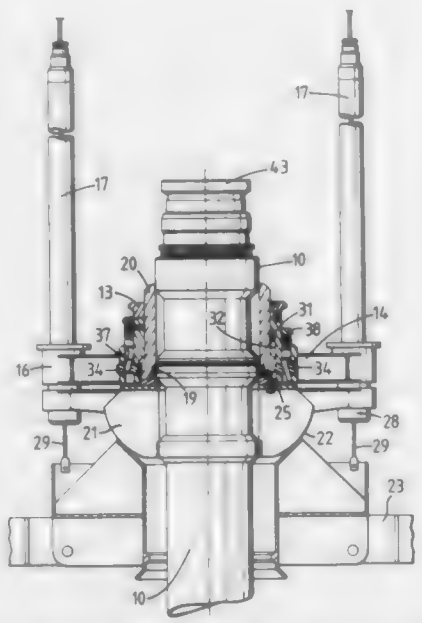
MULTI-PURPOSE WELL HEAD EQUIPMENT



Hans P. Hopper, Aberdeen, Scotland, assignor to The British Petroleum Company p.l.c., London, England

Filed Feb. 22, 1990, Ser. No. 483,484

Claims priority, application United Kingdom, Feb. 23, 1989, 8904123

Int. Cl.[5] E02D *5/74;* E21B *23/04, 33/038, 43/01*

U.S. Cl. 166—339 8 Claims

1. A guide base assembly for a sub sea well comprising:

an annular portion adapted to fit around a conductor housing and be fixed to said conductor housing and having curved plates for sealing said annular portion on a sea-bed base selected from a temporary guide base and mud mat,

a retrievable guide base portion having a central annulus adapted to fit around and be releasably locked to the annular portion,

releasable locking means for said releasable locking of the guide base portion to the annular portion comprising:

horizontally moveable locking pins in the guide base portion co-operating with a horizontal groove in the annular portion,

a lock/unlock ring capable of vertical movement having dependent keys to connect the vertical movement of the ring to the horizontal movement of the locking pins, and

a fixed shear pin to hold the lock/unlock ring in a position in which the locking pins are in their unlocked position and a spring loaded shear pin to hold the lock/unlock ring in a position in which the locking pins are in their locked position.

4. A tool suitable for placing and recovering a guide base of a sub-sea installation comprising:

a framework adapted to be attached to means for lowering the tool to the sea bed from a surface vessel,

a further framework attached to the first framework having releasable locking means for locking onto a guide base, said releasable locking means comprising:

releasable spring loaded latches for latching onto the guide base, and

a ring capable of vertical movement within the second framework having spring loaded locking pins,

means for moving the spring loaded latches out of engagement with the guide base, and

means for moving the ring vertically, said two means being capable of independent operation.

DOWNHOLE PUMP UNSEATING APPARATUS AND METHOD

Marvin L. Burrows, 125 W. St. Ann, Hobbs, N. Mex. 88240

Filed Oct. 20, 1989, Ser. No. 425,251

Int. Cl.[5] E21B *43/00;* F04B *47/00*

U.S. Cl. 166—381 20 Claims

1. In a fluid producing borehole having a downhole pump assembly located at a lower end of a tubing string for producing fluid from a pay zone, wherein some parts of the pump assembly are affixed to a hold-down and the hold-down is telescopingly received in sealed relationship within a seating nipple, the combination with said pump assembly of an apparatus for unsticking a downhole pump assembly by pushing the hold-down in an uphole direction and thereby forcing the hold-down to become unseated from the seating nipple;

said apparatus includes a pump upthrust member affixed at the lower end of said hold-down and extending downhole away from said seating nipple;

means connected to engage the borehole and apply an uphole force on said pump upthrust member in response to the tubing string being lowered downhole; and thereby unseat the hold-down from the seating nipple, and move the pump uphole respective to the tubing string, whereupon the downhole pump can then be retrieved from the borehole.

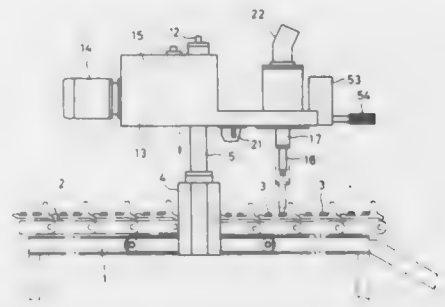
HIGH TORQUE HYDRAULIC SHOE BOLT WRENCH

Yasumitsu Moriki, Tokyo, and Hirotomo Numakura, Kawasaki, both of Japan, assignors to Maruma Jyusharyo Kabushiki Kaisha, Tokyo, Japan



Continuation of Ser. No. 306,880, Feb. 3, 1989, abandoned. This application Dec. 18, 1989, Ser. No. 455,934

Claims priority, application Japan, Sep. 28, 1988, 63-243690

Int. Cl.[5] B25B *21/00*

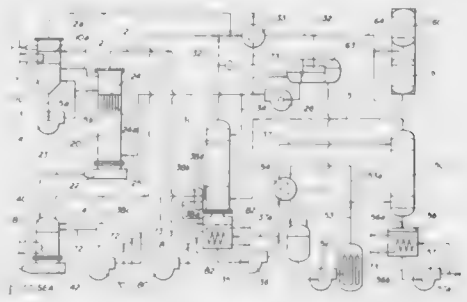
U.S. Cl. 173—12 11 Claims

1. A high torque hydraulic shoe bolt wrench comprising a vertical cylinder stood upright on a frame moving on work table of a shoe track, a main frame secured and supported on a piston rod of said vertical cylinder through an outer tube which rotates about an axis, a wrench socket driving shaft vertically projected below said main frame, a low speed high torque motor and a reduction gear provided on the axis of said driving shaft through a jaw clutch mechanism, said driving shaft having one lower clutch constituting said clutch mechanism and being always connected to a high speed low torque motor, said reduction gear having an upper clutch with a shift mechanism slidably provided on an output shaft thereof, said main frame being provided with an operating handle for adjusting the rotational direction and rotational speed of each of said hydraulic motors, characterized in that pressure oil having a relatively low set pressure of a hydraulic circuit is supplied to said high speed low torque motor, high pressure oil is supplied

to said low speed high torque motor and driven, and switching from said high speed low torque motor to said low speed high torque motor is carried out by a pressure switch disposed in a low pressure hydraulic circuit.

5,005,655

PARTIALLY HALOGENATED ETHANE SOLVENT REMOVAL OF OLEOPHYLIC MATERIALS FROM MINERAL PARTICLES



Olaf M. Stokke, Ponca City; David A. Flanigan, Cleveland, both of Okla.; Robert B. Ramsey, Wilmington, Del.; Robert E. Williams, Houston, Tex., and John Huycke, Ponca City, Okla., assignors to Conoco Inc., Ponca City, Okla.

Continuation-in-part of Ser. No. 104,858, Oct. 9, 1987, Pat. No. 4,836,302, which is a continuation-in-part of Ser. No. 937,557, Dec. 3, 1986, abandoned. This application Mar. 28, 1989, Ser. No. 330,392

The portion of the term of this patent subsequent to Jun. 6, 2006, has been disclaimed.

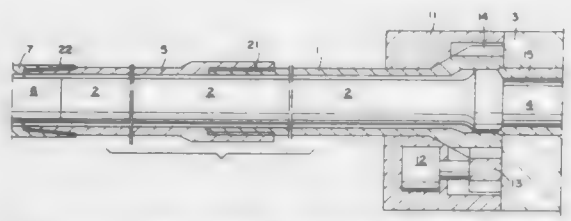
U.S. Cl. 175—66 3 Claims

1. A process for cleaning drilling mud containing an oleophylic substance from drill cuttings in order to prepare the cuttings for environmentally acceptable disposal, which comprises the steps of:

(a) collecting drill cuttings which are contaminated with said drilling mud containing an oleophylic substance;

(b) contacting the contaminated drill cuttings with a single solvent selected from 1,1-dichloro-2,2,2-trifluoroethane or 1,1-dichloro-1-fluoroethane to remove said drilling mud containing an oleophylic substance from the drill cuttings;



(c) separating the drill cuttings from said solvent laden with said drilling mud containing an oleophylic substance to provide drill cuttings which are sufficiently free of solvent laden with said drilling mud containing an oleophylic substance for environmentally acceptable disposal;

(d) moving the environmentally acceptable drill cuttings to the environment;

(e) heating the solvent laden with drilling mud conaining an

oleophylic substance to vaporize the solvent from the drilling mud containing an oleophylic substance;
(f) recovering the drilling mud containing an oleophylic substance for further handling; and
(g) condensing the vaporized solvent for recycle in the process by heat transfer with environmentally availble fluid at ambient temperatures.

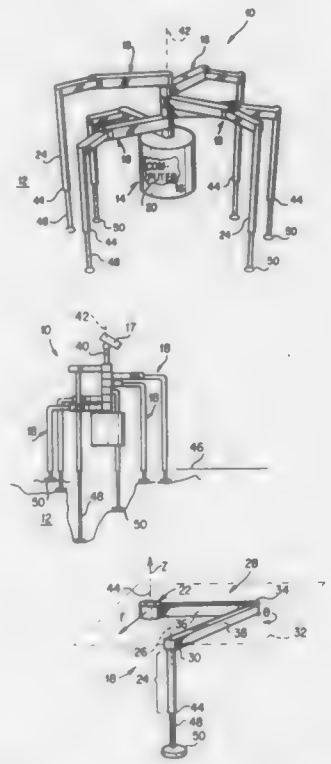
DEVICE IN IMPACT MACHINES
Jörgen A. R. Rodert, Saltsjö-Boo, Sweden, assignor to Atlas Copco MCT AB, Nacka, Sweden
Filed Feb. 8, 1990, Ser. No. 476,989
Claims priority, application Sweden, Mar. 7, 1989, 8900783
Int. Cl.[5] E21B *4/00*
U.S. Cl. 175—306 **1 Claim**

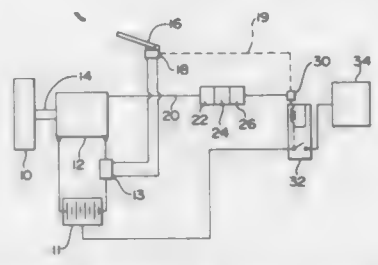
1. Device in impact machines comprising a maching housing (3, 11), a hammer piston (4) movable to-and-fro in the machine housing and arranged to deliver impacts against a tool, and a rotary device (12, 13) for rotation of the tool, said tool comprising a central set of rods comprising a plurality of rods (6) and a set of tubes comprising a plurality of interconnected tubes (7) surrounding the set of rods, said rods (6) being provided with projections (51), characterized in that said plurality of rods rest loosely against each other, each of said plurality of rods being provided with at least one of said projections (51), each of said plurality of said rods (6) being guided by elastic bushings (52, 53) arranged in said tubes (7), and said elastic bushings comprising a plurality of grooves (57) through which said projections (51) can be passed.

5,005,657
POWDER DISPENSING AND MEASURING DEVICE
Dolores D. Ellion, and M. Edmund Ellion, both of 2152 Highland Oaks Dr., Arcadia, Calif. 91006
Division of Ser. No. 318,963, Mar. 6, 1989, Pat. No. 4,953,645. This application Oct. 12, 1989, Ser. No. 420,376
Int. Cl.[5] G01G *1/18, 13/02*
U.S. Cl. 177—246 **6 Claims**



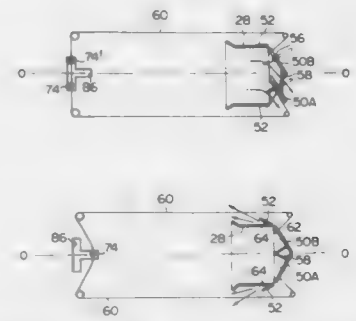
1. An improved powder dispensing apparatus comprising:
barrel means for transferring powder from a first retainer to a second retainer;
vibrating means for inducing vibration in said barrel effective to cause said powder to translate on a surface thereof;
scale means for measuring the amount of powder transferred to a second retainer, wherein said scale means is a mechanical scale having a balance arm and spring means in contact with a first end thereof for assisting the movement of said balance arm from an initial position to a point just below a second position at which it is in equilibrium with said second powder retainer suspended at an opposite end thereof; and

control means for controlling the activation of said vibrating means.



5,005,658
ORTHOGONAL LEGGED WALKING ROBOT
John E. Bares, and William Whittaker, both of Pittsburgh, Pa., assignors to Carnegie-Mellon University, Pittsburgh, Pa.
Filed Dec. 22, 1988, Ser. No. 288,677
Int. Cl.[5] B62D *57/02*
U.S. Cl. 180—8.1 **13 Claims**

1. A robot for moving along terrain comprising:
a body;
means for moving the body, said moving means including legs; each leg exhibiting an overlapping gait with respect to every other leg and comprised of a pedestal which has an axis that is disposed essentially in a z direction; and
means for positioning the axis of the pedestal at a desired ground engaged location with respect to an r, θ plane, where r and θ are directions mutually orthogonal to each other and the z direction; said moving means also able to move the body in any of r, θ heading and z dimensions,



said heading defined by a direction in which the movable body is pointing.

5,005,659
POWER ASSISTED STEERING FOR VEHICLES
John Jones, Essignton, and Rinaldo G. Uccellini, Wolverhampton, both of England, assignors to Yale Materials Handling Limited, Wolverhampton, England
Filed Feb. 12, 1988, Ser. No. 156,170
Int. Cl.[5] B60K *1/00;* B62D *5/00*
U.S. Cl. 180—65.1 **3 Claims**

1. Apparatus for actuating the power supply of a power steering assembly for an electrically propelled vehicle including an electric traction motor comprising:
detecting means for detecting any voltage generated by the traction motor; and
switch means operable by said voltage to actuate a power supply to the power steering assembly of the vehicle.

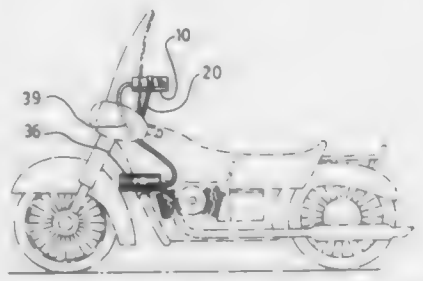
PROPULSION AIR STREAM DEFLECTING APPARATUS FOR AIR CUSHION VEHICLE
Ryuichi Yoshida, Takarazuka; Takashi Sawada, Suita; Yamamural Tetsushi, Takasago, and Koji Kadota, Kobe, all of Japan, assignors to Kawasaki Jukogyo Kabushiki Kaisha, Hyogo, Japan
Filed Oct. 16, 1989, Ser. No. 421,237
Claims priority, application Japan, Oct. 14, 1988, 63-133338
Int. Cl.[5] B60V *1/14*
U.S. Cl. 180—117 **8 Claims**

1. A propulsion air stream deflecting apparatus for an air cushion vehicle having a hull, said apparatus comprising:
(a) an air duct mounted on the hull, and a propeller fan disposed within said air duct for producing a propulsion air stream in the air duct that provides a thrust to the hull, the air duct having a longitudinal axis, an inner surface extending about the longitudinal axis, a rear open end, and opening means extending therethrough downstream of said propeller fan with respect to the direction in which the air stream produced by said fan flows through the air duct;
(b) a plurality of rudders each having side edges, said rudders supported in the apparatus adjacent the rear open end of said air duct and pivotable about respective vertical axes which lie in a plane extending transversely to the longitudinal axis of said air duct;
(c) link means linking adjacent rudders, of each respective pair thereof, together and articulatable between an extended state and a folded state,
said rudders assuming a mutually parallel arrangement when said link means assumes said extended state, and said rudders assuming a closed arrangement in which the side edges of the rudders are in abutting contact with each other and with said air duct at the rear open end thereof thereby closing said rear open end when said link means assumes said folded state;
(d) a control lever pivotally supported on the hull so as to be movable between a neutral position, side positions spaced transversely of the neutral position towards port and starboard sides of the vehicle, respectively, and a rear position spaced from the neutral position toward the rear of the vehicle;
(e) a pair of cables operatively connecting the control lever to said rudders, at respective locations close to the air duct with respect to the transverse dimension of the air duct, in such a manner that when the control lever is in said neutral position, said cables cause the rudders to assume said mutually parallel arrangement in which the rudders extend parallel to the longitudinal axis of the air duct with said link means in the extended state whereby a rearward propulsion thrust is produced by said fan, that when the control lever is in either of said side positions, said cables cause the rudders to assume the mutually parallel arrangement in which the rudders extend at an angle, corresponding to the degree to which control lever is shifted transversely of said neutral position, to the longitudinal axis of the air duct with said link means in the extended state

whereby a rearward steering thrust is produced by said fan, and that when the control lever is in said rear position, said cables cause the rudders to assume said closed arrangement with said link means in the folded state whereby the rear open end of the air duct is closed to cause an increase in air pressure in the air duct;

(f) flap means having an inner face and a rear end, the flap means being pivotably mounted at the rear end thereof to said air duct, said flap means assuming a normal position in which the inner face thereof is substantially flush with the inner surface of said air duct to close the opening means thereof, and said flap means being swingable outwardly of said air duct into an open position in which the inner face of the flap means extends obliquely and forwardly in the vehicle, from said rear end thereof, thereby opening said opening means whereby the inner face of the flap means guides the air stream produced by said fan to flow forward in the vehicle and provide a reverse thrust to the hull; and



(g) flap urging means for urging the flap means to said normal position, and for allowing said flap means to move to the open position thereof when the air pressure increase in the air duct is effected upon the rudders assuming said closed arrangement.

POWER TRANSMISSION SYSTEM FOR A FOUR-WHEEL DRIVE VEHICLE

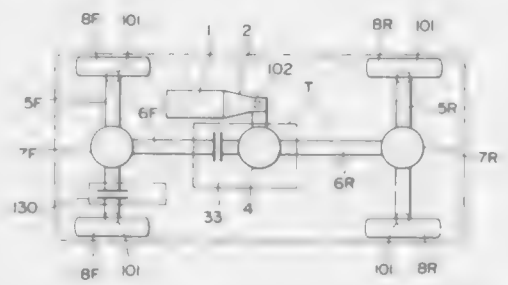
Yukio Kodama, Gunma, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 338,714, Apr. 14, 1989, which is a division of Ser. No. 63,173, Jun. 15, 1987, Pat. No. 4,896,738. This application Mar. 15, 1990, Ser. No. 494,719
Claims priority, application Japan, Jun. 20, 1986, 61-144475; Jun. 20, 1986, 61-144476; Jun. 20, 1986, 61-144477; Jun. 20, 1986, 61-144478; Jun. 20, 1986, 61-144479
The portion of the term of this patent subsequent to Feb. 21, 2006, has been disclaimed.
Int. Cl.[5] B60K *17/34, 23/08*
U.S. Cl. 180—233 **6 Claims**

1. A power transmitting system for a four-wheel drive vehicle in which power of an engine is transmitted to front and rear wheels of the vehicle through a central differential, the system comprising

a torque distribution device including clutch means for changing torque transmitted to the front and rear wheels,

detecting means for detecting driving conditions of the vehicle including axle loads on the front and rear wheels of the vehicle for producing corresponding output signals, and



control means responsive to the output signals for rendering the clutch means operative so as to change torque distribution ratio for the rear wheels.

5,005,663

FOUR-WHEEL DRIVE VEHICLE

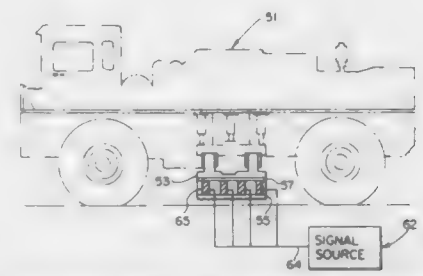
Kazuo Niide; Hideki Yamada, both of Hiroshima; Haruki Higashi, Hatsukaichi, and Noboru Nakamura, Hiroshima, all of Japan, assignors to Mazda Motor Corporation, Hiroshima, Japan

Filed Oct. 27, 1988, Ser. No. 263,212
Claims priority, application Japan, Oct. 28, 1987, 62-272411
Int. Cl.[5] B60K *17/35, 17/352*
U.S. Cl. 180—247 **11 Claims**

1. In a vehicle steered by a steering wheel and equipped with four-wheel drive having a transfer case including a center-differential which delivers driving power to both front and rear axle assemblies when needed, and is shiftable between a two-wheel and a four-wheel drive mode of operation and, in said four-wheel drive mode of operation, between a differential-locked and a differential-unlocked drive mode of operation, an axle differential disposed between left and right axles of at least one of said front and rear axle assemblies in association with wheels on said axles which are non-driven when said center-differential is in said two-wheel drive mode of operation, said one axle assembly being divided and delivering driving power differentially to said left and right axles thereof, and free-wheeling drive means with clutch means incorporated in said one axle assembly, said clutch means being disposed between said axle differential and one of said axles to operationally couple and uncouple said one axle from said axle differential, said free-wheeling drive means being actuated to force said clutch means to operationally disconnect said one axle from said axle differential so as to interrupt the transmission of driving power between said axle differential and said wheel secured to said one axle when said center-differential is in said two-wheel drive mode of operation, or to operationally connect said axle differential and said one axle so as to provide said transmission of driving power between said axle differential and said wheel on said one axle when said center-differential is in said four-wheel drive mode of operation, the improvement comprising:

detecting means for detecting whether said free-wheeling drive means is actuated to interrupt or provide said transmission of driving power; and

control means coupled to said detecting means for forcing said center-differential to shift from said four-wheel differential-unlocked drive mode of operation to said two-wheel drive mode or said four-wheel differential-locked mode when said detecting means detects that said free-wheeling drive means is actuated to interrupt said transmission of driving power while said center-differential is in said four-wheel differential-unlocked drive mode of operation.



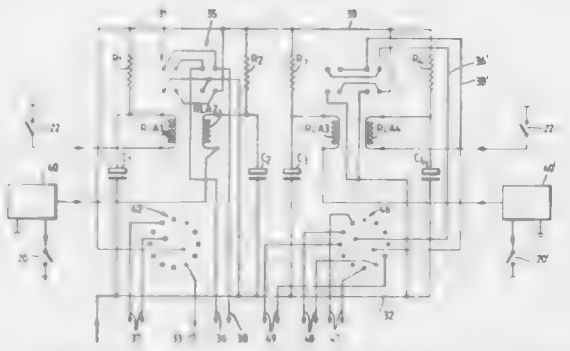
another of which positions the vehicle is no longer immobilized by said immobilizing means but said door is necessarily locked, said control facility including a key-switch located adjacent said door remote from the driver's cab, said key switch including an operating member providing a keyhole exposed adjacent said door for receiving a key whereby the key switch may be operated, said control facility being arranged to open said door only if said control member is in a position to immobilize the vehicle and select said door and said key switch is operated.

5,005,665

PIEZOELECTRIC SEISMIC VIBRATION DEVICE AND METHOD

Lim H. Cheung, Carrollton, Tex., assignor to The Standard Oil Company, Cleveland, Ohio

Division of Ser. No. 874,937, Jun. 16, 1986, Pat. No. 4,850,449. This application Jul. 24, 1989, Ser. No. 384,391
Int. Cl.[5] G01V *1/00*
U.S. Cl. 181—101 **14 Claims**



1. A vibrator for transmitting seismic signals into the earth, comprising at least one piezoelectric transducer capable of vibrating from 20 to 500 Hz, means for supplying an electrical signal to the transducer to cause the transducer to vibrate between 20 to 500 Hz, a contact plate attached to the transducer, and means for holding the transducer and contact plate firmly against the earth, said means for holding including a heavy mass.

EXTENSIBLE AND RETRACTABLE STEP ASSEMBLY

Eddy Anderson, 1681 NE. 172nd St., North Miami Beach, Fla. 33162

Filed Mar. 21, 1990, Ser. No. 496,936
Int. Cl.' A47B 77/10, 96/00
U.S. Cl. 182—15 6 Claims

1 An extensible and retractable step assembly for a cabinet standing on a floor and having a hollow interior space directly above the floor, said step assembly comprising:

a base shaped and dimensioned to be received in said hollow interior space of the cabinet, floor-engaging rollers on said base;

first guide means positionable in said hollow interior space of the cabinet,

second guide means on said base having antifriction engagement with said first guide means to guide said base between a retracted position within said hollow interior space of the cabinet and an extend position in front of the cabinet;

a step carried by said base,

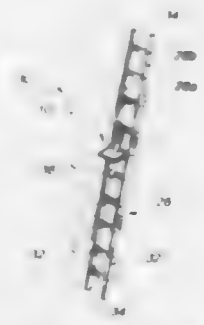
and linkage means acting between said base and said step and permitting said step to be selectively adjusted between a retracted lowered position on said base and an extended positioned raised up from said base when said base is in its extended position in front of the cabinet,

said base being a rectangular structure having a front wall, a back wall spaced behind said front wall, and opposite side walls extending between and interconnecting said front and back walls, said base being open between said front, back and opposite side walls,

said step fitting between said front, back and opposite side walls of the base,

and said linkage means being mechanical pivoted linkages on each of said opposite side walls of the base having a first position holding said step in its retracted lowered position and a stable second position holding said step in its extended position raised up from the base,

said pivoted linkages on each of said opposite side walls of the base in said first and second positions thereof being spaced above and out of contact with the floor,



and said pivoted linkages on each of said opposite side walls of the base comprising a first linkage located toward the front of said base and having respective pivotal connections to said side wall of the base and said step, and a second pivoted linkage spaced behind said first lingage and having respective pivotal connections to said side wall of the base and said step.

LADDER STEP SUPPORT

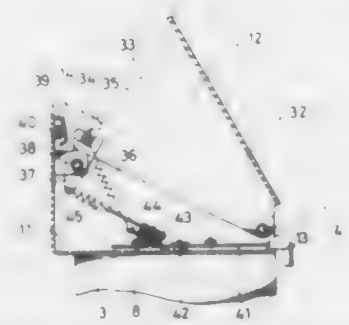
Bud C. Nowlan, 3958 Aldrich Ave. N., Minneapolis, Minn. 55412

Filed Jul. 20, 1990, Ser. No. 555,898
Int. Cl.' E04C 7/16
U.S. Cl. 182—121 8 Claims

1 A portable, integral ladder rung attachment comprising

a substantially rectangular platform, having a top and a bottom and a lip in a long edge thereof, the platform having securely attached on its bottom and its lip,

an elongate, oblique-angled, L-shaped, centrally disposed vertical support member, the support member having a tubular longer leg projecting from said platform and leading to a substantially flat shorter leg, the shorter leg being attached to the bottom of the platform, the opening of the tubular portion of the support being attached to the top of the platform adjacent its lip, the attachment further comprising,



horizontally mounted, elongate, arcuate, upper and lower brackets for cooperation with ladder rungs to support the platform, the upper bracket being secured transversely adjacent the end of the tubular long leg of said vertical support and the lower bracket being secured to the lip edge of said platform.

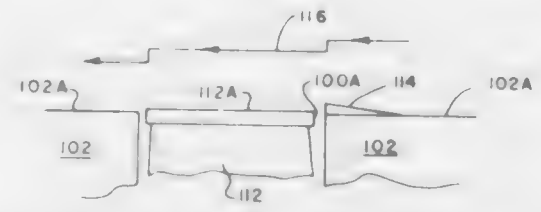
COMMODITY DATA INPUTTING DEVICE

Takao Umebara, and Takeshi Yagome, both of Shizuoka, Japan, assignors to Tokyo Electric Co., Ltd., Tokyo, Japan

Filed May 22, 1990, Ser. No. 526,881
Claims priority, application Japan, May 24, 1989, 1-130951
Int. Cl.' G06K 7/10
U.S. Cl. 186—61 2 Claims

1 A commodity data inputting device comprising a bar code scanner and a keyboard for inputting commodity data, a supporting member for supporting said bar code scanner, a base for retaining said keyboard, a mounting member provided on said bar code scanner for pivotably mounting said base at the front end thereof in such a manner that said base is rotatable about a horizontal pivotal axis, a plurality of engaging portions arranged along an arc defined about said pivotal axis and formed on at least one of a plurality of opposed side portions



located between said mounting member and said base, an engaging bar normally urged into engagement with one of said engaging portions by a biasing force applied toward said pivotal axis, a retaining portion formed adjacent an other of said opposed side portions for retaining at least one end of said engaging bar in such a manner as to permit displacement of said engaging bar toward and away from said pivotal axis, a release lever normally abutting said engaging bar and adapted to be displaced by a biasing force larger than said biasing force applied to said engaging bar, an operating portion displaceably mounted on said mounting member for operating said release lever, a wire connected at one end thereof to said operating portion, and a spring connected at the one end thereof to the other end of said wire, and at the other end thereof to said release lever.

5,005,670

METHOD AND APPARATUS FOR MOUNTING DATA GATHERING SYSTEM

Howard H. Nojiri, Eugene, Oreg., assignor to Spectra-Physics, Inc., San Jose, Calif.

Filed Mar. 24, 1989, Ser. No. 328,229
Int. Cl.' A47F 9/04
U.S. Cl. 186—61 6 Claims

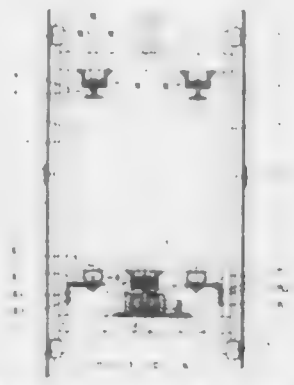
1 A method of mounting a data gathering system within a checkout counter to facilitate smooth handling of products which are presented at said counter for purchase, said method comprising the steps of

supporting said data gathering system within said counter such that an upper surface of said data gathering system is substantially parallel with an upper surface of said counter and extends thereabove by a first defined distance, said data gathering system defining an entry side across which products are passed to access said data gathering system and an exit side across which products are passed after having been processed by said data gathering system, and

elevating a portion of said counter adjacent the entry side of said data gathering system by a second defined distance greater than said first defined distance whereby products to be processed by said data gathering system are raised from said upper surface of said counter over the elevated portion of said counter and then encounter a downwardly stepped path as they are moved from the elevated portion of said counter preceding said data gathering system downwardly to the upper surface of said data gathering system and downwardly therefrom to said counter succeeding said data gathering system such that said products can be slid across the system substantially without being snagged or caught thereon.

5,005,671

APPARATUS FOR DAMPING OSCILLATIONS IN ELEVATOR CARS



Michel Aime, Maurepas, France, and Edmund Sager, Meggen, Switzerland, assignors to Inventio AG, Switzerland

Filed Jul. 12, 1989, Ser. No. 378,658
Claims priority, application Switzerland, Jul. 12, 1988, 02652/88
Int. Cl.' B66B 9/00
U.S. Cl. 187—1 R 13 Claims

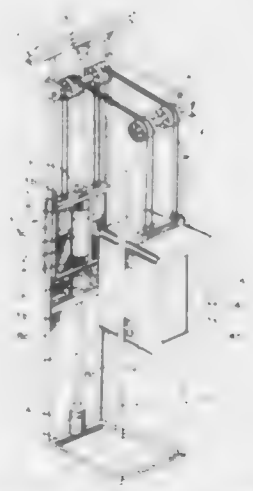
1. An apparatus for damping vibrations generated in an elevator car body supported in an elevator car sling, comprising

at least two spherical shock absorbers adapted to be attached to an elevator car sling for abutting a bottom side of an elevator car body supported by the car sling,

a spherical tensioning means adapted to be attached to the car sling and including a bumper support for limiting the deflection movement of the car body in the car sling and at least one other bumper support attached to said bumper

support for further limiting the deflection movement of the car body in the car sling,

a lower centering element adapted to be attached to the bottom side of the car body for generating springy and damped return movement of the car body into a center position in the car sling and coupled to said spherical tensioning means, and



centering and damping elements adapted to be attached between a top side of the car body and the car sling.

5,005,672

AIR GAP APPARATUS FOR A LINEAR MOTOR

Keiichiro Nakai, Tokyo, and Yoshinori Nakanishi, Chiba, both of Japan, assignors to Otis Elevator Company, Farmington, Conn.

Filed Feb. 26, 1990, Ser. No. 493,591
Claims priority, application Japan, Feb. 28, 1989, 1-49714
Int. Cl.' B66B 11/04
U.S. Cl. 187—17 32 Claims

25 In an elevator system including a car traveling along a predetermined traveling axis, a counterweight connected to said car via a rope and traveling along a predetermined traveling axis essentially parallel to the traveling axis of said car, a

toroidal linear motor for driving at least one of said car and counterweight, and an apparatus for maintaining an air gap in the toroidal linear motor, the linear motor having a stationary element disposed along an axis, and a moving element having a central opening for receiving the stationary element, the moving element and stationary element being separated by said air gap, the moving element of the linear motor being driven along the axis, the linear motor converting electrical power into a magnetic driving force, wherein said apparatus comprises;

at least one elastic body attached to said moving element about a circumference of said stationary element, said elastic body being in sliding contact with said stationary element, said elastic body being attached to said moving element and disposed in contact with said stationary element such that a predetermined air gap is maintained

5,005,673

COORDINATED ELEVATOR CAR DOOR-HALL DOOR MOVEMENT

James A. Rivera, Bristol, Conn., assignor to Otis Elevator Company, Farmington, Conn.

Filed Sep. 27, 1989, Ser. No. 413,028
Int. Cl.' B66B *13/00*
U.S. Cl. 187—52 LC **7 Claims**

1 An assembly for coordinating movement of an elevator car door and an elevator hoistway hallway door during opening and closing cycles of said doors, said assembly comprising

(a) a pair of vanes mounted on said elevator car door, said vanes being movable between a closely spaced collapsed position and a farther spaced spread position,

(b) means for biasing said vanes toward said spread position

(c) a pair of rollers mounted on said hallway door, said rollers being movable from a first position proximate each other to a second position further offset from each other

(d) spring means operable to urge said rollers toward said first position,

(e) said vanes being positioned on said car door so as to pass freely between said rollers when the latter are in their first position and said vanes are in their collapsed position when the elevator car moves up and down in the hoistway,

(f) stationary cam means on the elevator car for holding said vanes in said collapsed position when said elevator car door is fully closed; and

(g) said vanes being interposed between said rollers when the elevator car stops at the hallway door and said vanes being operable by reason of said means for biasing to move to said spread position to engage said rollers when the elevator car door begins to open to move said vanes away from said cam means thereby preventing the latter from holding said vanes, whereby concurrent opening and closing movement of said elevator car door and said hallway door will ensue

5,005,674

BI-DIRECTIONAL ROTATING GRIP BRAKE FOR USE WITH A CONVENTIONAL HAND BRAKE SYSTEM OF A BICYCLE

John A. Piatt, 226 Getchell St., Santa Cruz, Calif. 95060

Filed Feb. 5, 1990, Ser. No. 475,149
Int. Cl.' B62L *1/00 3/00*
U.S. Cl. 188—24.11 **15 Claims**

1 A hand grip subassembly for a bicyclist's use with a conventional cable operated, pull-up braking system to provide bi-directional braking action without change in the rider's grip comprising

a multi-sprocketed derailleur-controlled bicycle having handle bars, a frame upon which front and rear wheels are rotatably mounted, a conventional cable operated, pull-up braking system including a pair of levered subassemblies attached to said handle bars and braking subassemblies attached at said front and rear wheel, each levered subassembly of said conventional cable operated, pull-up braking system including stationary and movable members and a cable, each movable member including a handle, said cable being attached to said movable member and terminating at one of said braking subassemblies,

a cord of predetermined length,

a hand grip of elongated construction having a longitudinal bore into which one of said handle bars of said bicycle is slidably positioned about the rotatable with respect to said handle bar, and a side wall fitted with attaching means positioned closely adjacent to said handle of said movable member of said conventional pull-up braking system, said attaching means fastening said cord to said hand grip, said cord being attached to said handle of said movable member of said conventional pull-up braking system, whereby a non-braking nadir position is established for said attaching means but where in new precise, easily controllable braking positions can thereafter be easily established as said hand grip subassembly is rotated in both counter- and clockwise directions about an axis of symmetry of said bore relative to said handle bar

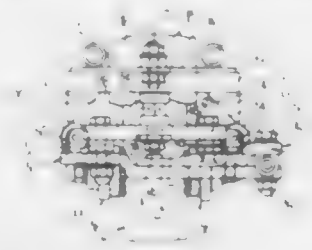
5,005,675

SELF-ASSISTING RIM BRAKE FOR BICYCLES

Oskar Pletscher, Marthalen, Switzerland, assignor to Gebruder Pletscher AG, Marthalen, Switzerland

Filed Jun. 21, 1989, Ser. No. 369,327
Claims priority, application Switzerland, Jun. 22, 1988, 02400 88-0
Int. Cl.' B62L *1/12*
U.S. Cl. 188—24.14 **6 Claims**



1 A self-assisting brake for selectively engaging the wheel rim of a bicycle, and comprising

a pair of caliper type brake arms, with each of said arms including a lower end portion, and with each of said arms mounting a brake shoe mounted at the lower end portion thereof,

means mounting said brake arms to the frame of the bicycle, with the lower end portions and brake shoes being located on respective opposite sides of the wheel rim, and for pivotal movement about respective, laterally spaced apart pivotal axes which extend generally parallel to the plane of rotation of the wheel rim so as to permit movement of said arms in a first pivotal plane lying perpendicular to the plane of rotation of the wheel rim and between a braking position wherein the brake shoes engage the wheel rim and an open position spaced from the wheel rim, and while permitting limited pivotal movement of said brake arms in a second pivotal plane which lies parallel to the plane of rotation of the wheel rim and such that said brake shoes are able to move in the direction of movement of the wheel rim,

manually operable means for moving said brake arms from said open position to said braking position, and spring biasing means for biasing said brake arms toward said open position,

a pair of cam surfaces fixed mounted to the frame of the bicycle at laterally space apart locations on opposite sides of the wheel rim and forwardly of said brake arms when

viewed in the forward rotational direction of said wheel rim, with the cam surfaces being generally aligned with respective ones of the lower end portions of said brake arms and positioned so as to lie between the associated brake shoe and the pivotal axis of the associated brake arm, and with said cam surfaces converging toward each other in the forward rotational direction of the wheel rim, and

a pair of rollers mounted to respective ones of said lower end portions of said brake arms and being aligned with respective ones of said cam surfaces,

whereby movement of the brake arms to said braking position during operation of the bicycle causes the brake shoes to engage the rotating wheel rim, which in turn causes said brake shoes to move in the forward rotational direction and said rollers to engage said cam surfaces, thereby camming the brake shoes against the wheel rim with an increased force

DISK FOR DISK-BRAKE

Alain L. Gassiat, Montussan, France, assignor to Societe Anonyme: Carbone Industrie, Bagnolet Cedex, France

Filed May 12, 1988, Ser. No. 193,081
Claims priority, application France, May 13, 1987, 87 07011
Int. Cl.' F16D *65/12, 65/847*
U.S. Cl. 188—218 XL **7 Claims**

1 An improved rotor for a disk brake comprising

(a) a hub portion rotatable about a central axis,

(b) a driving portion having a radially outward surface defining at least one driving tooth;

(c) a central web having a plurality of spacing members and defining at least one driving notch adapted to slidably receive the at least one driving tooth such that the central web may move in a direction generally parallel to the central axis with respect to the driving portion, but may not rotate relative thereto, and,

(d) a generally annular friction element formed separately from and located on each lateral side of the central web, each friction element defining a recess adapted to slidably receive the at least one driving tooth such that the friction elements may move in a direction generally parallel to the longitudinal axis separately from the central web, but may not rotate relative to the driving portion

ADJUSTABLE STOP FOR LOCKING DEVICE

Brian C. Bucholtz, Lakeview, and Thomas J. Miller, Clarence, both of N.Y., assignors to Enidine Incorporated, Orchard Park, N.Y.

Filed Mar. 14, 1989, Ser. No. 323,406
Int. Cl.' B60T *7/00*, **F16F** *9/34*
U.S. Cl. 188—299 **28 Claims**

1 In a fluid device including a piston and a cylinder wherein relative movement between said piston and cylinder is influenced by fluid in said device, an arrangement for limiting the extent of relative movement between said piston and cylinder in said device comprising

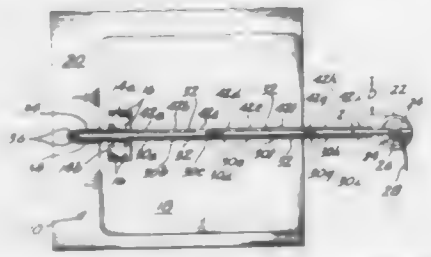
(a) a housing having a longitudinal axis and carried by said device,

(b) said housing having an inner surface of cross-sectional dimension enabling one end of said cylinder to move along within said housing,

(c) at least one formation on said housing inner surface,

(d) a stop member within said housing having a portion adapted to engage said formation in a manner establishing a fixed position of said stop member along said housing longitudinal axis, and

(e) means for supporting said stop member within said housing for movement between a first position wherein said stop member portion engages said formation and a second position wherein said stop member portion is out of engagement with said formation,



(f) so that said stop member in said first position acts as an abutment to contact said cylinder upon movement of said cylinder into said housing thereby limiting the extent of relative movement between said cylinder said piston

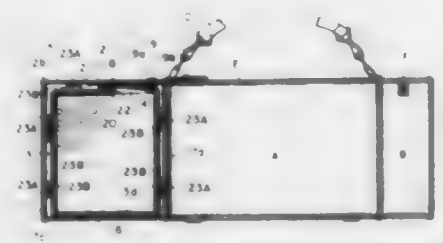
METHOD AND APPARATUS FOR SENSING AND DAMPING VIBRATION

Gerald J. Julien, Puyallup, and Steven P. Robinson, Seattle, both of Wash., assignors to The Boeing Company, Seattle, Wash.

Filed Mar. 3, 1989, Ser. No. 318,393
Int. Cl.[5] F16F 7/10
U.S. Cl. 188—378 41 Claims

1. A mechanism for damping vibration of a structure, comprising

a member comprising a metal alloy having temperature responsive shape memory characteristics and characterized by a very high specific damping capacity compared to the specific damping capacity of the structure and



means for attaching the member to the structure at least at two spaced apart points that are offset from a neutral axis of the structure, said points being selected so that the spacing between the points cyclically varies as the structure vibrates, the variation in spacing between the points applying stress to the member, said member absorbing energy from the structure as it is stressed, and thereby damping the vibration of the structure

APPARATUS FOR CONTROLLING GEAR TRANSMISSION AND CLUTCH OF VEHICLES

Yuji Satoh, and Hiromi Kono, assignors to Diesel Kiki Co., Ltd., Tokyo, Japan

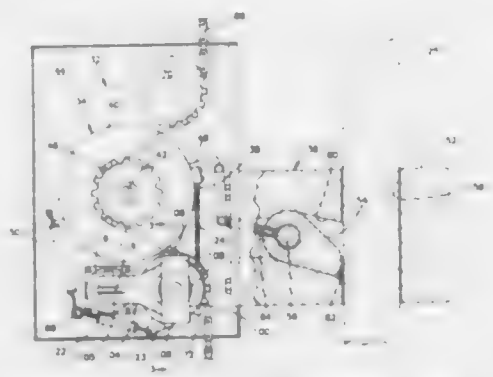
Filed Oct. 6, 1989, Ser. No. 418,056
Claims priority, application Japan, Oct. 14, 1988, 63-257005
Int. Cl.[5] B60K 41/22
U.S. Cl. 192—3.55 7 Claims

1. An apparatus for controlling a vehicle having an automatic gear shift control system for a gear transmission, said apparatus comprising

an input means for inputting information concerning a load condition of the vehicle,

a first determining means responsive to said input means for determining characteristic curves for engaging the clutch for vehicle drive-off,

a gear discriminating means responsive to said input means for discriminating whether or not a gear position set in the gear transmission corresponds to a predetermined allowable gear position at the time of vehicle drive-off, and



an engaging means responsive to said first determining means and said gear discriminating means for carrying out the operation for engaging the clutch during vehicle drive-off in accordance with the characteristic curve determined by said first determining means only when the gear of the transmission is shifted to an allowable gear position

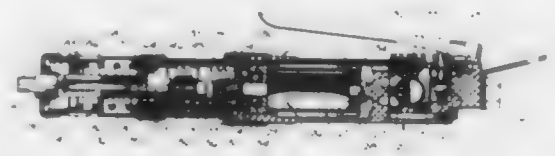
BRAKE MECHANISM FOR A STORAGE AND RETRIEVAL MACHINE

George R. Pipes, Salt Lake City, Utah, assignor to Eaton-Kenway, Inc., Salt Lake City, Utah

Filed Dec. 20, 1989, Ser. No. 454,788
Int. Cl.[5] B66B 5/16, 9/20
U.S. Cl. 192—7 11 Claims

1. In a load elevating system comprising a mast, a load carriage mounted for vertical movement along said mast, drive means operable to move said load carriage along said mast and



a brake system operable to prevent downward movement of said load carriage relative to said mast, the improvement wherein said brake system comprises engagement means on said load carriage engageable with said mast to prevent relative movement between said load carriage and said mast, said engagement between being movable between a first position out of engagement with said mast and a second position in engagement with said mast, actuating means operable to move said engagement means from said first position to said second position, a first rotary member on said load carriage, means operative to rotate said first rotary member in response to relative movement between said load carriage and said mast, a clutch assembly operatively engageable with said first rotary member, said clutch assembly including an output member having a first condition disengaged from said first rotary member and a second condition engaged with said first rotary member, means for selectively shifting said output member from its disengaged condition to its engaged condition, and means acting between said output member and said actuating means to move said engagement means from its first position to its second position when said output member is in its engaged condition, including means for providing lost motion connection means effective to permit a predetermined amount of relative movement between said load carriage and said mast after said output member is put in its engaged condition

5,005,682

AIR POWERED TORQUE CONTROL TOOL DRIVER WITH AUTOMATIC TORQUE DISCONNECT

Raymond L. Young, and James A. Sjovall, both of Sioux City, Iowa, assignors to Sioux Tools, Inc., Sioux City, Iowa

Filed Jun. 25, 1990, Ser. No. 543,159
Int. Cl.[5] B23Q 5/06
U.S. Cl. 192—0.034 8 Claims

1. A torque control tool driver comprising

a housing,

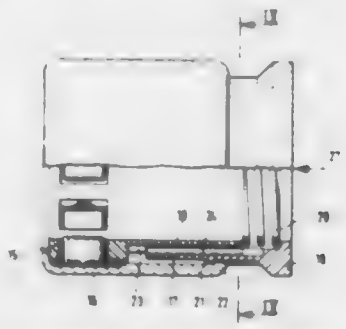
a motor mounted in said housing,

a tool driving spindle rotatably mounted at one end of said housing,

reduction gear means comprising a ring gear and planetary gears rotatably mounted in said housing and driven by said motor,

torque responsive clutch means for transmitting torque from said gear means to said spindle and operable at predetermined torque output of said spindle to prevent transmission of torque thereto,

said clutch means being operable to hold said ring gear stationary until said predetermined torque output is reached whereupon said ring gear is released for rotation to prevent torque transmission to said spindle, and



means operable subsequent to preventing transmission of torque to said spindle for shutting off said motor

5,005,683

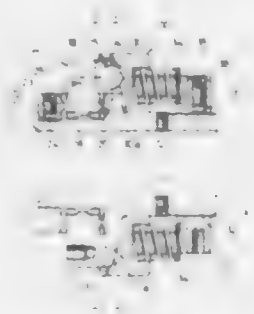
SWITCHABLE CLAMPING ROLLER OVERRUNNING CLUTCH

Joachim Ritter, Herzogenaurach, and Johann Stark, Weisendorf, both of Fed. Rep. of Germany, assignors to INA Walzlager Schaeffler KG, Fed. Rep. of Germany

Filed Dec. 27, 1989, Ser. No. 457,252
Claims priority, application Fed. Rep. of Germany, Jan. 31, 1989, 3902804
Int. Cl.[5] F16D 15/00, 23/00, 41/06
U.S. Cl. 192—45 4 Claims

1. An overrunning clutch comprising a clamping ring provided with clamping ramps and spring-loaded clamping rollers housed in pockets of a cage and associated with the clamping ramps, the clutch being switchable from a first indexing position into a second by rotation of the cage with respect to the clamping ring characterized in that the cage either directly or with the help of an intermediate member, and the clamping ring with projections and recesses, engage in each other similar to a screw thread that when the cage or the intermediate member, is axially displaced, the cage executes a movement of rotation with respect to the clamping ring and is mounted axially indisplaceably at both ends in the clamping ring between radially directed rims and between the cage and clamping ring, a preferably cylindrical intermediate member is axially displaceably mounted and pressed axially outwards under the action of a pressure spring, which intermediate member projects axially beyond the clamping ring, the cage and the intermediate member and the intermediate member and the clamping ring, engaging in each other similar to a screw thread and in the manner of a longitudinal guide, so that when the intermediate member is axially displaced, the cage executes a movement of rotation with respect to the clamping ring

5,005,684



OVERLOAD CLUTCH

Shunji Fujii, Osaka, Japan, assignor to Tsubakimoto Emerson Co., Daito, Japan

Filed Sep. 13, 1989, Ser. No. 406,715
Claims priority, application Japan, Dec. 3, 1988, 63-305154; Feb. 27, 1989, 1-43136; Feb. 27, 1989, 1-43137
Int. Cl.[5] F16D 7/08, 43/206
U.S. Cl. 192—56 R 15 Claims

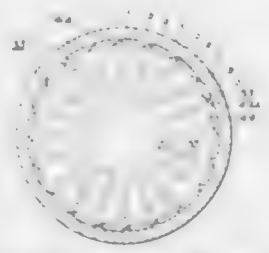
1. In an overload clutch in which torque transmitting elements are held within hollow portions formed in one of a driving member or a driven member and are urged by a pressure member against recesses formed in the other of the driving member or driven member so that torque may be transmitted and the torque transmitting elements are adapted to escape from said recesses in opposition to an urging force, comprising the improvement wherein said pressure member is formed with an inclined section means for pressing the torque transmitting elements along a direction which substantially intersects a rotational axis of the overload clutch, said hollow portions for holding the torque transmitting elements are generally V-

shaped when viewed axially, and said recesses for holding the torque transmitting elements are grooves which open axially

toward the hollow portions and are of V-shaped cross-section when viewed radially.

5,005,685

TORQUE TRANSMITTING DEVICE



Masami Takano; Tetsurou Hamada, and Katsuhiko Masuda, all of Tochigi, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 28, 1988, Ser. No. 212,711

Claims priority, application Japan, Jun. 30, 1987, 62-162622

Int. Cl.⁴ F16D 31/00, 13/64

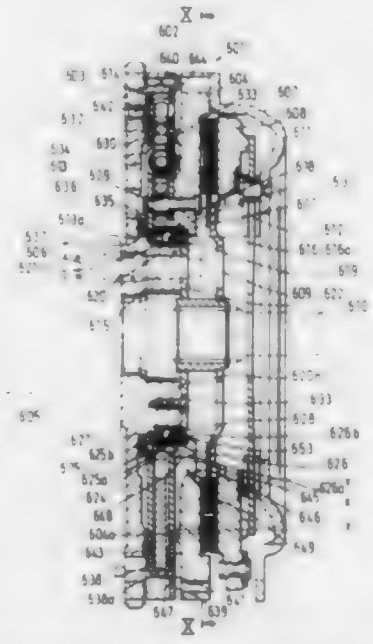
U.S. Cl. 192—58 B **13 Claims**

1 A torque transmitting device of viscous coupling type comprising a rotatable case member having defined therein a fluid chamber extending axially and filled with a viscous fluid, a rotatable shaft member disposed coaxially in said fluid chamber and rotatable with respect to said case member, two plate-groups comprised of outer plates and inner plates disposed coaxially in said fluid chamber, said outer plates being rotatable with said rotatable case member and said inner plates being rotatable with said rotatable shaft member for relative torque transmission between said rotatable case member and said rotatable shaft member through said fluid, and engaging means engaging the plates of at least one group of said two plate-groups with a peripheral surface of the corresponding rotatable member to provide rotational engagement therewith while allowing relative displacement therebetween through a predetermined angle, said engaging means comprising at least one pair of engaged teeth disposed on an inner peripheral surface of said rotatable case member spaced circumferentially from each other, and at least one engaging tooth disposed on an outer periphery of at least one of said outer plates projecting between said engaged teeth, said engaging tooth being engageable with said engaged teeth after having traversed a circumferential gap corresponding to said predetermined angle, said gap in a plane of said at least one outer plate having an area which is about 2 through 10% of the surface area of each said outer plate.

5,005,686

TORQUE TRANSMITTING AND TORSION DAMPING APPARATUS FOR USE IN MOTOR VEHICLES

Wolfgang Reik, Bühl, and Hans-Dieter Elison, Offenburg, both of Fed. Rep. of Germany, assignors to Luk Lamellen und Kupplungsbau GmbH, Baden, Fed. Rep. of Germany



Division of Ser. No. 132,909, Dec. 14, 1987, abandoned, which is a division of Ser. No. 470, Jan. 5, 1987, Pat. No. 4,727,970, which is a continuation-in-part of Ser. No. 716,838, Mar. 28, 1985, abandoned, Ser. No. 799,006, Nov. 18, 1985, abandoned, and Ser. No. 848,732, Apr. 4, 1986, abandoned. This application Dec. 13, 1988, Ser. No. 283,859

Claims priority, application Fed. Rep. of Germany, Jun. 12, 1984, 3421709; Nov. 23, 1984, 3442679; Apr. 15, 1985, 3513449; Apr. 16, 1985, 3513479

The portion of the term of this patent subsequent to Mar. 1, 2005, has been disclaimed.

Int. Cl.⁴ F16F 15/12 F16D 3/12 13/72

U.S. Cl. 192—70.17 **21 Claims**

1 Torque transmitting apparatus with means for taking up and for compensating for variations of torque, particularly for fluctuations of torque between a combustion engine and input means of a transmission, comprising at least two coaxial flywheels including first and second flywheels which are rotatable relative to each other, said first flywheel being connectable with the engine and said second flywheel being connectable with the input means of the transmission by way of a clutch plate of a friction clutch and having a friction surface engageable with the clutch plate with attendant generation of heat, damping means for opposing rotation of said first and second flywheels relative to each other; and antifriction bearing means interposed between said first and second flywheels and including at least one annulus of rolling elements, said second flywheel further having a plurality of elongated circumferentially extending substantially axial passages adjacent said bearing means and disposed radially between said friction surface and said bearing means, the combined length of said passages in the circumferential direction of said second flywheel being at least 20 percent of the corresponding portion of said second flywheel, said first and second flywheels defining a space which communicates with said passages and has an open outer portion to establish a path for the flow of cooling air through said passages and said space.

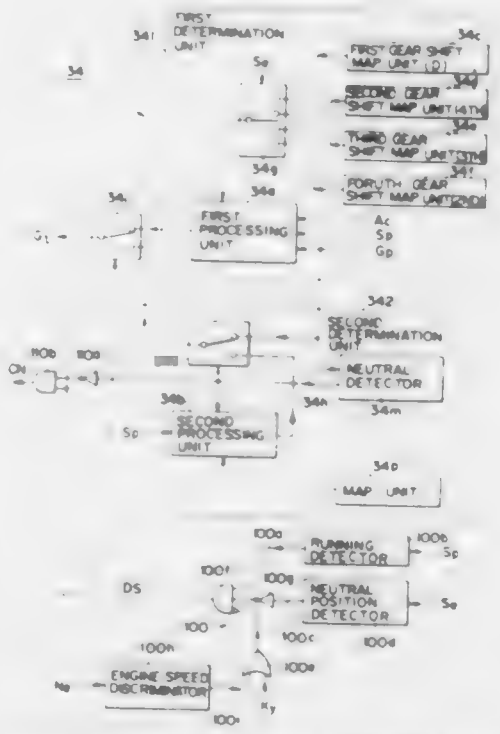
CONTROL SYSTEM FOR AUTOMATIC TRANSMISSION APPARATUS FOR VEHICLES



Kazumasa Kurihara, and Tsutomu Takahashi, both of Higashimatsuyama, Japan, assignors to Diesel Kiki Co., Ltd., Tokyo, Japan

Filed Dec. 13, 1989, Ser. No. 449,190

Claims priority, application Japan, Dec. 15, 1988, 63-314976

Int. Cl.⁵ B60K 41/28

U.S. Cl. 192—0.073 **11 Claims**

1 A system for controlling a vehicle transmission apparatus for a vehicle powered by an internal combustion engine including a gear transmission electronically controlled by a transmission control unit and a clutch electronically controlled by a clutch control unit, said system comprising

means for producing a key-switch signal indicating that an ignition switch is in its OFF position,

a discriminating means responsive to the key-switch signal for discriminating whether or not the vehicle is running with the gear transmission shifted to its neutral position and fuel combustion in the engine discontinued,

a first determining means for determining a first target gear position to which the gear transmission is to be shifted when the vehicle is running with the engine powered by the fuel combustion,

a second determining means for determining a second target gear position to which the gear transmission is to be shifted when the vehicle is running without fuel-combustion in the engine;

a providing means for providing an output from either said first or second determining means to the transmission control unit in accordance with a discrimination result obtained by said discriminating means, whereby the transmission control unit is caused to control the gear transmission to shift to the gear position indicated by the output provided by said providing means, and

means responsive to said discriminating means for producing a control signal for controlling the clutch control unit to engage the clutch at a prescribed timing

STORAGE SYSTEM

Dieter Maier, Stuttgart, and Dieter Boley, Leonberg/Eltingen, both of Fed. Rep. of Germany, assignors to Fraunhofer Gesellschaft zur Förderung der angewandten Forschung e.V., Munich, Fed. Rep. of Germany

Continuation of Ser. No. 474,634, Jan. 30, 1990, abandoned, which is a continuation of Ser. No. 160,210, Feb. 25, 1988, abandoned. This application Jul. 6, 1990, Ser. No. 549,637

Claims priority, application Fed. Rep. of Germany, Feb. 27, 1987, 3706493

Int. Cl.⁵ B65G 1/00

U.S. Cl. 198—347.3 **20 Claims**

1 A storage system for sequent and positioned input, storage and removal of items on a conveyor belt (1), the ends of which

are attached to shafts (31, 32) respectively, and which can be wound off together with the items thereon from one shaft and onto the other shaft by means of a forward transport unit in such a manner that one item at a time can be stored, and respectively be removed, at a loading and unloading station, a pair of containers (21, 22), said shafts (31, 32) being arranged with one of the shafts in a corresponding one of said containers, each of said containers being closed on all sides except for openings for said conveyor belt, said containers being connected to each other by means of a detachable connecting plate, whereby each of said containers can be removed from the storage system, said forward transport unit (43, 44, 46) being a synchronized forward transport unit, independent of said containers (21, 22)

5,005,690

CONVEYOR CARRIAGE

Jochen Gonser, Kornwestheim, Fed. Rep. of Germany, assignor to Veit Transpo GmbH

Filed Jun. 1, 1989, Ser. No. 359,891

Claims priority, application Fed. Rep. of Germany, Jun. 3, 1988, 8807283[U]

Int. Cl.[5] B65G 47/46

U.S. Cl. 198—350 **4 Claims**

1 A conveyor carriage, for an overhead conveying system, including a U-shaped frame, two casters for engaging a rail for travelling along a conveying direction, and a proximity-readable code carrier, said casters being supported and connected to one another by said frame, said frame being formed with an interior cavity so that said frame forms a housing for the accommodation into said U-shaped frame of said proximity-readable code carrier to protect said proximity-readable code carrier from damage, said proximity-readable code carrier including an electronic circuit of the non-contacting control type

APPARATUS FOR SUSPENDING GARMENTS ON HANGERS

Manfred A. Jennewein, Meisenweg 10, D-6082 Mörfelden-Walldorf, and Achim Ballweg, Homburg/Saar, both of Fed. Rep. of Germany, assignors to Manfred A. Jennewein, Mörfelden-Walldorf, Fed. Rep. of Germany

Filed Mar. 29, 1989, Ser. No. 330,312

Claims priority, application Fed. Rep. of Germany, Mar. 30, 1988, 3810794; Jun. 4, 1988, 3819103

Int. Cl.[5] B65G 17/32

U.S. Cl. 198—465.4 **25 Claims**

1 Apparatus for suspending garments on hangers of the type having a hook, comprising a plurality of garment holders each resembling the upper part of a human torso and each having an open-top hanger-receiving pocket, a main section and a receptacle which is movably installed in the respective main section and has an open upper side for admission of a hanger, the depth of each of said receptacles being such that at least the hook of a hanger in the receptacle projects upwardly beyond the respective receptacle, said receptacles being movable up and down in the respective main sections between raised and lowered positions, said main sections having topmost portions and the hooks of hangers in said receptacles being disposed at a level below the respective topmost portions in the lowered positions of said receptacles, a conveyor supporting and defining an endless path for said holders, and a plurality of stations including a first station adjacent said path and having means for inserting hangers into the pockets of adjacent holders so

that the hook of an inserted hanger extends upwardly, and a second station adjacent said path to facilitate the application of a garment over a holder and over the hanger in the pocket of such holder, one of said holders being located at said first station when another of said holders is located at said second station

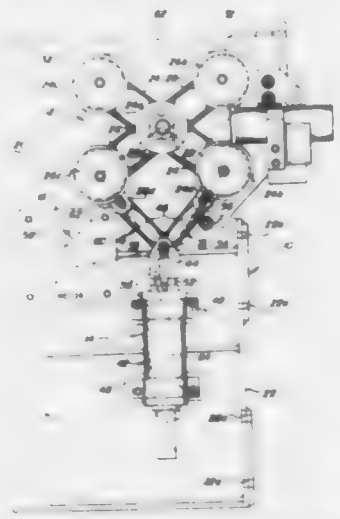
TUBE FEED APPARATUS



John J. Borzym, 4820 Schoolbell, Birmingham, Mich. 48010

Continuation of Ser. No. 149,430, Jan. 29, 1988, Pat. No. 4,903,822. This application Nov. 16, 1989, Ser. No. 437,864

The portion of the term of this patent subsequent to Feb. 27, 2007, has been disclaimed.

Int. Cl.[5] B65G 29/00

U.S. Cl. 198—624 **12 Claims**

1 A power feed apparatus for tubing or the like comprising

feed rollers adapted to drive the tubing along a tube feed path;

actuator means, including means interconnecting said rollers for joint displacement, operative in response to actuation of said actuator means to simultaneously and jointly displace said rollers between a drive position in which the rollers are disposed at opposite sides of and proximate said feed path to drivingly engage opposite sides of the tubing with each of said rollers having its axis of rotation spaced the same distance from the center line of said tube regardless of the diameter of said tube and a rest position in which each of the rollers is withdrawn form its drive position and withdrawn from said feed path,

means for rotationally driving said rollers throughout the movement of said rollers between engaged and withdrawn positions such that various tube diameters can be driven

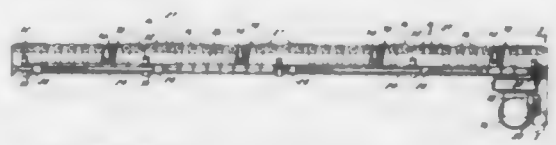
said means for relatively moving said rollers includes a pair of arms mounted for movement about a fixed pivot axis with said pair of arms each defining a free end,

said feed rollers are respectively mounted on the free ends of said arms,

a pulley is mounted on the free end of each of said arms in driving relation to the respective feed rollers; and

an endless member is trained around said pulleys.

5,005,693



LINE SHAFT ACCUMULATION CONVEYOR

William A. Fultz, and David M. McLochlin, both of Louisville, Ky., assignors to The Interlake Companies, Inc., Shepherdsville, Ky.

Filed Apr. 23, 1990, Ser. No. 512,818

Int. Cl.[5] B65G 13/06

U.S. Cl. 198—781 **3 Claims**

1 An accumulation conveyor comprising

a conveyor frame including first and second side rails and a plurality of rollers each having a first end mounted on the first side rail and a second end mounted on the second side rail;

a drive shaft extending along the conveyor and defining an axis which is substantially parallel to the side rails;

a plurality of intermediate shafts extending parallel to the drive shaft, said intermediate shafts being aligned with each other along an axis which is distinct from the axis of the drive shaft, each of said intermediate shafts lying adjacent to a distinct group of rollers so as to define a zone of rollers associated with each intermediate shaft,

a plurality of drive belts wrapped around each of the intermediate shafts, each of said drive belts also being wrapped around its respective roller such that, when an intermediate shaft rotates, it drives the drive belts that are wrapped around it, which, in turn, drive the rollers in the zone of rollers associated with that intermediate shaft,

a plurality of friction wheels mounted on the drive shaft, each of said friction wheels lying adjacent to its respective intermediate shaft; and

means for moving each intermediate shaft toward and away from its respective friction wheel, such that, when each intermediate shaft contacts one of the friction wheels of the drive shaft, it is driven by the drive shaft, which, in turn, causes the zone associated with that intermediate shaft to be driven, and, when that intermediate shaft is moved away from the friction wheel, it stops driving its zone of rollers

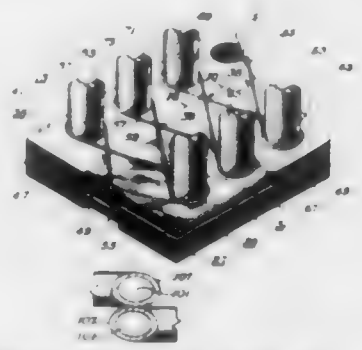
SYSTEM FOR PACKAGING DETONATING CORD FOR TRANSPORT



Billy F. Davis; Michael P. Hancock, both of Cleburne, and Scott L. Hayes, Burleson, all of Tex., assignors to Goex, Inc., Cleburne, Tex.

Continuation-in-part of Ser. No. 110,227, Oct. 19, 1987, Pat. No. 4,895,249. This application Jul. 6, 1989, Ser. No. 376,887

The portion of the term of this patent subsequent to Jan. 23, 2007, has been disclaimed.

Int. Cl.[5] B65D 85/62

U.S. Cl. 206—3 **20 Claims**

1 A detonating cord transport package comprising a plurality of sections, with each section comprising

a detonating cord separator-support member having front and back face surfaces and edge surfaces, and

a continuous length of detonating cord comprising a metal jacket surrounding an explosive core along said entire continuous length, disposed for support on said separator-support member and traversing portions of said surfaces such that said detonating cord is formed in a plurality of loops on said separator-support member, each of said loops having two end portions engaging each other at a severing location to allow said detonating cord to sever itself should detonation of said cord occur

CONDOM CADDY PACKAGE

David A. Tennefos, and Victoria I. Tennefos, both of 2711 S. Rivershore Dr., Moorehead, Minn. 56560

Filed Mar. 15, 1990, Ser. No. 493,785

Int. Cl.[5] B65D 85/00

U.S. Cl. 206—69 **6 Claims**

1 A condom package comprising,

a front web overlying and coextensive with a rear web, the front web and the rear web including a heat sealed upper edge spaced from a heat sealed lower edge, and

heat sealed side edges defining an enclosing perimeter of the package, and

a first opening means formed within the front and rear webs

adjacent the upper edge for gaining access interiorly of the package, and

a second opening means mounted adjacent the first opening means underlying the first opening means for permitting resealing of the package, and

a first compartment defined within the package underlying the second opening means, and

a second compartment defined within the package overlying the second opening means containing the first opening means, and

wherein the first opening means includes a first row of perforated slits formed within the front web extending coextensively along the front web, and further including a second row of perforated slits adjacent to said first row of perforated slits extending coextensively along the rear web wherein the first and second rows of perforated slits are arranged parallel to the top edge spaced above the second opening means, and

wherein the second opening means includes a continuous groove extending along the rear web cooperative with a continuous tongue formed to the front web wherein the continuous tongue is defined by a continuous linear recess formed within the front web wherein the linear recess defines a convex upper surface and a convex lower surface extending over the first and second compartments respectively to provide enhanced grasping of the package during opening of the package by rupturing the slits

STRENGTHENING STRUT FOR RECTANGULAR CONTAINER

Daniel P. Dutcher, Bethel, Minn., assignor to Waldorf Corporation, St. Paul, Minn.

Filed Sep. 12, 1990, Ser. No. 582,112

Int. Cl.' B65D 5/10

U.S. Cl. 206—491 14 Claims

1 A package of thin, flexible material for positioning an article contained within the package comprising

an exterior container having generally the shape of a rectangular box

comprising first and second opposed main panel pairs joined at ninety degrees to form a tube of generally rectangular cross-section and a pair of end closures at opposite ends of said tube, and

an internal positioning frame within said exterior container, said internal positioning frame comprising

a pair of generally parallel positioning panels, each such positioning panel being generally parallel to the first pair of main panels,

a first positioning strut connected between the first pair of main panels and lying generally perpendicular to each of the parallel positioning panels and in spaced, generally parallel relation to the second pair of main panels, and

a second positioning strut connected between said first positioning strut and at least one of said second pair of main panels, said second positioning strut lying generally parallel to said parallel positioning panels and in a plane intermediate the planes of said parallel positioning panels

APPARATUS FOR INDIVIDUALIZED ANGULAR CONTAINMENT OF CRAWFISH

Edward Bodker, 364 Peachtree Blvd., Baton Rouge, La. 70806

Continuation-in-part of Ser. No. 282,106, Dec. 8, 1988, abandoned. This application Jul. 10, 1990, Ser. No. 550,388

Int. Cl.[5] B65D 1/36, A01K 61/00

U.S. Cl. 206—563 10 Claims

1. A container for holding live or fresh crawfish, stored with their tails in a folded position, comprising

(a) an expansive support member carrying a plurality of sockets,

(b) each socket having a continuous sidewall conforming generally to the shape of a crawfish, the sockets being spaced apart so that multiple crawfish can be stored within the dimensions of the horizontal member, separate from one another and in a generally co-planar orientation,

(c) each socket including a longitudinally extending socket that aligns with the longitudinal axis of the crawfish being stored and including a front end portion of gradually increasing width and a rear end portion shaped to be receptive of a crawfish folded tail, and

(d) a transverse trough, angularly oriented with respect to the crawfish being stored and connecting adjacent sockets at the tail portion so that the thumb and forefinger of a user can grip the crawfish tail by entering the transverse slot

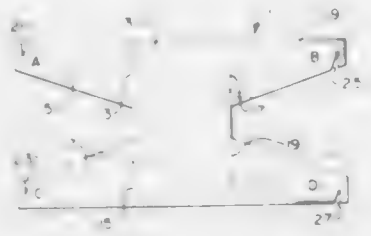
DISPOSABLE TACO HOLDER

Russell E. Martin, 5420 Beckner Str., Norfolk, Va. 23509

Filed Jun. 4, 1986, Ser. No. 870,418

Int. Cl.[5] B65D 5/42

U.S. Cl. 206—564 9 Claims



1. An assemblable holder for comestible products, which comprises

(a) a sheet having substantially negligible thickness dimension, formed of a semi-rigid material and having

(b) a central region, said central region having at least one pair of spaced parallel sides;

(c) first and second spaced apart legs secured to and spaced along one of said spaced parallel sides, each of said first and second legs having a first side most closely adjacent a first side of the other of said first and second legs and extending outwardly from said central region, said first sides forming a substantially V-shaped trough, each of said first and second legs having a notch at one end portion thereof remote from said central region extending in a direction parallel to said spaced parallel sides, and a crease in the material at the juncture of said first and second legs and said central region,

(d) third and fourth spaced apart legs secured to and spaced along the other of said spaced parallel sides, each of said

third and fourth legs having a first side most closely adjacent a first side of the other of said third and fourth legs and extending outwardly from said central region, said first sides forming a substantially V-shaped trough, each of said third and fourth legs having a notch at one end portion thereof remote from said central region extending in a direction parallel to said spaced parallel sides, the notch in said first leg extending in a direction opposite to said notch in said third leg and said notch in said second leg extending in a direction opposite to said notch in said fourth leg, and a crease in the material at the juncture of said third and fourth legs and said central region, said legs being folded toward each other along said crease with the notch of said first leg engaging the notch of said third leg and the notch of said second leg engaging the notch of said fourth leg to form said taco holder

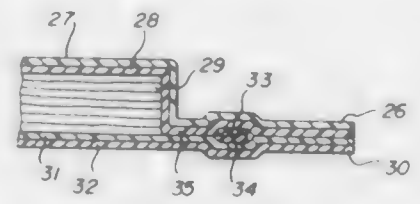
RECLOSABLE PACKAGE



Gerald O. Hustad, McFarland, and Ray H. Griesbach, Monona, both of Wis., assignors to Oscar Mayer Foods Corporation, Madison, Wis.

Continuation of Ser. No. 218,388, Jul. 12, 1988, Pat. No. 4,823,961, which is a continuation of Ser. No. 841,916, Mar. 20, 1986, Pat. No. 4,782,951. This application Feb. 22, 1989, Ser. No. 313,430

The portion of the term of this patent subsequent to Apr. 25, 2006, has been disclaimed.

Int. Cl.[5] B65D 75/26, 81/20

U.S. Cl. 206—632 12 Claims

1. A reclosable package comprising

a bottom film,

a top film positioned over said bottom film;

a continuous hermetic seal formed by intimate contact between said top and bottom films hermetically sealing said top and bottom films and peripherally surrounding a product cavity between said top and bottom films,

a portion of said hermetic seal being an easy-open hermetic peel seal for graining access to the contents of said product cavity, and

one or more interlocking ribs and grooves extending adjacent to said portion of said easy-open hermetic peel seal peripherally to said easy open hermetic peel seal, said interlocking ribs and grooves being adapted to reclose said package after said easy open hermetic peel seal has been opened

said easy open hermetic peel seal being of sufficient opening force to withstand processing, handling and shipping, yet low enough to allow easy access to the product cavity and to ensure that the structural and functional integrity of the films, interlocking ribs and grooves and remaining seals is maintained

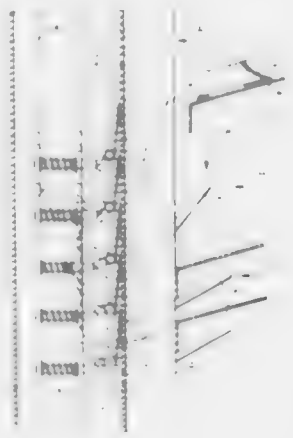
RETAINING DEVICE
Karl Hofer, Emmentalstrasse 77, 3510 Konolfingen, Switzerland
Filed Feb. 26, 1990, Ser. No. 484,556
Claims priority, application Switzerland, Mar. 31, 1989, 1171/89
Int. Cl.' A47F [illegible]
U.S. Cl. 211—70.6 4 Claims



1. A retaining device for generally vertically hanging a plurality of generally parallel disposed elongate objects, comprising
(1) a generally longitudinally elongated, rectangular, parallelepiped, block of a resilient foamed plastic or rubber having front, back, top, bottom and side surfaces,
(2) a plurality of spaced-apart incisions disposed through said front surface and extending toward said back surface to at least beyond the longitudinal center of said block and terminating within said block such that the back surface thereof is continuous
(3) a securing frame substantially surrounding at least a back portion of the said top, bottom and side surfaces and having a generally opened, rectangular, parallelepiped configuration, and
(4) attachment means for mechanically attaching the said block to said frame, said attachment means having vertically disposed spaced-apart, connecting bars attached between longer sides of the frame which bars are spaced apart such that the bars are received into correspondingly spaced-apart incisions near the termination thereof

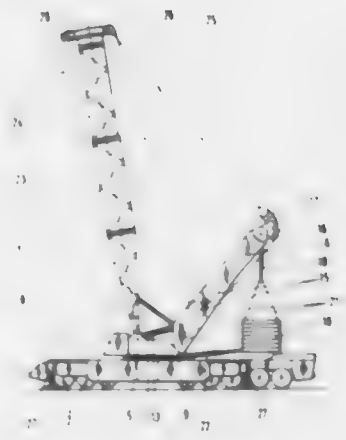
UTENSIL HOLDER APPARATUS
Christopher M. Pentross, 1028 Marine Ave., Apt. #138, Gardena, Calif. 90247, and Ferdinand E. Flowers, 3750 Easy Ave., Long Beach, Calif. 90810
Filed Apr. 13, 1990, Ser. No. 509,067
Int. Cl.' A47F [illegible]
U.S. Cl. 211—70.7 1 Claim

1. A utensil holder apparatus comprising,
a plurality of containers comprising a first, second, and third container, each container including an elongate longitudinally aligned body, with a rim mounted orthogonally to the body at an upper terminal end of the body, and wherein each container defines a cavity therewithin, and
designation means mounted to the body, and the designation means is configured to provide a configurational replication of a plurality of utensils contained within the cavity of each container, and
wherein the body is defined as a cylindrical body, the body including a matrix of apertures directed therethrough, and
wherein each rim includes a planar top surface, and the designation means including a plurality of fork members orthogonally and integrally mounted to the first container on the rim of the first container extending coaxially parallel to a first axis of the first container, and the second container including a plurality of spoon members integrally and orthogonally mounted to the rim of the second container coaxially parallel relative to one another and to a second axis defined by the second container, and the third container including a plurality of knife end members integrally and orthogonally mounted to the rim of the third container arranged parallel to one another and to a third axis defined by the third container, the plurality of fork members serving as first manual identification means for permitting manual identification of first utensils within the first container, the plurality of spoon members serving as second manual identification means for permitting manual identification of second utensils within the second container, and the plurality of knife end members serving as third manual identification for permitting manual identification of third utensils within the third container

5,005,712
STORING AND TRANSPORTING RACK FOR BODY PANELS AND OTHER FLAT COMPONENTS
Klaus Niederprum, Bergheim, Fed. Rep. of Germany, assignor to Ford Motor Company, Dearborn, Mich.
Filed Apr. 27, 1989, Ser. No. 344,940
Claims priority, application Fed. Rep. of Germany, Apr. 28, 1988, 3714452
Int. Cl.' A47F [illegible]
U.S. Cl. 211—150 17 Claims



12. A storage and transportation rack for stacking and transporting generally flat components, comprising
a framework means,
a plurality of support columns attached to said framework means, said support columns including bearing slots,
a plurality of support arm assemblies pivotally disposed in selected ones of said bearing slots of said support columns, said support arm assemblies being positionable between a rest position and an extended position so that when said support arm assembly is in said extended position, said support arm assembly supports at least a portion of the flat component, and wherein said support arm assemblies have a length and shape such that they can be adjustably positioned within a range of bearing slots allowing storage of flat components of varying size without disturbing the sequencing ability of said support arm assemblies and wherein such sequencing is such that when a component is placed on one of said support arm assemblies, said support arm assembly is rotated from an intermediate position, which is between said rest and said extended positions, to said extended position, and such that during such movement a portion of said support arm assembly cooperates with a portion of the adjacent support arm assembly to move the adjacent support arm assembly from said rest position to an intermediate position capable of receiving the next component

Patent Not [illegible] For This Number

5,005,714
CRANE, IN PARTICULAR A LARGE MOBILE CRANE
Joachim Kröll, Steinstrasse 1, 4053 Juchen 1, and Walter Köllner, Mendelssohnweg 25, 4052 Korschenbroich 2, both of Fed. Rep. of Germany
Filed Jul. 21, 1989, Ser. No. 384,138
Claims priority, application Fed. Rep. of Germany, Jul. 21, 1988, 3824732
Int. Cl.' B66C [illegible]
U.S. Cl. 212—196 1 Claim

1. A crane comprising
an undercarriage (1), a revolving joint (3) on said undercarriage (1), a superstructure on said revolving joint (3), said superstructure comprising a central part (5) rotatably mounted on said revolving joint (3), a boom pivotally connected to said central part (5), a swing part (6), and a horizontal swing bearing (9) pivotally mounting said swing part on said central part (5) for movement in a vertical plane on said central part (5), a plurality of winches mounted on said swing part (6), a retraction mechanism (17) mounted at one end of said swing part (6) opposite said swing bearing (9), said retraction mechanism comprising a pulley head (16) and a bracing (25) for said boom, a counterweight(18); means (19) for attaching said counterweight on said end of said swing part (6) for vertical movement relative thereto, at least one hydraulic ram (22) pivotally mounted on said central part (5) and having a free end, said free end acting on said counterweight (18) in a substantially horizontal direction, means (13) operatively connected between said central part (5) and said swing part (6) for swinging said swing part (6) in a vertical plane about said horizontal swing bearing (9), said swing bearing (9) having a horizontal axis extending perpendicular to the longitudinal axis of said superstructure, an operator's cab (8) attached to said central part (5), said swing

bearing (9) being located at approximately the height of said revolving joint on said central part (5) at a location farther from said operator's cab (8) than the pivot point of said boom; at least one of said plurality of winches being operatively connected to said bracing for positioning said boom at selected locations about said pivot point and at least another one of said plurality of winches being adapted to be connected to a load cable mounted on said boom for raising and lowering a load

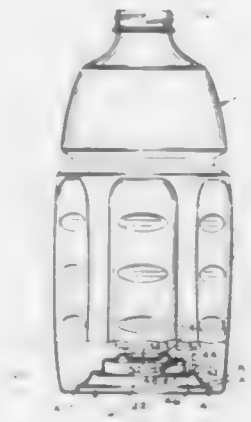
5,005,715

ARTICULATED RAILROAD CAR CONNECTOR

James E. Solomon, Lithopolis, Ohio, assignor to Buckeye Steel Castings Company, Columbus, Ohio

Continuation-in-part of Ser. No. 126,183, Nov. 27, 1987, Pat. No. 4,949,856. This application Jul. 24, 1989, Ser. No. 383,660
Int. Cl.[5] B61G 01/02
U.S. Cl. 213—62 A 14 Claims

1 An articulated connector for railroad cars, which comprises:



first and second connector members pivotably connected to each other at inner ends with a pin to permit vertical, rotational and horizontal pivoting of said connector members, said connector members having opposed ends proportioned to each be welded to a railroad car sill, and means for attaching said articulated connector to a railroad truck; pin bearing block means carried in said articulated connector and abutting said pin; slack adjusting wedge means urging said pin against the pin bearing block means, said slack adjusting wedge means being laterally positioned in said connector; and side aperture means in said connector positioned to provide access from the exterior to the slack adjusting wedge means; in which the inner end of the first connector member defines a downwardly facing, spherical face which rests on a spherical recess area defined in a recess of the inner end of the second connector member, said pin extending horizontally through first and second connector member inner ends, whereby said spherical face presses with relatively large surface area against the spherical recess area to provide a load-bearing sliding surface of relatively reduced pressure per unit area.

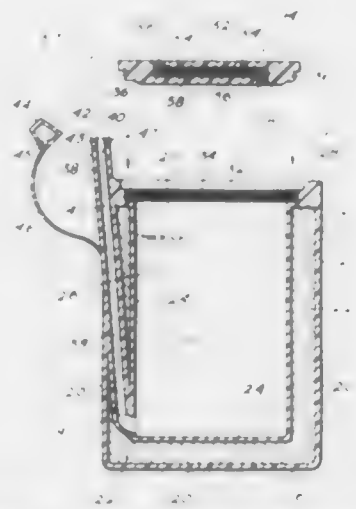
5,005,716

POLYESTER CONTAINER FOR HOT FILL LIQUIDS

Tod F. Eberle, Saline, Mich., assignor to Hoover Universal, Inc., Plymouth, Mich.

Continuation of Ser. No. 211,464, Jun. 24, 1988, abandoned. This application Feb. 7, 1990, Ser. No. 477,115
Int. Cl.[5] B65D 1/02, 1/42, 23/00
U.S. Cl. 215—1 C 6 Claims

1 A PET container formed by blow molding and adapted to be filled with liquid at an elevated temperature above room temperature, said container comprising an upper portion defining a sealable closure, a sidewall portion, and



a base portion closing the bottom of the container and formed integral with said sidewall portion, said base portion having a generally flat outer support ring at the lower end of said sidewall portion that is substantially concentric with said sidewall portion, a dome formed integral with said outer ring and extending upwardly into said container and terminating in a central disc portion that is also substantially concentric with said sidewall portion, said dome also including an annular wall extending between said disc portion and said outer ring, a portion of said annular wall being subject to deformation by virtue of the presence therein of unrelaxed retractive stresses resulting from blow molding and the heating effect of the filling liquid at said elevated temperature, said annular wall being shaped to resist deformation by said stresses by reducing the area of said dome in which said stresses may be formed by providing a series of alternately arranged radially upwardly sloping and radially downwardly sloping portions in said annular wall which provide said annular wall with a serpentine appearance extending radially from said disc portion along said dome down to said outer ring when viewed in radial cross section, said upwardly and downwardly sloping portions thereafter forming at least one inwardly concave reinforcing ring and at least one inwardly convex reinforcing ring being substantially concentrically positioned around said central disc portion to thereby reinforce the ability of said annular wall to resist deformation during filling of the container with liquid at said elevated temperature.

5,005,717

INSULATED BEVERAGE CUP

Clayton D. Oilar, P.O. Box 64, Cedarville, Calif. 96104, assignor to Clayton Dale Oilar, Cedarville, Calif.

Filed Jun. 26, 1990, Ser. No. 544,178
Int. Cl.[5] A47G 19/22
U.S. Cl. 215—13.1 2 Claims

1 A thermally insulated spill-resistant beverage cup with straw receiving structure, comprising

a tubular housing structured of an annular sidewall, an affixed bottom panel and an open top end oppositely disposed from said bottom panel, said annular sidewall with said bottom panel defining an open interior chamber adapted to retain a beverage therein, said housing generally manufactured of thermal insulating materials, said annular sidewall of said housing having threads adjacent said top end with said thread in communication with said interior chamber,

a handled lid affixed with threads positioned for removable engagement with said threads of said annular sidewall of said housing, said lid including means for providing a removable generally fluid tight seal over said interior chamber,

a vent opening through said handled lid;

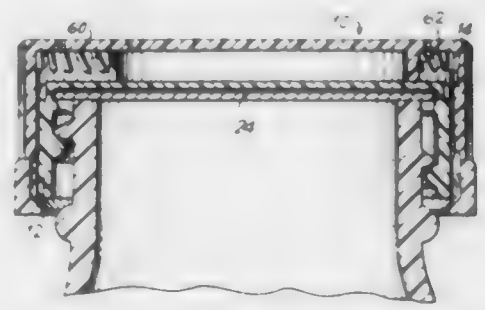
a first tubular passage extending within and through said annular sidewall of said housing from adjacent said top end to adjacent said bottom panel, said first tubular passage opening into communication with said interior chamber adjacent said bottom panel;

a drinking spout structured of an annular sidewall defining a second tubular passage, said drinking spout affixed to said annular sidewall of said housing adjacent said top end with said second tubular passage aligned with and in communication with said first tubular passage in said annular sidewall of said housing,

said first tubular passage and said aligned second tubular passage each sized and sufficiently straight to removably receive a disposable drinking straw inserted through an upper open end of said second tubular passage downward through said first tubular passage to adjacent said bottom panel;

a cap affixed by a flexible tether to said cup, said cap including means for removable placement over said drinking spout to provide a generally fluid tight seal over said second tubular passage,

at least two oppositely disposed handles affixed to said annular sidewall of said housing adjacent said top end,



a flexible carrying strap and means for securing said strap to said oppositely disposed handles

5,005,718

TAMPER-EVIDENT CHILD RESISTANT CLOSURE DEVICE

Caetano Buono, Staten Island, N.Y., assignor to Van Blarcom Closures, Inc., Brooklyn, N.Y.

Continuation of Ser. No. 228,294, Aug. 4, 1988, abandoned. This application Sep. 19, 1989, Ser. No. 409,276
Int. Cl.[5] B65D 55/02
U.S. Cl. 215—220 2 Claims

1 A tamper-evident child resistant screw-on closure for use on a container having a threaded portion threadedly engageable with said screw-on closure, comprising

an inner cap comprising a top and a cylindrical skirt depending from said top, the inner surface of said skirt being threaded for said threaded engagement with said container when said inner cap is rotated in one direction and is disengageable therefrom when said inner cap is rotated in the opposite direction;

an outer cap comprising a top and a cylindrical skirt coaxial with and surrounding the skirt of said inner cap, said inner and outer caps being in close confronting relation and being coaxially movable relative to one another,

the inner surface of said skirt of said outer cap having a first set of knurling extending away from the top thereof in an angular direction extending axially and in said one direction and the outer surface of said skirt of said inner cap having a second set of knurling complementary to said first set of knurling so that when said outer cap is turned in said one direction said first and second sets of knurling will meet to cam said outer cap relative to said inner cap axially toward said inner cap to rotate said inner cap in said one direction to threadedly engage said inner cap on said container and when said outer cap is rotated in said opposite direction said first and second sets of knurling will cam said outer cap axially away from said inner cap to prevent the rotation of said inner cap in said opposite direction to open said container, the camming of said outer cap axially away from said inner cap being preventable by the manual exertion of an axial force on said outer cap toward said inner cap to enable said outer cap to impart rotation to said inner cap in said opposite direction when such axial force is applied,

cooperating engageable means on said inner and outer caps for holding said inner and outer caps in a position axially away from one another whereby to prevent the meshing of said first and second sets of knurling to impart rotation to said inner cap by rotation of said outer cap through said meshed knurling, at least one of said cooperating engageable means being movable out of engagement with the other of said cooperating engageable means to permit the axial movement of said outer cap toward said inner cap, whereby to mesh said first and second sets of knurling, the movement of said one cooperating engageable means out of engagement with the other being readily visually detectable whereby to make tampering with said container visually evident, and

one-way drive means for imparting rotation to the inner cap when the outer cap is rotated in the closing direction but not for imparting rotation to the inner cap in the opening

direction when said outer cap is turned in said opening direction

TAMPER EVIDENT OPTICAL DEVICE AND ARTICLE UTILIZING THE SAME

Roger W. Phillips; Vernon C. Spellman; Wayne L. Gossett; Marc A. Kamerling; Paul G. Coombs; David W. Todd, and Steven A. Silver, all of Santa Rosa, Calif., assignors to Flex Products, Inc., Santa Rosa, Calif.

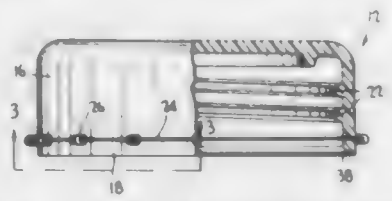
Continuation-in-part of Ser. No. 147,891, Jan. 25, 1988, Pat. No. 4,840,281, which is a continuation-in-part of Ser. No. 894,320, Aug. 7, 1986, Pat. No. 4,721,217. This application Jun. 19, 1989, Ser. No. 368,200

Int. Cl.⁵ B65D *55/02*

U.S. Cl. 215—230 25 Claims

16. In a tamper evident article, first and second parts which are movable with respect to each other, a tamper evident optical device disposed between said first and second parts and being adherent to at least one of said first and second parts, the tamper evident optical device displaying a desired optical property, the tamper evident optical device having a substrate, a splittable tamper evident coating adherent to the substrate, a liner having a metal layer incorporated therein, adhesive means securing the liner to the tamper evident coating and an induction adhesive secured to the liner, said induction adhesive being bonded to said one part.

5,005,720



PLASTIC CAP WITH BREAKAWAY TAMPER BAND AND METHOD OF FORMING SAME

Robert J. Heilman, Orland Park, Ill., assignor to Continental White Cap, Inc., Norwalk, Conn.

Filed Feb. 24, 1989, Ser. No. 314,960

Int. Cl.⁵ B65D *41/32*

U.S. Cl. 215—252 5 Claims

1. A plastic cap having an integral tamper indicating band, said plastic cap having a skirt with said tamper indicating band being a continuation of said skirt and separated from said skirt by a single continuous slit extending entirely around and through said skirt, and a purality of radially outwardly projecting and circumferentially spaced protrusions joining said tamper indicating band to said skirt, said slit extending radially outwardly into said protrusions to form said protrusions as openable strap means for permitting axial separation of said tamper indicating band from said skirt to have received between said skirt and said tamper indicating band a transfer bead of a container to be closed by said plastic cap.

FAIL SAFE RUPTURE DISK ASSEMBLY

Edward H. Short, III, and Jim E. Ellis, both of Tulsa, Okla., assignors to BS&B Safety Systems, Inc., Tulsa, Okla.

Filed Nov. 7, 1990, Ser. No. 610,972

Int. Cl.⁵ F16K *17/16*

U.S. Cl. 220—89.1 11 Claims

1. A fail safe burst disk assembly comprising

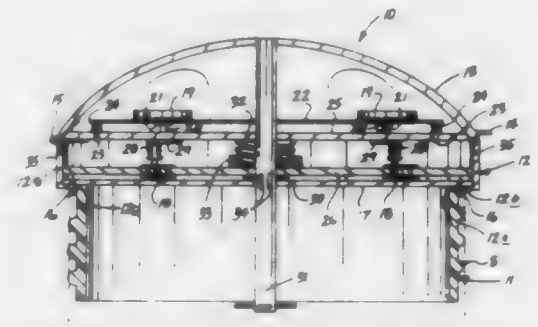
inlet and outlet head members each defining a central flow way and having juxtaposed peripheral seating surfaces extending therefrom,

a rupture disk formed as an outer portion for seating between said peripheral seating surfaces and a central domed portion having a concave surface and a convex surface that extends the convex surface into the flow way of the inlet head member,

means for securing said inlet and outlet head members together, and

a notch removing a portion of the inlet head seating surface adjacent the flow way for approximately one-sixth of the flow way periphery whereby the removal of support to the disk outer portion will cause disk failure at reduced pressures when the assembly is placed in operation upside down

5,005,723



LOCKING SPOUT CLOSURE CAP

Lambert L. Smallfoot, 4132 Briarcliff, Des Moines, Iowa 50317

Filed Mar. 10, 1989, Ser. No. 321,587

Int. Cl.⁵ B65D *55/14*

U.S. Cl. 220—210 9 Claims

1. A locking closure cap comprising, in combination,

a cylindrical bottom portion and a coaxially aligned top portion rotatably secured to said bottom portion, and

an annular combination plate fixedly mounted to the bottom portion, and

latch means for selective securement of said top portion to said bottom portion to enable selective torque transmission between said top portion and said bottom portion wherein said latch means is interengageable between said top portion and said bottom portion, and

wherein said latch means includes a plurality of combination legs reciprocatably mounted within said top portion to engage openings formed in the combination plate wherein the combination plate is integrally secured to said bottom portion to secure said top portion to said bottom portion, and

wherein said top portion includes a cylindrical skirt formed with a hinged top mounted to said skirt, and a first deck secured integrally between and orthogonally to said skirt, and a plurality of combination dials each including a dial post extending downwardly therefrom and slidingly directed through said first deck and the top portion further including an alignment plate positioned about the first deck securing said dial posts together wherein said alignment plate includes a plurality of legs integrally mounted to the alignment plate and slidably received within said first deck

FLOATING COVER FOR THE INTERIOR OF A STORAGE TANK

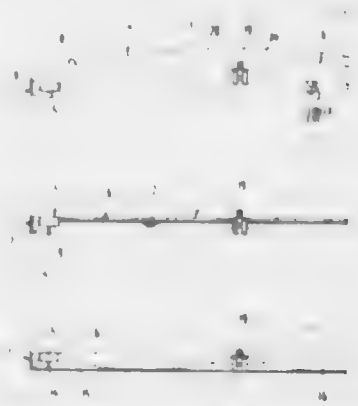
Heinrich L. Imhof, Offenbach, Fed. Rep. of Germany, assignor to Ingenieurbeero Imhof GmbH, Offenbach am Main, Fed. Rep. of Germany

Continuation of Ser. No. 204,098, Jun. 8, 1988, abandoned. This application Oct. 31, 1989, Ser. No. 430,103

Claims priority, application Fed. Rep. of Germany, Jun. 19, 1987, 3720302

Int. Cl.⁵ B65D *88/42*

U.S. Cl. 220—222 33 Claims



1. A floating cover for covering and sealing a liquid surface in a tank having an external roof, a tank floor, and at least one side wall, said floating cover comprising

(a) a gas tight membrane of flexible material, normally floating on said liquid surface in substantially direct contact with said liquid surface, peripheral float means connected to said membrane for keeping said membrane afloat within a circle defined by said peripheral float means,

(c) said membrane being dimensioned for bulging vertically upwardly in response to a pressure build-up in a space between said membrane and said liquid surface, said membrane bulging downwardly when said tank is empty and said float means come to rest above said tank floor,

(d) peripheral sealing means arranged in a gas-tight manner along a perimeter rim of said membrane for sealing said space between said membrane and said liquid surface,

(e) and at least one normally fully closed excessive pressure relief valve for normally closing off said space between said membrane and said liquid surface and for venting

excessive gas pressure from said space between said membrane and said liquid surface before said excessive pressure leads to damage of said membrane, whereby said flexible membrane in combination with said normally fully closed valve provides an extra expandable volume, the maximum expansion of which is limited by said valve, to minimize evaporation losses and to avoid an excessive expansion.

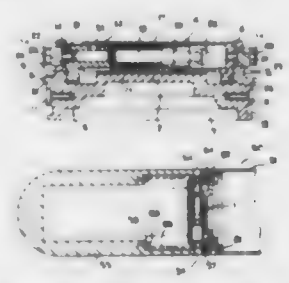
COVER RELEASE MECHANISMS



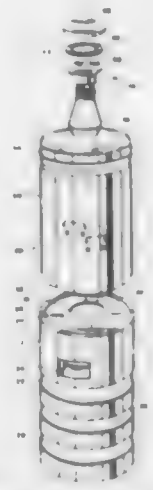
John C. Goodwin, Sunbury-on-Thames; Roy Kirby, Perivale, and Ernest A. Langley, Hayes, all of United Kingdom, assignors to Dowty Maritime Systems Limited, Feltham, England

Filed Jun. 30, 1989, Ser. No. 374,244

Claims priority, application United Kingdom, Jun. 30, 1988, 8815583

Int. Cl.⁵ B65D *41/00*

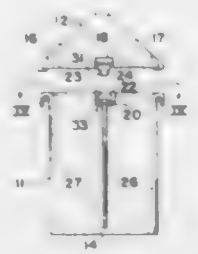
U.S. Cl. 220—261 18 Claims



1. A cover release mechanism which enables a cover to be released whilst being subjected to a high inwardly acting pressure differential, comprises:

an operating mechanism having at least two plungers mounted within the cover and a sealing member associated with each plunger; and

a high energy release mechanism mounted within the cover to activate the operating mechanism,



wherein under normal operating conditions, with the cover secured in position, each sealing member engages in a detent in the cover, and when the cover is to be removed the high energy release mechanism is activated causing said plungers to move and the associated sealing members to disengage from the respective detents.

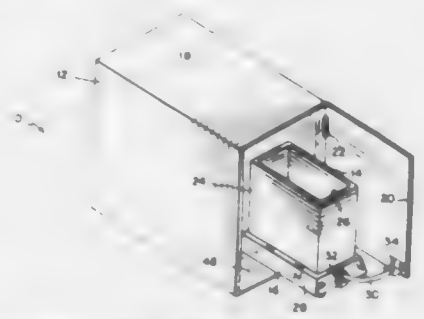
DUAL PURPOSE WASTE RECEPTACLE
Karen L. Roth, 100 Parkview Pl., Hampton, Va. 23664
Filed Apr. 23, 1990, Ser. No. 512,464
Int. Cl.[5] B65D *1/24*
U.S. Cl. 220—404 6 Claims



1. Apparatus for receiving and maintaining separate recyclable and non recyclable refuse, as accumulated, comprising in combination
a trash container having an open top end and a closed bottom end,
divider means carried by said open top end of said trash container,
two trash can liners supported by said divider means in side-by-side relationship and serving to divide the interior of said trash container into two separate compartments,
said divider means having spaced vertically extending edges defining an elongated open channel extending the length of said divider means and facing the open top end of said trash container,
a pair of linear protrusions formed on opposite sides of said vertically extending edges,
said open channel of said divider means receiving a portion of the top of each of said two trash can liners in overlapping relationship thereon,
a removable cover for said trash container serving to selectively cover said open top end thereof,
said removable cover being provided with first and second doors,
said first door being aligned with and providing access to one of said two trash can liners and said second door being aligned with and providing access to the other of said two trash can liners,
a transverse elongated bar extending over a central portion of the open top end and supported by said removable cover,
said transverse elongated bar including a depending elongated portion,
said depending elongated portion having a pair of grooves on opposite sides of said elongated bar and disposed along the length thereof and disposed in frictional mating engagement with said linear protrusions of said divider means when said removable cover is positioned on said trash can to thereby assist in maintaining said two trash can liners releasably attached to said divider means and to releasably secure said removable cover in position on said open top end of said trash container.

HAND-HELD EXTRUDER
Harold W. Koehler, West Paterson; Alfred J. Anderson, Livingston, and Alfred A. Finelli, Nutley, all of N.J., assignors to Hardman Incorporated, Belleville, N.J.
Filed Jun. 8, 1989, Ser. No. 363,629
Int. Cl.[5] B67D *5/08*
U.S. Cl. 222—54 14 Claims

1 A hand-held extruder comprising,
a main housing means including, a pistol grip section, and a double planetary gear assembly housing having, a first connecting means for connecting the double planetary gear assembly housing in alignment with the main housing means, and a reverse internally threaded section at the end remote from said first connecting means,
b counterclockwise rotating driving means mounted in said main housing means,
c double planetary gear reduction means in said double planetary gear assembly housing operatively connecting at one end to said driving means and having a driven shaft and connector at the opposite end,
d front assembly means having a second connecting means for connecting said front assembly means to the reverse internally threaded connecting means on said double planetary gear assembly housing for alignment therewith and to prevent separation of the front assembly means from the double planetary gear assembly housing during operation of the extruder,
e said front assembly means including, outer housing means, and barrel means mounted in said front assembly means,
f said barrel means including,
i a material feeding passage extending end to end along the longitudinal line of said front assembly means,
ii means in said barrel means for heating material in said material feeding passage,
iii an inlet means in communication with said material feeding passage for charging material to be extruded into said material feeding passage, and an outlet means in communication with said material feeding passage a spaced distance from said inlet means for discharging heated material from said hand-held extruder, and
iv means for controlling the heating means on said barrel means,
g screw conveyor means rotatably mounted in the material feeding passage in said barrel means and extending out of said front assembly means at the end with the second connecting means thereon,
h said screw conveyor means connected at one end to and in alignment with said driven shaft on said double planetary gear reduction means, and
i said driving means, double planetary gear reduction

means, driven shaft, and screw conveyor means so connected that during operation of said hand-held extruder the screw conveyor means is rotated counterclockwise at a predetermined number of revolutions per minute without reduction in torque of said driving means to increase the throughput and discharge of material from said material feeding passage at a predetermined rate

OIL CAN SPOUT WITH FLOW CONTROL

Henry E. Penn, 12300 Highway 67, Lakeside, Calif. 92040

Continuation-in-part of Ser. No. 427,760, Oct. 27, 1989, abandoned. This application Apr. 3, 1990, Ser. No. 503,762
Int. Cl.' B67D 5/00
U.S. Cl. 222—91 4 Claims

1 In combination with a liquid container having a pouring orifice, a controllable spout which comprises

a generally tubular conduit having an inlet at a proximal end and an outlet at a distal end,

said inlet being shaped and dimensioned to mate with said pouring orifice,

said tubular conduit having a gating section comprising

a tubular sleeve axially movable between two locking positions, and dimensioned to affect the flow of liquid through the distal end of said conduit when moved between said positions, wherein said tubular sleeve has a bore on the distal end, said bore being surrounded by a beveled inner annular surface, and

a projection extending on the distal end of said tubular conduit through and beyond said bore to form a sharply pointed tip, the periphery of said projection defining a beveled outer annular surface shaped and dimensioned to intimately contact said inner annular surface

FLACCID BAG BOTTLE FOR DISPENSERS

William R. Stoody, 8659 Summerdale Rd., San Diego, Calif. 92126

Filed Apr. 12, 1989, Ser. No. 337,151
Int. Cl.' B65D 35/56
U.S. Cl. 222—105 7 Claims

1 A collapsible, passive, flaccid bag bottle for closed containment of fluid to be aspirated therefrom, which comprises

a passive flaccid bag being collapsible and having, integral therewith, at least one passive means that manages collapsing of said bottle,

said passive means being a means which promotes complete collapsing of said bottle without regard to the attitude of said bottle,

whereas, said passive means insures against proliferation and sustainment of fluid retention pockets in said bottle without regard to the attitude of said bottle

FLEXIBLE POUCH WITH REINFORCEMENT TO FACILLITATE POURING

Todd D. Van Gordon, Basking Ridge; John H. Swanson, Bloomfield; Knud N. Kristensen, Fair Haven, all of N.J., and Adam Sherman, Brooklyn, N.Y., assignors to Colgate-Palmolive Company, Piscataway, N.J.

Filed Mar. 23, 1989, Ser. No. 327,659
Int. Cl.' B65D 35/08
U.S. Cl. 222—107 10 Claims

1 A flexible pouch for storing liquid therein, comprising first and second flexible walls made of sheet material, said first and second flexible walls being bonded along their periphery by means of a sealed juncture, said first and second flexible wall and said sealed juncture defining a closed chamber, said pouch having a shape with a recess for defining a spout when said walls are cut along a predetermined line, said pouch having a stiffening strip of material secured to one of an inner and outer surface of one of said first and second walls in the region of the spout for supporting said first and second wall of the spout in an open condition upon liquid being dispensed from the spout

DISPENSING APPARATUS FOR OPERATING DOUBLE CARTRIDGES

Wilhelm A. Keller, Riedstrasse 1, CH-6330 Cham, Switzerland

Filed May 17, 1988, Ser. No. 194,803
Claims priority, application Switzerland, May 20, 1987, 01946/87
Int. Cl.' B67D 5/52
U.S. Cl. 222—137 4 Claims

1 In a dispensing apparatus adapted for operation double cartridges of the type having an elongated holding flange with two sides longer than the two ends thereof, said apparatus having a front and a retaining guide thereon with a slide-in opening on one side of said guide for receiving the holding flange, said apparatus further having two delivery plungers, which are subject to movement out of said apparatus front along parallel axes, said plungers having respective centers spaced apart in correspondence with the centers of said double cartridges, the improvement comprising that said retaining guide is generally U-shaped and positioned on both sides of a straight line connecting the centers of both plungers and that the opening of said U-shape extends transversely to said straight line, said opening being dimensioned to slidingly receive said holding flange inserted end-first into said guide, said

guide being contoured to engage said two sides and one said end of said flange and constrain said sides and one end against forces at least in the direction of said parallel axes

---

5,005,736

APPARATUS FOR SIMULTANEOUSLY DISPENSING TWO COMPONENTS

Abelardo A. Portas, Arcos 2757 - 1 piso "E", 1428 Buenos Aires, Argentina

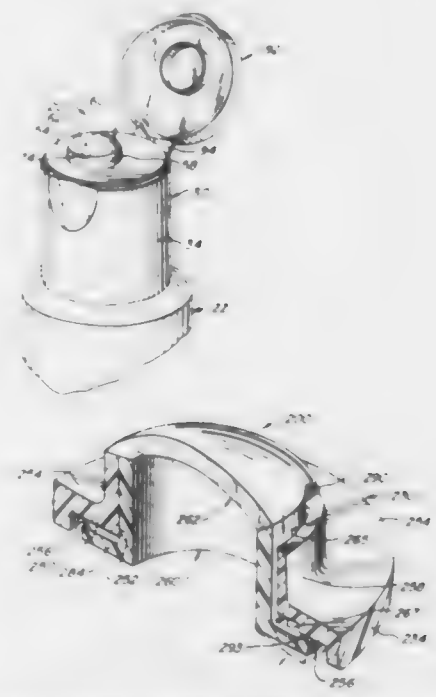
Continuation of Ser. No. 261,370, Oct. 24, 1988, abandoned. This application Apr. 30, 1990, Ser. No. 517,505
Claims priority, application Argentina, Oct. 23, 1987, 309102
Int. Cl.' B67D 5/56
U.S. Cl. 222—135 11 Claims

1 An apparatus comprising

a support frame for receiving a pair of pressurized containers in side-by-side relation;

a handle secured to one side of said frame;

a pressure plate having a pair of apertures, each aperture being sized to fit over an actuating push button of an atomizing valve on a respective container with an outlet orifice of each push button above said pressure plate and



a key hingedly mounted on said frame opposite said handle for disposition over said pressure plate between said apertures and said handle to permit pressing of said pressure plate towards the containers for simultaneous actuation of the valves of the containers.

5,005,737

FLEXIBLE DISPENSING CLOSURE HAVING A SLITTED RESILIENT OUTLET VALVE AND A FLANGED VENT VALVE

Robert D. Rohr, Elgin, Ill., assignor to Seaquist Closures, Crystal Lake, Ill.

Filed Jun. 29, 1989, Ser. No. 374,155
Int. Cl.' B65D 5/72
U.S. Cl. 222—212 2 Claims

1 A fluid dispensing closure in combination with a squeeze-type container,

said container comprising a discharge opening communicating with the container interior in which a fluid product is contained and that is sufficiently resilient to return to a substantially undeformed condition after applied squeezing forces have been removed

said closure comprising

a housing for being sealingly mounted to said container across said discharge opening, said housing including a peripheral wall having securing means for engaging cooperating means on said container for releasably securing said closure to said container, said housing including a top wall connected to said peripheral wall over said container discharge opening, said top wall having an upper surface exterior of said container and a lower surface facing the interior of said container, said top wall defining a cylindrical dispensing aperture providing communication between said container discharge opening and the exterior of the container above said housing, said housing further including a cylindrical collar projecting upwardly from said housing top wall upper surface around said cylindrical dispensing aperture, said collar and top wall having a generally vertically oriented venting channel that is open to said dispensing aperture, a portion of said top wall at said lower surface defining a partially circumferential venting recess opening to said venting channel, and said channel and recess together defining a vent passage; and

a resilient insert member mounted within said housing cylindrical dispensing aperture, said insert member defining at its upper end a dome member projecting convexly outwardly over said container discharge opening at the top of said cylindrical collar, said dome member defining at least one slit extending through said dome member, said dome member being sufficiently resilient to have a normally

closed configuration in which said slit is sealed closed at least when the pressure inside said dome member equals the pressure outside said dome member, and said dome member being sufficiently flexible to be deformed further outwardly from and relative to said normally closed configuration for opening said slit when said container is squeezed to exert a predetermined fluid pressure against the inside of said dome member whereby said fluid product can discharge from said container through said open slit, said insert member including a hollow cylindrical portion extending downwardly from said dome member through said collar and top wall dispensing aperture in circumferential sealing engagement with said collar and top wall except at said channel, said insert member including a vent valve member in the form of a flange of flexible material located below said top wall and radially extending from said hollow cylindrical portion beyond said top wall recess, said flange sealingly engaging the lower surface of said top wall around said top wall cylindrical dispensing aperture radially beyond said recess to close said vent passage to the interior of said container when the pressure inside the container is at least equal to the outside pressure, said vent valve member flange being sufficiently flexible adjacent said recess to be forced away from said housing top wall lower surface so as to open said vent passage at said recess when the pressure outside of said container exceeds the pressure inside of said container to permit exterior air to be vented down said vent passage channel, through said recess, and past said flange into said container to equalize the pressures inside and outside of the container

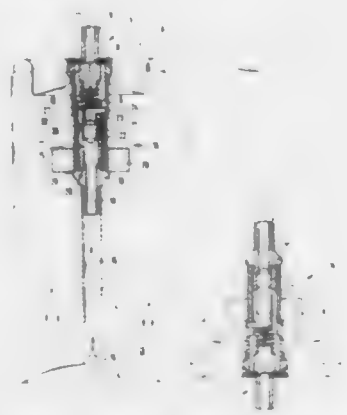
AEROSOL VALVE DEVICE



Antonie P. Tempelman, Meeden, Netherlands, assignor to Mobacc B. V., Veendam, Netherlands

Filed Mar. 27, 1989, Ser. No. 328,568

Claims priority, application Netherlands, Mar. 28, 1988, 8800774

Int. Cl.[5] B65D 83/14

U.S. Cl. 222—402.19 13 Claims

1. An aerosol valve device, suitable in particular for use with spray canisters or other containers from which liquid can be forced out in the form of a fine mist, using compressed gas as a propellent, said valve device comprising:

an aerosol valve;

a connector;

a riser tube connected to the connector;

a two-way valve provided between the aerosol valve and the connector, said two-way valve comprising a body with a central bore, in which two opposed valve seats are formed to seat an elongated valve member moveable between said valve seats;

automatic actuating means for actuating said valve member, which control the valve member depending on the position of the container;

said valve member cooperating with one valve seat to clear a connection between the riser tube and the aerosol valve and simultaneously to block a connection between the direct surroundings of the two-way valve and the aerosol valve, and said valve member cooperating with the other valve seat to block the connection between the riser tube and aerosol valve and at the same time to clear a connection between the direct surroundings of the two-way valve and the aerosol valve;

said valve member being made of magnetizable material and said automatic actuating means comprise a member disposed about the body of the two-way valve, which actuating means is at least partly permanently magnetic and can move freely along the body through a path corresponding to the patch between the two valve seats

MECHANICALLY ACTUATED ADDITIVE DISPENSER FOR DISHWASHER

Larry D. Marks; Richard C. Stiles, both of St. Joseph Township, Berrien County, and William F. Bartloff, Eau Claire, all of Mich., assignors to Whirlpool Corporation, Benton Harbor, Mich.

Continuation-in-part of Ser. No. 900,999, Aug. 27, 1986, abandoned. This application Sep. 28, 1988, Ser. No. 250,232

Int. Cl.[5] A47L 15/46

U.S. Cl. 222—651 33 Claims

26 In a dishwashing apparatus having a hinged door, a wash chamber selectively sealed by the door, a timer mechanism and moving means driven by said timer mechanism in a reciprocating path during an operating cycle, an additive dispensing module comprising:

a reservoir for storing a supply of additive and having an outlet,

a cover,

means for mounting the cover to the reservoir for movement relative to the reservoir between (a) a closed position wherein the cover prevents escape of additive from the reservoir outlet and (b) an open position permitting the additive to discharge from the reservoir through said outlet,

means for removably operably mounting the reservoir with

the cover operatively mounted on the reservoir as a unit to the dishwasher door so that the reservoir outlet is in communication with the wash chamber, and

means for interconnecting the cover to the moving means driven by the timer mechanism on the dishwasher with the module operably mounted to the dishwasher door so that in response to the moving means on the dishwasher moving in said reciprocating path the cover moves between its open and closed position

FLAT GARMENT HANGER WITH RETAINER SLOTS

James C. Smith, 11852 - 11th Ave. S., Seattle, Wash. 98168-2124

Filed Jan. 16, 1990, Ser. No. 464,548

Int. Cl.[5] A47G 25/14, 25/26, 25/28, 25/34

U.S. Cl. 223—87 10 Claims

1 A hanger for displaying articles of clothing, comprising

(a) a flat, elongated, one-piece plastic body of predetermined length and thickness and having a top edge and a bottom edge and which is rigid and yet flexible and which includes a hook portion generally centrally of said body and extending upwardly, said body also having a depending end portion at each end of said body such that an end edge is defined at each end, and

(b) a slot in each end portion angling generally upwardly and inwardly from each said end edge a predetermined distance, said slot being generally saw-tooth in form such that a series of triangular coacting teeth are defined and said slot also defining a lower end portion which is sufficiently flexible under finger pressure to be flexed for insertion of garment fabric therein

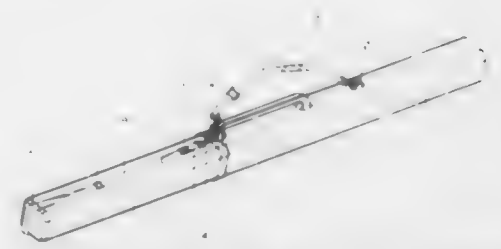
5,005,743

TELESCOPIC CARRYING CASE



Richard P. Ramsay, 19A Abbeville Road, London, Great Britain (SW4 9LA)

Filed Sep. 12, 1989, Ser. No. 406,070

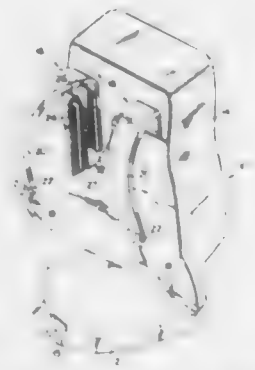
Claims priority, application United Kingdom, Sep. 15, 1988, 8821609

Int. Cl.[5] A45C 7/00, B65D 6/12

U.S. Cl. 224—202 7 Claims

1. A carrying case comprising first and second container portions each having an open end and a closed end and arranged in telescopic relation with the first container portion slidable over the open end of the second container portion to form a case of variable length, the first container portion being of a length such that the first container portion is capable of

sliding over the entire second container portion; means for securing said container portions one to the other at a position selected according to the contents of the case, and a rigid handle provided on the first portion and extending between a first position adjacent said open end of the first portion to a second position spaced therefrom by a distance such that the length of the handle is sufficient to extend over all centres of gravity which arise when using the case for carrying goods of differing lengths, wherein the securing means comprises a strap of adjustable length having a first end attached to a bar extending across the entire closed end of the second container portion, and a second opposite end constructed and arranged to selectively engage said first container portion such that said strap releasably secures said second container portion to said first container portion



---

5,005,744

ADJUSTABLE BACKPACK

Dana W. Gleason, 409 East Olive, Bozeman, Mont. 59715

Filed Aug. 3, 1990, Ser. No. 562,322
Int. Cl.[5] A45F 3/08
U.S. Cl. 224—211 4 Claims

1 A backpack carried on the back of a user comprising

a planar frame member constructed of a stiffened but bendable material,

a backpack bag,

a first pocket secured to a side of the backpack bag adjacent the user having an open upper portion for receiving the planar frame member and being formed between a first pocket member and a second pocket member,

a securing means for securing the planar frame member in the first pocket,

the second pocket member of the first pocket forming one side of a second pocket between the second pocket member and the backpack bag and wherein this second pocket member includes a VELCRO surface located on the side of the second pocket member closest the backpack bag,

a shoulder strap having one end connected to the backpack bag at a lower end thereof and having a VELCRO strip positioned at the other end of the shoulder strap,

the second pocket being sized to receive the VELCRO end of the shoulder strap, whereby the VELCRO end of the shoulder strap is positioned to engage the VELCRO surface of the second pocket member to securely hold the shoulder strap end within the second pocket

5,005,745

APPARATUS FOR PREVENTING TAPE FROM BEING ROLLED

Shozo Nishimura, Tokyo, Japan, assignor to Tanashin Denki Co. Ltd., Shinmachi, Japan

Filed Jan. 16, 1990, Ser. No. 465,977
Claims priority, application Japan, Feb. 23, 1989, 1-20756[U]
Int. Cl.[5] B65H 26/04, 59/38; G11B 15/43
U.S. Cl. 226—24 6 Claims

1 An apparatus for preventing tape from being rolled on a capstan or pinch roller in contact with one another, which comprises

(a) said pinch roller having a ratchet wheel attached thereto, the pinch roller and ratchet wheel together being simultaneously rotatable about a shaft,

(b) a tape-contacting plate having a pawl capable of engaging the ratchet wheel, the tape contacting plate being movable from a first tape-contacting position in which the pawl does not engage the ratchet wheel to a second non-tape contacting position in which the pawl engages the ratchet wheel and stops rotation of the pinch roller, and

(c) means for moving the tape-contacting plate between the first position and the second position, the means being capable of exerting a biasing force against a tape, the force being sufficient to move the tape-contacting plate from the first position to the second position in the absence of force exerted by a taut tape

5,005,746

APPARATUS FOR FEEDING BOTH CUT SHEET AND FAN FOLD PAPER IN A PRINTER

Kenjiro Murakami; Hirokazu Iinuma, and Toshikazu Kodaka, all of Suwa, Japan, assignors to Seiko Epson Corporation, Tokyo, Japan

Filed Apr. 4, 1989, Ser. No. 333,166
Claims priority, application Japan, Apr. 8, 1988, 63-87009
Int. Cl.[5] B41J 13/00; B65M 17/10
U.S. Cl. 226—101 15 Claims

1 An apparatus for feeding paper in a printer adapted to utilize both fan fold paper and cut sheet paper comprising push tractor means for feeding fan fold paper, a print head positioned downstream along the paper path of said push tractor means, first paper feed means intermediate said push tractor means and said print head for selectively feeding paper along said paper path, and second paper feed means downstream of said print head along the paper path for feeding paper along said paper path, the first paper feeding means including at least one first feed roller rotatably mounted on the printer, a first pressure roller rotatably mounted on the printer selectively

contacting the first feed roller, the paper being fed by the first paper feed means moving between the first feed roller and the first pressure roller, and pressure adjusting means for adjusting the pressure at which the first pressure roller contacts the first feed roller, the pressure adjusting means including a drive wheel, motor means for driving said drive wheel, a square shaft eccentrically positioned on said drive wheel, biasing means positioned for selectively coming in contact with said square shaft at selected positions of the drive wheel for biasing said first pressure roller towards said drive roller, whereby driving of the drive wheel causes the square shaft to cause the biasing means to bias said first pressure roller towards said first feed roller

---

5,005,747

MOUNTING FOR THE SPIRAL FLIGHTS AT THE OPPOSITE ENDS OF A BALE WRAPPING MATERIAL SPREADER ROLL

Henry D. Anstey, Ottumwa, Iowa, assignor to Deere & Company, Moline, Ill.

Filed Jun. 23, 1989, Ser. No. 370,538
Int. Cl.[5] B23P 11/02, 19/04
U.S. Cl. 226—190 7 Claims

1 In a roll including a smooth, cylindrical tube having a spirally wound elongate member received thereon and secured thereto to form flighting thereabout, the improvement comprising said elongate member being wound so as to have an inside diameter slightly less than an outside diameter of said tube when the elongate member is free of said tube, whereby a frictional fit is established between the tube and elongate member when the latter is received on the former, one end of said elongate member being defined by a radially inwardly directed projection, and said tube having a hole extending radially therethrough and receiving said one end of said elongate member to establish a connection which works in combination with the frictional fit as means for connecting the elongate member to the tube

---

5,005,748

IMPEDANCE ROLLER STRUCTURE FOR VCR

Soo K. Kim, Seoul, Rep. of Korea, assignor to Goldstar Co., Ltd., Seoul, Rep. of Korea

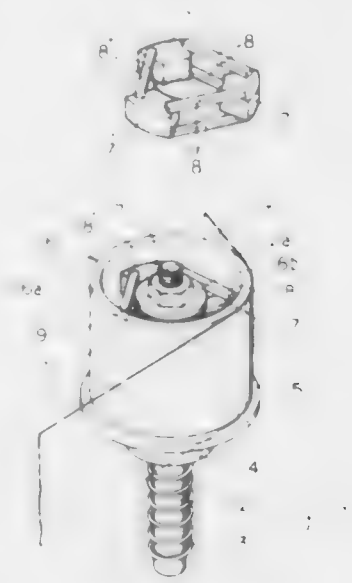
Filed Nov. 30, 1989, Ser. No. 443,210
Claims priority, application Rep. of Korea, Nov. 30, 1988, 19647
Int. Cl.[5] B65H 20/00
U.S. Cl. 226—190 2 Claims

1 An impedance roller mounted to main chassis for use in a video cassette tape recorder, which comprises

a roller for guiding a tape of said video cassette tape recorder, said roller including a roller hub and a roller boss disposed at a top portion thereof,

a roller shaft attached to said roller at an upper portion thereof, said roller shaft supported on said main chassis,

a flange disposed at an outer bottom edge of said roller for preventing the tape from separating from the roller,



a main boss attached to a bottom of said roller,

a compression spring wound around a lower portion of said roller shaft from said main boss, and

an inertia spring damping member disposed between said roller hub and said roller boss, said inertia spring damping member including

a plurality of elastic members and

a plurality of inertia masses alternatively connected to

each other, said inertia masses attached to a top surface and a bottom surface of said plurality of elastic members, whereby the impedance roller enables to absorb and reduce the vibrations to the tape so that the disadvantages such as trembling and flowing of the screen according to the vibrations of the tape can be eliminated

ANASTOMOSIS SURGICAL STAPLING INSTRUMENT

Ernest Aranyi, Easton, Conn., assignor to United States Surgical Corp., Norwalk, Conn.

Filed Jul. 1, 1988, Ser. No. 214,289
Int. Cl.[5] B31B 1/06
U.S. Cl. 227—19 19 Claims

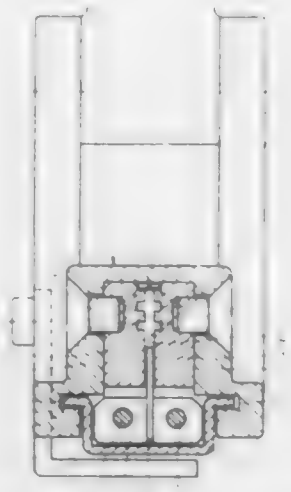
1 An anastomosis surgical stapling instrument comprising

a yoke,

a pusher tube slidably mounted within said yoke and having a pair of diametrically disposed openings near a proximal end thereof,

a pair of handles pivotally mounted on said yoke, each said handle having an arm extending through a respective opening in said pusher tube to abut and move said pusher tube in a distal direction in response to pivoting of said handles toward each other into a closed position, and

a center rod reciprocally mounted coaxially within said



pusher tube for relative movement thereto, said rod having a distal portion, a recessed portion extending proximally of said distal portion to receive said arms therein in spaced relation and an annular groove between said portions, said recessed portion extending proximally of said annular groove for a distance sufficient to allow said center rod to move axially within said pusher tube with said handles in said closed position with said arms spaced from said recessed portion

5,005,750

MAGAZINE FOR COMPRESSED-AIR RIVETING GUNS

Giancarlo Scala, Bologna, Italy, assignor to Fasco S.p.A., Cadriano di Granarolo Emilia, Italy

Filed Nov. 27, 1989, Ser. No. 441,727
Claims priority, application Italy, Dec. 2, 1988, 3688 A/88
Int. Cl.[5] B25C 7/00
U.S. Cl. 227—109 4 Claims

1 A magazine for compressed-air riveting guns, comprising a staple guiding channel delimited by two opposed side faces, a lid which can be extractable to allow loading of a set of staple elements, a plurality of seats formed by pairs of mutually facing longitudinal grooves extending in said faces at a side of said channel opposite to said lid, and a strip which can be inserted in one of said plurality of seats, said staple guiding channel being defined between two opposite bars fixed in a cavity enclosed by a U-shaped profiled element, said bars defining said pairs of mutually facing grooves for inserting said strip upon extraction of said lid

5,005,751

SHEET STACKING AND STAPLING APPARATUS

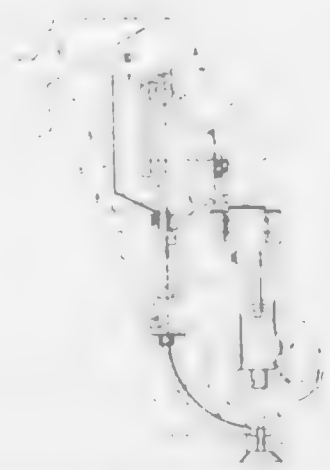
Manfred Radtke, Korb, and Friedrich Ueffinger, Schorndorf-Weiler, both of Fed. Rep. of Germany, assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Nov. 15, 1989, Ser. No. 437,005
Claims priority, application Fed. Rep. of Germany, Nov. 21, 1988, 3839306
Int. Cl.[5] B27F 7/21
U.S. Cl. 227—111 9 Claims

1 Apparatus for stacking and stapling sheets, said apparatus comprising

a stacking area through which sheets can be fed along a path in one feeding direction,

an abutment which is selectively movable from a releasing position remote from said sheet path into an abutment position intercepting said sheet path, in which it limits the stacking area, and back again, and against which an edge of sheets fed to the stacking area can be stacked when it is in its abutment position, and



means for stapling sheets stacked against said abutment, said stapling means laterally substantially surrounding the stacking area from above and below, but not intercepting said sheet path

5,005,752

APPLICATION APPARATUS

Frank Obst, Haan, Fed. Rep. of Germany, assignor to Stocko Metallwarenfabriken Henkels und Sohn GmbH & Co., Wuppertal, Fed. Rep. of Germany

Filed May 18, 1990, Ser. No. 525,473
Claims priority, application Fed. Rep. of Germany, May 20, 1989, 3916451
Int. Cl.[5] A41H 37/04
U.S. Cl. 227—114 6 Claims

1 In an apparatus for applying small parts, such as rivets, eyelets, snaps, hooks, buttons, etc., to a carrier material, and including a separating or sorting magazine for storing loose small parts, with said magazine comprising a laterally open, tub-shaped container that has a feed opening for said small parts and also comprising, for sorting said small parts, a drum-like working mechanism that is secured to a side of said container, an applying tool, and a guide rail that is disposed between said magazine and said applying tool for supplying oriented small parts that leave said magazine, the improvement wherein

at least one of said container and said working mechanism is

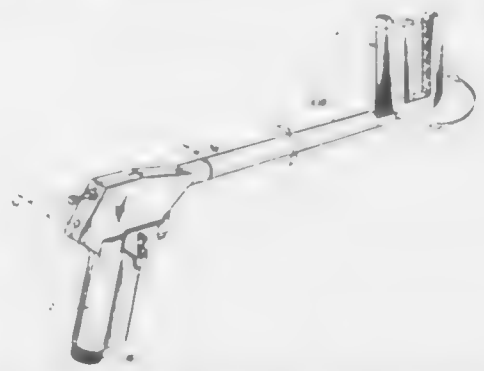
pivotably mounted about a shaft to permit opening and emptying of said magazine

5,005,753

CARTRIDGE FOR A RIVETING GUN

Edoardo Gravina, Cadriano di Granarolo Emilia, Italy, assignor to Fasco S.p.A., Cadriano di Granarolo Emilia, Italy

Filed Dec. 29, 1989, Ser. No. 459,225
Claims priority, application Italy, Jan. 18, 1989, 4713/89[U]
Int. Cl.[5] B27F 7/08
U.S. Cl. 227—120 3 Claims



1 A cartridge for a riveting gun comprising an elongated body in the shape of an inverted U which forms an accommodating and guiding channel for the fastener elements and a slidable lid closing said accommodating and guiding channel, said lid having a beak defining an expulsion channel for the fastening elements, wherein proximate to an end of the elongated body which is opposite to the expulsion channel a lateral seat is formed for retaining an elastic body defining an abutment, said lid having a protrusion arranged proximate to said beak, both said elastic body and said protrusion protruding with respect to said lid such that said protrusion engages with said elastic body upon a backward rearward sliding motion of said lid with respect to said accommodating and guiding channel

5,005,754

BLADDER AND MANDREL FOR USE WITH SURGICAL STAPLER

Ronald R. Van Overloop, West Chester, Ohio, assignor to Ethicon, Inc., Somerville, N.J.

Filed Apr. 4, 1990, Ser. No. 504,774
Int. Cl.[5] A61B 17/00
U.S. Cl. 227—178 6 Claims

1 In a surgical stapler having an acuation mechanism connected to a stapling head containing a driving mechanism by means of a pneumatic stapling line, said driving mechanism including a staple driver and a stapling surface, and a driving piston to propel said driver, said piston attached to said pneumatic stapling line, said driving piston propelled by the inflation of a driving bladder seated behind said driving piston upon actuation of said actuation mechanism, the improvement comprising a driving bladder, and a tube embedded within said stapling head and containing a mandrel retaining the form of said driving bladder, said driving bladder filling upon introduction of pneumatic pressure into said tube

5,005,755

FLEXIBLE TUBE OF ENDOSCOPE AND METHOD OF AND APPARATUS FOR PRODUCING THE SAME

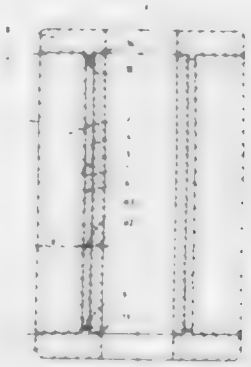
Nagashige Takahashi, and Teruo Ouchi, both of Tokyo, Japan, assignors to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 501,838, Mar. 30, 1990, abandoned, which is a division of Ser. No. 328,542, Mar. 24, 1989, Pat. No. 4,944,287. This application Aug. 8, 1990, Ser. No. 563,690
Claims priority, application Japan, Mar. 29, 1988, 63-77817; Mar. 29, 1988, 63-77818; Apr. 8, 1988, 63-87739
Int. Cl.[5] B23K 31/00, 101/04, A61B 1/00
U.S. Cl. 228—126 18 Claims

1 A method of producing a flexible tube of an endoscope, comprising the steps of

covering the outer periphery of a spiral tube made of a precipitation hardening metal with a braided-wire tube,

forming a groove in the outer surface of the tube stock comprising said spiral tube and said braided-wire tube, said groove being recessed inwardly from the outer side of the tube stock and extending in a straight line along the axis of the tube stock, and



subjecting said tube stock to a solid solution treatment and then age hardening process

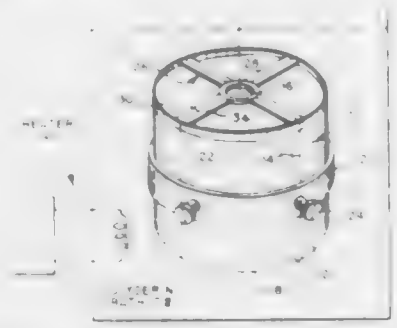
5,005,756

METHOD OF PRODUCING BIMETALLIC TUBES AND THE TUBES OBTAINED BY THIS METHOD

Alain Muggeo, and Denis Vuillaume, both of Montbard, France, assignors to Valinox, Boulogne-Billancourt, France

Filed Jan. 3, 1990, Ser. No. 460,539
Claims priority, application France, Jan. 3, 1989, 89 00025
Int. Cl.[5] B23K 20/00, 20/16, 101/06
U.S. Cl. 228—127 15 Claims

1 A method of producing a bimetallic tube by coextrusion under heat of a blank comprising two tubular components of revolution consisting of metals or alloys of different compositions fitted coaxially one into the other, characterised in that the cross-sections of each of these tubular components (2, 3, 22, 23) in a plane at right-angles to the common axis are established in such a way as to provide between their facing walls (5, 6, 25,



26) an annular space (4, 24) of radical width (e3, e13) which is not less than 3 mm, at least equal to 2% of the outside diameter of the inner component and no greater than that of the tubular component (3, 23) of lesser thickness, and then in that a divided alloy or metal, the composition of which is compatible with the compositions of the two tubular components, is used to fill this annular space (4, 24) which is then closed in sealing-tight fashion by closure means (7, 8, 27, 28) disposed at the two ends and in that the blank (1, 11) is heated to the extrusion temperature determined according to the characteristic features of the metals or alloys which constitute it, and in that coextrusion of the blank is carried out by means of a press through a die in such a way as to produce a bimetallic tube, the ratio of reduction between the solid cross-section of the blank and that of the bimetallic tube obtained being at least 4.

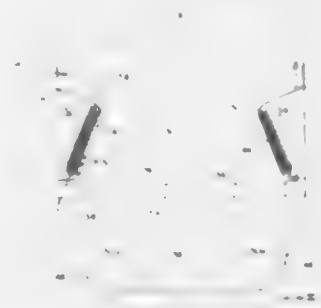
5,005,757

BONDED SEGMENTED CYLINDRICAL MAGNET ASSEMBLY

Michael G. Kornely, Jr., Centerport; Robert G. Micich, Bethpage, and John M. Miller, Huntington Station, all of N.Y., assignors to Grumman Aerospace Corporation, Bethpage, N.Y.

Filed May 14, 1990, Ser. No. 522,825
Int. Cl.[5] B23K 1/19
U.S. Cl. 228—178 11 Claims

1. A method for bonding rare earth-cobalt magnet segments together to form a permanent magnet, the steps comprising
temporarily restraining the segments in abutting relation,
gradually raising the temperature of the segments;
applying melted solder to the joints existing at segment interfaces until the solder flows over interface surfaces by capillary action,
cooling the magnet until the solder forms metallurgical bonds between mating interface surfaces; and
removing the temporary restraint of the segments.



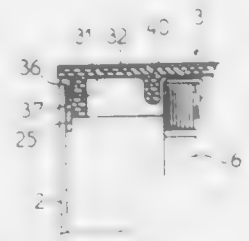
5,005,758

ENVELOPE CONSTRUCTED FOR INK JET PRINTING

Judith M. Richards, and James H. Beckman, both of Dayton, Ohio, assignors to Eastman Kodak Company, Rochester, N.Y.

Continuation-in-part of Ser. No. 890,884, Jul. 28, 1986, abandoned, which is a continuation-in-part of Ser. No. 809,609, Dec. 16, 1985, abandoned. This application Nov. 3, 1987, Ser. No. 117,452
Int. Cl.[5] B65D 27/00
U.S. Cl. 229—68 R 4 Claims

1. In an envelope comprising a central panel,
two side panels and a bottom panel foldably connected to said central panel so that the side panels and bottom panel are joined to each other along respective overlapping edges to form, with said central panel, the pocket of the envelope,
joining means applied to said overlapping edges,
and a sealing flap, foldably connected to said central panel,
the improvement wherein said side, central and bottom panels are constructed to permit flexure of the envelope out of a single plane, said constructed panels including,
(a) in at least a portion of said joined edges of the innermost one of said side panels or said bottom panel that are underneath the respective overlapping edges of the other of said joined panels, means defining slits of a shape and spacing effective to allow said joined respective edges to stretch while still joined, when wrapped around an axis extending parallel to said plane, said slits being located at the site of said joining means,



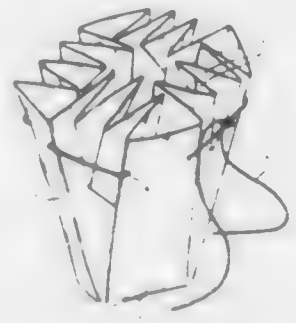
and scoring in said bottom panel and said central panel, said lines (a) extending at least the majority of the width of said envelope and parallel to said axis, and (b) being positioned and formed in one side only of said envelope so as to flex said panels in one direction only to approximate a curve favoring wrapping of the envelope around said axis,
whereby said envelope can be printed on a printer using a drum support during printing.

5,005,759

SNAP-LOCK BOX

Alain Bouche, 20 Impasse du Pigeonnier, Orvault, France (44700)

PCT No. PCT/FR88/00611, § 371 Date Apr. 25, 1990, § 102(e) Date Apr. 25, 1990, PCT Pub. No. WO90/06886, PCT Pub. Date Jun. 28, 1990
PCT Filed Dec. 14, 1988, Ser. No. 477,823
Int. Cl.[5] B65D 5/02, 5/64
U.S. Cl. 229—125.260 11 Claims



1. Snap-lock box comprising
a sleeve for containing a product having an inner wall, an outer wall, and at least two ends,
at least one of said two ends including
an edge surrounding an opening, and
at least one locking tab which is folded back against said inner wall of said sleeve, said at least one locking tab including means forming an anchoring orifice; and
at least one stopper comprising
a cap capable of bearing against said edge when inserted into the opening, with the size of the cap being sufficient to cover said edge,
a central body being dimensioned to be inserted into the opening and to substantially correspond to the dimensions of the inner wall, said central body having at least one side wall on which is arranged at least one lug which can cooperate with said means forming an anchoring orifice for maintaining said at least one stopper in position on said sleeve.

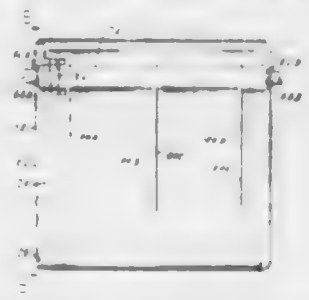
5,005,760

FLEXIBLE PLIABLE RETAINING PACKAGE FOR FLOWERS AND PLANTS

Lambertus A. M. van den Hoogen, 3, Antoniusstraat, NL-5408 AM Volkel, Netherlands

PCT No. PCT/EP87/00491, § 371 Date Apr. 28, 1988, § 102(e) Date Apr. 28, 1988, PCT Pub. No. WO88/01593, PCT Pub. Date Mar. 10, 1988
PCT Filed Aug. 31, 1987, Ser. No. 221,785
Claims priority, application Netherlands, Sep. 2, 1986, 8602213
Int. Cl.[5] B65D 5/24
U.S. Cl. 229—125.38 15 Claims

1. A packaging container for transport and display of flowers and plants, constructed for retaining water for keeping the flowers and plants fresh and for adding if desired a support characterized in that said container is made of a quadrangular sheet of waterresistant cardboard folded along creased folding lines, which are in crossform and diagonal over a surface of the sheet, such that four side planes (2), standing up to a variable degree around a square bottom surface (1) are formed, said side planes (2) being connected to each other by inwardly fold flaps (3), creating in a middle of said planes an almost quadrangular empty space having a height adapted to a height of the side planes (2), while said side planes (2) are provided with perforated small holes (4) near to an edge in an upper part of said planes, a string (5) being pulled through said small holes, to the effect that said container is kept either entirely collapsed or folded outwardly in a desired position by said string, which is put through said holes in said planes (2) and kept at a defined place through said holes, and said container being formed by folding the container into a vase and further comprising a flower or plant placed into the vase.



5,005,761

MULTIPLE ACCESS NEWSPAPER RECEPTACLE

James E. Barber, 319 E. Elm St., Wauseon, Ohio 43567

Filed May 28, 1987, Ser. No. 55,006
Int. Cl.[5] B65D 91/00
U.S. Cl. 232—1 C 1 Claim

1. A newspaper receptacle having opposing ends with an individual pivotable doorway on each end, such receptacle having a doorway hinge structure for each said individual doorway comprising
(a) a base planar member having a frontal face and rear face and having an upper part and a lower part said base planar member comprising the basic pivotable doorway structure;
(b) a longitudinally extending pivot bar member with end portions integrally formed as part of said planar member on the upper part thereof and extending transversely over said door width on the upper part thereof; said bar member being rounded on each respective end portion,
(c) a plurality of web members extending over the frontal

face of said doorway, said web members extending over the frontal face of said doorway, said web members being perpendicular to said bar member and extending from said bar member in a vertically downward direction as an integral extension of said bar member.

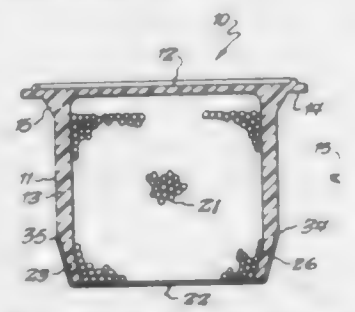
DECORATION OR UTILITARIAN WATER-USING EQUIPMENT FOR ATMOSPHERE OR LEISURE

Alain Cacoub, 94, rue de Sèvres, 75007 Paris, France

Filed Jul. 8, 1988, Ser. No. 216,380
Claims priority, application France, Jul. 8, 1987, 87 09680
Int. Cl.[5] F21P 7/00
U.S. Cl. 239—20 23 Claims

1. A water fountain device for creating controlled flows of water comprising
at least one pair of a liquid dispenser and collector operatively positioned with respect to one another at vertically spaced apart locations, each dispenser including a supply manifold and a supply line, each supply line including pressure and flow controllers, each supply manifold including a plurality of ports and an equal plurality of nozzles respectively associated with said ports, each of said nozzles including means defining a capillary outlet from said associated port of said supply manifold, said plurality of nozzles being positioned on said supply manifold D3 so that the volume, duration, frequency and D4 of flow of liquid from said supply manifold are adjustable, each collector being connected to at least one collection line and each collection line including control means for controlling the circulation and flow of liquid within said device to each of said supply lines.

5,005,763



CONTAINER FOR BULK MATERIAL AND METHOD OF FABRICATION THEREOF

John S. Cullen, Buffalo; Samuel A. Incorvia, Tonawanda; Christopher S. Nigon, Orchard Park, and Frederick A. Boczkowski, Tonawanda, all of N.Y., assignors to Multiform Desiccants, Inc., Buffalo, N.Y.

Continuation-in-part of Ser. No. 253,553, Oct. 5, 1988, abandoned. This application Jun. 14, 1989, Ser. No. 366,128
Int. Cl.[5] A61L 9/04
U.S. Cl. 239—57 12 Claims

1. A container for material such as a desiccant, adsorbent, absorbent, or the like, comprising a molded plastic shell having

a wall with an inner surface and an outer surface, an opening extending transversely to said wall, an end portion on said wall proximate said opening, a first edge portion of frustoconical configuration on said outer surface of said wall proximate said end portion, a permeable membrane extending across said opening transversely to said wall, an inner edge portion on said permeable membrane fused to said end portion of said wall, an outer edge portion of frustoconical configuration on said permeable membrane extending onto said first edge portion of frustoconical configuration and fused in frustoconical mating

relationship therewith, and said material within said inner surface of said shell on one side of said membrane for treating the environment on the other side of said membrane by desiccation, adsorption, absorption, or the like, said outer edge portion on said permeable membrane being formed to said mating frustoconical configuration with said first edge portion on said outer surface of said wall incidental to effecting said fusion therebetween

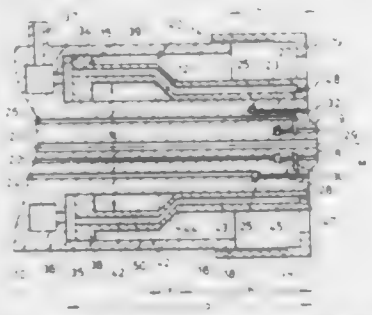
APPARATUS FOR FLAME SPRAYING OF POWDER MATERIALS



Wolfgang Simm, Ecublens; Hans-Theo Steine, Cugy, both of Switzerland, and Karl P. Streb, Markt-Mombris, Fed. Rep. of Germany, assignors to Castolin S.A., Sulpice, Switzerland

Filed Feb. 9, 1990, Ser. No. 477,629

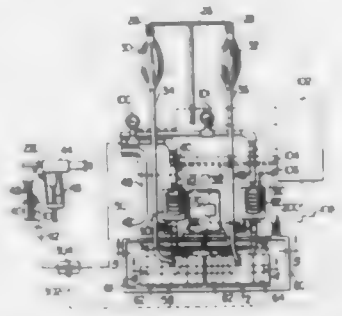
Claims priority, application Fed. Rep. of Germany, Feb. 10, 1989, 3903888

Int. Cl.[5] B05B 7/20, 15/08, C23C 4/00

U.S. Cl. 239—79 23 Claims

1 An apparatus for flame spraying powder materials comprising a nozzle carrier having a central arm portion disposed along a longitudinal axis and a peripheral wall portion spaced from said central arm portion and disposed along said longitudinal axis thereby defining with said central arm portion an elongated annular chamber; a burner nozzle formed on one end of said central arm portion, a hollow, elongated accelerating means disposed within said annular chamber between said peripheral wall portion and said central arm portion, and means for axially moving said accelerating means between a first non-working position and a second working position wherein said accelerating means defines a combustion chamber into which said burner nozzle projects.

5,005,765



METHOD AND APPARATUS FOR APPLYING MULTICOMPONENT MATERIALS

Kenneth J. Kistner, Midlothian, Tex., assignor to Specified Equipment Systems Company, Inc., Dallas, Tex.

Filed Jan. 25, 1988, Ser. No. 147,880

Int. Cl.[5] B05B 7/04

U.S. Cl. 239—135 34 Claims

1 A system for metering dual component materials comprising

a first gear pump and a second gear pump, one for receiving and pumping each of the components,

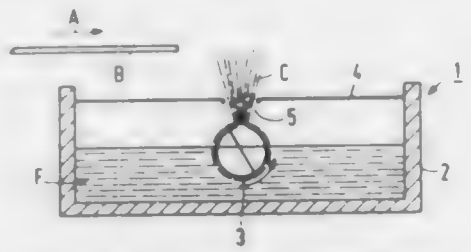
a drive source for simultaneously driving said gear pumps, said gear pumps having mesh gears rotating in a gear housing and said first gear pump having a first clearance between a radially outer tip of said gears and said gear housing and said second gear pump having a second clearance between a radially outer tip of said gears and said gear housing, said first and second clearances selected such that said gear pumps pump a predetermined amount of each component to produce a desired ratio of the components being pumped when said pumps are driven, and

an applicator for receiving said components from said gear pumps and for applying said components onto a surface or into a void

---

5,005,766

DEVICE FOR PROVIDING A FLUX LAYER ON A PRINTED BOARD



Nicolaas Heiner, Wenum-Wiesel, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Aug. 31, 1989, Ser. No. 401,893

Claims priority, application Netherlands, Sep. 15, 1988, 8802266

Int. Cl.[5] B05B 3/12

U.S. Cl. 239—214 8 Claims

1 A device for providing a flux layer on a printed board, which device comprises a reservoir and a wire-gauze cylinder which is present in and rotatable in the reservoir, a spray tube extending parallel to the center line of said cylinder provided in said cylinder, and outflow aperture of an air supply duct opening into said spray tube and in which spray apertures are provided which are arranged in a row extending in the longitudinal direction of the spray tube, characterized in that the spray

apertures are provided at a regular pitch in the wall of the spray tube and are conical at least over a part of their length

---

5,005,767

SLITTED DIRT SEAL FOR INGROUND SPRINKLER HEADS

Lawrence P. Heren, Peoria, Ill., assignor to L.R. Nelson Corporation, Peoria, Ill.

Filed Aug. 24, 1989, Ser. No. 398,277

Int. Cl.[5] B05B 15/00

U.S. Cl. 239—288 15 Claims

1 A pop-up sprinkler head and shield assembly for use during installation of an underground sprinkler system comprising

a housing having,

an inlet positioned in one portion of said housing operable to be communicated with water under pressure from an underground conduit of said underground sprinkler system, and an open end positioned in another portion of said housing having an annular seal means therein and, said open end extending upward from said inlet to a posture substantially coplanar with the ground surface when said housing is installed,

a pop-up body mounted within said housing for movement in cooperating relation with said annular seal means from a first retracted position within said housing to a second extended position extending upwardly from said housing in response to the communication of the water under pressure with said inlet of said housing,

said pop-up body having means for releasably securing a sprinkler nozzle in a position to cooperate with said annular seal means when said pop-up body is in said first retracted position to prevent debris from entering the pop-up body and the housing so that during installation when the sprinkler nozzle is unattached and the pop-up body is in said first retracted position there remains an aperture within said annular seal means through which debris may enter said pop-up body and said housing,

spring means for biasing said pop-up body into said first retracted position in absence of the water under pressure, said spring means being stressed in response to movement of said pop-up body from said first retracted position to said second extended position concurrent with the introduction of the water under pressure through said inlet of said housing, and

shielding means removably secured to said housing in an aperture-shielding position and movable (1) out of said aperture-shielding position in response to the movement of said pop-up body from said first retracted position to said second extended position during a flushing operation of the installation and (2) back into said aperture-shielding position in response to movement of said pop-up body from said second extended position back into said first retracted position, said shielding means operably serving to close said aperture and isolate the interior of said housing and said pop-up body from the unintended and unwanted deposit of debris, dirt and the like after the flushing operation of the underground sprinkler system

DISTRIBUTION OF A PULVERULENT SOLID

Vincent Sauvinet, Paris; Jean Fosset, Saint-Léger Aux Bois; Michel Valere, Thourotte; Daniel Defort, Lacroix Saint-Ouen, and Maurice Boutrouille, Melicocq, all of France, assignors to Saint Gobain-Vitrage International, Courbevoie, France

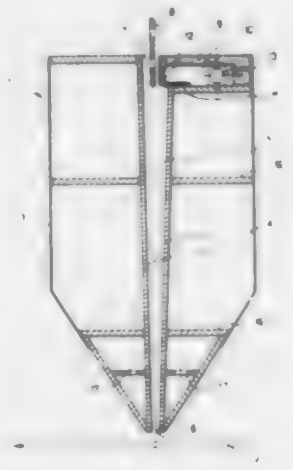
Filed Dec. 14, 1989, Ser. No. 450,793

Claims priority, application France, Dec. 14, 1988, 88 16436

Int. Cl.[5] B05C 19/00, B05B 7/14

U.S. Cl. 239—429 46 Claims

1 A device for distribution of a pulverulent solid suspended in a gas on an advancing substrate comprising



a nozzle having a cavity extending the length of the nozzle and defined by two substantially planar converging side walls being substantially planar along their length, said walls forming an outlet slot on the lower part of said nozzle and an orifice at the opposite end of the cavity from the outlet slot,

means for injecting a mixture of pulverulent solid suspended

in a gas into the cavity, said injecting means positioned in the orifice in the median plane of the cavity.

means for drawing gas into the cavity located adjacent to the pulverulent solid-gas mixture injecting means, and

means for injecting a secondary gas under pressure into said cavity, said secondary gas injecting means comprising a chamber which is fed with said gas, whereby said gas enters the cavity through an opening substantially parallel

to the inner wall of the cavity which is adjacent said opening, said opening comprising a multiplicity of jets with axes substantially parallel to the wall of the cavity that is adjacent to said jets, said jets being pierced in a plate closing said chamber and extending crosswise to the substrate

SIFTER FOR SIFTING GRANULAR MATERIAL AND GRINDING SYSTEM HAVING INTRODUCTION THEREINTO OF SUCH A SIFTER

Albert Suessegger, Bergisch Gladbach, Fed. Rep. of Germany, assignor to Kloeckner-Humbolt-Deutz Aktiengesellschaft, Fed. Rep. of Germany

Filed Feb. 22, 1990, Ser. No. 482,236

Claims priority, application Fed. Rep. of Germany, Feb. 20, 1989, 3905123

Int. Cl.' B02C 21/00

U.S. Cl. 241—19 7 Claims

1 A circulating grinding system for grinding particulate material comprising in combination

a high pressure roller press having an entry nip for interparticle crushing delivering partially agglomerated scabs which include finely ground material,

a tube mill having an input connected to receive the output from said roller press and grinding the material breaking the agglomerate,

a separator connected to receive an output from the tube mill, said separator having a coarse grit fraction output and a fine grit fraction output

first conduit means connected said coarse grit fraction output directly to the nip of said roller press whereby the coarse grits are passed through the roller press with other stock and

second conduit means connected said fine grit fraction to the input of the tube mill whereby the separated fine grit fraction is mixed with input to the tube mill from the roller press

IMPELLER BAR INSTALLATION AND REPOSITIONING MEANS FOR IMPACT CRUSHERS HAVING OPEN TYPE ROTORS

David A. Ostergaard, Cedar Rapids, Iowa, assignor to Cedarapids, Inc., Cedar Rapids, Iowa

Division of Ser. No. 182,120, Apr. 15, 1988. This application Jun. 16, 1989, Ser. No. 366,777

Int. Cl.' B02K 13/26

U.S. Cl. 241—30 7 Claims

1 A method of manipulating an impeller bar of a rotor of an impact crusher for installing the bar into the rotor and for repositioning the bar with respect to the rotor after periods of operation of the rotor, the method of manipulating including lowering the bar into and raising the bar out of the impact crusher, the rotor having an axis of rotation and at least one pair of axially spaced rotor discs on which the impeller bar is mounted substantially parallel to the axis of rotation of the rotor, the impeller bar having opposite side walls extending axially and generally radially of the rotor and forming leading and trailing sides of the impeller bar with respect to rotor rotation, said side walls having radially inner and outer edges and having a circular aperture extending through the bar through said opposite side walls and at the center of gravity of the bar, the method comprising the steps of positioning said bar in a mounting position at an upper portion of the rotor, engaging said bar aperture with a circular, generally horizontal portion at a lower end of an elongated hook suspended at its upper end for rotation about a generally vertical axis, the center of gravity of the impeller bar lying substantially along said generally vertical axis, supporting said bar with said hook for lowering the bar into and raising the bar out of the rotor, disengaging the hook from the bar after lowering the bar into the rotor, after an initial period of operation of the rotor and wear on the bar, engaging said aperture with said circular, generally horizontal portion, and then raising the bar from the rotor, then lowering the bar into the rotor, and then disengaging the hook from the bar after lowering the bar into the rotor, and, while the bar is raised from the rotor, rotating the bar about the horizontal portion at the lower end of the hook thereby exchanging, upon insertion into the rotor, radially inner and outer edges of the bar while maintaining a respective one of the side walls as the leading side, and after another period of operation of the rotor and wear on the bar, engaging said aperture with said circular, generally horizontal portion, and then raising the bar from the rotor, then lowering the bar into the rotor, and then disengaging the hook from the bar after lowering the bar into the rotor, and while the bar is raised from the rotor, rotating the bar and the hook about the generally vertical axis, thereby changing, upon insertion into the rotor, the side wall forming the trailing side to the side wall forming the leading side while maintaining the radially outer edges of the side walls as the radially outer edges thereof

RAPID, SINGLE KERNEL GRAIN CHARACTERIZATION SYSTEM

Charles R. Martin; Robert Rousser, and Daniel L. Brabec, all of Manhattan, Kans., assignors to The United States of America as represented by the Secretary of Agriculture, Washington, D.C.

Filed May 3, 1990, Ser. No. 519,196

Int. Cl.' B02C 9/00

U.S. Cl. 241—101.2 8 Claims

1 An apparatus for characterizing cereal grains comprising

a rotor having a coarse outer surface

a means for driving said rotor

an arm having a pivot point and a crescent-shaped inner surface which has a curvature greater than that of the outer surface of said rotor, said arm being positioned relative to said rotor so that a tapered gap having a wide, feed end and a narrow, discharge end is formed between the outer surface of the rotor and the crescent-shaped inner surface, wherein the spacing between said surfaces at the narrow end is substantially less than the thickness of the grains,

a means for feeding singulated kernels of grain into said gap,

a means for measuring the movement of said arm with time about the pivot point as a function of the physical resistance exerted by the grain on the crescent-shaped inner surface and

a means for correlating said movement to a value indicative of grain hardness

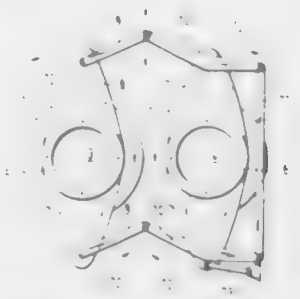
TWO ROLLER MACHINE, PARTICULARLY A ROLL TYPE CRUSHER



Willy Jakobs, Cologne, Fed. Rep. of Germany, assignor to Kloeckner-Humboldte-Deutz Aktiengesellschaft, Fed. Rep. of Germany

Filed Jan. 3, 1990, Ser. No. 460,538

Claims priority, application Fed. Rep. of Germany, Jan. 16, 1989, 3901060

Int. Cl.' B02C 4/32

U.S. Cl. 241—232 13 Claims

1 A two roll crusher, comprising in combination

first and second parallel rollers supported for rotation

toward each other to crush stock passing into a crushing nip formed between the rollers

gearings for the rollers flexibly connected to each other for absorption of reaction movements,

first and second end plates connected coaxially with the rolls at the roll ends and having ends projecting radially of the roll axes in opposite directions

first levers pivotally connected at each end of the first plate

second levers pivotally connected at each end of the second plate,

said first and second levers pivotally connected to each other between the plates at a junction point

and a rigid link means pivotally connected to each junction point so as to extend between points and limit movement of said plates to parallel movement for absorbing reaction movement caused by the rolls

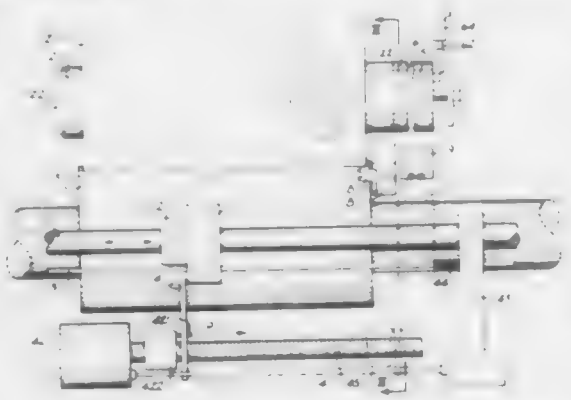
PROCESS AND DEVICE TO GUIDE AND SEVER A THREAD UPON BOBBIN REPLACEMENT



Ralph Schwarz, Ingolstadt, Fed. Rep. of Germany, assignor to Schubert & Salzer Maschinenfabrik Aktiengesellschaft, Ingolstadt, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 174,596, Mar. 29, 1988, abandoned. This application Feb. 28, 1990, Ser. No. 486,383

Claims priority, application Fed. Rep. of Germany, Mar. 31, 1987, 3710692

Int. Cl.[5] **B65H** *54/02, 54/34*

U.S. Cl. 242—18 PW **18 Claims**

1 A process for replacing stopped wound yarn bobbins on a winding machine with an empty bobbin support and for transferring a continuously supplied yarn from said stopped yarn bobbins to said empty bobbin support, wherein said yarn is wound onto said bobbins in a bobbin winding zone by a traversing yarn guide, comprising the steps of

(a) moving said yarn and said yarn traversing guide out of said winding zone into a yarn clamping and cutting zone,

(b) collecting said continuously supplied yarn in said cutting and clamping zone,

(c) severing said yarn between said cutting and clamping zone and said stopped bobbin,

(d) removing said stopped bobbin from said winding machine and replacing it with an empty bobbin support,

(e) cutting and clamping said yarn in said cutting and clamping zone,

(f) moving said yarn and said yarn traversing guide out of said cutting and clamping zone into said bobbing winding zone, and

(g) traversing and winding said yarn onto said empty bobbin support

5,005,777

SEAT BELT RETRACTOR WITH AN ELECTRIC MOTOR

Angel Fernandez, 36794 Harper, Apt. 301, Mt. Clemens, Mich. 48043

Filed Dec. 9, 1988, Ser. No. 282,744

Int. Cl.[5] **A62B** *45/00*; **B65H** *75/48*

U.S. Cl. 242—54 R **21 Claims**

1 A seat belt retractor for use by an occupant of a vehicle, said seat belt retractor comprising

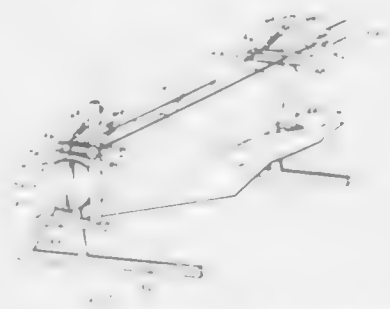
a rotatable spool with belt webbing wound around said spool, said spool being rotatable in a belt withdrawal direction and in a belt retraction direction, said spool rotating in the belt withdrawal direction to enable the belt webbing to be extended around the occupant, said spool rotating in the belt retraction direction to enable the belt webbing to be tightened against the occupant

a motor for rotating said spool,

detector means for detecting a tension force applied to the belt webbing and for providing a first signal when the tension force initially applied to the belt webbing increases above a first predetermined amount of force, and

actuator means for actuating said motor to rotate said spool in the belt withdrawal direction in response to said first signal

5,005,778



WEB WINDING APPARATUS

Herbert E. Gladish, Ottawa, Canada, assignor to E. B. Eddy Forest Products Ltd., Ottawa, Canada

Filed Nov. 28, 1989, Ser. No. 442,520

Int. Cl.[5] **B65H** *75/06, 18/08*

U.S. Cl. 242—61 **17 Claims**

1 Apparatus for wrapping web material about an object, comprising

(a) frame means,

(b) cylindrical support means mounted horizontally in said frame means,

(c) annular resilient sleeve means longitudinally and loosely surrounding said support means, having an inner diameter greater than the outer diameter of said support means, and being rotatable on and with respect to said support means,

(d) means for removably mounting an object in said frame means, with an outer surface of said object contacting said sleeve means, creating a nip therebetween,

(e) means for feeding said web material into said nip under substantially uniform tension, and

(f) means for rotating said object on a rotation axis thereof to draw said web material through said nip and to wrap such material about said object as it rotates, such rotating and wrapping movement causing said sleeve means to rotate on and with respect to said support means, and said sleeve means deforming radially inwardly at said nip under loading to enhance uniform wrapping of such web material on said object

5,005,779

SYSTEM FOR DISPENSING A CONTINUOUS WEB FROM A ROLL ON WHICH THE WEB IS WOUND

Gregory A. Ferguson, New Bedford, Mass., assignor to Precision Handling Devices, Rochester, N.Y.

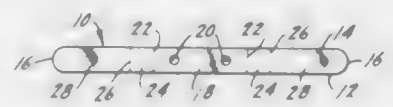
Filed Dec. 4, 1989, Ser. No. 446,946

Int. Cl.[5] **B65H** *23/16, 18/20*

U.S. Cl. 242—68.7 **10 Claims**

1 The method of unreeling a web wound onto a roll having a central axis while continuously maintaining tension on said web, even when unreeling stops, which method comprises the steps of supporting said roll on a rotatable body which contacts the outer periphery of said web wound on the roll at a point on the periphery of said body so that said body rotates with said roll as said web is pulled from said roll, guiding said roll for limited pivotal movement having a displacement component upwardly along the periphery of said body when pulling force is applied to said web and a downward component of motion when pulling force is released thereby applying tension on said web in the direction opposite to the direction of said pulling force when said pulling force is released, wherein said supporting step is carried out with a cylindrical body and said roll makes a line contact with said body, and wherein said guiding step is carried out with a shaft extending through a central opening in said roll, having a diameter which is larger than said shaft in diameter and with spaced walls having slots open at their top, and placing said roll between said walls with said shaft in said slots

5,005,780



REEL SPRING FOR MAGNETIC TAPE CASSETTES

William M. Carroll, Milwaukee, Wis., assignor to Koller Manufacturing Corporation, Milwaukee, Wis.

Filed Jan. 2, 1990, Ser. No. 460,015

Int. Cl.[5] **G11B** *15/32*

U.S. Cl. 242—199 **1 Claim**

1 In a magnetic tape cassette, a reel spring comprising an elongated strip of stainless steel having first and second edges extending substantially throughout its length parallel to a longitudinal centerline, the width between the first and second edges being about 0.315 inches, the strip including

a flat, central base portion,

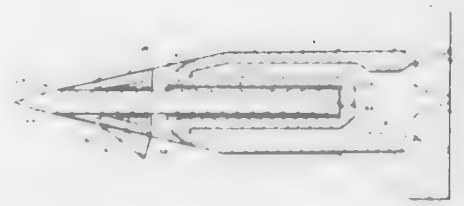
a first pair of transverse crimps at the ends of the base portion defining transition sections of the strip extending at a first angle to the plane of the base portion,

a second pair of transverse crimps at the outer ends of the transition sections defining end portions of the strip extending at a second angle to the plane of the base portion and terminating at tips,

the first and second angles and the lengths of the transition sections and end portions being chosen such that when the spring is at rest the tips are located about 0.390 inches above the base portion and when the tips are deflected to a distance of about 0.079 inches from the base, the spring exerts a force of about 280-380 grams, and

means for mounting said reel spring to the cassette, said means being formed in said base portion

5,005,781



IN-FLIGHT RECONFIGURABLE MISSILE CONSTRUCTION

Scott D. Baysinger, Chatsworth, and Ralph H. Klestadt, Encino, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Mar. 27, 1989, Ser. No. 328,828

Int. Cl.[5] **F42B** *39/12*

U.S. Cl. 244—3.26 **4 Claims**

1 A staged missile assembly for attacking a target, comprising

a rocket motor assembly having a forward end, an aft end and a cavity extending part way through said rocket motor assembly from said forward end,

an aerodynamic control section releasably mounted on the forward end of said rocket motor assembly, said control section including a tubular opening of uniform cross-section aligned with said cavity,

a penetrator rod payload, said penetrator rod including a first part slidably disposed within said control section and a second part slidably disposed within said cavity, said second part having an outwardly flared end portion formed with an external cross-section less than said cross-section of said cavity and greater than the cross-section of said tubular opening through said control section wherein jettisoning of said rocket motor assembly causes relative movement between said penetrator rod and said control section until said outwardly flared end is wedged into extended surface gripping contact and an increasingly tighter interference fit with said tubular opening, insuring said penetrator rod and said control section proceed as a unit toward a specified target

5,005,782

TWO DIMENSIONAL AND ASYMMETRIC SUPERSONIC AIR INTAKE FOR THE COMBUSTION AIR OF AN AIRCRAFT ENGINE

Francois Falempin, Saint Michel Sur Orge; Claude Sans, Massy; Champigny Patrick, Villebon Sur Yvette; Gérard Laruelle, Le Plessis Robinson, and Jean-Marie Garrel, Tremblay-Les-Gonesses, all of France, assignors to Office National d'Etudes et de Recherches Aerospatiales (ONERA), France

Filed Jul. 28, 1989, Ser. No. 386,130
Claims priority, application France, Aug. 7, 1988, 88 10557
Int. Cl.' B64D 33/02
U.S. Cl. 244—53 B 6 Claims

1 A two-dimensional supersonic air intake for the harness of the combustion air at the exterior of a supersonic aircraft provided with at least a jet engine, said air intake being arranged for supplying said aircraft jet engine with said combustion air, said air intake having two opposite sides, said air intake comprising

on one side a fairing,

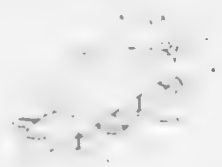
on the other side, a front flap forming a visor and articulated about a pivot axis situated opposite said fairing,

a mobile fairing nose situated in front of said fairing and fast with said front flap, said mobile fairing nose being adapted for moving in front of said fairing when said front flap moves in the direction which increases the air intake section, said mobile fairing nose being arranged so that when moving in front of said fairing it defines therewith a variable section passage forming a boundary layer trap through facing surfaces which move away from each other when said front flap moves in the direction which increases the air intake section.

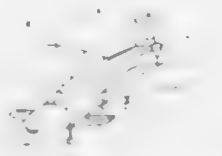
5,005,783

VARIABLE GEOMETRY AIRSHIP

James D. Taylor, Cambridge, Mass., assignor to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.



Filed Jan. 18, 1990, Ser. No. 466,888
Int. Cl.' B64B 1/58
U.S. Cl. 244—97 20 Claims

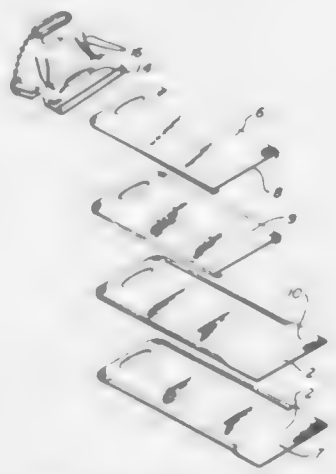


1. A variable geometry aircraft comprising

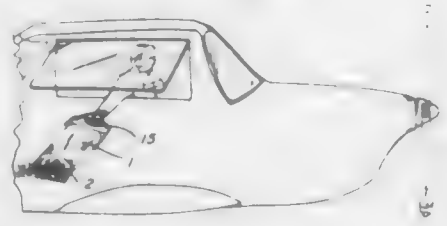
an airship frame;

a flexible gas envelope which is fixed to said airship frame and which may be inflated with a buoyant gas to provide buoyant lift to said variable geometry aircraft,

a means for providing a variable aerodynamic lift to said variable geometry aircraft, said providing means being fixed to said airship frame, and said variable geometry aircraft being capable of changing its geometric shape



from an ovoid shaped lighter than air airship to a winged shaped heavier than air airplane.



5,005,7[illegible]

METHOD AND APPARATUS FOR DISPERSING CREMATED REMAINS

Boanie J. Harden, 3279 Silverthorne Dr., Fort Collins, Colo. 80526

Division of Ser. No. 98,500, Sep. 18, 1987, Pat. No. 4,877,203.
This application Oct. 30, 1989, Ser. No. 4[illegible],766
Int. Cl.' B64D 1/16
U.S. Cl. 244—136 7 Claims

1 An apparatus for dispersing cremated remains comprising:

a. a sealable container, made of a fabric material, having a substantially constant circumference therethrough and a sealable opening on only one end;

b a means for opening said container at only one end, said means comprising a flap of fabric material extending beyond said opening,

c a means for preventing retention of any cremated remains within said container, said means comprising

i a permanent inner liner made of non-textured material, and

ii a rounded end seam,

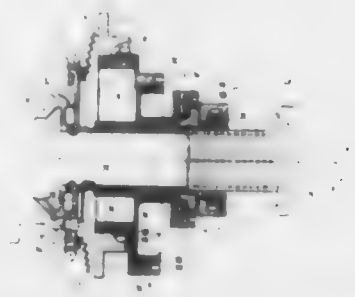
d an affirmative means for continuously evacuating said container.

5,005,785

HIGH DRAG SLIDER REEFING SYSTEM FOR PARACHUTES

Elek Puskas, Mt. Holly, N.J., assignor to Para-Flite, Inc., Pennsauken, N.J.

Filed Dec. 31, 1985, Ser. No. 815,056
Int. Cl.' B64D 17/62
U.S. Cl. 244—152 10 Claims



1 In combination with a parachute canopy having upper and lower airfoil surfaces separated by chordwise-extending cells inflated by inflow of air at an open leading edge, suspension lines connecting the lower surface of the canopy to a load, a reefing slider through which the extension lines extend and aerodynamic drag means for retarding descent of the slider relative to the canopy from an upper reefing position in which inflation of the canopy is restricted, the improvement comprising means extending beyond the suspension liens for deflecting flow induced by gravitational descent of the canopy and means connecting said flow deflecting means to the drag means in operative alignment with the leading edge of the canopy for diverting said inflow into the cells in the upper reefing position of the slider to delay inflation of the canopy, said drag means including a relatively high porosity baffle connected to the reefing slider, a relatively low porosity baffle and means peripherally securing the low porosity baffle to the high porosity baffle to form a drag chute thereabove inflated by said flow induced during said descent of the canopy.

5,005,786

DOCKING AND ACTIVE DAMPING DEVICE FOR SPACE STRUCTURES

Osamu Okamoto, Higashiyamato; Terusmi Nakaya, Machida; Seizo Suzaki, Mitaka; Naoaki Kuwano, Chofu; Yoshinori Sakai, Kakamigahara; Hiroshi Oda, Takatsuki; Masao Uegusa, Yachiyo, and Goji Iba, Toyama, all of Japan, assignors to National Aerospace Laboratory of Science & Technology Agency, Tokyo and Kawasaki Industries, Ltd., Kobe, both of, Japan

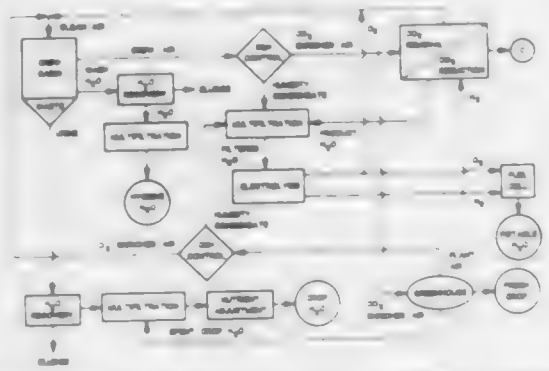
Filed Sep. 5, 1989, Ser. No. 402,586
Claims priority, application Japan, Mar. 1, 1989, 1-46479
Int. Cl.' B64G 1/64
U.S. Cl. 244—161 6 Claims

1 A docking and active damping device for space structures for docking a plurality of space structures or space structure elements including

a positioning device having a fixed cylinder provided on a frame of a docking portion of one space structure to be docked, one or more eccentric rotors successively eccentrically provided between said fixed cylinder and an output rotor, and a hollow output rotor provided at an eccentric position of the final eccentric rotor, said eccentric rotors and said output rotor being independently driven and controlled by an electric direct drive motor, and

a docking member supported on the output rotor of said positioning device, having a docking ring joined with a docking surface of the other space structure to be docked and having a plurality of latch mechanisms in an outer peripheral portion of said docking surface, said docking member capable of being moved and axially rotated within a two-dimensional plane vertical to at least the docking direction by said positioning device.

5,005,787

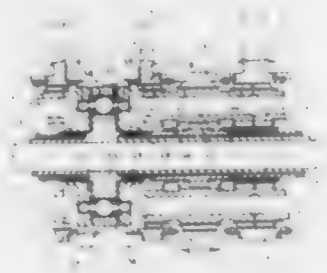


METHOD AND APPARATUS FOR BIO-REGENERATIVE LIFE SUPPORT SYSTEM

Hatice S. Cullingford, Houston, Tex., assignor to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.

Filed Jul. 11, 1989, Ser. No. 378,548
Int. Cl.' B64G 1/46
U.S. Cl. 244—163 12 Claims

1 A spacecraft life support system comprising, as integral parts thereof, a crew cabin capable of maintaining an environment conducive to human crew life and a greenhouse capable of maintaining plant life and, whereby, said crew cabin and said greenhouse are interrelated with each other and with other spacecraft systems such that portions of the consumables, food, carbon dioxide, water, hydrogen and oxygen, are regenerated and exchanged between said crew cabin, said greenhouse and said other spacecraft systems including returning portions of said regenerated consumables from the crew cabin and greenhouse to the other spacecraft systems so as to mini-



mize over a period of time the amount of said consumables required wherein the cabin air contamination control com-

prises a microbiological control treatment, a HEPA particulate control, and a trace contaminant oxidizer

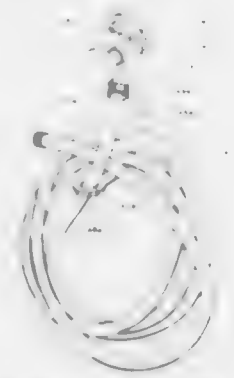
5,005,788
GEARED ROTARY ACTUATOR
Terence J. Capewell, Wheaton Aston, England, assignor to Lucas Industries Public Limited Co., Birmingham, England
Division of Ser. No. 301,150, Jan. 25, 1989, Pat. No. 4,932,929.
This application Jan. 3, 1990, Ser. No. 460,518
Claims priority, application United Kingdom, Feb. 6, 1988, 8802714; Jan. 15, 1988, 8814200
Int. Cl.[5] B64C 13/34
U.S. Cl. 244—231 6 Claims

6 A rotary actuator for an aircraft lift surface comprising an input shaft at least two axially aligned gear trains each gear train having an input sun gear drivingly connected to said input shaft a plurality of compound planet gears each having a first pinion and two second pinions said first and second pinions being secured together for rotation in unison, said first pinion meshing with said sun gear and with a first output ring gear and second output ring gears drivingly coupled for rotation by respective ones of said second pinions, said sun gears in adjacent gear trains being drivingly coupled to said shaft through a differential device for permitting limited rotational displacement between said sun gears in adjacent gear trains, a coupling joining adjacent ones of said first ring gears for movement in unison, and a spindle carried by said coupling and extending normally of a plane which contains the axes of the ring gears, said control surface being mounted, in use, on said spindle

5,005,789
PIPE HANGER
Harold D. Jones, 6392 Van Vleet Rd., Swartz Creek, Mich. 48473
Filed Aug. 10, 1989, Ser. No. 392,014
Int. Cl.[5] F16B 15/00
U.S. Cl. 248—58 2 Claims

1. A pipe hanger for supporting a pipe on a structural element comprising

an elongated wire having two free ends and a U-shaped midportion,

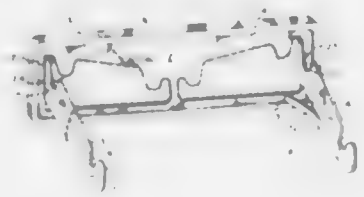


means for attaching said free ends of the wire to the structural element,

an elongated flexible strap of uniform thickness through its length, said strap being constructed of a plastic material,

means for attaching said strap to said U-shaped midportion of said wire, said attaching means comprising at least two pairs of spaced apart locking tabs, said locking tabs protruding outwardly from one side of said strap and being dimensioned to resiliently lockingly receive the wire therebetween, said locking tabs further integrated with said flexible strap as a one-piece construction

---



5,005,790
HOSE HOLDING FIXTURE
John H. Harris, III, 4518 Seboy Cir., Pensacola, Fla. 32504
Division of Ser. No. 264,372, Oct. 31, 1988, Pat. No. 4,903,922.
This application Nov. 20, 1989, Ser. No. 438,301
Int. Cl.[5] A62C 23/04
U.S. Cl. 248—75 4 Claims

1. A combination comprising a faucet, a hose having two ends with one end connected to said faucet and having a plurality of generally concentric coils intermediate said ends of said hose, a hose holding fixture having a flat flexible elongated body providing a ring shaped hose receiving opening at one end and a hook at the other end, and an elongated neck therebetween, said hose receiving opening encircling said hose substantially adjacent to said one end of said hose, said elongated neck extending through said plurality of coils, said hook at the other end of said elongated body releasably connecting to said faucet, said fixture depending from said faucet and supporting said coils from said faucet

---

5,005,791
HANGER FOR OPEN BAG
Richard G. Lanzen, 1843 38th St., Moline, Ill. 61265
Filed Apr. 30, 1990, Ser. No. 516,192
Int. Cl.[5] B65B 67/12
U.S. Cl. 248—99 1 Claim

1. A holder for supporting bags in an open position, said bags having opposite loops for handles, said holder having a base and two supporting arms, means for attaching said supporting arms perpendicularly to said base, means for mounting said base for extending said arms at the same level, said upper edges of said arms being contoured for suspending said loops about respective intermediate portions of said arms, the distance along each of said intermediate portions and the distance between said arms being sufficient to hold open the top of said bags having said loops about said intermediate portions,

the improvement comprising a hinge as said means for attaching each of said supporting arms to said base, said hinges permitting only horizontal turning of said arms, an intermediate portion of said base contiguous each of said hinges having a nestable space of sufficient area intermediate said hinges to receive the contiguous one of said arms in a nestable position within said base, said hinges being biased to urge said arms into said respective nestable spaces,

a stiffly resilient finger as an integral portion of each of said arms, each of said fingers being formed by a gap a short distance from the lower edge of said respective arm, said gap extending for a substantial distance from the hinged end of said respective arm outwardly along said lower edge thereof, an end of each of said fingers adjacent said respective hinge being movable to a position on said base to retain said respective arm in a useful position substantially perpendicular to said base, and the other end of each of said fingers being integrally connected to said respective arm

5,005,792
BRACKET FOR MOUNTING AN ELECTRICAL SWITCHBOX ON A WALL STUD
Eric R. Rinderer, Highland, Ill., assignor to B-Line Systems, Inc., Highland, Ill.
Filed Apr. 7, 1989, Ser. No. 334,897
Int. Cl.[5] A47B 96/00
U.S. Cl. 248—205.1 20 Claims

1. A bracket for mounting an electrical switchbox or the like on a metal stud of generally channel shape having a web at one side of the stud, constituting the closed side of the stud, generally parallel opposing flanges extending laterally outwardly from the web, one flange constituting a front flange at the front of the stud and the other flange constituting a rear flange at the rear of the stud, said flanges defining therebetween an open side of the stud, said bracket comprising

support means having a front end and a rear end,

means generally adjacent the front end of said support means for attaching the bracket to the front flange of the wall stud in a position in which said support means extends rearwardly adjacent one side of the wall stud,

means generally adjacent the front end of said support means for holding an electrical switchbox or the like in fixed position relative to said support means with one side of the

box generally adjacent said support means and with an open front of the switchbox facing forwardly, and

an arm on said support means adapted for movement from a first position in which the arm extends in front-to-rear direction with respect to said support means to a second position in which the arm extends laterally inwardly from said support means whereby, when the bracket is to be used at the open side of a wall stud and the depth of the wall stud in front-to-rear direction is greater than the length of said support means in front-to-rear direction, said arm is adapted to be moved to said second position for engagement with the web of the wall stud to support said support means against lateral movement toward the web of the stud

5,005,793
POLE CLIP NEEDLE CAP HOLDER
Richard A. Shillington, Leucadia, Calif., assignor to Med-Safe Systems, Inc., Carlsbad, Calif.
Filed Apr. 18, 1990, Ser. No. 510,579
Int. Cl.[5] F16M 13/00
U.S. Cl. 248—229 15 Claims

1. A needle cap holder for holding a cap in a stationary position for a needle to be reinserted therein, comprising

a base member for attachment to a support surface,

an arm having an inner end and an outer end and attached to said base at said inner end, and

needle holding means on the outer end of said arm for holding a plurality of needle caps in an inverted stationary position for enabling the insertion of a needle therein, comprising a generally rectangular frame on the outer end of said arm and extending generally transverse thereto, first vertical throughbore defined by a continuous peripheral wall in said frame for axially receiving and holding a cap of a first size, and a second vertical throughbore defined by a continuous peripheral wall in said frame for axially receiving and holding a cap of a second size

MULTIPURPOSE EASEL

Steven A. Holmgren, 703 N. Ella Ave., Sandpoint, Id. 83864

Filed Jun. 1, 1990, Ser. No. 531,632
Int. Cl.[5] A47B 97/04
U.S. Cl. 248—449 4 Claims

1 A tripodal easel convertible into a tripodal drafting table and comprising,

an upright pair of front leg members and an upright rear leg member each including a downwardly extensible segment, said rear leg member slotted for that portion if its length adjacent it upper end,

fastener means attaching the upper ends of said front leg members to said rear leg member in an adjustable manner permitting the attached upper ends of the front leg members to be positioned at different distances from the upper end of said rear leg member, a brace assembly adjustably coupling said front leg members to said rear leg member and

adjustable coupling means including fastener assemblies each joining each said downwardly extensible segment of each front leg member to the front leg member in a manner permitting downward extension and locking in place of each extensible leg segment, said coupling means additionally permitting each extensible leg segment to be angularly displaceable about one of said fastener assemblies to an upright position to serve as a drafting table leg while the remaining portion of each front leg member serves as a workpiece supporting table top

TROLLING MOTOR MOUNT

Thomas C. McCoy, 2796 W. Country Club Rd., Searcy, Ark. 72143

Filed Oct. 2, 1990, Ser. No. 591,934
Int. Cl.[5] B63H 5/00
U.S. Cl. 248—642 16 Claims

16 A mount for dynamically coupling a trolling motor to a fishing boat, said mount comprising

a rigid, generally L-shaped bracket, said bracket comprising rigid spaced-apart sides, a bottom, a rigid top connecting said sides, and a length defined centrally between said sides,

a rigid, adjustable base slidably coupled to said bracket bottom, said base projecting inwardly from one of said sides to facilitate adjustment of said bracket to properly fit about the gunwale of said boat,

a rigid shelf projecting integrally inwardly from one of said bracket sides to securely engage said the side or gunwale of said boat,

a rigid, adjustable screw clamp for at least temporarily securing said bracket to said boat,

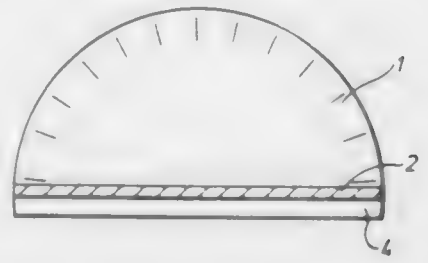
a rigid, elongated motor mounting block,

a first hinge defining a first axis of rotation parallel to said length, whereby said block may be rotated over said bracket along a first arc of roughly one hundred eighty degrees to move said trolling motor between a generally vertical, deployed position and a generally horizontal, storage position,

a second hinge defining a second axis of rotation generally perpendicular to said length, whereby said block and said motor may be rotated along a second arc generally parallel to said first axis of rotation of roughly two hundred twenty-five degrees whereby to permit said motor to resiliently deflect upwardly in response to impact with underwater obstacles,

a rigid, generally L-shaped stop integral with said bracket for limiting rotation of said block about said second axis of rotation; and,

a rigid lock projecting integrally outwardly from said block to fit within said stop whereby said lock prevents rotation of said block about said first axis of rotation



---

5,005,799

PATTERNS FOR DETERMINING THE PROFILE OF AN ARCH

Anthony Gallagher, 65 Hazewick Road, Three Bridges, Crawley, West Sussex, England

Filed Mar. 20, 1989, Ser. No. 325,638
Claims priority, application United Kingdom, Mar. 19, 1988, 8806587
Int. Cl.[5] E04G 13/00
U.S. Cl. 249—19 5 Claims

1 A pattern for defining a profile of an arch, the pattern having sufficient strength for supporting a brick arch during construction thereof and comprising a unitary block of material having a deformable upper surface whose contour complements the profile of the arch, a generally flat under surface, and

a first side face which includes markings to indicate to the user respective locations of bricks to be laid about the upper surface of the pattern

DIE FOR MAKING A TETRAHEXAGONAL TRUSS STRUCTURE

Dick O. Weisse, Camarillo, Calif., assignor to Tetrahex, Inc., Camarillo, Calif.

Division of Ser. No. 266,386, Nov. 2, 1988. This application Sep. 18, 1989, Ser. No. 408,619
Int. Cl.[5] B29C 33/42, 45/26
U.S. Cl. 249—175 2 Claims

1 A die having a plurality of walls for making a structure, comprising

a die apex,

a tetrahedron having tetrahedron edges and a tetrahedron apex that coincides with the die apex,

a hexagonal base located on the opposite end of the die from the die apex, the base being integrated with the tetrahedron such that three walls of the die are parallelograms having parallelogram edges, a first parallelogram vertex of each parallelogram wall intersecting the tetrahedron apex, and the opposing second parallelogram vertex of each parallelogram intersecting a base vertex, and

a groove in the parallelogram walls such that the groove joins a third parallelogram vertex with an opposing fourth parallelogram vertex in the parallelogram wall

JACK HANGING APPARATUS

Martin A. Giarrocco, III, 7155 Stockley Rd., Upper Darby, Pa. 19082, and Kevin J. McCarthy, 2061 Granite St., Philadelphia, Pa. 19124

Filed Aug. 18, 1989, Ser. No. 395,895
Int. Cl.[5] E04G 17/18
U.S. Cl. 249—211 26 Claims

1 An apparatus for holding, rotating and positioning a jack for the purpose of attaching said jack to one side of a structural support, said apparatus comprising

(a) a base having means to mount the base on the structural support and including a pivot axle extending parallel to said one side of said structural support, and

(b) a holder pivotally connected at one end to the pivot axle of the base, such holder having at least two side arms connected to said axle for adjustment of said arms relative to each other along the axle between closed and open positions, and for displacement of the holder between a first location above said structural support and a second location at said one side, each of said arms having a receiver, said receivers operable in said closed position to engage and retain the jack as the holder is pivoted between said locations in order to position the jack for attachment to said one side of the structural support, said receivers in the open position affording disengagement of the holder from the jack after said attachment, in said open position, said holder being displacable from said second location back to said first location after disengagement of the holder from the jack

VARIABLE BORE PACKER FOR A RAM TYPE BLOWOUT PREVENTER

David J. McWhorter; Bolie C. Williams, III, both of Houston; Eric G. Childs, Katy, and Gary R. Schaeper, Houston, all of Tex., assignors to Cooper Industries, Inc., Houston, Tex.

Filed Feb. 1, 1990, Ser. No. 473,579
Int. Cl.[5] E21B 33/06
U.S. Cl. 251—1.3 4 Claims

1 A variable bore packer for use in a front ram slot of a ram-type blowout preventer comprising

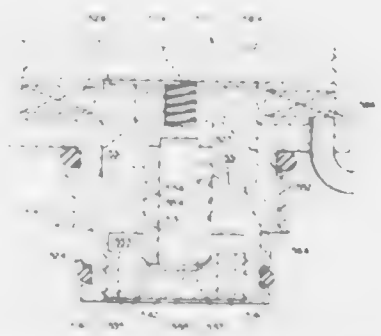
a resilient body having a size to fit within the front slot of the ram in which it is to be positioned, an upper portion, a lower portion and an upper surface, and having a central recess on its front face,

an upper plate positioned in the upper portion of the resilient body and having a recess on its front face and an under surface,

a lower plate positioned in the lower portion of the resilient body and having a recess on its front face,

a plurality of spaced apart, radially extending metal insert segments positioned between the upper surface of the resilient body and the under surface of the upper plate and around the central recess of the resilient body,

said insert segments being embedded in said resilient body and having sufficient length to engage the exterior surface of a tubular member which is to be sealed against by the packer,



said insert segments being selected to seat against a preselected small tubular member to provide anti-extrusion support for the resilient body against the small tubular member whose diameter is less than the diameter which could be sealed by the packer without the insert segments with the upper plate providing the sole anti-extrusion support for the resilient body

5,005,803

HIGH RESPONSE, COMPACT SOLENOID TWO-WAY VALVE

Frank M. Fritz, Milwaukee; Dale A. Knutson, Nashotah, and James P. Janecke, Waukesha, all of Wis., assignors to Applied Power Inc., Butler, Wis.

Filed Dec. 29, 1988, Ser. No. 290,374
Int. Cl.[5] F16K 31/06
U.S. Cl. 251—129.15 16 Claims

1 A high response, compact, flow regulating valve comprising

a housing having a generally cylindrical bore extending therethrough, said housing having an inlet port and an outlet port connected by said bore of said housing, said housing further having a first land in said bore, said first land defining a first chamber above said land and a second chamber below said land,

means for regulating fluid communication between said inlet port and said outlet port, said regulating means movable between a first closed position and a second open position, including

a generally cylindrical plunger, longitudinally slidable within said bore of said housing, having a coaxial bore therethrough, at least one cross bore connecting said bore of said plunger to said first chamber, and a plurality of notches about the periphery of said plunger,

sealing means at the base of said plunger including an outer bevelled lower edge on said plunger and a frusto-conical indentation in said housing below and concentric to said bevelled edge, said indentation designed to accept said bevelled edge to prevent fluid communication between said first and second chambers when said plunger is in contact with said indentation,

means for biasing said plunger into contact with said indentation,

a lightweight armature mounted to the upper end of said plunger and movable within said first chamber,

solenoid means comprising a coil which, when energized, magnetically moves said plunger away from said indentation, and

means for selectively energizing and de-energizing said coil

5,005,804

BALANCED-TORQUE BUTTERFLY VALVE

Blaine W. Andersen, Tempe, and John N. Tervo, Scottsdale, both of Ariz., assignors to Allied-Signal Inc., Morris Township, Morris County, N.J.

Filed Jun. 6, 1990, Ser. No. 534,091
Int. Cl.[5] F16K 1/22
U.S. Cl. 251—215 25 Claims

1 A butterfly valve, comprising

a mounting body defining a flow path for a fluid to be conveyed therethrough;

a valve plate disposed in the flow path and pivotally supported therein,

pivot means for pivotally supporting the valve plate in the path; the valve plate being supported by the pivot means such that the valve plate is translationally movable relative thereto in directions suitable for altering net torque to be exerted on the valve plate by the fluid, and rotationally movable over a range of rotational positions in order to variably permit flow along the path, the pivot means comprising a carrier which is rotatable with the valve

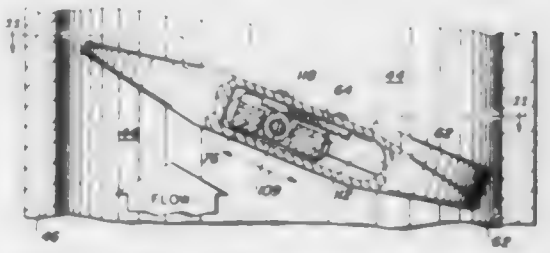


plate over the range of rotational positions, and a shaft which is rotatable relative to the carrier and secured thereto, and

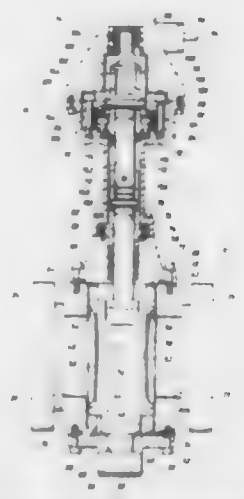
power transmission means secured to the valve plate and shaft for converting rotational movement of the shaft to translational movement of the valve plate



---

5,005,805

LIFT-TURN VALVE AND ACTUATOR ASSEMBLY

Gene A. Morris, New Caney; Deepak C. Patel, and James E. Sternenberg, both of Houston, all of Tex., assignors to Daniel Industries, Inc., Houston, Tex.

Filed Jun. 4, 1990, Ser. No. 532,625
Int. Cl.[5] F16K 5/18, 25/00, 31/528
U.S. Cl. 251—229 13 Claims

1 A lift-turn valve actuator for valves incorporating a valve body and a valve seat, said valve body having therein a valve element with a valve stem extending therefrom and being moved first linearly to space the valve element away from the valve seat, then rotated between opening and closed positions and then moved again linearly to seat the valve element against the valve seat, said valve actuator comprising

(a) a valve actuator housing having an internal actuator chamber disposed therein,

(b) an inner sleeve being disposed in fixed relation with said valve body, said inner sleeve defining opposed cam surfaces forming opposed guide slots each having upper and lower substantially vertically oriented guide slot sections and an intermediate inclined guide slot section, said inner sleeve forming an actuator stem passage centrally thereof,

(c) an outer sleeve being rotatably disposed about said inner sleeve and positioned within said actuator chamber, said outer sleeve defining cam surfaces forming opposed cam

slots each having upper and lower inclined sections and a substantially vertically oriented intermediate section together with smoothly curved transition sections therebetween, said outer sleeve receiving a driving means about a portion thereof and being disposed within a portion of said actuator chamber for operable coupling to an extended driving means.

(d) an actuator stem for connection in nonrotatable relation with said valve stem and being disposed for rotary and linear movement within said actuator stem passage.

(e) cam follower means extending transversely from opposed sides of said actuator stem and being movably received within respective guide slots and cam slots.

(f) means for restraining relative linear movement of said outer sleeve.

(g) means restraining rotary and linear movement of said inner sleeve; and

(h) said internal and external driving means imparting rotary movement to said outer sleeve thus inducing interaction of said cam slots and guide slots with said cam follower means for imparting movement to said cam follower means and said actuator stem, said lower vertically oriented sections of said guide slots of said inner sleeve and said lower inclined sections of said cam slots of said outer sleeve cooperatively inducing linear movement to said cam follower means and actuator stem during a first rotary component of movement of said outer sleeve in one direction said intermediate inclined sections of said guide slots and said vertically oriented intermediate sections of said cam slots cooperatively inducing simultaneous rotary and linear movement to said cam follower means and said actuator stem during a second component of rotary movement of said outer sleeve inn said one direction, whereby said cam follower means and actuator stem are initially moved linearly and then moved linearly and rotationally during rotation of said outer sleeve to the open position, and then moved linearly and rotationally during rotation of said outer sleeve to said closed position and then again moved linearly

CONTROLLED PERCOLATION SYSTEM AND METHOD FOR HEAP LEACH MINING

Richard G. Krauth, 7466 N. 4th St., Fresno, Calif. 93710

Continuation of Ser. No. 116,465, Nov. 3, 1987. This application Jul. 30, 1990, Ser. No. 560,369

Int. Cl.' C22B 3/00

U.S. Cl. 266—101 12 Claims

1 A controlled percolation system for heap leach mining over an ore bed composed of crushed metal-laden ore deposited on an impervious pad comprising

supply means for conducting a leaching solution adjacent to said ore bed,

a plurality of laterally spaced tube means connected to said supply means for receiving said leaching solution therefrom; and

a plurality of pre-calibrated emitter means attached to and positioned in spaced and communicating relationship along each of said tube means for directly and collectively emitting said leaching solution at predetermined flow rates and in overlapping patterns into said ore be at controlled and substantially uniform seepage rates without projecting said leaching solution to any substantial extend above said ore bed and without causing said leaching solution to pond thereon

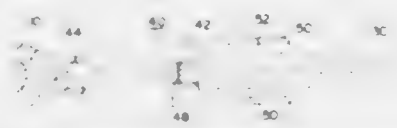
5,005,807



EXTENSION BAR FOR BLAST FURNACE TAP HOLE DRILL

Ronald J. Mathews, Valencia, and Robert T. Woodings, Pittsburgh, both of Pa., assignors to Woodings Industrial Corporation, Mars, Pa.

Filed Apr. 4, 1990, Ser. No. 504,603

Int. Cl.' C21C 5/48

U.S. Cl. 266—271 17 Claims

1 An extension bar for a blast furnace tap hole drill comprising an elongated body portion having a forward end and a rearward end, means at said forward end for securing a drill bit, and a socket at said rearward end having a base and forming a protective sleeve with said body portion extending rearward from said base, said socket having a diameter sufficient to receive a forward end of a drill rod and provide an annular gap between said drill rod and said sleeve and having means at said base for securing said drill rod such that said protective sleeve will shield the forward end of said drill rod and any metal-to-metal interface between said drill rod and said extension bar

---

5,005,808

AIRSPRING END MEMBER AND AIRSPRING ASSEMBLY

Ivan J. Warmuth, II, Wapakoneta, and Steven J. Moeglin, North Canton, both of Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio

Filed Dec. 1, 1987, Ser. No. 127,123

Int. Cl.' B60G 11/26, F16F 9/04

U.S. Cl. 267—64.27 13 Claims

7 An airspring assembly comprising:

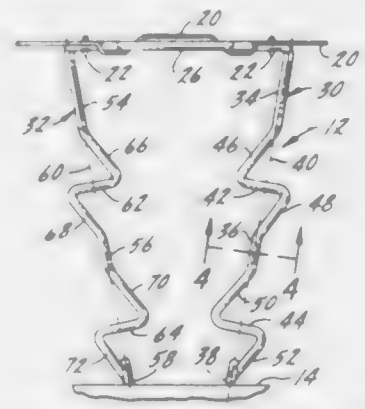
(a) a flexible tubular sleeve having two ends,

(b) a pair of clamping rings; and

(c) a pair of end members; wherein each end member is generally cylindrical in shape having a longitudinal axis and a trough area on its outer periphery, wherein each end of the sleeve is attached to one end member by means of one of the rings and wherein said trough area comprises an inner diameter surface of a pre-determined height, parallel to said axis, having extending from two ends thereof a first pair of radially, outwardly, diverging wall surfaces, and extending from said first pair, a second pair of radially, outwardly, more diverging wall surfaces

---

5,005,809



SPRING ELEMENT FOR A FOUNDATION UNIT AND FOUNDATION UNIT EMPLOYING A SPRING ELEMENT

Lonnie R. Harmon, Carthage, Mo., assignor to Steadley Company, Carthage, Mo.

Filed Oct. 30, 1989, Ser. No. 428,589

Int. Cl.' F16F 3/02, A47K 13/18, 11/04

U.S. Cl. 267—103 17 Claims

1 A spring element for a foundation unit of the type having a wire top bearing structure and a rigid bottom substructure, a plurality of the spring elements being disposed in spaced relationship between the top bearing structure and the bottom substructure, the spring element comprising

a a top portion and a pair of spaced support legs extending from said top portion and converging toward one another,

b said top portion including means for attachment to the wire top,

c each support leg comprising a series of spaced support segments, said support segments of each support leg lying generally in a single plane, adjacent support segments being oppositely directed from one another and at least one of said support segments being downwardly inclined,

d a torsion segment located between adjacent ones of said support segments at the ends thereof, each said torsion segment extending generally perpendicular to said single plane, each torsion segment comprising a generally straight wire member with the center of each torsion segment of each said support leg being located generally in said single plane, and

e means interconnecting each torsion segment and said adjacent support segments.

5,005,810

FLUID-FILLED CUSHIONING DEVICE HAVING SEALING ARRANGEMENT FOR EASY ASSEMBLING

Kouji Sawada, Toyota; Yasuhiro Miya, Kakogawa; Masato Tanabe, Toyota; Takanobu Nanno, Kasugai, and Shinji Miyakawa, Komaki, all of Japan, assignors to Tokai Rubber Ind., Ltd. and Toyota Jidosha Kabushiki Kaisha, both of, Japan

Filed Jul. 5, 1988, Ser. No. 215,305

Claims priority, application Japan, Jul. 9, 1987, 62-171665; Jul. 28, 1987, 62-115625

Int. Cl.' F16F 9/34

U.S. Cl. 267—140.1 11 Claims

1 A fluid-filled cushioning device connected to two support members for damping vibrations applied therebetween, comprising

an inner sleeve through which one of said two support members is inserted for attachment to the inner sleeve,

a cylindrical elastic body mounted on an axially intermediate portion of said inner sleeve, said elastic body being provided at its outer circumferential portion with orifice defining means which has an orifice formed therethrough

a pair of annular elastic members each having an integrally formed inner retainer member and an integrally formed outer sleeve which are spaced apart from each other in an axial direction of the elastic members, said pair of annular elastic members being mounted on said inner sleeve such that said inner retainer member is press-fitted in a corresponding one of axial end portions of said inner sleeve while said orifice defining means of said cylindrical elastic body is sandwiched by and between corresponding axial end faces of said outer sleeves of said pair of annular elastic members, in said axial direction of the elastic members

a cylindrical bracket which is mounted on outer circumferential surfaces of said outer sleeves of said pair of annular elastic members and to which the other of said two support members is fixed, said bracket forcing said outer sleeves of said pair of elastic members against each other via said orifice-defining means in said axial direction of the elastic members, said inner sleeve, said cylindrical elastic body and said annular elastic members cooperating with each other to define two fluid chambers which are separated from each other by said elastic body and which communicate with each other through said orifice, said fluid chambers being filled with a non-compressible fluid and

an axial dimension of said each annular elastic member before mounted on said inner sleeve being determined to permit said each annular elastic member to be axially compressed upon mounting of said pair of annular elastic members on said inner sleeve, so that said outer sleeves are urged against said orifice-defining means with a force sufficient to maintain fluid tightness between said pair of annular elastic members and said orifice-defining means, whereby the mounting of said cylindrical bracket on said outer sleeves of the elastic members may be effected in a condition that said two fluid chambers are filled with said non-compressible fluid; and

wherein said inner sleeve and said cylindrical elastic body having said orifice-defining means constitute a first inter-

mediate component prepared in the process of manufacture of said device, while said pair of annular elastic members are prepared as second intermediate components which are mounted on said inner sleeve of said first intermediate component, within a mass of said non-compressible fluid, said cylindrical bracket being mounted on said outer sleeves of said second intermediate components after an assembly of said first and second intermediate components is removed from said mass of the non-compressible fluid

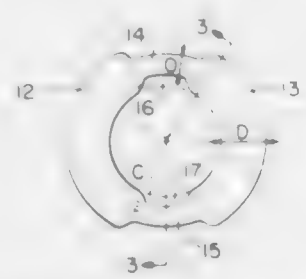
5,005,811



RESILIENT ROLLING TORUS FOR A LOAD-CUSHIONING DEVICE

Pamela J. Harrison, Pleasant Lake, and Richard D. Hein, Wabash, both of Ind., assignors to GenCorp Inc., Fairlawn, Ohio

Filed Oct. 2, 1989, Ser. No. 416,184

Int. Cl.[5] F16F 7/00

U.S. Cl. 267—220 5 Claims

1 A cushioning device comprising

(a) at least one pair of concentrically disposed, rigid conical surfaces in spaced relation, and

(b) a resilient, toroidally-shaped elastomeric ring disposed freely between the conical surfaces for rolling, compressive engagement with the surfaces as they come closer together, the ring having a pair of similar opposing longer toroidal segments of uniform circular cross-sections, connected by a pair of similar opposing shorter toroidal segments of uniform circular cross-sections, the shorter toroidal segments being concentric with the two longer toroidal segments about the circular axis of the ring and having a substantially shorter arcuate length than that of the longer toroidal segments, the shorter toroidal segments having cross-sections which are substantially smaller than those of the longer toroidal segments, such that recesses are formed between the ring and adjacent conical surfaces in the areas of the shorter toroidal segments

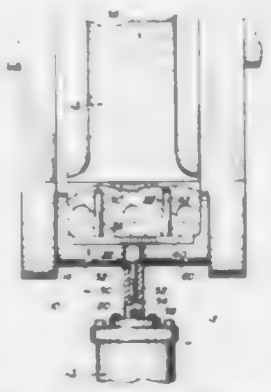
PNEUMATIC BEARING JACK AND ADAPTORS

M. D. Robertson, Rte. 1, Box 456, Big Spring, Tex. 79720

Filed Sep. 25, 1989, Ser. No. 412,015

Int. Cl.[5] B66F 3/00



U.S. Cl. 269—47 3 Claims

1 In a large internal combustion engine and a jack, wherein the large engine has a piston rod with a journaled end, the journaled end of the rod has a face with bolt holes formed therein, the combination with said rod and jack of an improved adaptor that is interposed between the jack and the journaled end of the piston rod,

said jack has a main body and a piston shaft reciprocatingly received therein and extending therefrom, said adaptor has a main body in the form of a plate member, said plate member has opposed sides, one side of said plate member has an extension member affixed thereto and extending therefrom and the other side of said plate member has a plurality of upstanding rod engaging pins affixed thereto and extending therefrom in opposition to said extension member,

the marginal free end of the piston shaft and the extension member of said adaptor telescopingly engage one another in a removable and slidable manner, said extension member has a boss adjacent said plate member that is seated on the terminal end of the piston shaft, and the free marginal end thereof is received within a counterbore formed within the marginal terminal end of the shaft, said upstanding pins have opposed ends with one end being affixed to the plate member and the other end freely extending therefrom, said upstanding pins have a free marginal end received within the bolt holes of the rod journaled end, said other side of said plate member engages the face of the rod end, said upstanding pins are equally spaced from said extension member,

whereby, the plate member and the upstanding pins are free of the crankshaft journal as the rod end is engaged and lifted from the engine crankshaft by said adaptor and said jack.

5,005,813

RAPID ACTION CAM-LOCK CLAMP

Joseph W. Lawrence, R.D. 4, Box 184, Saegertown, Pa. 16433

Filed May 15, 1990, Ser. No. 523,420

Int. Cl.[5] B25B 1/24

U.S. Cl. 269—236 19 Claims

1 A rapid acting adjustable clamp for controllably exerting clamping forces by a single cam actuated locking action, comprising

(a) a base member having a leg at each of two ends of a central bridge member to enclose a clamping plane with orthogonal X and Y axes, said bridge member having a first type of dovetail track formed along one edge thereof,

(b) a slideable locking member having cam actuated locking means with locked and released positions, and having a second type of dovetail track formed along one edge thereof engaged with said first type of dovetail track for slidable X-axis adjustability along said bridge member,

(c) a workpiece engaging member carried by and threadedly depending from said cam actuated locking means for rotatable Y-axis adjustability,

(d) whereby said workpiece engaging member may be rapidly adjusted along said X-axis by moving said slideable locking member relative to said base member and said workpiece engaging member may be finely adjusted along said Y-axis by said rotatable adjustment, both with said cam actuated locking means in a released position,

and said workpiece engaging member may be coarsely adjusted in part along said Y-axis by said cam actuated locking means,

and said cam actuated locking means locking said dovetail engaged members in its locked position

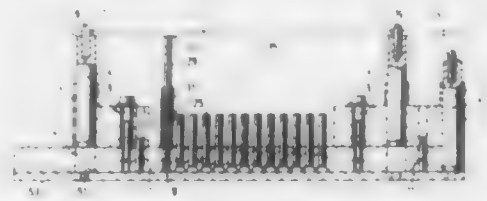
PRODUCT CARRIER FOR CIRCUIT BOARDS



Hans Gumbert, Sinn, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Continuation of Ser. No. 713,226, Apr. 18, 1985, abandoned. This application Jul. 23, 1986, Ser. No. 890,789

Claims priority, application Fed. Rep. of Germany, Mar. 20, 1984, 3410130

Int. Cl.[5] B23A 3/00

U.S. Cl. 269—309 11 Claims

1 A product carrier for circuit boards which are subjected to an operation while on this carrier and which have locating holes for aligning the board with respect to the carrier, comprising

a base plate, and

a plurality of locating pins provided on the base plate for insertion in the locating holes to fix a circuit board on the carrier in a given position and at a given height with respect to said plate, and

further comprising means for lowering the locating pins out of their locating holes individually with respect to the base plate,

a plurality of mounting areas on said base plate between said locating pins, and

a plurality of supporting pins between said locating pins and arranged in positions with respect to respective mounting areas, from which area these pins extend vertically up to the lower side of a circuit board carried on the carrier to support said board, said supporting pins defining a supporting plane and being arranged to extend to the lower side of the circuit board between any components which already have been mounted to said board

APPARATUS AND METHOD FOR INDIVIDUALLY PRINTING SIGNATURES DURING DELIVERY TO A BINDING LINE CONVEYOR

Gunnar Auksi, Palatine, Ill., assignor to R. R. Donnelley & Sons Company, Chicago, Ill.

Continuation of Ser. No. 224,332, Jul. 26, 1988, abandoned. This application Feb. 20, 1990, Ser. No. 483,333

The portion of the term of this patent subsequent to Sep. 28, 1990, has been disclaimed.

Int. Cl.[5] B41F 13/54

U.S. Cl. 270—1.001 49 Claims

1 An apparatus for individually printing signatures during delivery to a binding line conveyor, comprising

a feeding station for receiving a plurality of signatures to be delivered to said binding line conveyor,

signature transfer means extending from said feeding station to said binding line conveyor and adapted to receive one signature at a time from said plurality of signatures at said feeding station and to transfer said signatures to said binding line conveyor, and

means for individually printing on both sides of said signatures in a direction perpendicular to backbones of said signatures upstream of said binding line conveyor

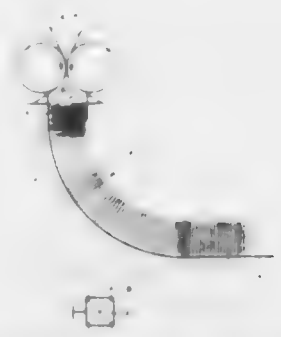
INTERFOLDER DEVICE WITH DYNAMIC PRESSURE SECTION CONNECTED AT THE OUTLET SIDE OF THE FOLDING ROLLERS



Kurt Stemmler, Neuwied; Ludwig Wecker, Dusseldorf, and Egon Marth, Neuwied, all of Fed. Rep. of Germany, assignors to Winkler & Dunnebier Maschinenfabrik und Eisengiesserei KG, Neuwied, Fed. Rep. of Germany

Filed May 16, 1989, Ser. No. 352,272

Claims priority, application Fed. Rep. of Germany, Jun. 13, 1988, 3820032

Int. Cl.[5] B41L 1/32

U.S. Cl. 270—39 8 Claims

1 An interfolder device for folding sheet material in a zig-zag manner comprising,

a pair of counter rotating rollers for receiving the sheet material,

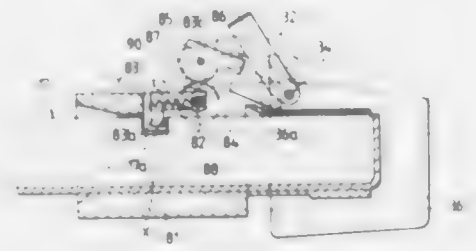
an elongated guide track disposed adjacent to said rollers for receiving, supporting and conveying the sheet material as it is folded, and,

dynamic pressure means coupled to said guide track for providing a vacuum brake to the sheet material as it is conveyed along said guide track

5,005,817
SHEET FEEDING MECHANISM AND METHOD FOR AN ELECTROPHOTOGRAPHIC PRINTER

Mark H. Ruch; Roger Q. Paubel, and Patricia J. Naron, all of Houston, Tex., assignors to Compaq Computer Corporation, Houston, Tex.

Filed Jun. 2, 1989, Ser. No. 360,395
Int. Cl.[5] B65H *3/44*
U.S. Cl. 271—9 25 Claims



1 A paper handling apparatus for an electrophotographic printer, comprising

paper feeding means for contacting a selected one of a plurality of stacks of sheets of paper and removing a selected one of said sheets of paper from said selected stack of sheets of paper, said paper feeding means being controllably moveable along a preselected substantially vertical path, and

a plurality of paper receiving trays, each of said trays being adapted for receiving a stack of sheets of paper, said plurality of trays being generally vertically arranged relative to one another and adapted for general horizontal movement between a first selected position and a second unselected position, wherein said first selected position intersects the substantially vertical path of said paper feeding means,

said paper feeding means including a single motor for both removing a selected one of said sheets of paper from said selected stack of sheets of paper and for moving said paper feeding means along the preselected substantially vertical path, second shaft being connected together through a one-way clutch

locking means for locking said sheet cassette against removal from the housing in response to movement of said sheet

attracting means toward said sheet cassette for feeding sheets from said sheet cassette

Patent Not Issued For This Number

5,005,818
SHEET FEED DEVICE HAVING A SHEET CASSETTE LOCKING MECHANISM

Takayuki Hayashi, Nagoya, and Hideo Yoshihara, Kasugai, both of Japan, assignors to Brother Kogyo Kabushiki Kaisha, Japan

Filed Dec. 19, 1989, Ser. No. 452,413
Claims priority, application Japan, Dec. 21, 1988, 63-165921[U]; Jan. 25, 1989, 1-7490[U]
Int. Cl.[5] B65H *3/08*
U.S. Cl. 271—107 18 Claims

1 A sheet feed device for feeding a sheet in housing, comprising:

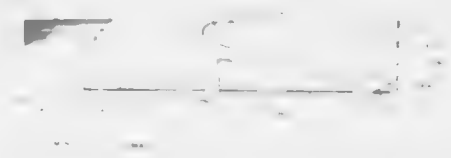
a sheet cassette storing a stack of sheets therein and removably positioned in the housing,

sheet attracting means for attracting one of the sheets from said sheet cassette, said sheet attracting means being movable toward and away from said sheet cassette; and

5,005,820
PAPER TRAY WITH LEAF SPRING

Michael C. Leembuis, Nicholasville, Ky., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Jun. 23, 1989, Ser. No. 370,923
Int. Cl.[5] B65H *1/08*
U.S. Cl. 271—127 4 Claims



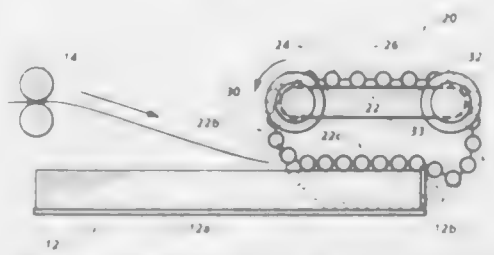
1 A sheet holding mechanism for use in a processing machine, such as a copier or printer, comprising

bin assembly means for holding a stack of print-receiving material,

a movable tray located within said bin assembly means for receiving said stack;

sheet feeding means for moving the top sheet from said stack into said machine;

leaf spring means located within said bin assembly means for applying a force to said movable tray to lift said tray to a position at which the top sheet on said tray is in a correct position for being fed into said machine by said sheet feeding means, and



movable support means for said leaf spring means for moving in a first dimension to adjust the spring constant of said leaf spring means to provide a constant normal force between said top sheet and said sheet feeding means regardless of the size and density of sheets on said movable tray

5,005,821
LOOSE ELEMENT SHEET STACKING ASSISTANCE SYSTEM

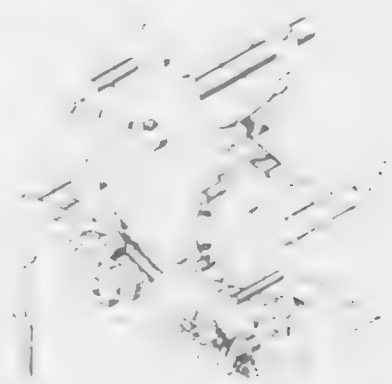
William R. Burger, Fairport, N.Y., assignor to Xerox Corporation, Stamford, Conn.

Filed May 2, 1990, Ser. No. 517,797
Int. Cl.[5] B65H *31/28*
U.S. Cl. 271—198 12 Claims

1 In a sheet stacking apparatus for a printer or copier in which sheets are sequentially fed by sheet output means into a stacking tray and against a stacking registration wall for stacking with a sheet stacking assistance and control system; the improvement in said sheet stacking assistance and control system comprising

an endless chain-like lose element member,

supporting means providing for endless rotation of said chain-like lose element member,



said supporting means for partially supporting said endless chain-like lose element member above said stacking tray so that a first integral portion of said endless chain-like lose element member hangs downwardly from said supporting means towards said stacking tray in the path of said sheets being sequentially fed by said sheet output means, and so that a second integral portion of said endless chain-like lose element member lies on top of any sheets stacking in said stacking tray, and

driving means for endless rotation of said chain-like lose element member so that continuously said first portion of said chain-like lose element member is moving downwardly towards said stacking tray, and said second portion of said chain-like lose element member is being dragged over the top of any sheets stacking in said tray to drag the top sheet towards said stacking registration wall.

5,005,822
SHEET DELIVERY

Reinhold Max, Bad Rappenau-Grombach, and Karl-Heinz Filsinger, Wiesloch, both of Fed. Rep. of Germany, assignors to Heidelberger Druckmaschinen AG, Heildelberg, Fed. Rep. of Germany

Filed Oct. 27, 1989, Ser. No. 427,796
Claims priority, application Fed. Rep. of Germany, Oct. 27, 1988, 3836571
Int. Cl.[5] B65H *31/04*
U.S. Cl. 271—213 7 Claims

1 Delivery for sheets being delivered by transport means in a conveying direction from a sheet-processing machine and being deposited alternatively in a pile and on catching arms of a catching device, the catching arms being temporarily moveable out of a basic position into a catching position above the pile, including stops for respective leading edges of the sheets, the stops being disposed at the pile and being flappable away from the pile in the conveying direction, and a transmission system for moving the catching arms from the basic position into the catching position and from the catching position into the basic position, and for flapping-out the stops against the action of a stop spring in the conveying direction and into a release position thereof and in an opposite direction into a stop position on the pile by means of a common actuating element, the transmission system being constructed so as to flap out the stops into the release position immediately after the catching arms have been moved into the catching position, comprising a dead-center spring swivellable with respect to a swivel shaft and articulatingly connected to the transmission system, said dead-center spring, in a first end position of the transmission system, holding the catching arms in the basic position against the action of at least one tension spring and, in a second end position of the transmission system, holding the stops in the release position thereof against the action of the stop spring.

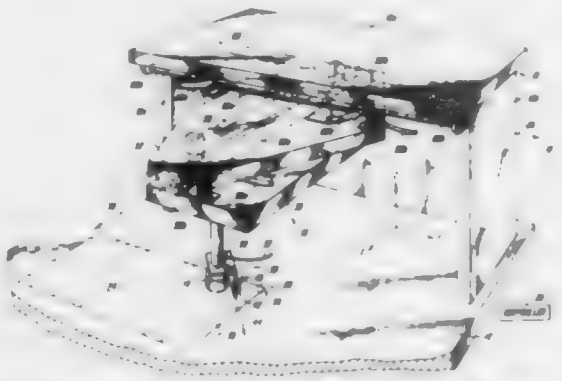
CORNER ALIGNMENT SYSTEM

Donald C. Fyler, Cambridge; Edward A. Van Duyne, Framingham, and Michael G. Kelly, Arlington, all of Mass., assignors to The Charles Stark Draper Laboratory, Inc., Cambridge, Mass.

Filed Jul. 6, 1989, Ser. No. 376,391
Int. Cl.[5] B65H *7/02*
U.S. Cl. 271—228 10 Claims

1 Apparatus for locating a corner of a workpiece on a substantially planar worksurface, said worksurface being characterized by a first reflectivity and said workpiece being characterized by a second reflectivity, comprising



A gripper overlying said worksurface and including means for selectively gripping said workpiece, and an associated two axis transport assembly affixed thereto, said transport assembly including means for maintaining the angular orientation of said gripper with respect to said worksurface substantially constant, said means being responsive to

applied position control signals for selectively positioning said gripper with respect to said worksurface in the direction of a first reference axis and for selectively positioning said gripper with respect to said worksurface in the direction of a second reference axis, said first and second axes being parallel to said worksurface.

B. means for directing radiation toward said workpiece and said worksurface from above said worksurface,

C. first sensor affixed to said gripper and including means for detecting said radiation reflected from portions of said workpiece and said worksurface and underlying a first region associated with said gripper, and for generating a first sensor signal representative thereof,

D. second sensor affixed to said gripper and spaced apart in

both said first and second direction from said first sensor and including means for detecting said radiation reflected from portions of said workpiece and said worksurface underlying a second region associated with said gripper, and for generating a second sensor signal representative thereof, and

E. control means responsive to said first and second sensor signals for translating said gripper on said worksurface in the direction of said first reference axis until a transition in the intensity of detected radiation is identified by said first sensor, and in the direction of said second reference axis until a transition in the intensity of detected radiation is identified by said second sensor, whereby said gripper overlies a predetermined corner of said oriented workpiece.

METHOD OF AVOIDING A CONTINUOUS CLENCH POSITION OF THE HAND AND FINGERS

Herman J. Eichel, 2571 Clarion Ct., Columbus, Ohio 43220

Filed Jun. 21, 1990, Ser. No. 541,337

Int. Cl.[5] A61H 1/02, A61F 13/44, A63B 5/00

U.S. Cl. 272—67 6 Claims

1. A method of avoiding a continuous clench position of the hand and fingers of a person afflicted with a disease such as arthritis while the person is sleeping to reduce pain and discomfort in the hand and fingers after the person awakes, comprising the steps of forming a generally cylindrical resilient body of spongy material having an axial length approximately equal to the width of the person's hand and a cross-sectional diameter between one and two inches, positioning the resilient body within the palm of the person's hand with the body axis extending laterally across the hand and in a pressure position to be engaged by the tips of the fingers during unconscious flexing of the fingers toward a clenching condition, attaching the resilient body to the person's hand with a flexible material connected to the body and extending laterally around the person's hand, retaining the resilient body in the pressure position within the palm with a flexible material connected to the body and extending around the person's wrist to prevent the body from slipping off the person's fingers, and maintaining the resilient body in the pressure position while the person is sleeping.

5,005,825

INTEGRAL LEG BRACE AND PEDAL FOR THE HANDICAPPED

Lou Fogel, 33 Hutchinson Ct., Great Neck, N.Y. 11027

Continuation-in-part of Ser. No. 926,209, Nov. 3, 1986, abandoned. This application Jan. 24, 1987, Ser. No. 65,780

Int. Cl.[5] A63B 23/02

U.S. Cl. 272—73 1 Claim

1. An integral leg brace and pedal apparatus adapted to convert a standard pedal driven exercise machine into a machine that can be used by the handicapped comprising an elongate pedal plate formed of a forward pedal shelf and a rearward heel platform, said plate having a step-like bend adapted to place the shelf and heel platform on spaced parallel planes with the pedal shelf disposed relatively below the heel platform, a pedal including a threaded pedal axle, said pedal fixedly attached to the pedal shelf with the pedal axle thereof extending laterally from one side of the pedal shelf and adapted to engage a respective pedal crankarm of the machine, a calf support of essentially semi-cylindrical configuration, said calf support extending relatively upwardly from the rearward edge of the heel platform, and strap means carried on the calf support for holding the lower leg within said calf support semi-cylindrical configuration such that as the lower torso is exercised, the lower leg remains within said configuration, a hub fixedly attached to and extending laterally from the pedal shelf, said hub being placed on the pedal shelf so as to be at a location that is substantially opposed to said axle, a spherical bearing attached to said hub for rotation therewith, a pair of rigid poles, each on one end being attached to said bearing for cojoint rotation therewith, and the other end of said pole being accessible to the exerciser, whereby simultaneous use of said pedals and said poles contributes to linked complex articulation of the upper and lower torso.

5,005,826

NECK EXERCISER DEVICE AND METHODS

John H. Merrick, 1465 Hooksett Rd., Hooksett, N.H. 03102

Continuation-in-part of Ser. No. 940,963, Dec. 12, 1986, abandoned. This application Jan. 3, 1989, Ser. No. 293,745

Int. Cl.[5] A63B 23/025

U.S. Cl. 272—94 7 Claims

1. A method of exercising muscles of the cervical spine comprising

providing an inflated hollow airtight resilient sphere free of liquid and having a flexible skin with hand grip means attached thereto and pressure observing means for observing the pressure in said sphere, said sphere being inflated to at least 2 pounds per square inch pressure,

placing said sphere against a substantially vertical surface with one hand holding said hand grip means,

placing one's head against said sphere and pressing said sphere against said surface, and

while continuing to so press the head against said sphere exercising selected muscles of the cervical spine by rotating the head in all directions of motion.

LEAPER'S OBSTACLE

Gary A. Steinbrecher, Box 101, Scottsbluff, Nebr. 69363-0101

Filed Feb. 26, 1990, Ser. No. 484,814

Int. Cl.[5] A63B 5/04

U.S. Cl. 272—102 1 Claim

1. A leaper's segmented obstacle bar comprising two elastic distal end segments each having a buckle for adjustably looping said end segments to each of a pair of vertical uprights, and a third central segment comprised of soft material having an elastic portion at one end and having a buckle at its other end for providing a length adjustable loop; each said end segment having a magnetic catch and said third central segment having a piece of nonsharp ferrous material at each of its ends for engagement with each respective magnetic catch of said distal end segments, thereby providing a magnetically united segmented barrier between a pair of conventional vertical uprights, whereby the bar separates into unconnected segments during an unsuccessful leap.

HIGH JUMP RIBBON ASSEMBLY

Roland Sauerbrey, 94 Bruehlstrasse, in 9320 Arbon, Kanton Thurgau, Switzerland

Filed Jul. 2, 1990, Ser. No. 546,718

Int. Cl.[5] A63B 5/02

U.S. Cl. 272—103 20 Claims

1. A high jump ribbon assembly which is comprised of a fabric ribbon, and at least two brackets, wherein

(a) said fabric ribbon comprises a textile base material and attached to at least two separate portions of said textile base material, two separate portions of fibrous fastener fabric, wherein

1. said textile base material has a width of from about 1 to about 3 centimeters and a thickness of from about 0.5 to about 2 millimeters,

2. each of said portions of fibrous fastener fabric has a length of from about 2 to about 7 inches,

3. each of said portions of fibrous fastener fabric has a width of from about 1 to about 3 centimeters,

4. said fabric ribbon is comprised of at least two different textile materials,

(b) each of said brackets has attached thereto at least two separate pieces of complementary fibrous fastener fabric, wherein one of said pieces is loop fibrous fastener fabric, and the other of said pieces is complementary hook fibrous fastener fabric, and

(c) each of said brackets comprises means for adjustably securing said bracket to a standard.

5,005,829

EXERCISE MACHINE FOR PATIENTS CONFINED TO BED

Anthony A. Caruso, 1130 Commodore Dr., Clearwater, Fla. 34643

Filed Nov. 14, 1989, Ser. No. 436,168

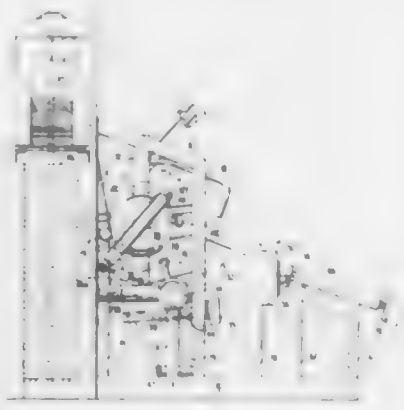
Int. Cl.[5] A63B 21/00

U.S. Cl. 272—130 17 Claims

1. An exercise device for persons confined to a bed, comprising

a base member configured to fit under a bed,
an upstanding column member secured to said base member,
a substantially horizontal arm member disposed in cantilevered relation to said column member,
a pair of handle members,
said handle members being pivotally mounted to opposite sides of said arm member for reciprocation in a substantially vertical plane,
resistance means disposed in interconnecting relation between each of said handle members and said arm member, said resistance means being disposed on opposite sides of said arm member,
locking means for locking said device to a bed when in use and a handle member stabilizing means including a bell crank member pivotally secured to an underside of said arm member, and a pair of stabilizing link members, each link member in said pair of stabilizing link members being disposed in interconnecting relation between each handle member and said bell crank member on opposite sides of said arm member for maintaining said handles in a substantially vertical plane.

5,005,830



MACHINE FOR EXERCISING AND/OR TESTING MUSCLES OF THE LOWER TRUNK

Arthur A. Jones, 1155 NE. 77th St., Ocala, Fla. 32670

Division of Ser. No. 236,367, Aug. 25, 1988, Pat. No. 4,902,009, which is a continuation-in-part of Ser. No. 60,679, Jun. 11, 1987, Pat. No. 4,836,536, which is a continuation-in-part of Ser. No. 181,372, Apr. 14, 1988, Pat. No. 4,834,365. This application Oct. 18, 1989, Ser. No. 422,905

Int. Cl.[5] A63B 21/00

U.S. Cl. 272—134 14 Claims

1. Apparatus for exercising the muscles of the lower trunk of a human body, the apparatus comprising in combination, a seat for receiving a person in sitting position, means for restraining against movement the pelvis of a person seated on said seat, a movement arm extending above the seat and being mounted for pivotal movement relative to the seat about a generally horizontal axis, said movement arm having a portion engageable by a trunk portion of the body for applying with the muscles of said lower trunk a force to the movement arm to pivot the movement arm about said axis, and resistance means connected to the movement arm to create resistance to movement of the movement arm, and means on the movement arm for fixing the positions of the arms and head of the body relative to the movement arm during movement of the movement arm, said means on the movement arm including a headrest mounted to the movement arm for fixing the position of the head relative to the movement arm.

ATHLETIC EQUIPMENT FOR REHABILITATION

Tsutomu Hara, 20-15, Kamisoshigaya 3-chome, Setagaya-ku, Tokyo, Japan

Filed Aug. 1, 1988, Ser. No. 226,543

Int. Cl.[5] A63B 21/04

U.S. Cl. 272—136 19 Claims

1. Athletic equipment for rehabilitation, comprising
a support means adapted to be mounted to a supporting surface,
a first arm pivotally mounted to the support means for pivotable movement in a first direction and means for mounting said first arm and said support means to said support surface for co-rotation of the first arm and support means in a second direction different from the first direction of pivotal movement,
a second arm coupled to said first arm so as to be capable of rotation in a plane oblique to the plane containing the first arm, and
at least one holder, graspable by a user to pivot and/or rotate at least one of the first and second arms in exercising movement, mounted on said second arm, and
means for imparting spring bias to the holder during pivotal movement of the first arm.

PORTABLE ABDOMINAL EXERCISER

Martin A. Van Der Hoeven, 2726 Loker Avenue W., Carlsbad, Calif. 92008

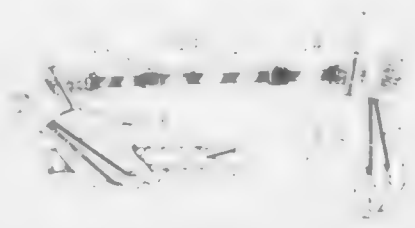
Filed Aug. 18, 1989, Ser. No. 395,537

Int. Cl.[5] A63B 21/02

U.S. Cl. 272—137 10 Claims

1. An portable exercise device comprising
an elongate and generally arcuate shaped bar,
the width of said bar at its center being shaped and dimensioned to fit and press against a user's abdomen,
the length of said bar being approximately the shoulder width of the user,
handgrip means attached near both ends of the bar in such position as to enable the user to press the convex side of the arcuate bar against his abdomen,
a tensioning means spanning the concave side of the arcuate bar and horizontally disposed across the center point of the bar, and
said tensioning means being attached to the bar on both sides of the center point to restrain flexion of the bar.

5,005,833



TENNIS TRAINING AID

Joseph F. Groveman, and Grant D. Groveman, both of 500 E. Amado, Palm Springs, Calif. 92262

Filed Oct. 30, 1989, Ser. No. 428,911

Int. Cl.[5] A63B 69/38

U.S. Cl. 273—29 A 6 Claims

1. A tennis training aid for attachment to the wrists of a user to train for the driving of a tennis ball comprising
first and second similar band means,
means for securing each of said band means in place when wrapped around a separate one of said wrists,
a looped thong means extending from each of said band means for securing one of the fingers of the hand associated with each of said wrists to said band means, thereby restraining said hands against palmar flexion, and
strap means for joining said first and second band means together, whereby the arms of a user are caused to move together in preparing for and executing a tennis stroke.

5,005,834

MULTI-FRAME RACKET

Matthew F. Ferrari; Harry M. Ferrari, and John M. Shallenberger, all of Pittsburgh, Pa., assignors to Ferrari Importing Company, Pittsburgh, Pa.

Filed Mar. 16, 1990, Ser. No. 495,231

Int. Cl.[5] A63B 49/02

U.S. Cl. 273—73 C 23 Claims

1. In a sports racket having a handle, a multi-frame comprising
(a) a primary frame having a pair of opposite sides and defining a throat connected to said handle and a hoop-shaped head connected to said throat and encompassing an open region, said head having a plurality of stringing holes defined therethrough for attaching stringing to said head and across the open region, said stringing holes being aligned in a common plane lying between said opposite sides of said primary frame,
(b) at least one supplementary frame disposed solely in spaced relation outwardly from one of said opposite sides of said primary frame and being coextensive with at least a portion of said primary frame, and
(c) means disposed between said supplementary frame and said one of said opposite sides of said primary frame for rigidly interconnecting said supplementary frame to said coextensive portion of said primary frame at said one opposite side thereof for increasing the stiffness of said primary frame to thereby reduce axial and torsional deflections thereof upon striking a ball by the stringing across the open region of said primary frame head.

BOARD GAME
Kyle A. Ryan; Michael Ackerman; Bruce Hale, and Ward Payne, all of Seattle, Wash., assignors to Turning the Tables, Inc., Seattle, Wash.
Filed Dec. 15, 1989, Ser. No. 451,448
Int. Cl.[5] A63F 3/00
U.S. Cl. 273—240 5 Claims

1 A method of playing a game in which the players simulate being waitpersons in a restaurant, the game including the taking and remembering of lists of food dishes for later recitation and confirmation as to accuracy, comprising the steps of

providing a board having a playing surface divided into sections, each section having table spaces marked thereon corresponding to tables in a restaurant,

providing a set of table cards corresponding to each of the table spaces,

providing a plurality of order sheets, said order sheets sized such that they are capable of being covered by said table cards, and

providing a plurality of markers, one marker associated with each player, providing a menu containing food items, assigning each section and its corresponding table spaces to a different player, placing said markers on each of said assigned section, moving said markers on said playing surface a first players marker and when is moved to a predetermined space within a section associated with that player permitting an opposing player to order a plurality of food items from said menu, said first player taking the food order by marking ordered food items on an order sheet, and covering said order sheet with a table card, and said first player reciting said food order back

DART QUARTERBACK
Brian A Bauer, 321 W. Main St., Hartford City, Ind. 47348
Filed Mar. 30, 1990, Ser. No. 502,244
Int. Cl.[5] F41J 3/00
U.S. Cl. 273—408 1 Claim

1 A dart football comprising

(a) singular, circular dart board target means for receiving a multitude of at least 8 darts therein,

(b) said dart board consists of centralized, donut shaped area

as a means for scoring a plurality of darts therein, to attain a point,

(c) center, circular, donut hole, of said centralized donut shaped area, being centermost of said board and encompassing the bullseye, wherein pierced by each, and every dart therein results in a point or touchdown, whereas,

d) four other circular areas exist, in relation to said center, circular donut hole, in relation to point or touchdown value results, and approximate circular diameters, whereby located toward the outermost parameters of said board at twelve, three, six, and nine o'clock, as each, and every dart within said other, circular areas, also results in a point or touchdown,

(e) each player throws at least 8 darts, and less than 15 darts, successively, for 4 rounds or quarters, to complete an entire game, as each players score is totalled after each round or quarter, unless a tie results after the fourth round or quarter, whereby overtime rounds or quarters continue, one by one, until a winner is declared,

(f) competition by a solo player is possible on said board by competing against a prescribed, equal number of points or touchdowns per round or quarter, and thus the sum per game, whereby said prescribed equal number of points or touchdowns represents between 33-40 % of the total mount of darts thrown in single round or quarter

FISHING CADDY APPARATUS

Ernest L. King, 2108 Squire Rd., Rock Hill, S.C. 29730, and Lee R. Durham, Rte. 1, Box 26 T.F., Iron Station, N.C. 28080

Filed Feb. 26, 1990, Ser. No. 485,000

Int. Cl.' B62B *1/12, 1/26*

U.S. Cl. 280—47.19 6 Claims

1 A fishing caddy apparatus comprising, in combination,

a central support post orthogonally mounting a lower rectangular framework at a lowermost end thereof directed forwardly of the support post, and

an upper rectangular framework directed rearwardly of the support post mounted to an upper terminal end of the support post, and

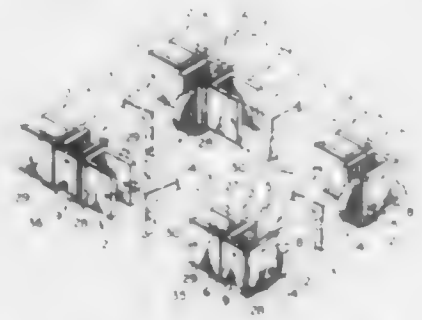
an axle mounted to a rear side of the lower rectangular framework including a plurality of wheel members mounted to the axle to permit transport of the apparatus, and

a handle means pivotally mounted to a rear side of the upper rectangular framework, and

a spring locking clip mounted to a rear side wall of the support post, and

the handle means rotatably mounted to the upper rectangular framework for selective engagement with the clip, and

wherein the handle means comprises a handle collar rotatably mounted to the rear side of the upper rectangular framework, and a rotatably lock member to selectively lock the collar in a predetermined relationship relative to the rear side of the upper rectangular framework, and



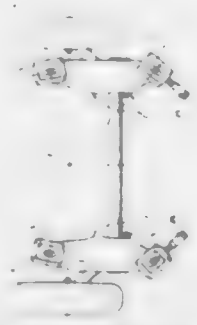
wherein the handle means further includes a handle leg mounted to an elbow, the elbow rotatably mounted to a further handle leg, the further handle leg mounted to the elbow at a rear end of the further handle leg and to the handle collar at a forward end of the further handle leg, and a handle elbow lock member to selectively and rotatably lock the elbow relative to the further handle leg, and the handle leg including an illumination member mounted thereto, with a switch member mounted to the handle leg

5,005,848

MODULAR CABINET SUPPORT

Paul Cornell, 4426-97 St., South Edmonton, Alberta, Canada (T5E 5R9)

Filed Sep. 25, 1989, Ser. No. 411,647
Claims priority, application Canada, Apr. 7, 1989, 596111
Int. Cl.' B62B 3/02
U.S. Cl. 280—79.11 8 Claims



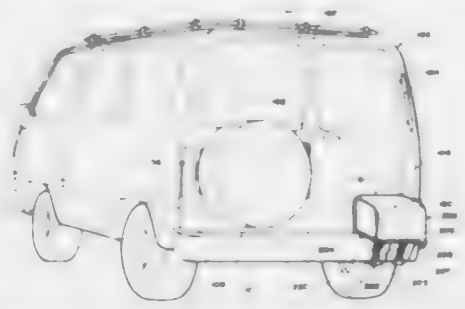
1 A modular dolly having a dolly frame with an upper surface for supporting objects, the frame having at least one corner formed by a pair of interconnected bracket means, each bracket means being substantially U-shaped as viewed generally normal to the upper surface of the frame such that each bracket means includes a base end, two side arms and an open end opposite said base end, the base end of one said bracket means being interconnected with a side arm of the other bracket means such that the open ends open away from and perpendicular to each other, wheel means rotatably mounted in one said bracket means for supporting the dolly, and elongated channel means extending from and connected to each bracket means to define a side and an end of the dolly adjacent said corner

5,005,849

STEERING DEVICE FOR THE REAR AXLE OF A MOTOR VEHICLE

Romolo Gandiglio, Villanova d'Asti, and Ernestino Bellone, Turin, both of Italy, assignors to Fiat Auto S.p.A., Tokyo, Japan

Filed Apr. 21, 1989, Ser. No. 341,603
Claims priority, application Italy, Apr. 27, 1988, 67392 A/88
Int. Cl.' B62D 5/00, 15/00
U.S. Cl. 280—97 8 Claims



1. A rear suspension for motor vehicles having four steerable wheels including a suspension support frame adapted to be fixed to the body of the motor vehicle and carrying members for supporting and guiding the rear wheels of the motor vehicle, wherein the suspension support frame is adapted to be connected to the body of the vehicle for rotation about a vertical axis contained substantially in the longitudinal median plane of the motor vehicle, by means of a plurality of attachment members, each attachment member comprising a first element adapted to be fixed to the body and a second element mounted for sliding in a straight line on the first element in a direction which is tangential to a circumference whose centre lies on said vertical axis, the second element being fixed to the suspension support frame

5,005,850

RETRACTABLE STAIRS FOR VEHICLES

Milo Baughman, 24 S. 600 East, #5, Salt Lake City, Utah 84102

Filed Dec. 29, 1989, Ser. No. 459,013
Int. Cl.' B60R 3/00
U.S. Cl. 280—166 15 Claims

1 A retractable/extensible staircase apparatus for access to at least one elevated site at the exterior and materially above a floor of a vehicle, the staircase apparatus comprising

means by which the staircase apparatus is mounted to the exterior of a vehicle,

staircase means comprising a series of steps disposed above the mount means and collapsible/extensible frame means interconnecting the steps,

the staircase means further comprising means by which the staircase means are securely supported at the exterior of the vehicle when extended and elevated to provide access to at least one location exteriorly disposed substantially above the floor

container means into which the staircase means are collapsed during periods of nonuse including travel and storage

5,005,851

TRUCK MOUNTED JEEP HAVING ADJUSTABLE AXLE AND LOADING CAPACITY

James R. McGhie, 4632 Metcalf Dr., Eagan, Minn. 55122, and Robert Dieleman, 6109 S. Industrial Rd., Las Vegas, Nev. 90118

Filed Mar. 12, 1990, Ser. No. 491,939
Int. Cl.' B60D 1/44, B62D 53/00, 53/06
U.S. Cl. 280—407.1 7 Claims

1 A jeep for use with a vehicle for hauling heavy loads, said vehicle including at least one power supplying unit, at least one jeep, a least one rear carriage and a load unit supported by said jeep and carriage units, said jeep comprising

(a) an elongated, rigid frame having a top surface and an underside and a front leading end and a rear trailing end, said frame extending therebetween,

(b) a plurality of hydraulically suspended wheel axle assemblies attached to said underside of said frame near the opposite longitudinal sides thereof, and means for selectively and transversely positioning said wheel axle assemblies along a line extending transversely and perpendicularly across the longitudinal axis of said elongated frame,

(c) a fifth wheel connection member attached to the underside of and near the leading end of said frame, and

(d) a fifth-wheel plate attached to the top surface of said frame, said plate located rearwardly from said fifth wheel connection member and means for selectively positioning said plate in the vertical orientation and in the horizontal, longitudinal orientation relative to said frame, said means for selectively positioning in the vertical direction comprising a hydraulically-powered elevator assembly having two pairs of piston and cylinder arrangements, one of said arrangements located on each side of said fifth-wheel plate, said cylinders being fixedly attached to said frame and said pistons being operably attached to said fifth wheel plate

5,005,852

SEPARATIVE TRAILER TONGUE HITCHING METHOD

George M. Smyly, Sr., 1903-B Carlton St., N. Charleston, S.C. 29405

Filed Aug. 23, 1989, Ser. No. 397,246
Int. Cl.' B60D 1/00
U.S. Cl. 280—477 19 Claims

1 A separative trailer tongue comprising

(a) a first assembly housing integral with a handle and a coupler and means for coupling a first end of said coupler to a vehicle,

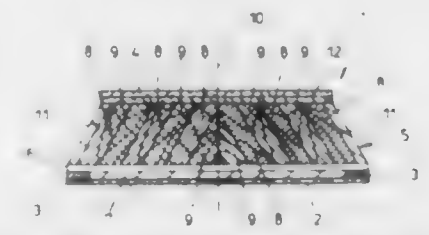
(b) a bracket having a brace slidingly captured within a lower channel thereof, said bracket fixedly attached, using fasteners, upon a forward inner lower surface of said housing, said brace having a tab attached upon a rear upper surface thereof, a frame having a tab attached at a lower forward surface thereof, and a brace retracting spring attached between said tabs, a stud fixedly attached at a forward lower surface of said brace, said stud providing means for gripping and pulling said brace, locking a catch lip of said brace with a forward surface of said bracket lower channel, a forward most end of said brace having a concave shape and protrudes from within said housing when said catch lip is locked, said spring maintaining said catch lip in a locked position, said spring retracts said brace when said catch lip is unlocked,

(c) a horizontal pulley, two rearward directed vertical pulleys and a stop supported by said frame, said frame fixedly attached, using fasteners, within and at rear most end of said housing, said stop secured, using fasteners, upon a rear surface of said frame,

(d) an elongated cylindrical lug, said lug providing nut like means for fastening a hitching ball upon a ball mount, said lug also providing a support for said locked protruding brace forward most end, said forward most concave shaped end surroundingly abutting said lug, said first assembly housing, being coupled to said vehicle and supported in a near horizontal position, said first assembly housing being pivotal in a near horizontal plane,

(e) a V-shaped pivotal lever secured between two supports, said supports attached at a forward top surface of said bracket, an upper leg forward end of said lever having a contact rod fixedly attached thereto, a lower leg of said lever having a forward under surface resting upon an upper surface of said brace,

(f) second assembly bifurcated bars, said bars having beveled forward most ends, said bars registrable with inner surfaces of said first assembly housing when said bars are received in said housing, said bars sandwich and are integral with longitudinally spaced-apart blocks, said bars extending rearward beyond said blocks providing space between said bars to secure a cable guide pulley and a winch, said blocks having longitudinally aligned apertures, and

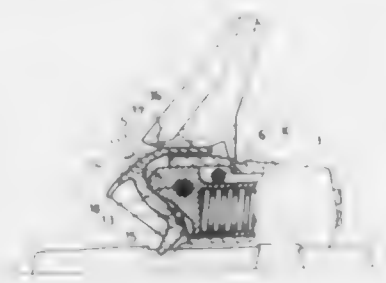


(g) a pull lift align slide rod disposed through said apertures, a rear most end of said slide rod having a protruding stop, said protruding stop abuts a rear surface of rear most block, said slide rod having a tapered forward most end said tapered forward most end slightly protrudes beyond said forward most beveled ends of said bars, said slide rod having an end of a cable attached at said tapered forward most end, said cable extending and trained about said horizontal pulley and upon said vertical pulleys, semicircular cable guide notches at bottom edge of said frame supported stop maintaining said cable within upper grooved rims of said vertical pulleys, grooved rims of said vertical pulleys slightly protrude from within rear end of said housing, said cable returning through aperture in said tapered forward most end of said slide rod, said channel extending from said channel to winching means, said frame secured stop having said slide rod forward most end abutting a forward surface thereof during winching resulting in said slide rod being forced rearward as said bars are being received in said housing, said bars forking internal components of said housing, except said contact rod, forward edges of said bars pushing said contact rod pivoting said lever causing said under surface resting upon said brace to push said brace causing said catch lip to unlock from said bracket lower channel forward surface causing said brace to retract under spring tension resulting in said brace forward most concave shaped end clearing said lug, said first and second assemblies being united

5,005,853

SKI

Heinz Lampl, Hohenems, Austria, assignor to Head Sportgerate Gesellschaft m.b.H. & C.OHG., Kennelbach, Austria



Filed Feb. 25, 1986, Ser. No. 832,781
Claims priority, application Austria, Feb. 25, 1985, 560/85
Int. Cl.' A63C 5/12
U.S. Cl. 280—610 22 Claims

1 A ski (1) assembly, said assembly comprising at least one running surface layer (2) and a top surface layer (4) disposed normal to a longitudinal plane and at least one multiple-part intermediate layer (5) bisected by the center plane and disposed between the surface layers characterized in that said intermediate layer (5) comprises elements (8, 9) of substantially parallelogram-shaped cross-section retained between lateral cheeks (11), which elements are inclined relative to the longitudinal center plane (10), converge toward one another in the direction of the top layer (4), and extend longitudinally within the ski, a plurality of said elements (8, 9) being of different

bending elasticity arranged in traverse direction relative to the longitudinal axis of the ski (1) and being in abutment with one another.

5,005,854
ALPINE SAFETY SKI BINDING
Pierre Szafranski, Annecy Le Vieux, France, assignor to Salomon S.A., Annecy Cedex, France
Filed Nov. 16, 1988, Ser. No. 271,916
Claims priority, application France, Nov. 18, 1987, 87 16302
Int. Cl.' A63C 9/08
U.S. Cl. 280—626 23 Claims

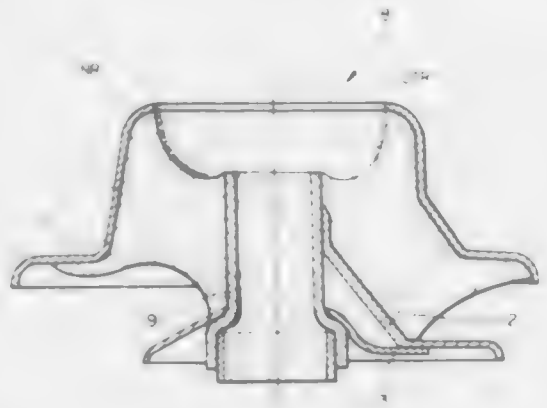
1 A safety ski binding for retaining the end of a boot to a ski until a threshold bias force is exerted, said binding comprising

(a) a body for connection to the ski,

(b) a jaw mounted on the front of the body for movement between a stable closed position at which the jaw is adapted to engage and retain the end of the boot when the latter is resting on the ski, and a stable open position at which the jaw is adapted to either free the end of the boot from the binding or to receive said end into the binding

(c) elastic return apparatus for biasing the jaw towards one or the other of its stable positions, said apparatus including energization means and a pressure element,

(d) said jaw having a ramp that includes and elastic extend segment and an opening segment selectively engageable with said pressure element, engagement of the pressure element with the elastic extend segment of the ramp effecting movement of said jaw toward its closed position, and engagement of the pressure element with the opening segment of the ramp effecting movement of the jaw toward its opened position;



(e) a lever having a handle pivotally mounted on said binding and having a raised position rising above the body towards the rear thereof when the jaw is in its closed position, the handle being extended in a lowered position when the jaw is in its opened position, said handle having a front end defined by a front edge and two parallel cheeks which overly the rear portion of the jaw,

(f) first means on the lever cooperable with first means on the jaw for opening the latter, and second closure means on the lever cooperable with second means on the jaw for closing the latter,

(g) said second means of the lever being constituted by at least one portion of the front edge of the handle, and the second means of the jaw being constituted by at least a portion of the upper surface of the jaw

(h) the second means of the lever and the second means of the jaw being constructed and arranged so that, when the jaw is in its opened position and the lever is in its lowered position, the front edge of the lever engages a portion of the upper surface of the jaw, and movement of the lever towards its raised position causes the front edge of the lever to move on a portion of said upper surface while moving the jaw toward its closed position, at least until the pressure element has reached the elastic extent segment

5,005,855
INSULATOR DEVICE FOR STRUT TYPE SUSPENSION SYSTEM OF AUTOMOBILE
Un K. Lee, Ulsan, Rep. of Korea, assignor to Hyundai Motor Company, Seoul, Rep. of Korea
Filed Jan. 10, 1990, Ser. No. 463,336
Claims priority, application Rep. of Korea, Jan. 24, 1989, 89-695
Int. Cl.' B62D 17/00
U.S. Cl. 280—662 3 Claims

1 An insulator device for a strut type suspension system of an automobile, which comprises

a car body and a plurality of car wheels,

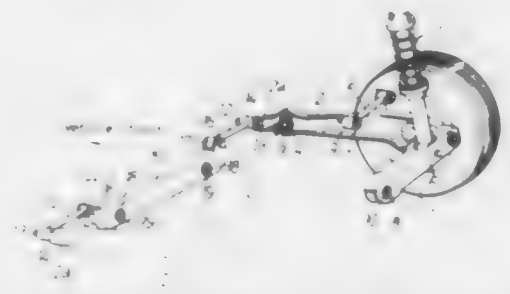
a steering knuckle connected to each of said car wheels at one end thereof,

a shock absorber integrally formed with said steering knuckle, said shock absorber containing a piston rod disposed in the center thereof,

a lower control arm connected to said steering knuckle at one end thereof and connected to said car body at the other end thereof,

a coil spring disposed on the upper portion of said shock absorber, and

an elastomeric insulator member disposed between said car body and the upper end of said piston rod, said elastomeric insulator member having an asymmetrical configuration and including



a bearing case,

a rubber member disposed around said bearing case, said rubber member provided with a supporting plate, said supporting plate secured to both said rubber member and said bearing case and supported by a reinforcing plate at bottom end thereof, said reinforcing plate secured to the lower portion of said bearing case, and

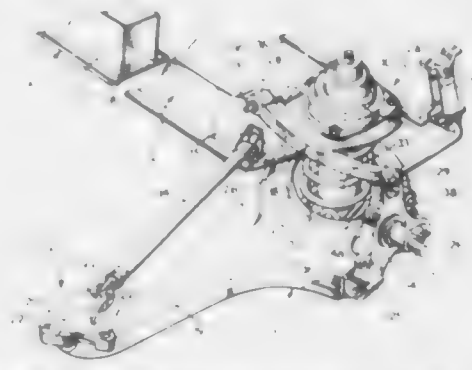
an insulator housing having an asymmetrical configuration and defining an outside portion located toward the outside of

the automobile and an inside portion located toward the inside of the automobile, wherein the outside portion thereof is larger than the inside portion thereof so as to become a smaller spring constant of an inside portion of said rubber member than a spring constant of an outside portion of said rubber member, distance between said supporting plate and an inside surface of said insulator housing is smaller than a distance between said bearing case and an inside surface of said insulating housing, and whereby moving centrode of the car wheels to the car body can be controlled by displacements of the bearing case

5,005,856
REAR SUSPENSION SYSTEM OF AUTOMOBILE
Yasuji Shibahata, Saitama, Japan, assignor to Honda Giken Kogyo Kabushiki Kaisha, Wako, Japan
Filed Jul. 11, 1989, Ser. No. 377,975
Claims priority, application Japan, Jul. 14, 1988, 63-175348
Int. Cl.' B60G 3/18
U.S. Cl. 280—688 4 Claims

1 A rear suspension system of an automobile, comprising

a pair of left and right trailing arms pivoted vertically swingably to a body of the automobile for carrying thereon left and right rear wheels, respectively,



forward extension arms extending forwardly from portions of the respective trailing arms pivoted to said automobile body for permitting longitudinal displacements as well as lateral swinging motions of the trailing arms in a resilient fashion,

left and right compensator arms inclined so as to have front ends thereof directed inwardly of the automobile body and rear ends thereof connected to said forward extension arms for swinging motions relative to each other, and

a relay rod carried on the automobile body in a manner displaceable in a lateral direction with respect to the body, said relay rod providing a connection between the front ends of the compensator arms such that the front ends of the compensator arms are swingable relative to each other via the relay rod

---

5,005,857
INDEPENDENT REAR SUSPENSION
Sergio Camuffo, Torino, Italy, assignor to Fait Auto S.p.A., Torino, Italy
Filed Dec. 7, 1988, Ser. No. 447,465
Claims priority, application Italy, Dec. 7, 1988, 68092 A/88
Int. Cl.' B60G 3/04
U.S. Cl. 280—690 8 Claims

1 A rear suspension for a motor vehicle comprising:

a cross member (2) for supporting the suspension, which is fixed at its ends (2a), with the interposition of rubber blocks (3), to two side members (4) fixed under the floor of the motor vehicle,

the suspension also including, in association with each rear wheel

a lower arm (15) which is pivotably mounted at one end on the respective end (2b) of the supporting cross member (2) and at the other end on the respective wheel support (14), the lower arm (15) having a part (19) which extends forwardly from the cross member (2) with reference to the direction of travel,

an auxiliary support (21) provided with means (22) for fixing it in an adjustable position under the motor vehicle body, the front end of the lower arm (19) being articulated to the auxiliary support (21) so that the entire lower arm (15) is pivotable relative to the body of the motor vehicle about a pivoting axis (23) lying in a substantially horizontal plane and inclined to the longitudinal axis of the motor vehicle, the axis (24) of pivoting between the lower arm (15) and the wheel support (14) being substantially parallel to the pivoting axis of the lower arm relative to the body of the motor vehicle,

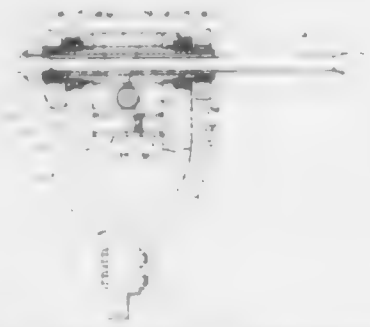
an upper transverse strut (27) mounted pivotably at its ends on the cross member (2) and on the wheel support (14) respectively, so as to form an articulated quadrilateral with the lower arm (15),

resilient shock-absorbing means (32, 33) interposed between the lower arm (15) and the end (2a) of the cross member (2),

an inclined tie-rod (34) connected at its ends to the cross member (2) and to the auxiliary support (21), and an anti-roll stabiliser bar connected at its ends to the two wheel supports (14) and supported beneath the body of the motor vehicle by means of dependant members (37)

5,005,858
HYDROPNEUMATIC VEHICLE SUSPENSION SYSTEM OF VARIABLE ATTITUDE
Vittorino Torrielli, Turin, and Virginio Maggioni, Rosta, both of Italy, assignors to Fiat Auto S.p.A., Turin, Italy
Filed Dec. 21, 1989, Ser. No. 452,750
Claims priority, application Italy, Dec. 23, 1988, 68150 A 88
Int. Cl.' B60G 11/26
U.S. Cl. 280—707 6 Claims

1 A vehicle hydropneumatic suspension system of variable attitude, of the type comprising, for each wheel, sustaining and load adaptation means of variable rigidity, characterised by comprising a plurality of vehicle dynamic attitude sensors and a central electronic control unit connected to said sensors, said sustaining and load adaptation means comprising, for each wheel, at least one respective hydraulic damper of variable internal pressure directly connected hydraulically to a respec-



tive hydraulic service accumulator which is connected to a pressure source via a first solenoid valve controlled by said central control unit

MOTOR VEHICLE SUSPENSION WITH ROTARY DAMPER

Yutaka Satoh, and Yoshinori Takeuchi, both of Shizuoka, Japan, assignors to Kabushiki Kaisha Showa Seisakusho, Tokyo, Japan

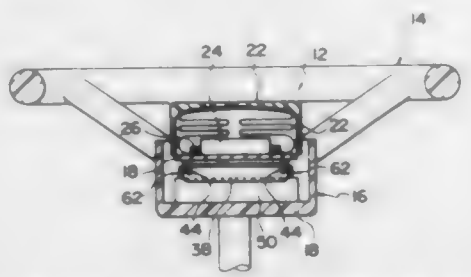
Filed Nov. 17, 1989, Ser. No. 438,681
Claims priority, application Japan, Nov. 18, 1988, 63-291985; Nov. 18, 1988, 63-291986; Apr. 25, 1989, 1-105680
Int. Cl.' B60G 15/06
U.S. Cl. 280—721 7 Claims

1 A suspension for supporting a wheel on a vehicle body, comprising

a hollow shaft adapted to be fixed to the vehicle body

an arm having one end adapted to be coupled to the wheel and an opposite end pivotally supported on an outer peripheral surface of said hollow shaft,

a rotary damper interposed between said hollow shaft and said arm, for dampening swinging movement of said arm with respect to said hollow shaft, said rotary damper comprising a damper case with an oil chamber defined therein and filled with working oil and a vane movably disposed in said oil chamber, said damper case being fixed to said opposite end of the said arm for angular movement in unison with said arm, said vane being joined to the outer peripheral surface of the hollow shaft, and



a torsion bar extending through said hollow shaft and having one end adapted to be fixed to said vehicle body and an opposite end coupled to said opposite end of said arm for angular movement in unison with said arm

VELOCITY CHANGE SENSOR WITH DOUBLE POLE SENSOR

Allen K. Breed, Boonton Township, Morris County; Ted Thuen, Morris Plains, and Carl T. Grossi, Wharton, all of N.J., assignors to Breed Automotive Technology, Inc., Boonton Township, Morris County, N.J.

Filed Oct. 19, 1989, Ser. No. 423,871
Int. Cl.' H01H 35/14
U.S. Cl. 280—734 13 Claims

1 An accelerometer for sensing velocity changes comprising

a housing with a first end and a second end opposite said first end,

first and second contact means disposed at said first end, at least one of said contact means being flexible for displacement toward the other of said contact means,

a sensing element movably disposed in said housing, and

biasing means for generating a biasing force on said sensing means for urging said sensing element toward a first position, said sensing element being arranged and constructed to move toward a second position away from said first position in response to a deceleration force exceeding said biasing force, said sensing element displacing said first contact means to contact said contact means by moving toward said second position with said second contact being initially stationary as said first contact is being displaced by said sensor element

SEATBELT POSITIONING ASSEMBLY FOR A PREGNANT PERSON

Steinar Kruse, Ste. 109, 1055 S. American Way, Miami, Fla. 33132

Filed Jul. 31, 1990, Ser. No. 560,882
Int. Cl.' B60R 22/02
U.S. Cl. 280—801 7 Claims

1 For use in combination with a seatbelt of an automobile, a seatbelt positioning assembly adapted to position the seatbelt along a lower abdominal region of a pregnant person, said assembly comprising

a seat pad for placement on a seat of the automobile having a substantially flat configuration and including an upper side and a lower congruent side connected thereto along an outer peripheral edge including a front edge, a rear edge and two opposite side edges,

a sleeve structured and configured to be slidably received along a portion of the length of the seatbelt,

an elongate securing strap fitted along said rear edge of said seat pad and adapted to extend around the seat, attaching at opposite free ends so as to secure said seat pad to said seat,

positioning straps connected to said elongate securing strap and extending from said upper side of said seat pad, and

said positioning straps including attachment means formed on a free distal end thereof for removable attachment with a bottom edge of said sleeve, said positioning straps being positioned and disposed so as to exert a downward pulling force on said sleeve when attached thereto, thereby pulling the seatbelt down to a position extending along the lower abdominal region of the pregnant person substantially below the womb

SEAT BELT CUSHION IN THE FORM OF PEOPLE PLACES AND THINGS

Eddie R. Reedom, P.O. Box 754, Pixley, Calif. 93256

Filed May 5, 1986, Ser. No. 859,400

The portion of the term of this patent subsequent to Feb. 9, 2005, has been disclaimed.

Int. Cl.[5] B60R *22/00*

U.S. Cl. 280—801 **14 Claims**

1 A novel seat belt cushion comprising

(a) any of a plurality of sections, limbs, cushioned sections, objects, things and electronic devices adapted for cooperative assembly to form representations of people, places, things, animals, birds, caricatures or insects, and where two or more of said seat belt cushions can be joined together,

(b) means forming at least one opening in said seat belt cushion to receive a portion of a seat belt of a vehicle, said means forming an opening comprising a pair of cushion portions which are hingedly connected together and which can open to thereby form said opening to receive a seat belt and which can close about said seat belt to fully encircle a portion of the seat belt,

(c) padding means in said seat belt cushion and constructed for for absorbing the force of an impact in at least two stages,

(d) first joining means for securing cushioned sections, objects, devices, things or limbs to said seat belt cushion, and

(e) second joining means for securing said seat belt cushion to a seat belt while allowing access to a buckle and a release button of a seat belt system.

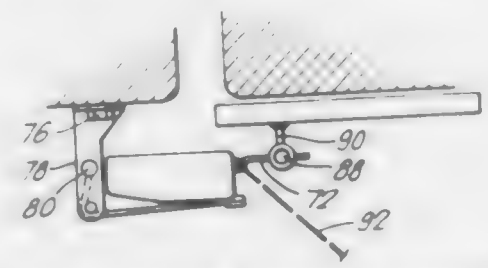
PIVOTALLY MOUNTED LOCKING STATION FOR PASSIVE SAFETY BELT CARRIAGE



Lars V. Sandvik, and Gert A. Anderzen, both of Vargarda, Sweden, assignors to General Engineering (Netherlands) B. V., Utrecht, Netherlands

Filed Jul. 17, 1989, Ser. No. 380,444

Claims priority, application Sweden, Jul. 18, 1988, 8802664; United Kingdom, Sep. 29, 1988, 8822887

Int. Cl.[5] B60R *22/06*

U.S. Cl. 280—804 **21 Claims**

1 A passive safety belt arrangement in a motor vehicle having a door and a door frame, comprising

a rail in a plane on the door of the motor vehicle

a carriage movable along the rail,

a tongue, the carriage carrying the tongue,

a safety belt connected to the tongue,

a locking station pivotally mounted on one of the door and the door frame, the locking station having means for receiving the tongue when the carriage reaches one end of the rail, and

retaining means for retaining the locking station in a predetermined initial position in a plane parallel to the plane of the rail, the retaining means being responsive to a severe force applied from the belt to the locking station via the tongue, in a direction of force, to release the locking station from the retaining means and pivot the locking station into alignment with the direction of force

RETRACTABLE SLING FOR TRANSPORTING COASTER-TYPE VEHICLES

Bradley M. Stern, 3 Chester La., Nanuet, N.Y. 10977, and James Doane, 213 E. 6th St., Clifton, N.J. 07011

Filed Apr. 6, 1990, Ser. No. 505,403

Int. Cl.[5] A63C *11/00*

U.S. Cl. 280—814 **14 Claims**

1 A sling assembly for carrying, transporting, or storing of a coaster-type vehicle, said sling assembly including

(a) a flexible sling having a determined length, a free end, and a second end,

(b) an enclosure adapted for mounting to said vehicle as a spacer between a truck member and said vehicle, said enclosure further arrayed for the passage of the flexible sling therethrough;

(c) a storage means carried interior of said enclosure, said storage means adapted for holding and storing a selected portion of said flexible sling within said enclosure, said storage means being attached to said second end of said flexible sling,

(d) a connecting means adapted for attaching to said vehicle at a second selected position, said second selected position at or near a second end of said vehicle,

(e) an attaching means arrayed for securing to said free end of said flexible sling exterior of said enclosure, said attaching means further arrayed for engaging said connecting means and holding said flexible sling in an extended condition, said extended condition allowing for said carrying, transporting, or storing, and

(f) a means for retracting said selected portion of said flexible sling into said enclosure and onto said storage means as and when desired

DEVICE TO DISPLAY COVER AND PAGES OF A DOCUMENT

Samuel C. Smith, 210 Hartman Rd., Newton Center, Mass. 02159

Continuation of Ser. No. 173,599, Mar. 25, 1988, abandoned. This application May 25, 1990, Ser. No. 529,779

Int. Cl.[5] B42D *1/00, 3/00*, **A47B** *91/00*, **A47G** *1/06*

U.S. Cl. 281—15.1 **10 Claims**

1 A device for substantially vertical (i.e., non-horizontal) display of a book form memorable document with three or more leaves in a series, a first such leaf being a front cover member with primary display significance, the device comprising in combination

(a) means forming a common pivot/binder for the leaves at a common first side edge of each leaf which allows variable spread openings of the leaves to be established and maintained,

(b) each of several of the leaves comprising a display page with a coupled rigid member,

(c) means forming a lost motion pull linkage between successive leaves and comprising a thread passing through openings at a second (outer) side edge of such leaf with stops spaced along the thread with sufficient slack to allow up to a maximum spread between successive leaves, the stops being effective in engaging openings - while the thread is pulled - to impart turning motion to the leaf carrying the engaged opening

FORM USED FOR ORDERING CUSTOM PRINTED PRODUCTS

Doan R. Anderson, River Falls, Wis., assignor to Minnesota Mining & Manufacturing Company, St. Paul, Minn.

Filed Jan. 25, 1990, Ser. No. 470,104

Int. Cl.[5] B42D *15/00*

U.S. Cl. 283—61 **6 Claims**

1 A form used for ordering custom printed sheets, said form comprising

a master portion corresponding in size and shape to a sheet to be printed, said master portion having a front surface free of indicia that will be reproduced by the printing process,

an identifying portion having a front surface on the same side of the form as the front surface of the master portion for accepting identifying information concerning a person ordering the sheets, and

an informational portion bearing written instructions concerning the use of the form,

the master portion and the identifying portion of the form having adjacent edges joined to each other,

the form is perforated along the boundary between the informational portion and the master and identifying portions of the form to afford separation of the master and identifying portions of the form as a unit from the informational portion of the form,

the adjacent edges of the master and identifying portions of the form are adapted to afford folding the form along the adjacent edges, and

the identifying portions of the form is smaller in area than the master portion of the form and is completely overlaid by the master portion of the form when the form is folded

along the adjacent edges so that after the person ordering the sheets applies identifying information to the identifying portion of the form and indicia of a desired type to the master portion of the form the identifying and master portions of the form can be separated from the informational portion of the form, folded along the adjacent edges to position the identifying portion along the side of the master portion opposite the indicia applied to the master portion, and the folded identifying and master portions of the form can be releasably adhered at a predetermined location on a substrate with the master portion of the form opposite the substrate to provide a graphic master for preparation of a printing plate for use to print the printed sheets, and the identifying portion of the form can thereafter be separated from the substrate and used as a label to send the printed sheets to the person ordering the sheets

QUICK CONNECT-DISCONNECT COUPLINGS

Richard L. Fahl, Fairfield, Ohio, assignor to Dover Corporation, New York, N.Y.

Filed Dec. 19, 1989, Ser. No. 452,762

Int. Cl.[5] F16L *37/20*

U.S. Cl. 285—311 12 Claims

1 A quick connect-disconnect coupling comprising

an adapter adapted to be mounted on a first fluid conduit and having a sealing surface at its outer end and an undercut outer surface spaced from and adjacent thereto, and

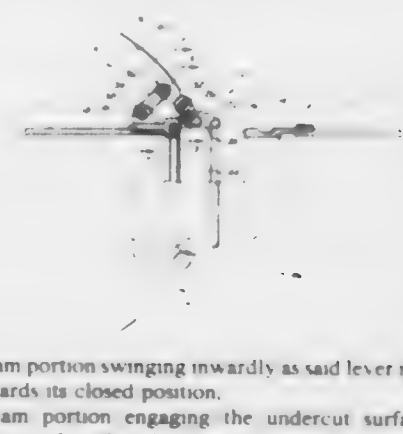
a coupler adapted to be attached to a second fluid conduit and comprising a body member having a bore for telescopingly receiving the outer end portion of the adapter, and locking mechanism for joining said coupler and adapter,

said locking mechanism comprising

a four bar linkage including

a manually operable lever,

a link pivotally connected to the lever and to the body member, and



a cam member having pivotal connections with the lever and the body member,

said cam member having a projecting portion extending beyond and inwardly from its pivotal connection with the body member,

said protruding cam being engageable with the undercut surface of the adapter when it is telescoped within the bore of the body member,

said lever being displaceable between an open position and a closed position,

said cam portion being disposed outside the outline of said bore in the open position of said lever,

said cam portion swinging inwardly as said lever is displaced towards its closed position,

said cam portion engaging the undercut surface of the adapter when the adapter is telescoped into said bore,

the point of contact between said cam portion and said undercut portion closely approaching a plane normal to the axis of said bore and passing through the axis of the pivotal connection of the cam member with the body member, as the lever nears its closed position, said point of contact passing to the opposite side of said plane when the lever is fully displaced to its closed position,

whereby, the movement vector of the cam portion, at its point of engagement with said undercut portion is essentially axial and there is minimal relative movement between the cam portion and the undercut portion

QUICK CONNECT/DISCONNECT FLUID COUPLING

Lawrence F. Hayman, Auckland, New Zealand, assignor to Parker Hannifin Corporation, Cleveland, Ohio

Filed Dec. 6, 1989, Ser. No. 446,948

Claims priority, application New Zealand, Dec. 16, 1988, 277363

Int. Cl.[5] F16L *37/22*

U.S. Cl. 285—315 9 Claims

1 A quick connect/disconnect coupling having two engageable and disengageable haves, said halves being locked together when in engaged relation, comprising

a male coupling half having a first fluid bore therethrough,

said male coupling half having a generally cylindrical outside surface and including a first locking surface extending outward relative to a centerline of the coupling, said first locking surface extending circumferentially about said male coupling half,

a female coupling half having an opening and a second generally cylindrical fluid bore therethrough for accepting said male coupling half, said outside surface of said male coupling half extending into said opening when said halves are in engaged relation, said female coupling half including a body portion having a second locking surface extending circumferentially in said second fluid bore, said second locking surface extending inward and at an acute angle relative to the centerline of the coupling and a plane of said opening, said first and second bores in fluid communication when said coupling halves are in engagement, said body portion further including a cylindrical outer surface extending parallel of the centerline of the coupling,

a plurality of cocking bodies mounted for movement outward from the centerline of the coupling on one of said coupling halves, each of said locking bodies comprising an arcuate segment of a ring, and in the engaged position of said coupling halves each of said locking bodies engaging said first and second locking surfaces and both adjacent locking bodies in said ring, and biasing means for biasing said ring segments toward said centerline of said coupling, and movement means for moving said locking bodies to disengage at least one of said locking surfaces, whereby said coupling halves are enabled to be disconnected, and wherein said movement means includes

a sleeve member mounted for movement parallel of the centerline of the coupling on said female coupling half, said sleeve member including a cylindrical portion having an inner face, said inner face of said cylindrical portion overlying and contacting said outer surface of said body portion of said female coupling half and extending circumferentially about said outer surface, said sleeve member further including a turned-in continuous leg portion, said cylindrical portion and said leg portion of unitary, one piece construction, said leg portion extending from said cylindrical portion of said sleeve member to adjacent said outside surface of said male coupling half

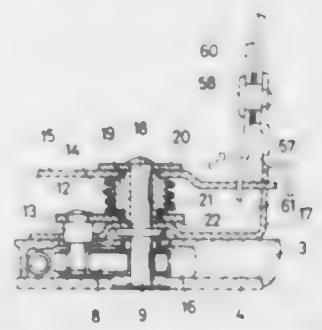
AUTOMOTIVE DOOR LOCK DEVICE



Ryoichi Fukumoto, Nagoya; Shigeru Hayakawa, Chiryu, and Nozomu Torii, Hekinan, all of Japan, assignors to Aisin Seiki Kabushiki Kaisha, Kariya, Japan

Filed Sep. 28, 1989, Ser. No. 413,533

Claims priority, application Japan, Sep. 30, 1988, 63-244530

Int. Cl.' E05C 3/26

U.S. Cl. 292—216 5 Claims

1 An automobile door lock device comprising

a base having a surface area,

a sub-base spaced from the base and having an inner surface portion opposing the base surface area, the sub-base having an opening in alignment with the base surface area,

a pawl pin having a head end, a shank of substantially uniform diameter terminating at a lower end, the head end being of larger diameter than the shank, the pawl pin being inserted through the opening of the sub-base with the lower end of the shank being mounted to the surface area of the base,

a flange integrally attached to the pawl pin in engagement with the inner surface area portion of the sub-base surrounding the opening in the sub-base,

a washer disposed on the pawl pin in engagement with the head end,

a collar having an axial bore disposed on the pawl pin having first and second opposite radially extending end faces, the first end face engaging the washer and the second end face engaging the sub-base surrounding the opening of the sub-base on an outer surface portion opposite the inner surface portion, and

a pawl member rotatably mounted on the pawl pin between the flange and the surface area of the base

CYLINDER LOCK MODIFIED FOR USE WITH A CARD READER UNLOCKING MECHANISM

Aaron M. Fish, St. Lac; Alexander Branover, St. Laurent; Jean-Paul Dansereing, Laval, and Masoud Miresmaili, LaSalle, all of Canada, assignors to Ilco Unican Inc., Montreal, Canada

Filed Feb. 6, 1990, Ser. No. 474,395
Claims priority, application Canada, Feb. 7, 1989, 590355
Int. Cl.' F05B *41/00*
U.S. Cl. 292—336.3 5 Claims

1 A cylinder lock comprising

a circular door knob having a free end and a connected end and extending longitudinally from said free end to said connected end,

a locking rod cylinder partially enclosed within said door knob and extending longitudinally of said door knob and coaxially with said door knob, and having a first end adjacent said free end of said door knob,

a push-button, having a free end and an attached end, and mounted coaxial with said door knob and extending, from the free end thereof, from the outside of said door knob through said free end of said door knob and into said cylinder through the first end thereof,

a locking rod, extending longitudinally from said attached end of said push-button and through said cylinder;

whereby, when said push-button is pushed inwardly, in the direction from the free end to the connected end of said knob, said locking rod moves in the same direction,

means for detecting the movement of said locking rod; and

whereby, means for providing an electronic signal are activated by said means for detecting on detecting the movement of the locking rod, to provide said electronic signal;

and further including a cylindrical detector assembly housing having a front end and an open rear end;

a wall at said front end having an opening therein,

a retractor assembly retainer cap assembly comprising a cylindrical member having a front end and a rear end;

a plate member mounted transversely to said cylindrical member at the rear end thereof;

the front surface of said plate member abutting the rear surface of said wall;

said means for detecting comprising a twostate switch;

said switch being mounted on the front surface of said plate member;

said opening of said wall receiving said cylindrical member and said switch such that said cylindrical member and said switch extend in front of said front wall outside of said housing

APPARATUS FOR OPERATING LINKAGE OR CAR DOOR BY PIVOTAL LEVER

Yasutomo Kobayashi, Chigasaki, and Tsuyoshi Kato, Yokohama, both of Japan, assignors to Nifco, Inc., Yokohama, Japan

Filed Sep. 18, 1989, Ser. No. 408,585
Claims priority, application Japan, Sep. 19, 1988, 63-121574
Int. Cl.' E05B *3/00*
U.S. Cl. 292—336.3 10 Claims

1 An apparatus for operating a linkage with a pivotal lever having a crank arm provided on a lever handle pivoted on a pivot and coupled to one end of the linkage, comprising

a piston-cylinder assembly including a cylinder having a rod end and a head end, a piston having a piston rod coupled to the crank arm and being accommodated in said cylinder, and a coil spring interposed between said piston and said rod end of said cylinder,

a support for supporting the lever handle and said piston-cylinder assembly,

stopper means extending into said cylinder to engage an inner side of said head end of said cylinder, prevent movement of said cylinder toward said rod end but permit movement of said cylinder toward said head end,

a contact portion provided on said piston rod for abutting an outer side of said rod end of said cylinder when said piston rod is fully projected into said cylinder, and

spring bearing means for receiving an end of said coil spring directed toward said head of said cylinder at the same position as that of said piston rod when said piston rod is fully projected into said cylinder

LATCH MECHANISMS

Terence J. Carroll, 3 Lackenheath Court, Dingley, Victoria, Australia (3172)

Filed Dec. 8, 1989, Ser. No. 447,136
Int. Cl.' E05C *1/16*
U.S. Cl. 292—336.3 9 Claims

1 A locking device for a latch mechanism, the latch mechanism including a bolt device movable between a latched position and retracted position, an actuator shaft operatively connected to the bolt device such that rotation thereof about an axis of rotation causes movement of the belt device between the latched and retracted positions and at least one handle operatively connected to the actuator shaft by which the actuator shaft can be rotated, the locking device comprising

a locking element mounted for movement in the direction of the axis of the actuator shaft between a lock position in which rotation of the actuator shaft by the handle is inhibited and a release position in which the actuator can be rotated by the handle,

a control member operatively connected to or engageable with said locking element said control member being mounted for movement in the direction of the actuator shaft between first and second positions whereby in said first position the locking element is caused to adopt the lock position and in said second position the locking element can adopt the release position, whereby in said first position the control member is capable of rotatable movement and in said second position is inhibited from that rotational movement, and

an actuating member operable to cause the axial movement of the control member and drive means associated with said actuating member and said control member for causing rotation of the control member when in the first position

ENERGY ABSORBING BUMPER FASTENER SYSTEM

Josh Kelman, Dover, N.H., assignor to Davidson Textron Inc., Dover, N.H.

Filed Apr. 9, 1990, Ser. No. 506,160
Int. Cl.' B60R *19/24*
U.S. Cl. 293—120 10 Claims

1 An energy absorbing bumper assembly for attachment to spaced frame rails of a motor vehicle, the spaced frame rails each having a rail end with an end surface and polygonal side surfaces formed generally perpendicular to said end surface, the assembly including a bumper extending as a bridge across the spaced frame rails, the bumper including a core of energy absorbing material and a high strength outer sheath with a flat inboard surface carrying a frame mount characterized by

said frame mount being a pair of spaced fastening cups each having interconnected side walls to form an axial opening with an axial open end for receiving said ends of said spaced frame rails, said fastening cups each further having a multiplicity of flat surface portions each located against the polygonal side surfaces of said rail end, said polygonal side surfaces and said interconnected side walls being juxtaposed to form a double wall thickness therebetween at each of said polygonal side surfaces for resisting frame rail bending and for distributing loads from said outer sheath to the spaced frame rails.

5,005,888

GARDEN TOOL FOR REMOVING PLANTS HAVING ROOTS

David W. Parks, Dallas; Thomas A. Parks, Lindsay, and Raymond Green, Richardson, all of Tex., assignors to Speedy Weedy, Inc., Dallas, Tex.

Continuation-in-part of Ser. No. 208,151, Jun. 17, 1988, abandoned. This application Jan. 29, 1990, Ser. No. 471,303
Int. Cl.' A01B *1/16*
U.S. Cl. 294—50 19 Claims

1 A garden tool for extracting a plant having roots in the earth comprising

a housing having an upper end and a lower end,

a prong assembly connected to the lower end of the housing and being adapted for insertion in the earth generally about the plant to be extracted, the housing and the prong assembly being rotatable after insertion in the earth for compacting the earth about the plant to be extracted and forming a plug comprising the plant, a substantial portion of the plant root and a portion of the earth disposed generally within the prong assembly and surrounding the plant to be extracted, the housing and the prong assembly being removed from the earth along with the plug, comprising

a prong holder having an outer peripheral surface, an upper end and a lower end, the upper end of the prong holder being connectable to the lower end of the housing and at least three prong openings being formed in the lower end of the prong holder generally near the outer peripheral surface of the prong holder with each prong opening extending a length into the prong holder generally from the lower end toward the upper end of the prong holder; and

at least three prongs, each prong having an upper end, a lower end and a prong length, the upper end of each prong being disposed in one of the prong openings and each prong being inserted in one of the prong openings with at least about one-fourth of the prong length of each prong being disposed in one of the prong openings whereby the prong holder cooperates with the portions of the prongs disposed in the prong holder to provide sufficient strength for substantially reducing the tendency of the prongs to bend when disposed in the earth and rotated during the operation of the garden tool, and

wherein the housing includes a slit formed through the lower end thereof and extending a distance generally toward the upper end thereof and a snap hole formed through a portion thereof and spaced a distance generally above the lower end thereof, and wherein the prong holder further comprises a holder opening extending through a portion thereof intersecting the upper and the lower ends of the prong holder, and a retaining

ridge connected to the prong holder and disposed generally within the holder opening and extending a distance into the holder opening, the retaining ridge being disposable in the slit formed in the housing generally near the lower end thereof in the assembled position of the prong holder connected to the lower end of the housing for cooperating to substantially prevent rotation of the prong holder relative to the housing, and wherein the prong holder further comprises a snap knob connected to the prong holder and disposed generally within the holder opening, the snap knob being snappingly disposable in the snap hole formed in the housing generally near the lower end thereof for snappingly connecting the prong assembly to the housing in an assembled position

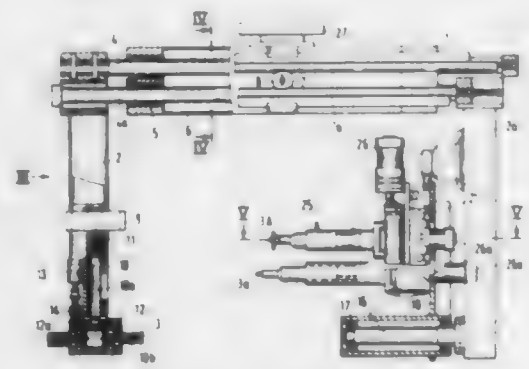
GRIPPER ASSEMBLY FOR AN INDUSTRIAL ROBOT



Klaus K. Nerger, Witten; Hans J. Klein, Iserlohn, and Günther Burkart, Herdecke, all of Fed. Rep. of Germany, assignors to Mannesmann Aktiengelsellschaft, Dusseldorf, Fed. Rep. of Germany

Filed May 31, 1989, Ser. No. 359,120

Claims priority, application Fed. Rep. of Germany, Jun. 3, 1988, 3819302; Jan. 24, 1989, 3902341

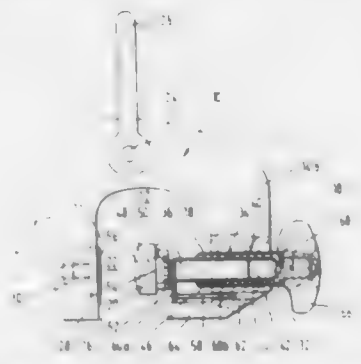
Int. Cl.[5] B66C *1/62*

U.S. Cl. 294—86.4 12 Claims

1. A gripper assembly of an industrial robot, comprising:
- a pair of gripper arms disposed for relative movement toward and away from each other, each gripper arm comprising a shaft, said shaft having an axis and said axes extending perpendicularly with respect to each other;
- a plurality of workpiece receiving devices carried on each said shaft for gripping arrangement with a workpiece;
- operable means including said shaft mounting said receiving devices to said gripper arms for selectively moving said receiving devices about said axis so as to bring said receiving devices into receiving positions for engagement with the workpiece; and
- one of said plurality of said receiving devices being arranged in a substantially star-shaped configuration with respect to each other, and one of said gripper arms including a guide for guiding said shaft along a vertical axis and about which axis said receiving devices in said star-shaped configuration are movable so as to bring at least a selected one of said receiving devices into a receiving position for engagement with said workpiece.

5,005,890

LIFTING CLAMP



Willy Schwenger, Sussen, Fed. Rep. of Germany, assignor to Carl Stahl GmBH, Fed. Rep. of Germany

Filed Oct. 5, 1989, Ser. No. 417,467

Claims priority, application Fed. Rep. of Germany, Oct. 11, 1988, 8812717[U]

Int. Cl.[5] B66C *1/44*

U.S. Cl. 294—103.1 23 Claims

1 A lifting clamp for the lifting and conveyance of loads, comprising

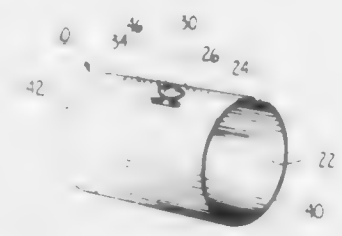
a clamp body defining a chamber for receiving articles,

lifting means, coupled to said clamp body, for attaching said body to a lifting tool;

first and second jaws coupled to said clamp body, said jaws opposing and facing one another, and

drive means, coupling said second jaw to said clamp body, for moving said second jaw along a path relative to said first jaw within said chamber to engage the articles between said jaws, said drive means including a spindle having first and second spindle parts, said first spindle part being rotatably mounted in said clamp body, said second spindle part supporting said second jaw and being guided for longitudinal movement in said first spindle part, said first spindle part driving said second spindle part, said second spindle part having a ball end on a free end thereof projecting into said chamber, said second jaw being pivotally mounted on said ball end.

5,005,891



BAG HANDLE APPARATUS

T. J. Lunsford, 11668 Hi Ridge Rd., Lakeside, Calif. 92040

Filed Feb. 26, 1990, Ser. No. 485,089

Int. Cl.[5] A45F *5/10*; B65D *33/06*

U.S. Cl. 294—171 7 Claims

1 An apparatus for protecting the hands of a user carrying at least one heavily loaded plastic carrier bag of the type having handles formed in the plastic carrier bag, comprising

a thin sheet of semirigid flexible material having a first end portion and a second end portion opposite said first end portion;

a locking tab formed on said first end portion; and

a locking slot formed in said second end portion for lockingly engaging said locking tab, wherein said locking tab has a substantially mushroom-shaped head portion having a predetermined width, and said slot has a first orifice portion and a second orifice portion positioned beneath said first orifice portion so that said first orifice portion is disposed intermediate said second orifice portion and said locking tab, and separated by a flexible catch portion, said first orifice portion having a width greater than said head portion to allow free movement into and out of said first orifice portion, said second orifice portion having a width less than said head portion to latch said head portion in said second orifice portion,

said sheet having a width sufficient to cover the user's hand, and having a length sufficient to permit said sheet to be disposed around said carrier bag handles with said locking tab engaged in said slot

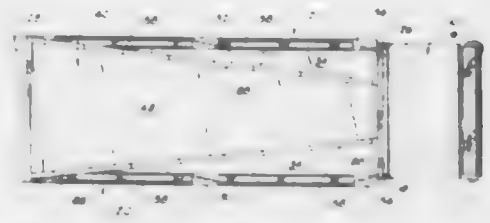
MOBILE PROMOTIONAL VEHICLE



Marcus R. McCrary, 18711 Fortson Ave., Dallas, Tex. 75252

Filed Oct. 30, 1989, Ser. No. 429,830

Int. Cl.[5] B60R *13/00*; B62D *33/04*

U.S. Cl. 296—21 15 Claims

1. A mobile promotional vehicle comprising
- a wheel-supported tractor cab having a forward end and a rear end;
- a wheel-supported bed connected to the rear end of said tractor cab and projecting rearwardly therefrom, said bed having a forward end and a rear end and an upwardly facing floor surface, and
- an informational display superstructure extending upwardly from said bed, said superstructure including
- a pair of opposed, upwardly extending side walls each having a lower edge level with the floor surface, and an upper edge, said walls inclining outwardly and said upper edges being spaced further from each other in a horizontal direction than said lower edges, and said side walls extending from the rear end of the bed toward the forward end thereof, and converging toward each other as the side walls progress from the rear end of the bed toward the forward end thereof so that said side walls are closer to each other at the forward end of said bed than at the rear end thereof, and

- a trapezoidally-shaped ceiling extending parallel to the floor surface and interconnecting the upper edges of said side walls, and
- a vertically extending trapezoidally-shaped forward wall extending between and joining said side walls whereby said side walls, floor surface, ceiling, and forward wall define an enclosure which is trapezoidal in horizontal cross-section in a plane extending parallel to the floor surface, and is also trapezoidal in vertical cross-section in a vertical plane extending transversely across the bed and parallel to said front wall, said side walls each having an outwardly facing indicia display surface illuminable from below and visible from ahead of the cab of the vehicle over substantially an entire length of the respective side walls

AUTOMOTIVE SEAT WITH SUSPENSION DEVICE

Kojiro Nagata, Akishima, Japan, assignor to Tachi S Co., Ltd., Tokyo, Japan

Filed Oct. 31, 1989, Ser. No. 429,512

Int. Cl.[5] B60N *2/42*

U.S. Cl. 296—68.1 3 Claims

1 An automotive seat with a suspension device having upper and lower frames, the seat including a seat cushion on the upper frame and the lower frame engaging a floor of an automobile body, said seat comprising

an X-shaped link means entirely interposed inwardly of the upper and lower frames,

a first pivot connecting a first link member of said X-shaped link means to the upper frame,

a second pivot connecting a second link member of said X-shaped link means to the lower frame,

a seat belt anchor,

a pin fixed on said first link midway between a cross point of said X-shaped link means and said first pivot, and

a sublink positioned inwardly of the frames having one end connected to the lower frame by said second pivot and another end thereof formed with an elongated hole in which said pin is slideably retained

ADJUSTABLE VISOR

David A. Muyres, Saugatuck; Wesley D. Mersman, Holland; Steven P. Dykstra, and Russell L. Clark, both of Zeeland, all of Mich., assignors to Prince Corporation, Holland, Mich.

Filed Apr. 16, 1990, Ser. No. 509,505
Int. Cl.' B60J 3/02
U.S. Cl. 296—97.8 22 Claims

1 A vehicle visor having an adjustable width comprising

a pivot rod for attachment to a vehicle for supporting said visor;

a visor body supported by said pivot rod having guide means formed within said body for receiving a slide member,

said slide member movably supported by said guide means, and

a collapsible shield mounted to said slide member for extension and retraction from said visor body with said shield collapsing into said visor body in a stored position and extending from said body with said slide member when in an extended position

RETRACTABLE TRUCK CANOPY FRAME

Cheng-Chin Li, No. 391, Tung Men Road, Tainan, Taiwan

Filed Jan. 22, 1990, Ser. No. 468,146
Int. Cl.' B62D 25/06
U.S. Cl. 296—100 1 Claim

1 A retractable truck canopy frame for a truck body, comprising.

(a) a pair of rails adapted to be installed on opposite sides of a truck body, each rail having an inwardly opening, generally "C" shaped cross-sectional configuration,

(b) a plurality of sliding elements, each sliding element having a mounting post extending generally upwardly therefrom and a pair of vertically spaced rollers slidably receivable in one of the respective rails,

(c) a plurality of main frames, each main frame having an inverted generally "U" shaped configuration with each lower end of each main frame fixedly connected to the mounting post of a sliding element,

(d) a plurality of rods, each rod having one end pivotally connected to a main frame and an opposite end slidably attached to an adjacent main frame,

(e) means to fixedly attach the sliding elements associated with a frontmost main frame to the associated rail, and,

(f) means to releasably fix the sliding elements associated with a rearmost main frame to the associated rail

WIPER DEVICE OF A MOTOR VEHICLE

Mineo Endo, Chiyoda, and Shigemi Kambayashi, Nitta, both of Japan, assignors to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Mar. 15, 1990, Ser. No. 494,015
Claims priority, application Japan, Apr. 19, 1989, 1-46139[U]
Int. Cl.' B62D 25/08
U.S. Cl. 296—192 2 Claims

1 A wiper device of a motor vehicle having a cowl provided adjacent a front edge of a windshield and a bulkhead in a form of a box laterally extending under the cowl, comprising.

a front panel vertically provided in the bulkhead to form a chamber in the bulkhead into a housing for a wiper at a front side and an air duct at a rear side,

a center pivot mounted on the cowl on a lateral center line of the vehicle;

a side pivot mounted on the cowl at a side position of the vehicle,

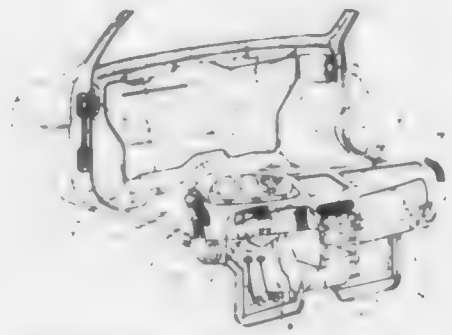
a wiper motor provided in the bulkhead at an opposite side of the side pivot,

a center wiper link pivotally mounted on the center pivot at a center thereof,

a side wiper link pivotally mounted on the side pivot at a front end thereof;

a first wiper rod connected between the wiper motor and a front end of the center wiper link,

a second wiper rod connected between a rear end of the center wiper link and a rear end of the side wiper link; and



the front panel having an opening through which the second wiper rod extends and fresh air passes for ventilation.

5,005,898

VEHICLE STRUCTURE AND THE METHOD FOR ITS ASSEMBLY

Piero Benedetto, Murello; Salvatore Bezzi, Moncalieri, and Paolo Odone, Turin, all of Italy, assignors to Fiat Auto S.p.A., Turin, Italy

Filed Dec. 21, 1989, Ser. No. 452,744
Claims priority, application Italy, Dec. 23, 1988, 68147 A/88
Int. Cl.' B60K 37/00
U.S. Cl. 296—194 11 Claims

1 A vehicle structure, comprising

(a) a body defining an engine compartment and a passenger compartment communicating with each other through an opening between them,

(b) a dividing element between the passenger compartment and engine compartment,

(c) said dividing element comprising a panel independent of said body and arranged to close said opening between the engine compartment and passenger compartment,

(d) said panel comprising a rigid element having a mechanical support function and a soundproofing element formed of expanded material of cellular structure,

(e) said soundproofing element forming a single body with said rigid element,

(f) said panel including an upper portion of cross-member form and a lower portion of bulkhead form,

(g) said rigid element defining a load-bearing framework of said panel and being embedded in said soundproofing element, and

(h) said soundproofing element covering said upper portion of said panel on a side facing the engine compartment and said lower portion on a side facing the passenger compartment

VEHICLE TRANSPARENT ROOF HAVING MANUALLY OPERABLE SUNSHADE

Alain J.-M. Clenet, Santa Barbara, Calif., assignor to Asha Corporation, Santa Barbara, Calif.

Continuation-in-part of Ser. No. 313,795, Feb. 22, 1989, Pat. No. 4,923,244, and a continuation-in-part of Ser. No. 220,785, Jul. 19, 1988, abandoned. This application May 2, 1990, Ser. No. 518,576
The portion of the term of this patent subsequent to May 8, 2007, has been disclaimed.
Int. Cl.' B60J 7/00
U.S. Cl. 296—214 16 Claims

1 For use with a vehicle including a roof covering an occupant compartment, a sunshade roof construction comprising a transparent roof panel through which the environment can be viewed from the occupant compartment; a sunshade mounted below the transparent roof panel and including a plurality of laterally elongated blades each of which has opposite ends; said sunshade also including a flexible sheet-like shade that connects the blades, a pair of guides supported below the transparent panel with each guide receiving one end of each blade to support the sunshade for movement between: a closed position where the blades are spaced from each other below the transparent roof panel with the flexible shade extending between the blades to cooperate therewith in shading the occupant compartment from the transparent roof panel, and an open position where the blades are stored in a stacked relationship with all of the blades located in a single vertical stack at a location that exposes the occupant compartment to the transparent roof panel and with portions of the flexible shade folded between the stacked blades, the sunshade having a front end

including a handle that is manually grasped to move the sunshade between the closed and open positions, and a coupling mechanism including releasable connections for connecting to the blade ends to maintain the blades spaced from each other during movement to and from and while in the closed position, and the releasable connections of the coupling mechanism disconnecting from certain blade ends upon movement to the open position to permit the storage of the blades in the stacked relationship with the portions of the flexible shade folded between the blades

AUTOMOTIVE SEAT CUSHION SUPPORT

Jerry D. Clampa, Dearborn Heights, and Lawrence J. Kummer, Plymouth, both of Mich., assignors to Ford Motor Company, Dearborn, Mich.

Filed Jun. 12, 1989, Ser. No. 364,765
Int. Cl.' A47C 7/02
U.S. Cl. 297—216 14 Claims

1 In an automotive vehicle body having a floor and a seat mounted on the floor having at least one seating position for supporting vehicle occupants, the seat including a seat back extending substantially perpendicularly upwardly from the floor and the seat cushion having rear surfaces abutting lower front surfaces of the seat back and extending substantially parallel to the floor, an improved support for the seat cushion comprising

a support frame fixedly secured to the floor below the rear of the seat cushion and including a restraining portion projection obliquely upwardly and forwardly from the floor to a position rearwardly proximate the front of the seat cushion, comprising a generally U-shaped member having a substantially horizontal mounting portion including one

end adapted to be fixedly secured to the floor proximate the rear of the seat cushion and wherein the restraining portion projects from the other end of the mounting portion

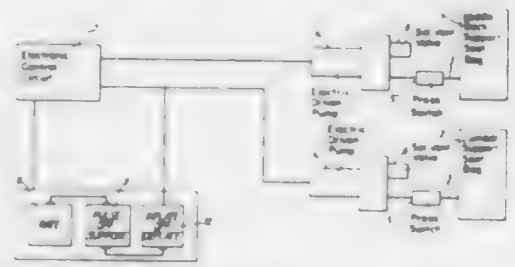
PROTECTIVE CUSHION FOR CHILD'S AUTO SEAT
Raye F. Minardi, 19601 Gunn Hwy., Odessa, Fla. 33556
Filed May 5, 1989, Ser. No. 347,570
Int. Cl.' A47C 27/00
U.S. Cl. 297—250 12 Claims

1 In combination with a child's auto seat having laterally outwardly facing sides and laterally outwardly facing supporting framework, the sides and framework each having sharp and rough edges, the improvement comprising a removably attachable cushion for attachment to a portion of the sides and the supporting framework, said cushion comprising

(a) cover means



(b) padding means substantially encased by said cover, and

(c) attaching means connected to said cushion, said attaching means adapted so that said cushion is removably attached to a portion of the laterally outwardly facing sides of the seat structure and a portion of the laterally outwardly facing supporting framework of the child's auto seat, such that the padding encases at least a portion of the sharp and rough edges of the child's auto seat, whereby said cushion is interposed between said child's auto seat and persons or things not placed within said child's auto seat

5,005,904
SYSTEM FOR INFLATING SUPPORT BAG IN SEAT
Clive Clemens, Etwall, and Gary Martin, Burton-on-Trent, both of England, assignors to Pirelli Limited, London, England
Filed Feb. 27, 1989, Ser. No. 315,656
Claims priority, application United Kingdom, Mar. 1, 1988, 8804864
Int. Cl.' A47C 7/46
U.S. Cl. 297—284 12 Claims

1 A seat bag inflation system comprising a seat structure and inflatable bag means forming part of said seat structure, electrically driven pump means for supplying inflation fluid to said bag means, said pump means when driven continuously producing complete inflation of said bag means in a first time interval, and a control circuit for automatically energizing said pump means for periods at spaced apart intervals to produce complete inflation of said bag means in a second time interval substantially longer than that which would be produced by continuous energization of said pump means, the duration of each period of energization being such that the output of said pump means during each period of energization produces only a small increase in the inflation of said bag means whereby a

multiplicity of periods of energization at said spaced apart intervals is required to produce complete inflation of said bag means

RECLINING DEVICE
Yoshio Suzuki, Shioya; Kaoru Umeda, and Norimasa Kitoh, both of Inuyama, all of Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo and Kabushiki Kaisha Imasen Denki Seisakusho, Inuyama, both of, Japan
Filed Jun. 8, 1989, Ser. No. 363,265
Claims priority, application Japan, Jun. 14, 1988, 62-78467[U]; Jun. 14, 1988, 63-78468[U]; Jun. 14, 1988, 63-78470[U]; Jun. 14, 1988, 62-146464; Jun. 14, 1988, 63-0146465
Int. Cl.' B60N 2/02
U.S. Cl. 297—362 14 Claims

1 An adjustable device for a vehicle seat having a seat portion and a back portion comprising:

a back bracket adapted to be attached to the back portion;

an external gear on said back bracket;

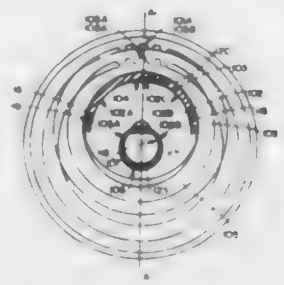
a seat bracket adapted to be attached to the seat portion;

an internal gear on said seat bracket having a slightly greater number of gear teeth than the gear teeth on said external gear;

an eccentric shaft having an eccentric portion thereon;

said internal and external gears being rotatably mounted on said eccentric shaft with one of said internal and external gears being mounted on said eccentric portion, so that said internal and external gears are relatively rotatable with respect to each other by rotation of said shaft and said internal and external gear teeth engage with each other continuously over a part of each gear,

at least one of said gears being attached to the associated bracket by rivet means;



at least the other of said gears being disposed between said at least one gear and the associated bracket on which said one gear is mounted, and

a plurality of slots in at least the other of said gears circumferentially spaced on the same radius, said slots extending in directions relative to said eccentric shaft and being positioned so that parts of said rivet means slidably engage in said slots to provide for said relative rotation of said gears and reclining adjustment of said seat and back portions

Int. Cl.' B60N 1/06
U.S. Cl. 297—362 9 Claims

1 A continuous joint for a seat with an adjustable back comprising a fixed plate, integral with the seat-part of the seat and a movable plate, integral with the back, said plates being laterally secured to each other in confronting relationship, one of said plates being provided with a shaft disposed about a central axis, an eccentric constituting a cam provided with a bearing aperture in which is seated the shaft and rotatable about said central axis, enabling the angular position of one of the two plates to be varied in relation to the other by partial engagement of at least two sets of teeth, a first set of teeth, integral with one of the two plates being centered on said central axis, about which the eccentric constituting a cam turns and a second corresponding set of teeth being integral with a part driven by the eccentric constituting a cam, in such a way

as to displace around said central axis the partial engagement zone, wherein, the eccentric constituting a cam has on its periphery, in the most eccentric zone in relation to the axis, an elastic bearing made of a metal or metal alloy, integral with this eccentric constituting a cam, which is elastically held, directly or indirectly against the driven face of the tooth part displaced by this eccentric constituting a cam, in such a way as to hold the second set of teeth, integral with this part, against the first set of teeth in the partial engagement zone, the bearing aperture of the eccentric constituting a cam being provided with two main support zones in relief, on which the shaft bears to provide a reactive force to the force applied by said elastic bearing against the driven face of said tooth part, said support zones being angularly spaced 90°-150° apart on opposed sides of a plane containing the central axis and a diametral line symmetrically bisecting the partial engagement zone of said at least two sets of teeth

5,005,908

FLOATING WEDGE COUPLING

Charles D. Young, Princeton, Ky., assignor to Hoover Universal, Inc., Plymouth, Mich.

Filed Oct. 16, 1989, Ser. No. 422,005
Int. Cl.' A47C 7/00
U.S. Cl. 297—443 4 Claims

1 A seat assembly comprising:

a lower seat cushion,

a seat back extending generally upwardly from said seat cushion, and,

a coupling for joining said seat back to said seat cushion, said coupling including;

an elongated mounting plate attached to said seat cushion and extending longitudinally therefrom,

a hollow housing attached to said seat back, said housing being open at one end for reception of said plate into said housing by longitudinally moving said housing over said plate;

a recess in one edge of said plate for reception of a longitudinally elongated portion of a sidewall of said housing therein upon lateral movement of said housing relative to said plate to couple said housing to said plate to prevent longitudinal movement of said housing relative to said plate; and

wedge means comprising a separately attached wedge disposed within said housing for resisting lateral movement of said plate relative to said housing to hold said sidewall in said recess to resist rotational movement of said housing relative to said plate.

5,005,909

FORCE-LIMITING ENERGY ABSORBER FOR SAFETY BELT SYSTEMS

Artur Föhl, Schorndorf, Fed. Rep. of Germany, assignor to TRW Repa GmbH, Fed. Rep. of Germany

Division of Ser. No. 202,803, Jan. 3, 1988, Pat. No. 4,904,023.
This application Jul. 27, 1989, Ser. No. 386,512
Claims priority, application Fed. Rep. of Germany, Jul. 17, 1987, 3723772
The portion of the term of this patent subsequent to Feb. 27, 2007, has been disclaimed.
Int. Cl.' A62B 35/04
U.S. Cl. 297—472 1 Claim

1 A force-limiting energy absorber for a safety belt system, said force-limiting energy absorber comprising

two end fittings,

a deformable element connected with said end fittings, said deformable element including first and second side portions which are spaced apart for at least a portion of their length to at least partially define an opening, said first and second side portions being deformable under the influence of a tensile load transmitted between said two end fittings through said first and second side portions,

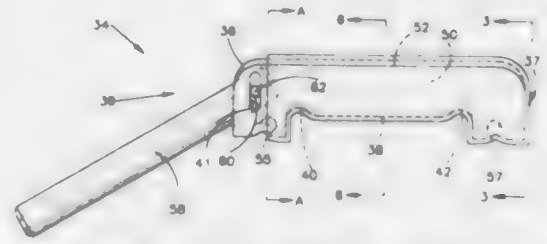
a limiting element in each opening located longitudinally centrally of the side portions as measured in the direction of tensile load and having a surface portion spaced from said side portions for abutting another surface portion located longitudinally centrally of said side portions as measured in the direction of tensile load to limit the combined distance through which said first and second side portions of said deformable element move during deformation to a distance which is substantially less than a transverse dimension of the opening as measured along a line extending perpendicular to a longitudinal axis extending between said two end fittings through said deformable element prior to deformation of said deformable element under the influence of a tensile load transmitted between said two end fittings.

5,005,910

APPARATUS FOR RESTRICTING RELATIVE MOVEMENT OF BELT PORTIONS

Isaak A. Itkis, Southfield, and Louis A. LaFrate, Sterling Heights, both of Mich., assignors to TRW Vehicle Safety Systems Inc., Lyndhurst, Ohio

Filed Jul. 6, 1989, Ser. No. 376,313
Int. Cl.' A47C 31/00
U.S. Cl. 297—483 11 Claims



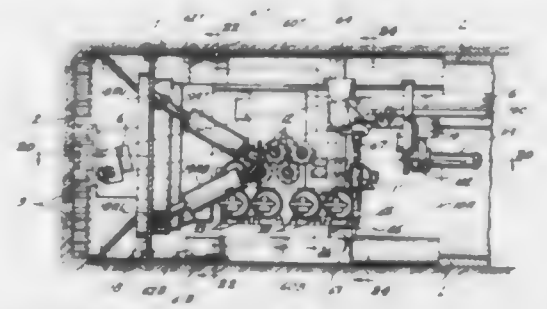
1 An apparatus for use with a first belt portion and a second belt portion arranged in a lengthwise overlapping side-by-side relationship with the first belt portion, said apparatus comprising:

a first member having a pair of leg portions and a bight portion interconnecting said leg portions, said first member having an opening in said bight portion for receiving a loop formed from the overlapping first and second belt portions;

each of said leg portions including a surface against which a part of one of the overlapping belt portions is engagable,

the surfaces of said leg portions extending away from said bight portion and diverging relative to each other as they extend away from said bight portion, and

a second member having a portion thereof pivotally connected to a portion of said first member and between said pair of leg portions of said first member, said second member being receivable in the loop for, when said second member is received in the loop and tension is applied to a belt portion, engaging the other one of the overlapping belt portions into engagement with respective diverging surfaces of said leg portions to clamp the overlapping belt portions between said second member and the diverging surfaces of said leg portions and thereby restrict relative sliding movement of the first and second belt portions, said first and second members clamping the overlapping belt portions along spaced apart parallel lines at locations of the overlapping belt portions spaced apart along the length of the overlapping belt portions



5,005,911

QUADRISHOE TUNNEL BORING MACHINE

Tyman H. Fikse, P.O. Box 1008, LaConner, Wash. 98257

Continuation-in-part of Ser. No. 183,020, Apr. 18, 1988, Pat. No. 4,915,453. This application Mar. 13, 1990, Ser. No. 493,078
Int. Cl.' E21C 29/00, E21D 9/12
U.S. Cl. 299—31 5 Claims

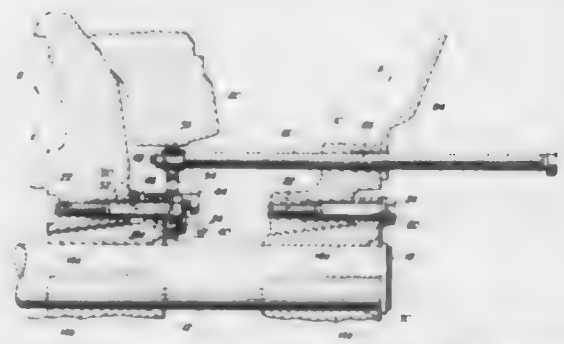
1 A quadrishoe tunnel boring machine comprising a body having a front end, a rotary cutterhead rotatively mounted on the front end of said body, two pairs of anchor shoes disposed in circumferentially orthogonal relationship behind said body with the anchor shoes of each pair being disposed diametrically oppositely, each anchor shoe of each pair being substantially a quadrant in circumferential extent and the anchor shoes of said two pairs being in generally circumferential registration, the opposite anchor shoes of one of said pairs floating relative to said body, pivot means pivotally connecting the leading end portions of the anchor shoes of the other of said pairs to said body for movement along the tunnel conjointly therewith, shoe-setting jack means engaged directly between the opposite anchor shoes of each anchor shoe pair for spreading the anchor shoes of such pair to set them against the tunnel wall in machine-anchoring position independently of the anchor shoes of the other pair, said body including thrust-receiving means, and body-advancing jack means engaged directly between said thrust-receiving means and said floating anchor shoes of said one pair for advancing said body and the other pair of anchor shoes relative to said one pair of anchor shoes.

5,005,912

WHEEL MOUNTING ASSEMBLY FOR A STORAGE AND RETRIEVAL MACHINE

George R. Pipes, Salt Lake City, Utah, assignor to Eaton-Kenway, Inc., Salt Lake City, Utah

Filed Oct. 2, 1989, Ser. No. 415,738
Int. Cl.' B60B 35/10
U.S. Cl. 301—111 10 Claims



1 In a storage/retrieval machine comprising a base, a mast assembly attached to said base, at least one wheel mounted for rotation on said base and supporting said machine on a floor-mounted rail, and means for mounting said wheel to said base comprising a first mounting member mounted in fixed relation to said base, a second mounting member movably mounted on said first mounting member, means rotatably mounting said wheel on said second mounting member, and means for moving said second mounting member relative to said first mounting member about a plurality of axes, the improvement comprising means defining a spherical joint between said first mounting member and said second mounting member.

5,005,913

WHEEL TREAD ADJUSTING DEVICE

Carl E. Kittle; Dennis L. Paxton, both of Cedar Falls, and Abraham Camacho, Gilbertville, all of Iowa, assignors to Deere & Company, Moline, Ill.

Continuation-in-part of Ser. No. 236,690, Aug. 25, 1988, Pat. No. 4,936,634. This application Oct. 3, 1989, Ser. No. 416,741
Int. Cl.' B60B 35/00, 27/06
U.S. Cl. 301—128 13 Claims

1 A wheel adjusting mechanism for moving a wheel axially along an axle, the wheel having a hub positioned about the axle and a tapered sleeve positioned between the hub and the axle which is axially movable relative to the hub, the sleeve frictionally holding the hub to the axle when the sleeve is wedged

between the hub and the axle, and allowing the hub to move axially along the axle when the sleeve is not wedged 10 between the hub and the axle, the wheel adjusting mechanism comprising:

a. a plate having at least one adjustment bore therein,

b. mounting means for mounting said plate to the tapered sleeve of the wheel;

c a threaded adjustment bolt substantially parallel to the axle,

d holding means for holding one end of said adjustment bolt in said adjustment bore in said plate while allowing rotary motion of said adjustment bolt within said adjustment bore and limiting axial movement of said adjustment bolt along said adjustment bore;

e bracket means fixed to said axle and having at least one threaded bore therein, said adjustment bolt threadedly engaging said threaded bore

5,005,914

DUAL BRAKE COMPENSATOR

Roland Levrai, Stains, and Pascal Le Normand, Aulnay Sous Bois, both of France, assignors to Bendix France, Drancy, France

Filed Sep. 14, 1989, Ser. No. 407,481
Claims priority, application France, Sep. 30, 1988, 88 12861
Int. Cl.[5] B60T 8/22
U.S. Cl. 303—9.63 5 Claims

1 A dual brake compensator for a motor vehicle, comprising two correcting valve of which respective inlets are connected separately to two independent brake-pressure sources and reapective outlets are connected separately to two independent brake motors, each correcting valve being capable of controlling the values of pressures at the respective inlet and outlet of the valve according to a predetermined relation, and each correcting valve comprising a piston subjected to respective elastic return means by a respective lever, the dual brake compensator further including a device for detecting and providing a warning signal of an angular deviation between the levers

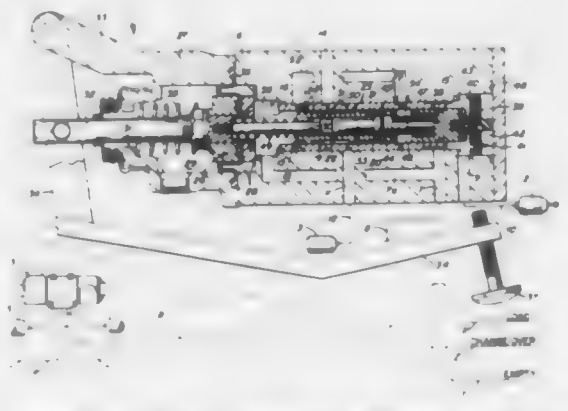
---

5,005,915

EMPTY/LOAD CHANGEOVER VALVE FOR RAILWAY CAR

James E. Hart, Trafford, Pa., and Albert A. McKay, Stoney Creek, Canada, assignors to American Standard Inc., Wilmerding, Pa.

Filed Feb. 20, 1990, Ser. No. 481,414
Int. Cl.[5] B60T 8/18
U.S. Cl. 303—22.2 31 Claims



1 For use in a railway vehicle brake control system including a brake pipe charged to a certain chosen pressure, an auxiliary reservoir charged to the pressure carried in said brake pipe, a brake cylinder device, and a brake control valve device via which fluid under pressure is supplied from said auxiliary reservoir to said brake cylinder device and released therefrom in accordance with variation of the fluid pressure in said brake pipe, an empty/load changeover valve device mounted on one of the sprung and unsprung members of said vehicle comprising

(a) load sensing means engageable with the other of said sprung and unsprung members for measuring the distance therebetween to provide an empty setting and a load setting of said changeover valve device depending upon said distance being greater or less than a predetermined distance corresponding to the changeover point between said empty and load settings.

(b) an inlet passage connected to said control valve device and an outlet passage connected to said brake cylinder device.

(c) a valve seat between said inlet and outlet passages.

(d) a check valve between said valve seat and said outlet

passage, said check valve being engageable with said valve seat in a closed position to interrupt the supply of fluid under pressure to said brake cylinder device and disengageable therefrom in an open position to conduct the supply of fluid under pressure to said brake cylinder device;

(e) a balance piston to which said check valve is connected having equal opposing pressure areas, one of said pressure areas being subject to the fluid pressure effective at said inlet passage; and

(f) empty/load valve means for pressurizing the other of said pressure areas in said load setting of said changeover valve device to establish a fluid pressure force balance across said balance piston, and for depressurizing said other pressure area in said empty setting to establish a differential fluid pressure force across said balance piston in the direction of engagement of said check valve with said valve seat

---

5,005,916

ANTILOCK BRAKE CONTROL SYSTEM FOR A MOTORCYCLE

Hideaki Fujioka, and Yoshio Katayama, both of Itami, Japan, assignors to Sumitomo Electric Industries, Ltd., Osaka, Japan

Filed May 17, 1990, Ser. No. 524,474
Claims priority, application Japan, May 18, 1989, 1-125299
Int. Cl.[5] B60T 8/60
U.S. Cl. 303—103 4 Claims

1 An antilock brake control system for a motorcycle having front and rear wheels, comprising:

means for detecting a velocity of said front wheel;

means for detecting a velocity of said rear wheel;

means for calculating an estimated velocity of said motorcycle based on the detected front and rear wheel velocities;

means for calculating a slippage of said front and rear wheels relatively to the estimated motorcycle velocity;

means for detecting a brake applied to said front wheel;

means for detecting a brake applied to said rear wheel

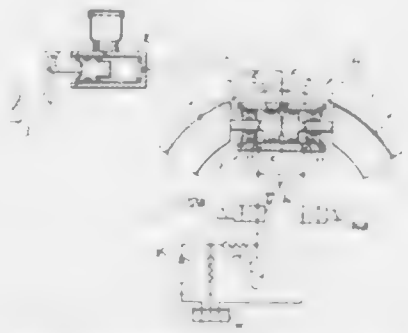
means for providing antilock control to said front wheel;

means for providing antilock control to said rear wheel,

means for detecting whether or not one of said front and rear wheel is provided with antilock control,

means for detecting whether or not one of said front and rear wheel is applied with brake, and

means for producing compensation amounts for compensating said slippage when each of said front and rear wheels is provided with antilock control



---

5,005,917

ANTI-LOCK BRAKE CONTROL METHOD

Toshio Yahagi; Yoshihiro Iwagawa; Yoichi Sugimoto, and Tsuyoshi Satoh, all of Saitama, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 17, 1989, Ser. No. 380,415
Claims priority, application Japan, Jun. 6, 1989, 1-143277
Int. Cl.[5] B60T 8/58
U.S. Cl. 303—113 6 Claims

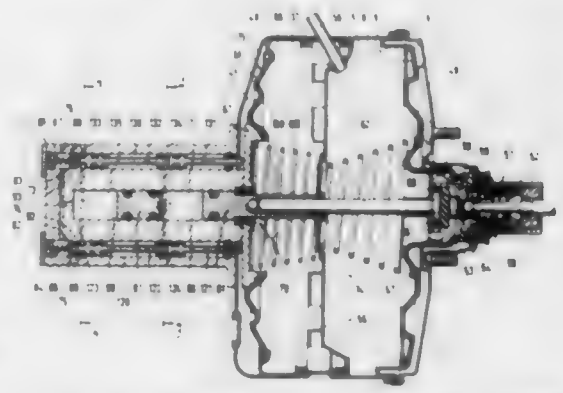
1 A method of controlling an anti-lock brake having a control valve means for controlling a braking pressure of a braking device coupled to a rotating wheel and also to a master cylinder, the method comprising the steps of

reducing said braking pressure of said braking device for a first time period, when said rotating wheel enters a locking condition, in order to reduce the braking force of said braking device, thereby preventing the wheel from becoming locked,

intermittently increasing said braking pressure for a second predetermined time period depending upon a pressure fed from the master cylinder, when said braking pressure is to be recovered, in order to intermittently increase said braking force;

detecting a condition of a braking operation, the condition comprising one of a recovery of said braking pressure or a completion of said braking operation, said condition occurring during said second time period while said braking force is intermittently increasing;

interrupting said intermittently increasing braking force for a third time period in response to the detection of the completion of said braking operation, said third time period being less than and occurring during said second predetermined time period



---

5,005,918

AUTOMOTIVE VEHICLE BRAKE SYSTEM

Lothar Schiel, Hofheim, and Manfred Rueffer, Salzbach, both of Fed. Rep. of Germany, assignors to Alfred Teves GmbH, Frankfurt, Fed. Rep. of Germany

Filed Oct. 18, 1989, Ser. No. 423,315
Claims priority, application Fed. Rep. of Germany, Oct. 28, 1988, 3836710
Int. Cl.[5] B60T 8/44
U.S. Cl. 303—114 6 Claims

1 An automotive vehicle brake system having a vacuum brake power booster which is interposed between brake pedal and master brake cylinder and which comprises at least two working chambers isolated from one another by by a diaphragm plate, one of said chambers communicating with a vacuum source, while the other one of said chambers is ventilated by means including a control valve actuated by the brake pedal for generating a boosting force that is proportional to the brake pedal force, wherein wheel brake cylinders are connected by way of brake lines to the master brake cylinder, wherein sensors are allocated to the wheels to be braked which sense the rotational behavior of the wheels to determine wheel-lock, and the output signals of which sensors are coupled to a central control electronics, and with a second diaphragm plate provided in the vacuum brake power booster to which a controllable pressure difference is applied and which isolates two additional pneumatic working chambers from each other and which, for slip control, is movable in a direction opposite to the actuating direction of the master brake cylinder under the effect of two compensating cylinders (120, 130) connected to and cooperating with the master-brake-cylinder pressure chambers, wherein said compensating cylinders (120, 130) include relief chambers (123, 133, 124, 134) respectively connected to pressure chambers (80, 90) of said master cylinder, and wherein the wheel brake cylinders are further connected to said relief chambers (123, 133, 124, 134) of the compensating cylinders (120, 130) and the connection between the master-brake cylinder pressure chambers (80, 90) and the relief chambers (123, 133, 124, 134) being closable during said slip control

5,005,919

ABS SOLENOID/ISOLATION VALVE INTEGRATION INTO SINGLE-ENDED SOLENOID BODY, USING MASTER CYLINDER ACTUATION

Lyle W. Shuey, Pendleton, Ind.; Edward J. DeHoff, Huber Heights, and Donald E. Schenk, Vandalia, both of Ohio, assignors to General Motors Corporation, Detroit, Mich.

Filed Mar. 13, 1989, Ser. No. 322,040
Int. Cl.[5] B60T 8/36
U.S. Cl. 303—119 6 Claims

1 A solenoid/isolation valve integration into a single ended body using master cylinder actuation for use in an anti-lock

braking system including a master cylinder, wheel cylinder, reservoir, and a pressurized fluid source, said valve integration in combination comprising

a housing for mounting said solenoid valve and said isolation valve, said housing including fluid connections for said master cylinder, wheel cylinder, reservoir and said pressurized fluid source, said housing also having a first fluid path connecting said master cylinder to said wheel cylinder, a second fluid path intersecting said first fluid path and connecting with said pressurized fluid source and a third fluid path intersecting with said first fluid path and connecting with said reservoir,

a first solenoid having a first solenoid actuated valve member for controlling fluid communication in said first fluid path between said intersection of said first and second fluid paths and said wheel cylinder connection, said first solenoid having a normally open position,

a second solenoid having a second solenoid actuated valve member positionally located on the same side of said first and second solenoids as said first solenoid valve member, and said second solenoid valve member controlling fluid communication in said third fluid path and said second solenoid having a normally closed position, and

an isolation valve mounted within said first fluid path with a portion sealably separating said master cylinder from said wheel cylinder and when said anti-lock braking system is actuated said normally open solenoid valve member is closed and said normally closed solenoid valve member is opened allowing fluid to flow from said wheel cylinder to said reservoir and said isolation valve moves within said first fluid path by a pressure force provided by said master cylinder to isolate said master cylinder from said wheel cylinder.

5,005,920

TRACK ADJUSTING MECHANISM

Malcolm H. Kinsinger, Washington, Ill., assignor to Caterpillar Inc., Peoria, Ill.

Filed Mar. 26, 1990, Ser. No. 499,234
Int. Cl.' B62D 55/30
U.S. Cl. 305—10 9 Claims

1 A track adjusting mechanism for adjusting the tension in the track of a track-type vehicle comprising

a track roller frame having first and second portions slidably movable relative one to the other,

first and second wheels connected respectively to said first and second portions of said roller frame, said track being entrained around said first and second wheels and said roller frame,

means for biasing said first wheel away from said second wheel, said means including a compressed spring positioned within said first portion of said track roller frame,

means for varying the degree of compression of said spring, including a first piston reciprocally movably positioned within said first portion of said track roller frame,

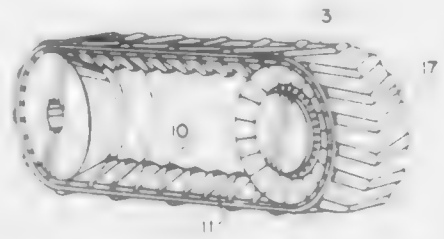
a fluid cylinder having a fluid leakage port for receiving low pressure leakage fluid, said cylinder being contained within said second portion of said track roller frame,

a source of pressurized fluid and means for controlling the flow of said pressurized fluid between said source and said fluid cylinder, said means including a variable position control valve,

a second piston positioned within said cylinder and being movable by said pressurized fluid

means for collecting and storing said low pressure leakage fluid from said cylinder, said means being in fluid communication with said fluid leakage port, and

a fluid line connected between said control valve and said cylinder, said fluid line adapted to receive high pressure fluid from said control valve in a first operational position of said control valve, and to receive relatively low pressure fluid from said cylinder and low pressure leakage fluid from said collecting means in a second operational position of said control valve



---

DOUBLE V-SHAPED ENDLESS TRACK DRIVE SYSTEM

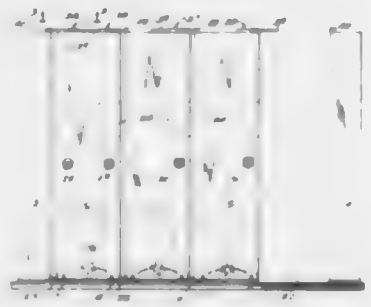
John W. Edwards, Brandon; Daniel R. Harper, and Quinton B. McNew, both of Ft. Myers, all of Fla., assignors to Edwards, Harper, McNew & Company, Ft. Myers, Fla.

Continuation of Ser. No. 261,933, Oct. 25, 1988, Pat. No. 4,884,852, which is a continuation-in-part of Ser. No. 113,670, Oct. 28, 1987, which is a continuation-in-part of Ser. No. 51,830, May 20, 1987, Pat. No. 4,906,054, which is a continuation-in-part of Ser. No. 49,819, May 14, 1987, Pat. No. 4,861,120. This application Sep. 22, 1989, Ser. No. 411,885
Int. Cl.' B62D 55/24
U.S. Cl. 305—35 EB 31 Claims

1 An endless drive track comprising

a plurality of endless track drive members each having at least one lateral side, said lateral side including first and second lateral frictional drive faces which intersect one another at an obtuse angle, and

means for connecting said drive members to one another to form said endless drive track



---

5,005,923

LIMIT SWITCH ASSEMBLY FOR MOBILE STORAGE APPARATUS

Dean L. Dahnert, Fort Atkinson, Wis., assignor to Spacesaver Corporation, Fort Atkinson, Wis.

Filed Mar. 9, 1990, Ser. No. 491,256
Int. Cl.' A47B 53/00
U.S. Cl. 312—201 8 Claims

1 A limit switch assembly comprising

a base member,

rod means having opposite ends and mounted on said base member for moving axially between a first limit position wherein one end is fully projected a predetermined distance from said base member and a second limit position wherein said rod means is retracted relative to said base member,

switch operating cam means fixed on said rod means for moving therewith between corresponding limit position, said cam means including axially spaced apart first and second cam surfaces,

first and second axially spaced apart switches mounted adjacent said rod means for said first cam surface on said rod means to operate the first switch when said first cam surface is in the first limit position and to operate the second switch when the second cam surface is in said second limit position, and

means for applying a biasing force to said rod means to move said first cam surface thereon to said first limit position wherein said one end of said rod means projects by said predetermined distance and said first cam surface operates said first switch, and such that a force acting on said rod means to overcome said biasing force retracts said rod means for said second cam surface to operate said second switch

DRAWER COMB HOLDER

Henry H. Hawn, 531 S. Mesa Dr., Mesa, Ariz. 85210

Filed Dec. 28, 1988, Ser. No. 291,153
Int. Cl.' A47B 83/00
U.S. Cl. 312—237 7 Claims

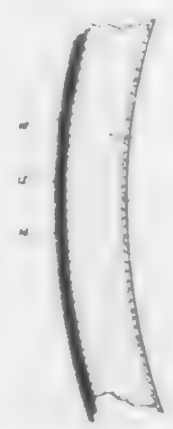
– 3

1 A combination drawer and comb holder comprising a generally vertical front wall, and a comb holder mounted thereupon for holding a hand comb which has a lower edge defined by protruding comb teeth and an upper edge defined by a back for grasping and holding the comb, the comb holder comprising

(a) a first bottom comprising a narrow elongate bottom strip from about four to about ten inches long and from about 0.1 to about 0.4 inches wide, the strip having first and second ends and front and rear edges;

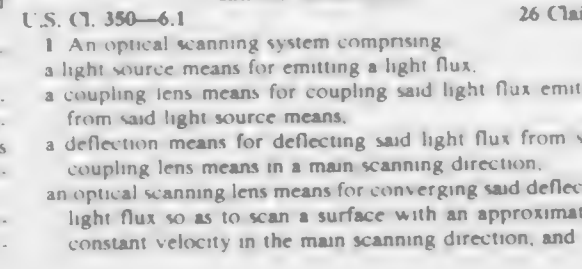
(b) a first front wall substantially the length of the first bottom and from about one-half to about one and one-half inches in width having a bottom edge secured along the front of the first bottom, a top edge and first and second ends,

(c) first and second trapezoidal end pieces each having a base edge, a top edge longer than the base edge, an altitude and front and rear edges, the base edges being secured at the repective ends of the first bottom and the front edges secured to the respective ends of the first front wall,



(d) means for mounting the rear edges of the first bottom and of the end pieces adjacent a generally vertical wall for use, the first bottom, end pieces and first front wall being so constructed and disposed relative to each other that when the holder is mounted for use the first front wall extends upwardly from the first bottom and outwardly from the vertical wall at an angle of from about 15 to about 50 degrees and defines an elongate receptacle for holding a comb therein lower edge down lying at an angle of from about 15 to about 50 degrees from vertical for exposing the upper edge for easy grasping by the user

5,005,925
COMBINATION TOY CHEST AND TABLE
Henry Diehl, 26 Old East Neck Rd., Melville, N.Y. 11747
Filed Apr. 17, 1990, Ser. No. 510,592
Int. Cl.[5] A47B [illegible]
U.S. Cl. 312—282 10 Claims



1 A combination toy chest and table comprising
a housing having a closed bottom wall
a sidewall extending completely around said bottom wall and extending vertically upwardly therefrom and having an upper perimeter edge to create a hollow interior space within said housing and an open top portion
a table top having two opposite ends and an underside
a leg attached to the underside of said table top at one end for supporting said table top and
a pivot hinge attached to the underside of said table top adjacent to the other end thereof for movably and rotatably connecting said table top to said sidewall so as to allow pivotable movement of said housing between a closed position for covering the open top portion of said housing and an open position for uncovering said open top portion of said housing, said pivot hinge raising up said leg during the rotatable movement thereof

5,005,926
BALLISTIC PROTECTIVE LASER SHIELD
Seymour Spielberger, Stamford, Conn., assignor to Barnes Engineering Company, Shelton, Conn.
Filed Oct. 18, 1988, Ser. No. 259,168
Int. Cl.[5] G02B [illegible]
U.S. Cl. 350—1.1 7 Claims

1 A ballistic protective laser shield for transmitting visible radiation while absorbing and/or reflecting predetermined laser radiation comprising
a transparent ballistic protective plastic substrate for transmitting visible radiation,
an interference filter deposited on a high temperature transparent plastic film which passes normal incidence radiation below 694 nanometers and reflects other wavelengths out to 1064 nanometers regardless of the angle of incidence of the laser radiation applied thereto,
transparent optical bonding means for bonding said interference filter directly onto said transparent ballistic protective plastic substrate thereby providing a protective laser shield having ballistic protection properties as well as laser radiation rejection properties

5,005,927
NONLINEAR OPTICAL MICROSCOPE
Roger S. Cudney, Los Angeles; Robert M. Pierce, San Pedro, and Jack I. Feinberg, Manhattan Beach, all of Calif., assignors to The United States of America as represented by the Secretary of the Air Force, Washington, D.C.
Filed Mar. 28, 1989, Ser. No. 329,731
Int. Cl.[5] G03H [illegible] G02B [illegible]
U.S. Cl. 350—3.64 2 Claims

1 A stationary object enhancing microscope which displays stationary microscopic objects in a sample while eliminating a moving background from said sample, said stationary object enhancing microscope comprising
a means for illuminating said sample which emits an illuminating beam,
a means for extracting a reference beam from said illuminating beam, said extracting means receiving and propagating said illuminating beam from said illuminating means while extracting said reference beam therefrom,
a microscope slide which holds said sample in front of said illuminating beam which it receives from said extracting means to yield thereby an object beam, said object beam containing an image of said moving background and an image of said stationary objects, and
a barium titanate photorefractive crystal which receives and interferes said reference beam from said extracting means with said object beam from said microscope slide to create a phase hologram inside itself, said phase hologram thereby creating constructive interference between said image of said moving background in said object beam with respect to said reference beam from said extracting beam, said barium titanate photorefractive crystal thereby yielding an output that displays predominantly only said stationary microscopic objects

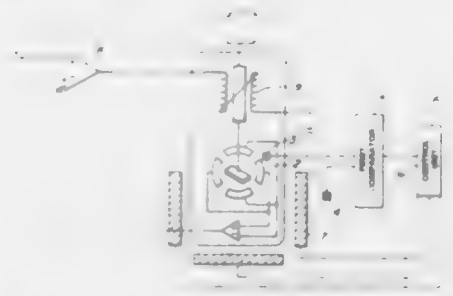
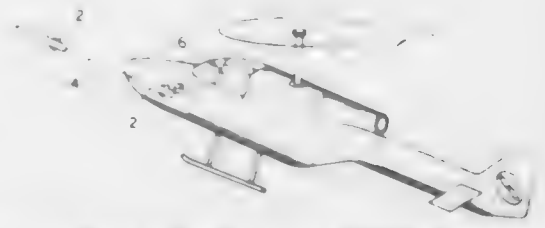
OPTICAL SCANNING SYSTEM
Seizo Suzuki, Tokyo; Nobuo Sakuma, Isagi; Katsumi Yamaguchi, Fuchu, and Osamu Endo, Kawasaki, all of Japan, assignors to Ricoh Company, Ltd., Tokyo, Japan
Filed Jul. 7, 1989, Ser. No. 376,631
Claims priority, application Japan, Jul. 15, 1988, 63-176320; Dec. 29, 1988, 63-332472; Mar. 13, 1989, 1-61876; Jun. 5, 1989, 1-142740
Int. Cl.[5] G02B 26/10
U.S. Cl. 350—6.1 26 Claims



1 An optical scanning system comprising
a light source means for emitting a light flux,
a coupling lens means for coupling said light flux emitted from said light source means,
a deflection means for deflecting said light flux from said coupling lens means in a main scanning direction,
an optical scanning lens means for converging said deflected light flux so as to scan a surface with an approximately constant velocity in the main scanning direction, and

a correcting lens means, cooperating with said optical scanning lens means, for further converging, on said scanned surface, said light flux from said optical scanning lens means in the main scanning direction and approximately coupling said deflection means and said scanned surface with a conjugate relationship in view of geometrical optics, said correcting lens means having an optical axis,



said correcting lens means including a barrel toroidal surface in which the radius of curvature thereof measured in a sub-scanning direction perpendicular to the main scanning direction decreases with an increased distance from said optical axis of said correcting lens means in a direction parallel to the main scanning direction

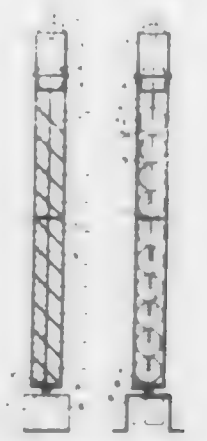
APPARATUS INCLUDING A LASER SCANNER
Kazuo Ota, Kanagawa, Japan, assignor to Kabushiki Kaisha Komatsu Seisakusho, Tokyo, Japan
PCT No. PCT/JP87/00568, § 371 Date Feb. 15, 1989, § 102(e) Date Feb. 15, 1989, PCT Pub. No. WO88/01396, PCT Pub. Date Feb. 25, 1988
PCT Filed Jul. 30, 1987, Ser. No. 364,448
Claims priority, application Japan, Aug. 18, 1986, 61-192541
Int. Cl.[5] G02B 26/10
U.S. Cl. 350—6.5 2 Claims



1 An apparatus including a laser scanner usable for the purpose of controlling the position of a mirror where a laser beam is reflected (representative of the direction of scanning) by turning said mirror by driving means adapted to be actuated in response to a signal indicative of a positional command and a signal detected by a position sensor, wherein said apparatus further includes,
scanner temperature detecting means for detecting the temperature of said position sensor,
environment temperature detecting means for detecting the environment temperature and
temperature controlling means adapted to perform controlling operation so as to allow the temperature of the position sensor to be kept constant at all times on the basis of an output from said environment temperature detecting means and an output from said scanner temperature detecting means
whereby operation of said driving means is controlled by said temperature controlling means

5,005,930
MULTI-DIRECTIONAL PAYOUT FIBER OPTIC CANISTER
Daniel K. Schotter, Tucson, Ariz., assignor to Hughes Aircraft Company, Los Angeles, Calif.
Filed Feb. 23, 1990, Ser. No. 484,015
Int. Cl.[5] G02B 1/00 F41G 7/00
U.S. Cl. 350—96.10 9 Claims

1 An optical fiber data link for interconnecting a missile launched from a moving platform, comprising
a first dispensing canister mounted to the missile on which a first optical fiber end portion is formed into a stack,
a second dispensing canister mounted to the moving platform including,
a further stack formed from the opposite end portion of the fiber, and
an enclosure having a single opening in the enclosure bottom with enclosure walls defining the opening being flared outwardly forming smooth curved surfaces facing the fiber dispensed through the opening

5,005,931
LIGHT RADIATOR
Kei Mori, 3-16-3-501, Kaminoge, Setagaya-ku, Tokyo, Japan
Filed Feb 2, 1990, Ser. No. 474,178
Claims priority, application Japan, Mar. 13, 1989, 1-61904
Int. Cl.[5] G02B 6/00
U.S. Cl. 350—96.10 10 Claims

10 A light radiator comprising a tubular container which is at least partially transparent and which has an elongate axis, rotary means rotatably mounted in said container for rotation about said axis, said rotary means comprising a rotary shaft having a shaft axis coaxial with said container axis and a plurality of spaced transparent plates mounted on said shaft with each plate being at an acute angle relative to said axis of said shaft, said tubular container having a longitudinal end portion, a light-guide cable means mounted on said end portion, a lens

in said tubular container disposed between said light-guide cable means and one of said plates, and motor means for rotatably driving said shaft about said container axis, each of said transparent plates having a least a partial reflective surface with the size of said partial reflective surface of each plate increasing with increasing distance from said end portion of said container such that each plate thereby reflects substantially the same amount of light rays.

5,005,932

ELECTRO-OPTIC MODULATOR

James H. Schaffner, Chatsworth; William B. Bridges, Pasadena, and Adrian E. Popa, Newbury Park, all of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Nov. 6, 1989, Ser. No. 432,933
Int. Cl.' G02B 6/10, 5/14
U.S. Cl. 350—96.14 18 Claims

1 An electro-optic modulator comprising

(a) a substrate having a major surface,

(b) an optical waveguide having at least two generally parallel optical waveguide channels formed in said substrate adjacent said major surface;

(c) an RF coplanar waveguide formed on the major surface of the substrate, said RF coplanar waveguide having first and second metallic ground conductors thereon which are separated by a region, the region overlying the two optical waveguide channels, said RF coplanar waveguide also having an axis of RF signal propagation within the region,

(d) optical input means for coupling an optical signal of a given phase to the optical waveguide,

(e) electromagnetic drive source means for coupling electromagnetic energy to the RF coplanar waveguide and

(f) phase regulating conductor means in said region between the first and second metallic ground conductors for adjusting the phase of the electromagnetic energy to maintain it in phase with the optical signal in the optical waveguide, said regulating conductor means being symmetric about the axis of RF signal propagation

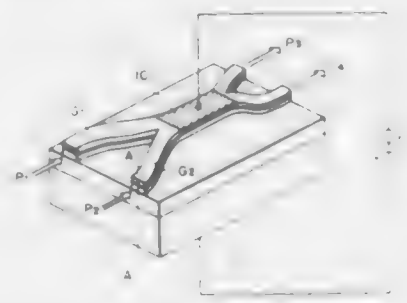
NON-LINEAR OPTICAL DEVICE

Akira Shimuzu, Isagi, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan



Filed Sep. 28, 1989, Ser. No. 413,733
Claims priority, application Japan, Sep. 30, 1988, 63-246324
Int. Cl.' G02B 6/10; H01L 27/14; H03F 7/00
U.S. Cl. 350—96.14 7 Claims

1. A non-linear optical device for transmitting light or carrying out optical signal processing by using a non-linear optical material having a biasing electric field applied perpendicularly to a semiconductor laminated to form a quantum well structure, characterized by:

(a) a well layer of the quantum well structure having substantially the same thickness as a Bohr radius of an exciton;

(b) the magnitude of the biasing electric field being selected such that a distance between centers of gravity of an electron and a hole which constitute the exciton is from a fraction of to substantially equal to the effective Bohr radius,

(c) the thickness and the potential of a barrier layer of the quantum well structure being selected such that the increase in the width of the absorption peak of the exciton which is caused by the ionization due to the tunneling effect of the exciton under the biasing electric field is

smaller than the width of the absorption peak under no electric field,

(d) the wavelength of light used to activate the device being selected such that the energy $h\omega$ of the photon us substantially equal to or slightly smaller than Eex/2, where Eex is the generation energy of the exciton of the quantum well structure, and

(e) the light which activates the device is polarized light whose electric field vector has a component normal to the layer of the quantum well structure

FIBER OPTICS CHANNEL SELECTION DEVICE

Lawrence E. Curtiss, Concord, Mass., assignor to Galileo Electro-Optics Corporation, Sturbridge, Mass.

Filed Jul. 11, 1989, Ser. No. 378,145
Int. Cl.' G02B 6/26, 6/32
U.S. Cl. 350—96.15 13 Claims

1. An optical signal channel selection device comprising

a plurality of first fixedly positioned optical signal channels for transmitting collimated optical beam signals along a plurality of first parallel channel axes;

a second fixedly positioned optical signal channel for transmitting collimated optical beam signals along a second channel axis which is parallel to said first channel axis

a rotor structure having an open walled optical channel formed therein and a pair of ports communicating with said open walled optical channel,

a pair of mirrors fixedly mounted on said rotor structure at the ends of said open walled optical channel and arranged so as to be parallel with each other and in optical communication with respective ones of said pair of ports, an input collimated optical beam signal incident upon one of said pair of mirrors being directed through said channel toward and reflected from the other of said pair of mirrors through its associated port in parallel with said input signal, said mirrors being larger than the collimated beam signals from said first optical signal channels or said second optical signal channel, and

means for rotating said rotor structure to move said pair of mirrors so that said one of said mirrors and its associated port can be selectively positioned opposite selected ones of said plurality of first optical signal channels and the other of said mirrors and its associated port is positioned opposite said second optical signal channel

WAVELENGTH-DIVISION MULTIPLEXING OPTICAL TRANSMISSION SYSTEM

Tatsuro Kunikane, Yokohama, and Takashi Yokota, Yamato, both of Japan, assignors to Fujitsu Limited, Kawasaki, Japan

Filed Apr. 17, 1990, Ser. No. 510,138
Claims priority, application Japan, Apr. 19, 1989, 1-097498
Int. Cl.' G02B 6/28
U.S. Cl. 350—96.16 6 Claims

1 A wavelength division multiplexing optical transmission system for transmitting light of wavelengths λ_1, λ_2 and λ_3 having a relationship $\lambda_1 < \lambda_2 < \lambda_3$ by way of a single optical fiber, comprising

a first prism having a first side face and a second side face opposite to said first side face, said first side face having a first filter formed thereon while said second side face has second and third filters formed thereon,

a second prism having a third side face and a fourth side face opposite to said third side face, said third face having a fourth filter formed thereon while said fourth side face has fifth and sixth filters formed thereon,

said first, third and fifth filters having a characteristic that they transmit light of the wavelengths λ_1 and λ_2 but reflect light of the wavelength λ_3 while said second, fourth and sixth filters have another characteristic that they transmit light of the wavelengths λ_2 and λ_3 but reflect light of the wavelength λ_1,

an optical fiber disposed such that an end thereof is opposed to said second filter of said first prism and the other end thereof is opposed to said fifth filter of said second prism

first optical device means provided adjacent said first side face of said first prism in an opposing relationship to said first filter and adapted to emit or receive light of the wavelength λ_2,

second optical device means provided adjacent said first side face of said first prism such that a light path thereof may be directed to said third filter of said first prism and adapted to emit or receive light of the wavelength λ_3;

third optical device means provided adjacent said second side face of said first prism such that a light path thereof may be directed to said second filter of said first prism and adapted to emit or receive light of the wavelength λ_1,

fourth optical device means provided adjacent said third side face of said second prism in an opposing relationship to said fifth filter and adapted to emit or receive light of the wavelength λ_2,

fifth optical device means provided adjacent said third side face of said second prism such that a light path thereof may be directed to said sixth filter of said second prism and adapted to emit or receive light of the wavelength λ_1, and

sixth optical device means provided adjacent said fourth side face of said second prism such that a light path thereof may be directed to said fifth filter of said second prism and adapted to emit or receive light of the wavelength λ_3

5,005,936

LONG RANGE BIDIRECTIONAL OPTICAL FIBER COMMUNICATION LINK

Hui-Pin Hsu, Northridge, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

Filed May 22, 1990, Ser. No. 527,228
Int. Cl.' G02B 6/28
U.S. Cl. 350—96.16 17 Claims

1 A long range bidirectional communication link comprising

an optical fiber having a first and a second end wherein the attenuation of optical energy passing therethrough at wavelengths included within a transmission window is substantially minimized;

first means for launching a first optical carrier of a first wavelength onto said fiber at said first end thereof, said first launching means including means for impressing a first modulating signal spanning a first frequency spectrum upon said first carrier,

second means for launching a second optical carrier of a second wavelength included within said transmission window onto said fiber at said second end thereof, said second launching means including means for impressing upon said second carrier a second modulating signal spanning a second frequency spectrum larger than said first spectrum,

a first receiver of a first bandwidth encompassing said first frequency spectrum, coupled to said second end of said fiber, for extracting said first modulating signal from said first optical carrier, and

a second receiver having a second bandwidth encompassing said second frequency spectrum, coupled to said first end of said fiber, for extracting said second modulating signal from said second optical carrier.

5,005,937

OPTICAL BRANCHING EQUIPMENT AND OPTICAL NETWORK USING THE SAME

Kazuo Aida, Yokohama; Shigeado Nishi, Yokosuka, and Kiyoshi Nakagawa, Miura, all of Japan, assignors to Nippon Telegraph and Telephone Corporation, Tokyo, Japan

Filed Apr. 10, 1990, Ser. No. 506,832
Claims priority, application Japan, Apr. 14, 1989, 1-94580; May 9, 1989, 1-115527
Int. Cl.' G02B 6/28
U.S. Cl. 350—96.16 36 Claims

1 Optical branching equipment comprising

a trunk line optical signal input terminal into which an optical signal of a first wavelength band is input from a trunk line,

a trunk line optical signal output terminal from which an optical signal of said first wavelength band is output to said trunk line,

a branch line optical signal output terminal from which an optical signal of said first wavelength band is output to a branch line,

a branch line optical signal input terminal into which an optical signal of said first wavelength is input from said branch line,

optical divider means which has an input port and first and second output ports and whereby light input into said input port optically connected to said trunk line optical signal input terminal is divided for output to said first and second output ports,

optical coupling means which has first and second input ports and an output port and whereby light input into either of said first and second input ports is output to said output port optically connected to said trunk line optical signal output terminal,

a short circuit for optically interconnecting said first output port of said optical dividing means and said first input port of said optical coupling means,

a first branching circuit for optically interconnecting said second output port of said optical divider means and said branch line optical signal output terminal,

a second branching circuit for optically interconnecting said second input port of said optical coupling means and said branch line optical signal input terminal,

optical limiter amplifier means inserted in said short circuit, for limiting and amplifying light of said first and second wavelength bands;

control light input means optically connected to said optical limiter amplifier means, whereby control light supplied from said branch line and of a second wavelength band different from said first wavelength band is input into said optical limiter amplifier means; and

pump light supply means supplied with power from said trunk line, for supplying pump light to said optical limiter amplifier means to excite it;

wherein when being supplied with said control light, said optical limiter amplifier means excited by said pump light suppresses an optical signal of said first wavelength band to thereby substantially cut off said short circuit for said optical signal and, when not supplied with said control light, amplifies and outputs said optical signal

OPTICAL WAVELENGTH CONVERTICAL APPARATUS

Tatsuo Itoh, Osaka; Shinichi Mizuguchi, Katano; Keishi Kubo, Moriguchi, and Takeo Sato, Kawasaki, all of Japan, assignors to Matsushita Electric Industry Co., Ltd., Osaka, Japan

Filed May 4, 1989, Ser. No. 347,817
Claims priority, application Japan, May 6, 1988, 63-111090; Jul. 15, 1988, 63-177813; Jul. 15, 1988, 63-177814
Int. Cl.' G02B 6/32
U.S. Cl. 350—96.18 10 Claims

1 An optical wavelength converting apparatus comprising

a light source,

an optical wavelength converting element comprising an optical waveguide capable of changing the wavelength of light of the type radiated by said light source that is incident at one side thereof, said optical waveguide having a central axis and transmitting light incident at one said side thereof at an angle other than 0° with respect to said central axis,

directing means operatively disposed in the apparatus between said light source and said optical waveguide for directing light radiated by said light source onto said one side of the optical waveguide,

a rotation lens defining at least a portion of a conical surface symmetrical with respect to an optical object axis of the lens,

said rotation lens disposed adjacent another side of said optical waveguide opposite that to which light radiated by said light source is directed by said directing means, and said optical wavelength converting element comprising said optical waveguide transmitting light, radiated by said light source and incident at said one side of said optical waveguide, to said at least a portion of a conical surface as divergent rays,

divergent rays impinging said at least a portion of a conical surface thereof being transmitted by said rotation lens as parallel rays

OPTOELECTRONIC ASSEMBLY

Nicolaos C. Arvanitakis, Vestal, N.Y.; Vincent J. BLack, Austin, Tex.; Richard E. Corley, Jr., Lexington, Ky.; Richard G. Nolan, Binghamton, N.Y., and Leonard T. Olson, Jr., Centerville, Va., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Mar. 26, 1990, Ser. No. 499,238
Int. Cl.' G02B 6/42
U.S. Cl. 350—96.20 25 Claims

1 An optoelectronic assembly for providing bidirectional data transmission between fiber optic means and an electrical circuit member, said assembly comprising

a housing adapted for being positioned on said circuit member and including a base portion having first and second receptacle sections therein, and a cover portion for being attached to said base portion;

a first optoelectronic device positioned within said first receptacle portion of said housing for receiving electrical data signals and for converting said electrical data signals to optical data signals,

a second optoelectronic device positioned within said second receptacle portion of said housing for receiving optical data signals and for converting said optical data signals to electrical data signals, and

a substrate member located within said housing adjacent said first and second optoelectronic devices and adapted for

being electrically coupled to said electrical circuit member when said housing is positioned on said circuit member, said substrate member including first and second circuitized sections, said first circuitized section being electrically connected within said housing to said first optoelectronic device for providing said electrical data signals thereto and said second circuitized section being electrical connected within said housing to said second optoelectronic device for receiving said electrical data signals therefrom

CONNECTOR FOR OPTICAL FIBERS AND THE LIKE

Henry J. Modrey, 3546 S. Ocean Blvd., #7[illegible], Palm Beach, Fla. 33480

Division of Ser. No. 317,208, Feb. 21, 1989, Pat. No. 4,948,224. This application Jun. 5, 1990, Ser. No. 535,372
Int. Cl.' G02B 6/38
U.S. Cl. 350—96.21 7 Claims

3 A connector for connecting two fiber conductors in stable end-to-end engagement, comprised of

a spirally wound cylindrical member having an outer surface and an elongate axis, said cylindrical member being characterized as having at least more than one overlapping spiral winds,

said cylindrical member defining a hollow cylindrical inner volume along said elongate axis and further defining a slot therein on its outer surface adapted to receive a corresponding inwardly bent tongue member means connected to said outer surface,

said tongue member means being adapted for movement between a first position entirely removed from said slot and a second position entirely within said slot,

when said tongue member means is disposed within said slot, said tongue member means does not extend beyond the thickness of one wind of said member and thus does not extend into said inner volume of said member,

whereupon when said tongue member means is disposed within said slot, said cylindrical inner passageway assumes a first, enlarged, diameter adapted to receive the end segments of said elongated fiber members and, when said tongue member means is removed from said slot means said cylindrical inner passageway assumes a second, reduced diameter generally corresponding to the diameter of the fiber members to thereby clamp the end segments thereof in end-to-end engagement

FIBER OPTIC SPLICE ASSEMBLY

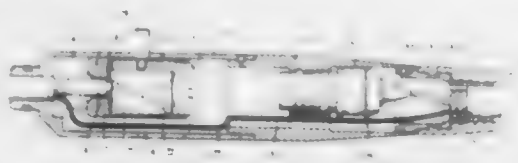
Robert W. Barlow, Canton; Thomas M. Lynch, and Steven E. Swanson, both of Williamsport, Pa., assignors to GTE Products Corporation, Stamford, Conn.

Continuation-in-part of Ser. No. 403,438, Sep. 5, 1989. This application Oct. 2, 1989, Ser. No. 415,684
Int. Cl.' G02B 6/38
U.S. Cl. 350—96.21 15 Claims

6. a fiber optic splice assembly for splicing optical fibers, said

fibers having a transparent core with a buffer coating thereon, said assembly comprising a longitudinal body having an axial bore therethrough and having opposed ends separated by and connected to a center portion, a hollow sleeve positioned within said center portion, elastic means mounted in said hollow sleeve for receiving the transparent cores of two fibers which have had a portion of their buffer coating removed, one fiber entering said body from each of said ends, said body



comprising longitudinal halves, means associated internally of said ends of said longitudinal halves for receiving a portion of the fibers having a buffer coating thereon and including said longitudinal bores, said longitudinal bores being defined by a slot formed on one of said halves and a projection formed on the other of said halves and holding means cooperating with said ends for applying radial compression to said ends whereby said fibers are retained within said bore.

5,005,943

RIGID VIDEO-ENDOSCOPE HAVING A ROTATABLE DEVICE FOR ADJUSTING THE ORIENTATION OF AN IMAGE RELATIVE TO AN IMAGE RECEIVING DEVICE

Francois Fort, Paris, France, assignor to Fibres Optiques Recherche et Technologie, Dourdan, France

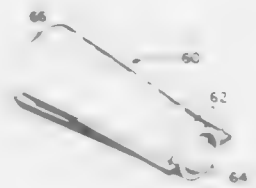
Filed Dec. 12, 1989, Ser. No. 448,112
Claims priority, application France, Dec. 12, 1988, 88 16301
Int. Cl.' G02B 23/26, A61B 1/00
U.S. Cl. 350—96.26 6 Claims

1. A rigid video-endoscope comprising

an optical system disposed at a distal end of an elongated tubular rigid inserting portion and providing an image of an object,

a solid state image receiving device, whose axis is in alignment with the optical axis of the optical system, for picking up the image provided by the optical system, said image receiving device being connected through an electrical cable to an image processing device disposed outside the video-endoscope,

a bundle of optical fibers transmitting light from a light source and illuminating the object, said bundle passing along said elongated tubular inserting portion and defining an optical cable,



wherein said video-endoscope further includes an handle supporting said elongated inserting portion, through a proximal end thereof, and said image receiving means disposed inside said handle, this latter comprising a rotatable device for rotating the image provided by the optical system, in order to optimally adjust the orientatation of the image relative to said receiving means, said rotatable device of the handle being disposed between the optical system and the image receiving device.

5,005,944

HOLLOW LIGHTPIPE AND LIGHTPIPE TIP USING A LOW REFRACTIVE INDEX INNER LAYER

Katherine D. Laakmann, Seattle, and Michael B. Levy, Woodinville, both of Wash., assignors to Luxar Corporation, Bothell, Wash.

Continuation-in-part of Ser. No. 139,285, Dec. 29, 1987, Pat. No. 4,805,987. This application Feb. 17, 1989, Ser. No. 310,774
Int. Cl.' G02B 6/20
U.S. Cl. 350—96.32 36 Claims

1. A hollow tip for transmission of light energy from the end of a light conduit to an area exterior of the light conduit comprising

an elongated tip housing having an interior surface defining an elongated interior space through which the light energy is transmitted from an input end through an output end to the area exterior of the light conduit, said elongated tip housing being adapted to be selectively attached to the end of the light conduit, a first portion of said interior surface reflecting the light energy incident thereon from the light conduit at an incidence angle that is less than 90 degrees and being composed of a material having a complex index of refractivity with a real part (n) less than about 0.4.

5,005,945

REAR PROJECTION SCREEN AND REAR PROJECTION SYSTEM COMPRISING SUCH A SCREEN

Johannes C. van de Ven, Eindhoven, Netherlands, assignor to U. S. Philips Corporation, New York, N.Y.

Continuation-in-part of Ser. No. 467,717, Jan. 19, 1990. This application Jul. 19, 1990, Ser. No. 556,939
Claims priority, application Netherlands, Aug. 22, 1989, 8902112
Int. Cl.' G03B 21/60
U.S. Cl. 350—128 27 Claims

1. A rear projection screen having a front and a rear side for displaying at the front side of the screen a picture supplied by a plurality of primary picture sources arranged at the rear side of the screen, said screen comprising a translucent plate whose front side is provided with a multitude of parallel-arranged first light-spreading elements extending in one direction across the plate for spreading light in a first plane perpendicular to the said direction, said elements having steep edges for obtaining total internal reflection and having a top with a portion for transmission and refraction, characterized in that the rear side of the plate is provided with parallel-arranged second light-spreading elements which extend mainly in the said direction, for spreading light already upon its entrance into the plate in a plane perpendicular to said direction.

5,005,946

MULTI-CHANNEL FILTER SYSTEM

Robert W. Brandstetter, Levittown, N.Y., assignor to Grumman Aerospace Corporation, Bethpage, N.Y.

Filed Apr. 6, 1989, Ser. No. 334,593
Int. Cl.' G02B 27/42, G02F 1/11, G06E 3/00, G03H 1/10
U.S. Cl. 350—162.12 34 Claims

1. A multi-channel filter system comprising

means for modulating a substantially coherent light beam with an input RF signal spectrum,

means for optically Fourier transforming and channelizing the modulated light beam to produce an input array of modulated light beams, each light beam in said input array being modulated by a spectral component of said input RF signal spectrum,

means for optically notching out noise in said input array of modulated light beams,

a holographic multi-channel spectrum filter, said spectrum filter selectively passing light beams from said input array having a correlation to preselected RF spectral components to produce a correlated output array,

means for illuminating said spectrum filter with said input array of modulated light beams to produce said correlated output array,

means for downconverting said correlated output array into an output array of noise excised and spectrum filtered RF signals, and

means for detecting and for respectively converting the signals passed by said holographic multi-channel spectrum filter into electrical output signal arrays.

5,005,947

DEVICE FOR FIXING AN OPTICAL MEMBER SUCH AS A FILTER TO A SUPPORT

Gérard Sibilo, Le Plan De Grasse, and Michel Louis, Nice, both of France, assignors to Aerospatiale Societe Nationale Industrielle, Paris Cedex, France

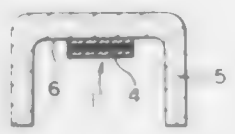
Filed Sep. 27, 1989, Ser. No. 413,398
Claims priority, application France, Sep. 30, 1988, 88 12812
Int. Cl.' G02B 7/02, 7/00
U.S. Cl. 350—252 7 Claims

1. Device for fixing at least one optical member (12) to a support (10), characterized in that it comprises at least one clamp (20), whereof a first end of said clamp bears on the support (10) and whereof a second end of said clamp bears on the optical member (12) via a shim (26), the clamp being traversed between said ends by at least one fixing screw (22) screwed into the support, at least one elastic washer (28) being fitted between the clamp and a head of said screw, so as to tighten said optical member against the support with a calibrated force, said shim along with said optical member and said support providing flat substantially adjacent surfaces, separating strips (24) of a thermally conductive malleable material

being interposed along said flat surfaces between said optical member, the support, and the shim, said second end of said clamp (20) and the shim (26) being in contact by surfaces defining a swivel bearing.

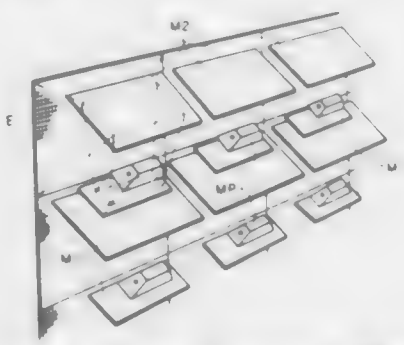
5,005,948

LENS MOUNTING APPARATUS FOR A TELEVISION CAMERA



Masami Takahashi, Zushi, and Ichiro Kajiya, Yokohama, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Kadoma, Japan

Filed Oct. 20, 1989, Ser. No. 424,789
Claims priority, application Japan, Oct. 20, 1988, 63-264534
Int. Cl.' G02B 7/02, H04N 5/30
U.S. Cl. 350—252 11 Claims



1. A lens mounting apparatus for television cameras, comprising a lens mounting mechanism on which a lens is mounted, a ring mechanism supported on said lens mounting mechanism, an elastic member for biasing said ring mechanism in the direction of the optical axis of said lens mounting mechanism, and a regulating member which abuts against a plurality of slanted cam faces formed in said ring mechanism so as to regulate a movement of said ring mechanism by said elastic member in the direction of the optical axis of said lens mounting mechanism, wherein an image pickup element-supporting member is moved toward or away from said lens mounting mechanism corresponding to said movement of said ring mechanism in the direction of said optical axis.

ANTI-GLARE COVERING FOR ILLUMINATE INDICATOR
Toshihiko Egawa, and Satoshi Odashima, both of Saitama, Japan, assignors to Shin Etsu Polymer Co., Ltd., Tokyo, Japan
Filed Oct. 25, 1989, Ser. No. 427,040
Claims priority, application Japan, Oct. 27, 1988, 63-140307[U]
Int. Cl.' G02B 27/00
U.S. Cl. 350—276 R 5 Claims

1. An anti-glare covering for an illuminate switch or indicator which comprises
(a) a covering member having a flat portion and two spaced-apart leg portions extending vertically from a surface of said flat portion; and
(b) an anti-glare microlouver sheet integrally melt-bonded to said covering member between said leg portions

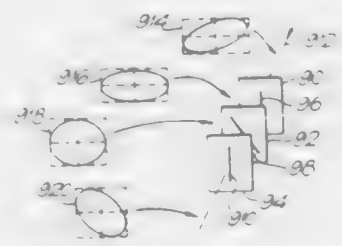
GIANT LIQUID CRYSTAL DISPLAY MEANS
Francois Morin, Lannion, France, assignor to Etat Francais Represente Par Le Ministere des Postes, Issy Les Moulineaux, France
Filed Jun. 15, 1989, Ser. No. 366,587
Claims priority, application France, Jun. 28, 1988, 88 08663
Int. Cl.' G02F 1/13; H04N 9/31
U.S. Cl. 350—333 10 Claims



1 A giant display device comprising a large translucent screen having a front face directed toward an observer and a rear face covered by a mosaic of colored filters organized in triads of primary colors, a liquid crystal display device having a mosaic of pixels, a plurality of optical projection modules comprising a white light source and optical means for projecting an image of said mosaic of pixels of said liquid crystal display device onto said mosaic of colored filters on said rear face of said screen, each pixel of said mosaic of pixels of said liquid crystal display device being optically projected by said optical projection modules on one filter of said mosaic of colored filters.

5,005,951
LIQUID CRYSTAL DISPLAY DEVICE
Ties S. Te Velde, Waalre, Netherlands, assignor to U.S. Philips Corporation, New York, N.Y.
Filed Jun. 8, 1988, Ser. No. 204,144
Claims priority, application Netherlands, Jun. 10, 1987, 8701347
Int. Cl.' G02F 1/133
U.S. Cl. 350—334 20 Claims

1 A liquid crystal display device comprising a liquid crystalline medium between a supporting plate and a cover plate, at least one of which plates is transparent and each of which is at least provided with a layer comprising a conducting material, characterized in that the layer of conducting material of the cover plate has a two-dimensional array of openings and in that spacing material is present between the plates at substantially equal distances from the openings

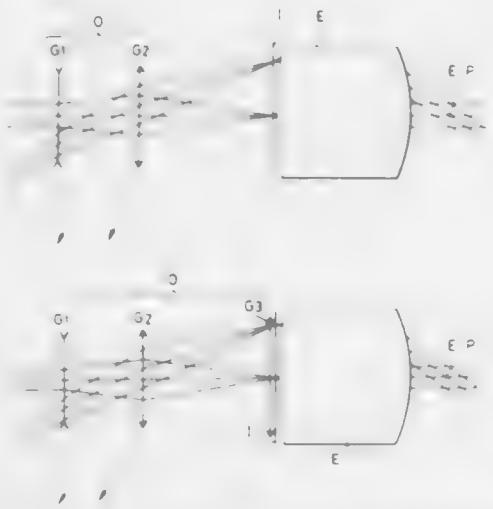
5,005,952
POLARIZATION CONTROLLER
Michael G. Clark, Buckinghamshire, and Ifor D. W. Samuel, Surrey, both of England, assignors to The General Electric Company, p.l.c., England
PCT No. PCT/GB88/00105, § 371 Date Dec. 14, 1988, § 102(e) Date Dec. 14, 1988, PCT Pub. No. WO88/06303, PCT Pub. Date Aug. 25, 1988
PCT Filed Feb. 18, 1988, Ser. No. 264,952
Claims priority, application United Kingdom, Feb. 18, 1987, 8703795
Int. Cl.' G02F 1/13
U.S. Cl. 350—335 7 Claims

1 A polarisation controller comprising at least one stack of nematic liquid crystal cells arranged such that radiation incident on the stack will pass through each cell in the stack in sequence, and means for applying synchronized fields across the cells so as to change the phase retardation of the radiation transmitted through each cell by a chosen amount, the optical axes of the cells being oriented with respect to each other, such that the polarisation of radiation transmitted through the controller is changed from a first polarisation state in which the radiation impinges upon the controller to a second polarisation state in which the radiation leaves the controller, one of said states being a first arbitrary polarisation and the other of said states being a pre-selected fixed polarisation or a second arbitrary polarisation; said means for applying synchronized fields including feedback means effective to change the values of said fields dependent on said second state

5,005,953
HIGH CONTRAST LIQUID CRYSTAL ELEMENT
Hideyuki Kawagishi, Fujisawa, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan
Continuation-in-part of Ser. No. 253,077, Oct. 4, 1988, abandoned. This application Nov. 20, 1989, Ser. No. 438,046
Claims priority, application Japan, Oct. 6, 1987, 62-250676; Mar. 2, 1989, 1-48556
Int. Cl.' G02F 1/133
U.S. Cl. 350—341 16 Claims

13 A liquid crystal apparatus comprising
a a liquid crystal element comprising
a pair of substrates, each of said substrates including electrodes and uniaxial orientation-processing axes,
a ferroelectric smectic liquid crystal disposed between said substrates and having a temperature range for producing a smectic A phase, said liquid crystal being in an orientation state having at least two different average molecular axes by being disposed between said pair of substrates which are separated by a distance which is small enough to suppress a spiral alignment structure of the ferroelectric smectic liquid crystal in the absence of an electric field, and
a polarizer and an analyzer at 90° crossed nicols, wherein said ferroelectric smectic liquid crystal has a $T_A - T_B$ value no larger than 4% in the maximum value thereof within a wavelength of 440–600 nm, when oriented to produce in the absence of voltage, an angle between two different average molecular axes less than an angle between two different average molecular axes when voltage is applied, where T_A (%) is transmittance in an orientation state having one average molecular axis when the arrangement of the polarizer and the analyzer is in the darkest state of the smectic A phase and subsequently rotating only the analyzer clockwise by 15° from said darkest state with regard to the proceeding direction of incident light and TB is transmittance in an orientation state having another average molecular axis when only the analyzer is rotated counterclockwise by 15° with regard to the proceeding direction of the incident light from said darkest state, and
b first means for applying to the ferroelectric liquid crystal an AC electric field insufficient to convert one of the average molecular axis into the other average molecular axis

5,005,954
METHOD AND APPARATUS FOR SECOND-RANK TENSOR GENERATION
Hua-Kuang Liu, South Pasadena, Calif., assignor to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.
Filed Feb. 16, 1989, Ser. No. 310,992
Int. Cl.' G02B 5/23; G06G 7/19; 7/192; 9/00
U.S. Cl. 350—354 6 Claims



1 A real-time optical second-rank tensor generator comprising
a nonlinear refractive crystal having two parallel sides,
means for generating a first coherent vector beam representing a linear array of vector components,
means for expanding said first vector beam in a direction perpendicular to said linear array of said first vector components,
means for collimating said first expanded vector beam onto one of said two parallel sides of said crystal,
means for generating a second coherent vector beam representing a linear array of vector components oriented perpendicular to said linear array of said first vector components,
means for expanding said second vector beam in a direction perpendicular to said linear array of said second vector beam components,
means for collimating said second expanded vector beam onto the second of said two parallel sides of said crystal in exact opposition to said first expanded vector,
means for producing a coherent plane wave pumping beam for all of said first and second vector beams expanded, and
a beamsplitter positioned in the path of said plane wave pumping beam to reflect said plane wave pumping beam onto said one side of said crystal thereby to produce four wave mixing in order to generate a conjugated beam from said nonlinear photorefractive crystal that represents said second-rank tensor

5,005,955
KEPLERIAN ZOOM FINDER OPTICAL SYSTEM
Koichi Ohshita, Kawasaki, Japan, assignor to Nikon Corporation, Tokyo, Japan
Filed Oct. 16, 1989, Ser. No. 421,765
Claims priority, application Japan, Oct. 18, 1988, 63-262209
Int. Cl.' G02B 15/14; 13/18; G03B 13/02
U.S. Cl. 350—423 15 Claims

1 A Keplerian zoom finder optical system having a zoom power variable objective lens, said Keplerian zoom finder optical system comprising
a zoom objective lens including a first lens group having a negative refracting power and capable of being moved for the purpose of conducting the zoom power variation and a second lens group including at least a positive meniscus lens whose convex surface faces an image and having a

positive refracting power, said second lens group being relatively movinl with respect to said first lens group for the purpose of conducting the zoom power variation, and an ocular used for enlarging and observing the image formed

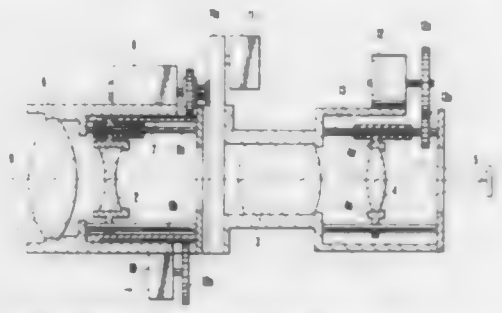
by said zoom objective lens, wherein provided that the focal length of said first lens group is f_1, the focal length of said second lens group is f_2, and the curvature radius of said convex surface is r_a, the structure thereof is so formed as to meet the following conditions:

$$0.8 < \frac{f_1}{f_2} < 1.4 \quad (f_1 < 0)$$

$$0.1 < \frac{r_a}{f_2} < 1.4 \quad (r_a < 0)$$

5,005,956

LENS POSITION CONTROL DEVICE



Naoya Kaneda; Hiroyuki Wada; Masahide Hirasawa, and Hirofumi Suda, all of Kanagawa, Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed May 31, 1989, Ser. No. 359,730

Claims priority, application Japan, Jun. 1, 1988, 63-135902; Jun. 7, 1988, 63-139619; Dec. 26, 1988, 63-328465

Int. Cl.[5] G02B *15/00*

U.S. Cl. 350—429 **14 Claims**

1 A lens position control device comprising

(a) a first lens group movable along an ootical axis for performing a function of varying an image magnification,

(b) a second lens group movable along the optical axis for performing a function of compensating at the time of variation of the image magnification and a function of focusing,

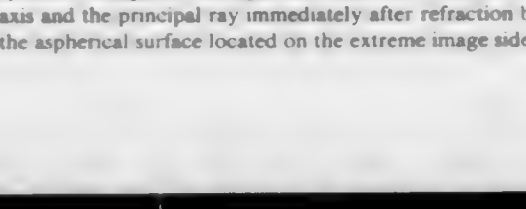
(c) position detecting means for detecting positions of said first lens group and said second lens group,

(d) in-focus detecting means for detecting an in-focus state, and

(e) control means for controlling movement of said second lens group on the basis of at least position information of said first lens group and said second lens group obtained by said position detecting means and information obtained by said in-focus detecting means, said control means forcibly driving said second lens group in a deviating direction from an in-focus position.

5,005,957

OBJECTIVE LENS SYSTEM FOR ENDOSCOPES



Iwao Kanamori, tokyo, and Minoru Okabe, Kanagawa, both of Japan, assignors to Olympus Optical Co., Ltd., Tokyo, Japan

Filed Sep. 6, 1989, Ser. No. 403,480

Claims priority, application Japan, Sep. 7, 1988, 63-222215; Oct. 18, 1988, 63-262117; Apr. 10, 1989, 1-88115

Int. Cl.[5] G02B *13/18, 21/02*

U.S. Cl. 350—432 **18 Claims**

1 An objective lens system for endoscopes comprising, in the recited order from the object side,

a first lens unit having negative refractive power and a second lens unit having positive refractive power,

said lens units being arranged in such a manner that a principal ray passes substantially through a front focal point of said second lens unit for making the principal ray emerging from said objective lens system substantially parallel to an optical axis of the objective lens system;

said first lens unit including a negative lens component having a concave surface on the image side thereof, bearing a substantial portion of the negative refractive power of said first lens unit and satisfying the following condition (1), and said objective lens system comprising an aspherical surface satisfying the following condition (2) at 50% or more of the effective area determined depending on the maximum image height:

$$R_1 < 3f \quad (1)$$

$$\left| \frac{K_I - K_{0.5}}{K_{0.5}} \right| < |\cos\omega_I - \cos\omega_{0.5}| \quad (2)$$

wherein the reference symbol R_1 represents radius of curvature on said concave surface, the reference symbol f designating focal length of the objective lens system as a whole, the reference symbols ω_I and $\omega_{0.5}$ denote field angles at an image height of I and at ½ of the maximum image height respectively, and the reference symbols K_I and $K_{0.5}$ represent values of K at the image height of I and at ½ of the maximum image height respectively when K is defined as $K = \sin\theta_2/\tan\theta_1$ (the reference symbol θ represents an angle formed between the optical axis and the principal ray incident from the object side on said aspherical surface located on the extreme object side, and the reference symbol θ designates an angle formed between the optical axis and the principal ray immediately after refraction by the aspherical surface located on the extreme image side).

5,005,958

HIGH FLUX SOLAR ENERGY TRANSFORMATION

Roland Winston; Philip L. Gleckman, both of Chicago, and Joseph J. O'Gallagher, Flossmoor, all of Ill., assignors to Arch Development Corporation, Chicago, Ill.

Continuation of Ser. No. 164,069, Mar. 4, 1988, abandoned. This application Oct. 16, 1989, Ser. No. 423,616

Int. Cl.[5] G02B *5/08*

U.S. Cl. 350—442 **19 Claims**

1 A multi-stage solar radiant energy transformation system, said system comprising:

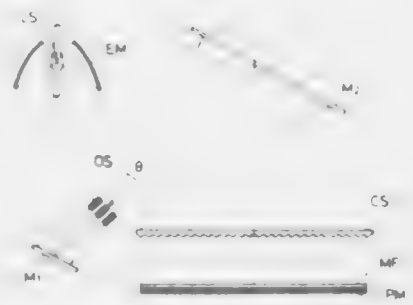
(a) as a primary stage, a means for focusing solar energy

(b) as a secondary stage, a non-imaging means for concentrative transmission of solar energy to an energy exit aperture,

said secondary stage disposed in energy receiving relation to said primary stage solar energy focusing means, and the concentrative capacities of said primary and secondary stages selected to provide a net solar flux intensification of at least 2000 uniformly distributed at the secondary stage energy exit aperture.

5,005,959

ILLUMINATION SYSTEM



Shinichi Nagata, Kyoto; Atsushi Kikkawa, Osaka, and Kenji Endo, Nagaokakyo, all of Japan, assignors to Dainippon Screen Mfg. Co., Ltd., Japan

Continuation of Ser. No. 062,440, Jun. 12, 1987, abandoned. This application May 24, 1989, Ser. No. 357,642

Claims priority, application Japan, Jun. 13, 1986, 61-138479

Int. Cl.[5] G02B *3/08*, F21V *13/00*

U.S. Cl. 350—452 **4 Claims**

1 An illumination system, comprising

a light source for producing light,

a reflector positioned with respect to said light to produce therefrom directed light,

an optical means having an entrance pupil for receiving said directed light at a characteristic entrance height, an exit pupil for passing the directed light received by said entrance pupil, and an optical axis leading from said exit pupil to an object to be illuminated, said optical means being effective for causing said light passing through said exit pupil to pass therefrom at an exit angle having a tangent which is substantially proportional to the entrance height of said directed light at said entrance pupil, including when said exit angle is larger than 10 degrees, and

collimation means, having a focal point which is in compliance with a focal point associated with said optical means, disposed between said exit pupil and said object to be illuminated for collimating light arriving at said object, said object to be illuminated being positioned on said optical axis whereby a uniform illumination is obtained on said object with a relatively short optical path of said illumination system.

5,005,960

RELAY LENS SYSTEM WITH FOUR OPTICAL ELEMENTS IN SYMMETRICAL ARRANGEMENT

Hans J. Heimbeck, Gallen, Switzerland, assignor to Med Inventio AG, Zurich, Switzerland

PCT No. PCT/EP88/00218, § 371 Date Nov. 21, 1989, § 102(e) Date Nov. 21, 1989, PCT Pub. No. WO88/07218, PCT Pub. Date Sep. 22, 1988

PCT Filed Mar. 17, 1988, Ser. No. 278,923

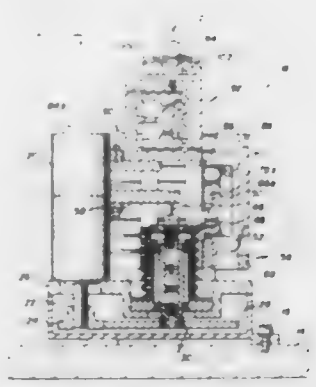
Claims priority, application Fed. Rep. of Germany, Mar. 19, 1987, 3709021

Int. Cl.[5] G02B 9/34, 23/00, 23/24

U.S. Cl. 350—573 **13 Claims**

1 Relay lens system for endoscopes, comprising two rod-type lens elements and two further optical elements therebetween in symmetrical arrangement relative to a center plane of symmetry between the two rod-type lens elements and two further optical elements, wherein the rod-type lens elements are individual convex/concave lens elements with concave surfaces which face the center plane, while the two further optical elements are individual bi-convex lens elements, one of said two rod-type lens elements and one of said two further optical elements being bonded to each other.

5,005,961



DEVICE FOR CONVERTING A DISPLACEMENT IN A DIRECTION INTO A FORCE IN THE SAME DIRECTION

Michael J. O'Brien, Rochester, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.

Filed Dec. 19, 1989, Ser. No. 452,892

Int. Cl.[5] G02B *5/08, 5/10, 7/18*

U.S. Cl. 350—611 **6 Claims**

1 A device for converting a displacement in a direction into a force in the same direction, said device including,

support means extensive in a plane parallel to said direction,

a first set of flexures, the flexures of the first set being of equal length and parallel to one another and each being

attached at one end to said support means and extending, in the unflexed condition, generally perpendicular to said plane;

first floating spine means attached to the ends of said flexures remote from said support means,

a second set of flexures, the flexures of said second set being of equal length and parallel to one another and each being attached at one end to said spine means and extending generally parallel to the flexures of the first set towards said support means,

first transfer means attached to the ends of the flexures of the second set remote from said first spine means,

a third set of flexures, the flexures of the third set being of equal length and parallel to one another in the unflexed state and being attached at one end to said first transfer means and extending generally parallel to the flexures of the first and second sets towards said first floating spine means,

second floating spine means attached to the ends of the flexures of the third set remote from said first transfer means;

a fourth set of flexures, the flexures of the fourth set being of equal length and parallel to one another in the unflexed state and being attached at one end to said second floating spine means and extending generally parallel to the flexures of the first, second and third sets towards said first transfer means,

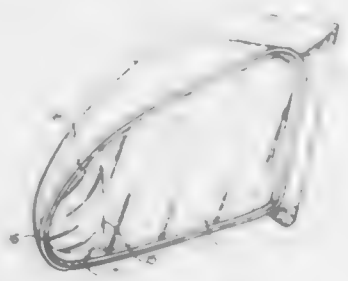
second transfer means attached to the ends of the flexures of the fourth set remote from said second floating spine means,

first means for applying a displacement to one of the first and second transfer means, and

second means for applying a reaction to the other of the first and second transfer means,

the attachment of the flexures to the support means, the spine means and the transfer means being such, and the orientations of the flexures relative to the transfer means being such, that when a displacement is applied by the first means and a reaction is applied by the second means, the flexures of the third and fourth sets are caused to flex and movement of the second transfer means is guided by the first and second sets of flexures.

5,005,962



REARVIEW MIRROR

Karl W. Edelman, 45 Winter St., Hopkinton, Mass. 01748

Continuation-in-part of Ser. No. 391,433, Aug. 10, 1989, abandoned. This application Apr. 6, 1990, Ser. No. 505,603

Int. Cl.' G02B 5/10

U.S. Cl. 350—625 13 Claims

1 A rearview mirror comprising

a one piece sheet having a flat front face and a back face,

said back face having a flat section and a convex section when viewed from the front face,

and a reflective coating covering the back face, wherein the convex section is a spherical surface and the highest point on the spherical surface is adjacent to the plane of the flat section.

5,005,963

VEHICULAR MIRROR

William P. Schmidt, 21000 Woodruff, Rockwood, Mich. 48173, and Franklin D. Hutchinson, 28000 Beel Road, New Boston, Mich. 48164

Continuation-in-part of Ser. No. 254,027, Oct. 6, 1988, Pat. No. 4,938,578. This application Jun. 5, 1989, Ser. No. 361,334

The portion of the term of this patent subsequent to Jul. 3, 2007, has been disclaimed.

Int. Cl.' G02B 5/10

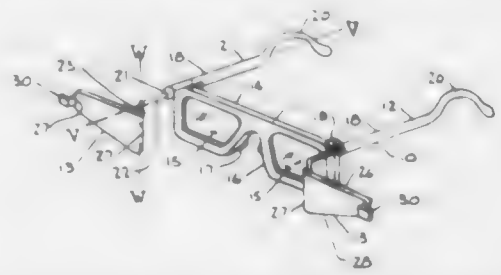
U.S. Cl. 350—629 16 Claims

1 A mirror for mounting onto a vehicle which provides a field-of-view about a vertical axis, the mirror comprising

a quadratic reflective surface having a generally convex shape throughout, the quadratic reflective surface having a height and a diameter, the height being normal to the diameter, the quadratic reflective surface having a first radius of curvature and a second radius of curvature, the first radius of curvature being different from the second radius of curvature, the quadratic reflective surface being bordered by a first flange and a second flange and a third flange, the quadratic reflective surface providing the driver of the vehicle with a field-of-view that is greater that the angle subtended by the quadratic reflective surface about the vertical axis.

5,005,964

SPECTACLES WITH COMBINED SLIDING AND PIVOTING REAR VISION ELEMENTS



Joseph J. Berke, 2063 Long Lake Shore, West Bloomfield, Mich. 48033; George H. Muller, 1955 Gulf of Mexico Dr., Long Boat Key, Fla. 34228, and A. Gil Spear, Jr., Vero Beach, both of Fla.

Continuation of Ser. No. 243,855, Sep. 13, 1988, abandoned. This application Jan. 8, 1990, Ser. No. 463,937

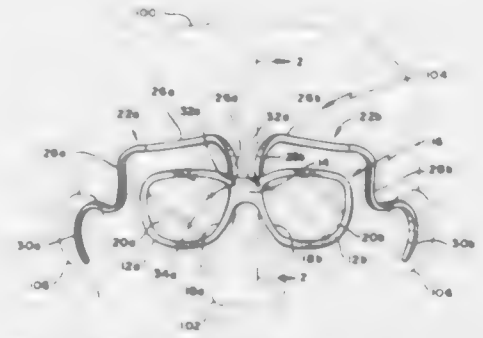
Int. Cl.' G02C 7/14

U.S. Cl. 351—50 8 Claims

1 A pair of spectacles having a means for viewing objects behind a forward facing user which is integrated into a temple of the spectacles, comprising, in combination: an eyepiece, said eyepiece having a frame and a pair of lenses mounted in said frame, a pair of symmetrically opposite temples rotatably attached to the opposite outer ends of said frame, at least one of said temples having a longitudinal aperture for receiving a closely fitting slender cylindrical shaft, a slender cylindrical shaft having one portion engaging said aperture which is adjustably slidable along the axis of said aperture from a fully extended position out of said temple to a fully retracted position into said temple and adjustably rotatable about said axis throughout the full range of adjustment of said shaft along the axis of said aperture and an adjoining portion which is external to said temple and orthogonal to said first portion, and a reflective element which is visible through one of said lenses for

viewing objects behind a user of said spectacles, said reflective element being mounted on said forward orthogonal portion of said shaft and being selectively rotatable about the axis of said orthogonal portion of said shaft.

5,005,965



SPECTACLE FRAMES

Donald Walters, High Springs, Fla., assignor to University of Florida, Gainesville, Fla.

Filed Sep. 12, 1989, Ser. No. 405,968

Int. Cl.' G02C 3/00

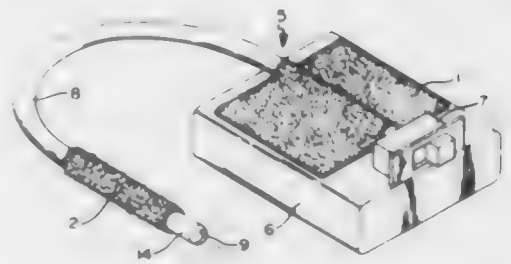
U.S. Cl. 351—119 17 Claims

1 Spectacle frames comprising

substructure means for holding a pair of lenses, said substructure means comprising a first and a second rim means for retaining a lens therein, and a bridge piece attached to said first and second rim means adapted to maintain a predetermined spacing between said rims, and

first and second head-engaging members, a first end of each of said head-engaging members having means for pivotally attaching said head-engaging members to said substructure means at a top central portion of said substructure, each of said first ends of said head-engaging members extending upwardly to a predetermined distance in a substantially vertical orientation from said top central portion of said substructure, said means for pivotably attaching said head-engaging members to said substructure comprising a first and a second cylindrical bore extending inwardly into said substructure means from said top central portion of said substructure means and each of said first and second head-engaging members having a cylindrical pin extending from a first end thereof, each of said cylindrical bores being adapted to receive and retain one of said cylindrical pins, a second end of said first head-engaging member being adapted to engage one ear on a head of a wearer, and a second end of said second head-engaging member being adapted to engage the other ear on the head of the wearer.

5,005,966



EXOPHTHALMOMETER LIGHT, AND METHODS OF CONSTRUCTING AND UTILIZING SAME

Albert W. Handler, deceased, late of West Bloomfield, Mich.; by Bernice Handler, legal representative, West Bloomfield, Mich. 48033, and Lawrence F. Handler, North Miami Beach, Fla. 33180

Filed Jun. 2, 1988, Ser. No. 201,537

Int. Cl.' A61B 3/10

U.S. Cl. 351—221 14 Claims

1 An exophthalmometer light device, comprising

an electrical power source,

an electrical power control means operably interconnected with and controlling said electrical power source,

said power source having attachment means for affixing said power source to a Hertel-type exophthalmometer,

a light-emitting means having a flexible arm to locate the light-emitting means distally from said power source, and

said light-emitting means being electrically connected to said power source,

whereby said power source and said light emitting means may be affixed to said Hertel-type exophthalmometer, with the intensity of light emitted being controlled by said electrical power control means, thereby providing the operator of said exophthalmometer with sufficient illumination of the eye area and reflected light therefrom, to make an accurate reading, and leaving both hands free to operate said exophthalmometer.

5,005,967

MICROFILM IMAGE PROCESSING APPARATUS HAVING AUTOMATIC FOCUS CONTROL CAPABILITIES

Masaaki Kuriyama, Osaka, Japan, assignor to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Jun. 29, 1989, Ser. No. 374,295

Claims priority, application Japan, Jul. 1, 1988, 63-165583; Jul. 1, 1988, 63-165584

Int. Cl.' G03B 21/53, 27/34

U.S. Cl. 353—101 15 Claims

1 A microfilm image reader for projecting an image of a microfilm onto a target plane, comprising

means for illuminating the microfilm for producing an image-bearing beam of light bearing the image of the microfilm,

a projection lens for projecting said image-bearing beam of light onto said target plane,

first detecting means for detecting a condition in which said image-bearing beam of light is focused with respect to said target plane,

first focus control means responsive to the condition detected by said detecting means and operative to establish an automatic mode of focus control operation for automatically moving said projection lens to adjust the focal plane of the lens with respect to said target plane depending on the condition detected by said detecting means,

second detecting means for detecting a condition in which the automatic mode of focus control is inoperable;

second focus control means responsive to the condition detected by said second detecting means and operative to

automatically move said projection lens to a position having its focal plane located on a predetermined plane with respect to said target plane when it is detected by said second detecting means that the automatic mode of focus control is inoperable,

manual focus control means for permitting manual adjustment of the focal plane of said projection lens after the projection lens is moved to said position by said second automatic focus control means and

indicating means for indicating the direction in which said projection lens should be moved with respect to said target plane by said manual focus control means when said projection lens is moved to said position by said second focus control means

OPTICAL PROJECTION APPARATUS WITH THE FUNCTION OF CONTROLLING LASER COHERENCY

Keiji Katsuoka, Kawagoe, Japan, assignor to Hitachi, Ltd., Tokyo, Japan

Filed Mar. 29, 1989, Ser. No. 330,291
Claims priority, application Japan, Mar. 30, 1988, 63-74293
Int. Cl.' G03B 21/14, G02B 27/10
U.S. Cl. 353—122 9 Claims

1 An optical projection apparatus comprising

a laser source

a splitting device for splitting light emitted from said laser source into a plural incoherent split light beams having light intensity equal to each other

an illuminating optical system for focusing each of said split light beams, and

a projection optical system for projecting an image of a pattern of a mask illuminated with said split light beams from said illumination optical system into a sample,

wherein said splitting device is constituted by a first reflection plate constituted by divisional portions respectively having predetermined reflection coefficients different from each other, and a second reflection plate arranged so as to return light reflected from one of said divisional portions of said first reflection plate to said first reflection plate so that said returned light enters into different one of said divisional portions of said first reflection plate having a reflection coefficient different from that of said one divisional portion, and in which a distance along which light reciprocates once between said first and second reflection plates is held so as to be longer than a coherent length and respective split light beams emitted from said divisional portions of said first reflection plate enter into corresponding lens portions of said illumination optical system

DISTANCE DETECTING APPARATUS

Keiji Kunishige, Hachioji, Japan, assignor to Olympus Optical Co., Ltd., Japan

Filed Mar. 3, 1989, Ser. No. 318,723
Claims priority, application Japan, Mar. 4, 1988, 63-52416
Int. Cl.' G01C 3/10, 3/08
U.S. Cl. 356—1 43 Claims

17 A distance detecting apparatus for a camera comprising

projection means for projecting light toward an object;

a semiconductor position sensitive element for receiving reflected light from an object being photographed as a light beam is projected thereto from said projection means and for producing a pair of signal currents depending on the position thereon of incidence of the reflected light, the semiconductor position sensitive element being positioned so that reflected light from an object being photographed which is located at infinity impinges thereon at a position which is displaced toward the projection means from the center of the element.

superimposition circuit means for superimposing bias currents upon the pair of signal currents,

a bias current preset circuit for presetting predetermined bias currents which are superimposed upon the pair of signal currents,

and a calculation circuit for calculating a distance to an object on the basis of an output from the superimposition circuit means

the predetermined values of said bias currents being selected so that the calculated output is substantially proportional to the reciprocal of a distance to an object to be photographed over an entire range across which the determination of distance is enabled

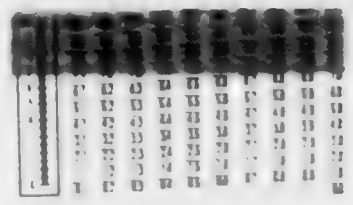
METHOD AND APPARATUS FOR SIMPLIFYING AND IMPROVING CONSISTENCY OF COLOR GRADING OF GEMSTONES

Charles E. Davis, 1412 Watrous Dr., Titusville, Fla. 32780

Filed Jul. 3, 1990, Ser. No. 548,292
Int. Cl.' G01N 21/87
U.S. Cl. 356—30 7 Claims

1 Apparatus for grading gemstones within a color range comprising

a slide having a plurality of chips arranged in end-to-end relationship, each of the chips having a hue falling between the hue of each adjacent chip, and



a frame for holding said slide in sliding engagement within a groove formed in a surface of said frame, said frame having at least one pocket formed in said surface adjacent said groove, said at least one pocket including an aperture communicating between said pocket and said groove, said aperture having a width less than the width of each one of said chips when said slide is positioned in said groove, said pocket being adapted for receiving a gemstone for comparing with the hue of each of said chips as said slide is moved within said frame

5,005,972

REFRACTOMETER READOUT SYSTEM

Herbert F. Goldberg, 195 Heath's Bridge Rd., Concord, Mass. 01742

Filed Jan. 24, 1990, Ser. No. 469,343
Int. Cl.' G01N 21/41
U.S. Cl. 356—135 7 Claims

1 In a refractometer of the critical angle of total reflection type

a scale for reading the concentration of a substance to be measured, an optical system including an objective to form an image on a reticle carrying said scale, said image including a shadow line moving across said scale in a direction of measurement in response to changes of said concentration to be measured, and

said scale being composed of scale segments, and

said scale segments being composed of successive scale divisions oriented parallel to said shadow line and positioned stepwise end-by-end, and

said scale segments sloping laterally to said direction of measurement, and forming angles of orientation with respect to said show line

said sloping scale segments being positioned with respect to each other to form a continuously reading scale, and

identifying numerals being positioned adjacent to at least one half of the said successive scale divisions to form discrete reading units providing a direct numerical readout of said concentration of said substance to be measured

LASER BORESIGHTING METHOD AND APPARATUS FOR WEAPONRY

William E. Mimmack, El Paso, Tex., and William J. Thompson, El Cajon, Calif., assignors to Cubic Corporation, San Diego, Calif.

Filed Apr. 26, 1990, Ser. No. 497,543
Int. Cl.' G01B 11/26, G02B 26/08
U.S. Cl. 356—152 14 Claims

1 A boresighting system for establishing the boresight of a vehicle-borne weapon relative to a fixed reference line on said

vehicle which establishes a first axis of reference, such system comprising a light source and a projector comprising a collimator lens receiving light from said light source to establish a second axis and positioned on the vehicle to project a collimated light beam parallel to said first axis of reference, a weapon positioned on said vehicle remotely from and in non-axial alignment with said projector, a position-sensitive sensor, a receiver positioned on said vehicle at said weapon and coaxial with said weapon for focusing the collimated light beam onto said position-sensitive sensor the output of which indicates departure from an alignment condition, and one or more optical deviators for directing the collimated light beam to the receiver

PROJECTING TESSELLATOR

Peter S. Baum, 9 Eustis St., #2R, Cambridge, Mass. 02140

Division of Ser. No. 303,956, Jan. 25, 1989, Pat. No. 4,940,309. This application Dec. 19, 1989, Ser. No. 454,051

Int. Cl.[5] G02B 5/08, 7/18, 27/14

U.S. Cl. 350—171 10 Claims

1. A tessellator comprising

(a) a focusing means used to form a set of electromagnetic waves into a clear image,

(b) a plurality of source elements, each of which generates a segment of said clear image,

(c) at least one reflective means positioned along the path taken by the electromagnetic waves as they travel from said source elements to said focusing means, said reflective means positioned farther from said focusing means than a minimum tessellating distance to direct at least one section of said electromagnetic waves from at least one of said individual source elements to said focusing means.

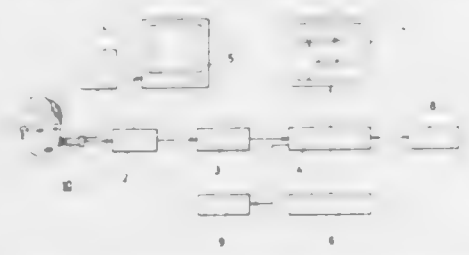
SURFACE PROFILE ANALYZER



Michio Kawai, Funabashi; Sadahiro Tanaka, Yokohama, and Osamu Osanai, Chiba, all of Japan, assignors to Kao Corporation, Tokyo, Japan

Filed Aug. 31, 1988, Ser. No. 239,118

Claims priority, application Japan, Aug. 31, 1987, 62-216773

Int. Cl.[5] G01N 21/00; G01B 11/30

U.S. Cl. 356—237 11 Claims

1. A profile analyzer for human skin surfaces comprising:

a ring-shaped illuminating device for irradiating a predetermined area of a human skin surface from all peripheral directions thereof at an irradiating angle of 0° to 10° with respect to the skin surface;

image pick-up means for photographing the skin surface illuminated by said ring-shaped illuminating device, thereby generating an image signal,

negative-positive converter means, operatively connected to said image pick-up means, for converting said image signal representing the skin surface to from a negative image to a positive image;

digital signal generating means, operatively connected to said negative-positive converter means, for converting said image signal representing a positive image of skin surface into a digital signal representing an image of the skin surface, and

a computer including member means for storing said digital signal

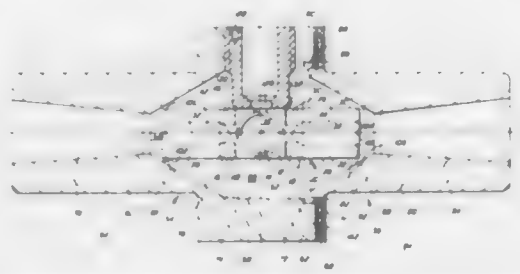
ELECTROTHERMAL ATOMIZATION OF A SAMPLE FOR SPECTROSCOPIC PURPOSES



Rolf Tamm, Am Fohrenbuhl 8, 7777 Salem 2; Bernhard Huber, Hildegardring 42, 7770 Uberlingen; Gunther Rodel, Hinter den Garten 13, 7776 Owingen, and Erich Stengele, Dorfstr. 23, 7776 Taisersdorf, all of Fed. Rep. of Germany

Filed Jul. 11, 1989, Ser. No. 377,992

Claims priority, application Fed. Rep. of Germany, Jul. 13, 1988, 3823733

Int. Cl.[5] G01J 3/30; G01N 21/74

U.S. Cl. 356—312 29 Claims

1 An electrothermal atomization furnace assembly comprising

an electrothermal furnace body having a furnace bore adapted for passing a radiation beam therethrough, a sample port for introducing sample into the furnace bore and contact surfaces configured for mounting engagement between coacting electrical contacts for supplying electrical current through said furnace body,

current-supplying contact means for operationally mounting the furnace body and supplying current therethrough to heat the furnace body for sample atomization,

said contact means comprising first and second contact elements coacting to form a cavity containing said furnace body and having a though-bore in alignment with said sample port for introducing sample into the furnace body and exhausting inert gas and sample components, said first and second contact elements being in non-contacting disposition to form a predetermined gap therebetween,

electrically insulating seal means for sealing said gap against inert gas loss from said cavity, and

said contact means having means for providing inert gas in a defined flow about and within said furnace body to prevent exposure to oxygen and exhausting out said throughbore

---

POLARIMETER

Toma Tomoff, Lavendelweg 9, 7770 Uberlingen, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 400,304, Aug. 29, 1989. This application Oct. 30, 1989, Ser. No. 429,218

Int. Cl.[5] G01N 21/21

U.S. Cl. 356—367 9 Claims

1 A polarimeter for measuring the rotation of optically active samplers comprising

light source means for generating a measuring light beam along a light path for polarimetric analysis of a sample,

polarizer means for polarizing said measuring light beam to define a polarization plane for passing through a sample, said light beam having a beam axis and said polarizer means being mounted for rotational movement about said axis,

sample vessel means for holding sample to be analyzed,

analyzer means mounted in the light path to receive the measuring light beam from the sample vessel means, said analyzer means having a zero position and defining a polarization plane,

photodetector means for sensing the measuring light beam from said analyzer means,

servomotor means for rotating said polarizer means with a first adjusting movement to attain a coarse balancing of the polarization plane of the measuring light beam relative to said zero position of said analyzer means and with a superimposed second reciprocating rotational movement,

control means for controlling said servomotor means for said adjusting movement and said superimposed reciprocating rotational movement of said polarizer means, said control means being connected to said detector means, and

means for fine measurement of angle between the polarization plane of said analyzer in said zero position and said polarization plane of the measuring light beam in a coarsely balanced position

---

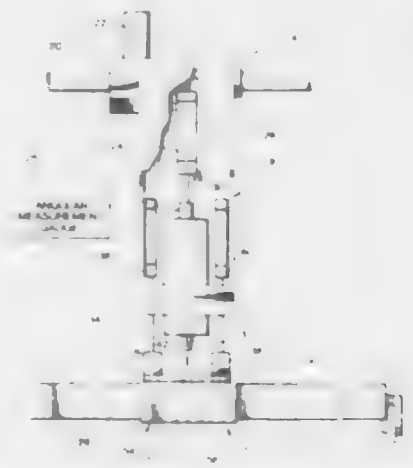
APPARATUS AND METHOD FOR THE NONCONTACT MEASUREMENT OF DRILL DIAMETER, RUNOUT, AND TIP POSITION

Timothy A. Skunes, Columbia Heights; Steven K. Case, St. Louis Park, and Jeffrey A. Jalkio, St. Paul, all of Minn., assignors to CyberOptics Corporation, Minneapolis, Minn.

Filed Nov. 6, 1989, Ser. No. 433,620

Int. Cl.[5] G01B 11/00, 11/04



U.S. Cl. 356—372 32 Claims

1 An apparatus for measuring the lateral variation of a rotating element defining an operating envelope, comprising

angular measurement means for determining the angular position of said rotating element,

sensor means for locating the edge of said envelope at first and second angular positions of said rotating element to provide first and second envelope edge positions, and

measurement means for determining the linear difference between said first and second envelope edge positions

whereby said linear difference provides a measure of said lateral variation

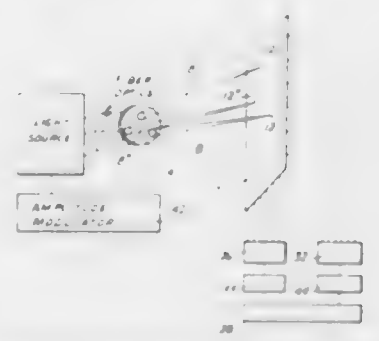
OPTICAL POSITION DETECTION



Heinz Sontag, Friedrichshafen; Hartmut Elias, Meersburg, both of Fed. Rep. of Germany; Wolfgang Ludwig, Taegerwilen, Switzerland; Walter Fritzsch, Markdorf, Fed. Rep. of Germany; Wolfgang Lachner, Daisendorf, Fed. Rep. of Germany; Rainer Hundhausen, Immenstaad, Fed. Rep. of Germany, and Harald Kratz, Tettnang, Fed. Rep. of Germany, assignors to Dornier GmbH, Friedrichshafen, Fed. Rep. of Germany

Filed Jul. 31, 1989, Ser. No. 387,623

Claims priority, application Fed. Rep. of Germany, Jul. 30, 1988, 3826067

Int. Cl.[5] G01B 11/14; F21V 9/16

U.S. Cl. 356—375 4 Claims

1. Apparatus for determining the position of objects comprising

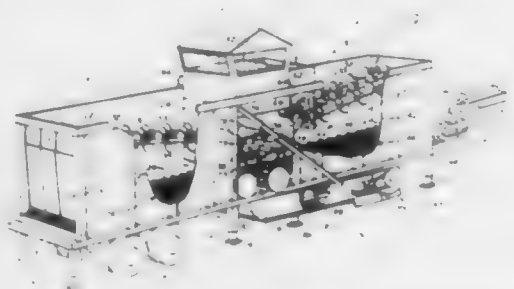
light source means positioned in relation to one of said objects such that form a particular position on the one object three collimated beams issue respectively bearing different but fixed and definite positional relationship to the position of said one object, and being differently modulated,

a planar flourescent foil or plate positioned in relation to said one object such that three spots on said foil are stimulated bearing in a two dimensional fashion a very definite position relationship to the position of the one object owing to the utilization of said three collimated beams that provide the stimulations,

a plurality of fiber optics, each having a first and a second end, respective first ends of the respective fiber optics of the plurality of fiber optics being arranged in a spatial relation to said flourescent foil or plate, that establishes and is a particular geometric pattern of positioning, to

receive in each instance radiation from such stimulated spots, respective other ends of the fiber optics being arranged in a similar but smaller scale geometric pattern as the first ends are; and

detector means in relation to said other ends providing electrical signals that represent the position of said object there being a demodulator included in the detection means in order to differentiate among the different spots, by demodulating in accordance with the different modulations



---

5,005,980

SLUDGE/SOIL MIXING MACHINE

Harold M. Zimmerman, R.D. #1, Wabash Rd., Ephrata, Pa. 17522

Filed Jan. 5, 1990, Ser. No. 461,371
Int. Cl.' B01F *15/04, 15/02*
U.S. Cl. 366—162 20 Claims

1 A mixing machine for homogeneously mixing two solid materials, comprising

a support frame;

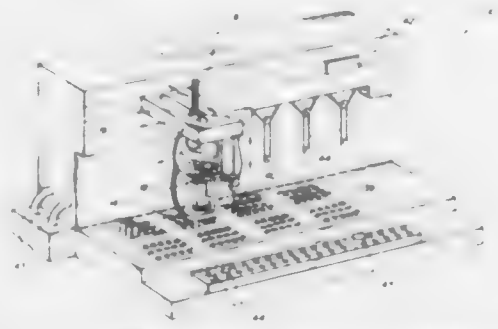
a mixing chamber centrally mounted on said support frame,

a first hopper mounted on said support frame for holding a supply of a first material on one side of said mixing chamber, said first hopper having a first conveyor means for moving said first material from said first hopper through a first discharge opening into said mixing chamber,

a second hopper mounted on said support frame for holding a supply of a second material on the opposing side of said mixing chamber from said first hopper, said second hopper having a second conveyor means for moving said second material from said second hopper through a second discharge opening into said mixing chamber,

rotor means rotatably supported within said mixing chamber to engage both said first and second materials entering said mixing chamber and to effect both a comminuting and a mixing of said first and second materials while in said mixing chamber to form a mixed material, said rotor means further being operable to discharge said mixed material through a discharge opening in said mixing chamber,

discharge means supported from said support frame in flow communication with said discharge opening in said mixing chamber to receive said mixed material from said rotor means, to effect a further mixing of said mixed material, and to effect a discharge of the mixed material remotely from said machine; and



power means operably connected to said first conveyor means, said second conveyor means, said rotor means, and said discharge means to drive the operation thereof

5,005,981

APPARATUS FOR METHOD FOR CAUSING VORTICES IN A TEST TUBE

Harvey Schulte, Los Altos, and Sal Noto, Sunnyvale, both of Calif., assignors to Becton, Dickinson and Company, Franklin Lakes, N.J.

Filed Sep. 8, 1989, Ser. No. 405,803
Int. Cl.' B01F *13/08*
U.S. Cl. 366—219 10 Claims

1 A test tube handling assembly for causing a vortex in a test tube sample comprising

an elongated member with an end for engaging a test tube and an end opposite thereto driven about an axis of the member for orbital movement with the axis thereof, the member having a center part thereon between the ends thereof and along the axis,

a support for the member with an arm extending therefrom to carry the center part of the member and permit limited motion of the member relative to the support, the arm carries the center part in spaced apart relation with respect to the support so that movement of the member relative to the center part is permitted without contact between the support and the test tube or the member,

a test tube gripping means on the end for engaging the test tube, the gripping means having test tube contacting means able to hold the test tube and the contents thereof for engaging an open end of the test tube during movement of the member relative to the axis, the contacting means including an inflatable bladder which upon inflation holds the open end of the test tube with a seal for closing the open end of the test tube,

a drive located on the support near the end opposite and in contact with the gripping means, the drive having a motor carried on the support, the motor axis and the member axis are in spaced parallel relation relative to each other with a linkage means between the end opposite the motor axis to cause the axis of the member to orbit imparting an orbital motion to the end opposite of the member thereby orbiting the end for engaging the test tube to cause the test tube to move with the axis thereby swinging the test tube relative to the center part of the member

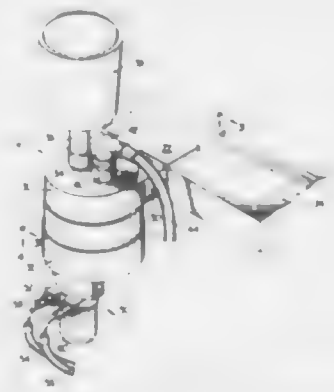
MATERIAL PROCESSOR

Kenneth J. Kistner, 419 Tahoe La., Midlothian, Tex. 76065



Filed Jun. 21, 1989, Ser. No. 369,108
Int. Cl.' B01F *5/14*
U.S. Cl. 366—272 29 Claims

1 A material processor comprising

a housing defining a process chamber having an inlet for introducing material therein and an outlet for discharging material therefrom,

a drive process gear and a driven process gear in intermeshing relation and rotatable in said process chamber, said area of intermesh being in a flow path between the inlet and outlet in the process chamber,

said drive and driven process gears designed with a clearance therebetween such that the mesh between said gears during selected rotational speeds permits said driven gear to be forced ahead of and out of contact with said drive gear by material therebetween, thereby allowing material

to flow from the discharge side to the inlet side of said gears through the intermesh, and

a power source for rotating said drive gear at one of said rotational speeds

PLATE BLENDER

Dale Draffen, Paducah; William E. Dunning, Eddyville; Larry D. McGregor, Benton; Donald L. Walker, Paducah, all of Ky., and Harold R. Sisk, Deatsville, Ala., assignors to Apex Engineering Inc., Calvert City, Ky.

Filed Jan. 23, 1989, Ser. No. 299,445
Int. Cl.' B01F *5/06*
U.S. Cl. 366—340 11 Claims

1 A stationary mixing and blending apparatus for particulate material which employs a static action for solids mixing on a batch flow basis comprising a chamber having walls and an inlet and outlet at substantially opposite ends thereof, a plurality of planar baffle members positioned within said chamber and extending radially outwardly to and contacting the chamber walls, said baffle members defining a plurality of vertically extending blending zones with one blending zone located between each two adjacent baffle members, said baffle members each having at lest one opening or window for passage of said particulate material from one blending zone to another; and with said inlet for the chamber being positioned above a blending zone defined between adjacent baffles, wherein the opening for each successive baffle in one of either a clockwise or counter clockwise direction from an upper opening is at a progressively lower level around the circumference of the chamber

5,005,984

OPTICAL HEAT FLUX GAUGE

Bruce W. Noel, Espanola, N. Mex.; Henry M. Borella, Santa Barbara, Calif.; Michael R. Cates, Oak Ridge, Tenn.; W. Dale Turley, Santa Barbara, Calif.; Charles D. MacArthur, Clayton, and Gregory C. Cala, Dayton, both of Ohio, assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Division of Ser. No. 362,541, Jun. 7, 1989. This application Aug. 24, 1990, Ser. No. 572,073
Int. Cl.' G01K *17/00*
U.S. Cl. 374—29 8 Claims

1 An optically interrogated gauge for measuring heat flux incident on a plurality of points on a surface comprising

a plurality of first thermographic phosphors in direct contact with said surface,

a plurality of second thermographic phosphors spaced above, but juxtaposed in relation to said plurality of first thermographic phosphors,

thermal insulating means having a predetermined thickness and thermal conductivity between said plurality of first thermographic phosphors and said plurality of second thermographic phosphors for thermally isolating said plurality of first thermographic phosphors from said plurality of second thermographic phosphors,

light means incident on said plurality of first thermographic phosphors and on said plurality of second thermographic phosphors, for producing first luminescence from each of said plurality of first thermographic phosphors and second luminescence from each of said plurality of second thermographic phosphors collecting means for collecting said first and second luminescences wherein said first luminescence and said second luminescence are indicative of the temperatures of said first and second thermographic phosphors at a plurality of points on said surface, and computing means connected to said collecting means for determining the heat flux on said plurality of points on said surface using numerical differences between said temperatures of said pluralities of first and second thermographic phosphors, and said thickness and thermal conductivity of said thermal insulating means

8 A method of determining heat flux incident on a surface comprising the steps of

depositing a plurality of first thermographic phosphors on said surface,

depositing a thermal insulator having a predetermined thickness and thermal conductivity over said plurality of first thermographic phosphors;

depositing a plurality of second thermographic phosphors over said thermal insulator;

illuminating said plurality of second thermographic phosphors and said plurality of first thermographic phosphors with light to produce first luminescence from said plurality of first thermographic phosphors and second luminescence from said plurality of second thermographic phosphors,

collecting said first and second luminescences, and

computing said heat flux incident on said surface from information contained within said first and second lumines-

cences and said thickness and thermal conductivity of said thermal insulator

METHOD OF DETERMINING THERMAL COEFFICIENT OF MATERIALS

Ewa Piórkowska-Galeska, and Andrzej Galeski, both of Lód , Poland, assignors to Polska Akademia Nauk Centrum Badan Molekularnych i Makromolekularnych, Lód , Poland

Filed May 5, 1989, Ser. No. 348,070
Claims priority, application Poland, May 20, 1988, 272596
Int. Cl.[5] G01N 25/18
U.S. Cl. 374—44 5 Claims

1 A method for determining thermal conduction coefficient of a material sample having two opposite surfaces, comprising the steps of:

placing said material sample in a system composed of a heater, a first and second heat sinks, a first and a second identical reference samples having known thermal conduction coefficients, said first reference sample being in thermal contact with the first heat sink, said second reference sample being in thermal contact with the second heat sink, said material sample and said heater being positioned between the first and the second reference samples and maintaining thermal contacts therewith;

supplying an amount of heat in a time unit by the heater so as to give rise to a heat flux across the samples,

measuring said amount of supplied heat during a preferably continuously linear change of the temperature of said heat sinks;

measuring a momentary temperature difference between the two opposite surfaces of the material sample, and

determing the thermal conduction coefficient of the material sample for the momentary temperature of the system on the basis of the following equation

$$\lambda = \frac{P}{2s} \cdot \frac{l}{\Delta T} \cdot \frac{\lambda_1}{2 l_1}$$

wherein

λ is the thermal conduction coefficient of the material sample;

P is the amount of heat supplied by the heater in a time unit,

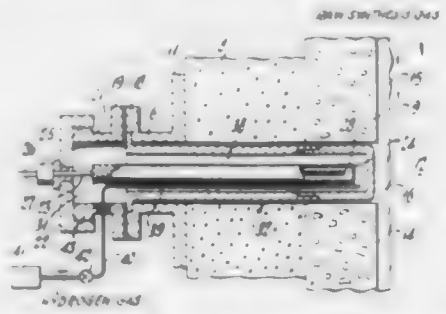
l is the thickness of the material sample,

s is the surface of the heater;

Δ is the momentary temperature difference between surfaces of the material sample;

λ_1 is the thermal conduction coefficient of the reference samples, and

l_1 is the thickness of the reference samples



5,005,986

SLAG RESISTANT THERMOCOUPLE SHEATH

Mitri S. Najjar, Wappingers Falls, N.Y., and Arnulf Muan, Lacey Spring, Va., assignors to Texaco Inc., White Plains, N.Y.

Filed Jun. 19, 1989, Ser. No. 367,930
Int. Cl.[5] G01K 1/10, 1/08
U.S. Cl. 374—179 12 Claims

1. In an apparatus comprising a thermocouple for measuring the temperature in a system for the partial oxidation of liquid hydrocarbonaceous and/or solid carbonaceous fuel with a free-oxygen containing gas in the presence of a temperature moderator in the reaction zone of a gasifier to produce an effluent gas stream comprising H_2, CO, CO_2, and at least one member from the group consisting of H_2O, N_2, H_2S, COS, Ar, and CH_4, along with slag containing Fe and other free metals, the improvement comprising a metal sheath for enclosing said

thermocouple thereby protecting said thermocouple from exposure to iron and other damaging elements in said slag, and wherein said protective sheath is made from a continuous binary alloy consisting of about 30 to 70 wt. % of palladium and the remainder silver

RECTILINEAR MOTION ROLLING GUIDE UNIT

Kunihiko Morita, Koganei, Japan, assignor to Nippon Thompson Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 379,259, Jul. 13, 1989. This application Sep. 11, 1990, Ser. No. 570,596
Claims priority, application Japan, Dec. 1, 1988, 63-302239
Int. Cl.[5] F16C 29/06, 19/49
U.S. Cl. 384—43 4 Claims

1 A rectilinear motion rolling guide unit comprising

a rail having a top part with projecting side portions, the upper and lower corners of said side portions being chamfered to form inclined upper and lower rail track surfaces;

an inverted U-shaped casing having a concave portion for riding on said rail, said concave portion having upper and lower casing track surfaces corresponding to said upper and lower rail track surfaces,

plural rollers carried between said upper rail and casing track surfaces for resisting a first force tending to decrease the distance between said top part and said concave portion and for holding said rail approximately centered in said concave portion; and

plural balls carried between said lower rail and casing track surfaces for resisting a second force having a component opposite to said first force and for holding said rail approximately centered in said concave portion,

said casing having two first cavities for carrying said plural rollers and two second cavities for carrying said plural balls,

each of said first cavities having an axis that is aligned approximately forty-five degrees to said top part's upper surface when viewed in vertical cross section and each of said second cavities having an axis that is aligned approximately parallel to said top part's upper surface when viewed in vertical cross section

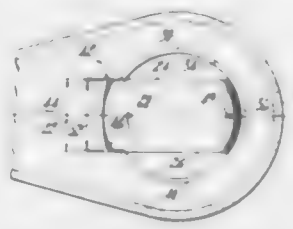
SPHERICAL BEARING LINK

David E. Heumann, Jupiter, and William G. Hoop, Palm Beach Gardens, both of Fla., assignors to United Technologies Corporation, Hartford, Conn.

Filed Dec. 4, 1987, Ser. No. 129,023
Int. Cl.[5] F16C 23/04
U.S. Cl. 384—208 3 Claims



1 A spherical bearing link comprising

an elongated link having a longitudinal axis, at least one link opening adjacent at least one end, and an arm extending away from said end;

a truncated ball member having a width defined by substantially flat opposing sides and having a spherical perimeter,

an opening through said ball member substantially perpendicular to said opposing sides;

said link opening having a spherical inner surface commensurate with the spherical perimeter of said ball member on the edge of said link opening closest to the end, and also on both sides of said link opening along said axis.

said link opening having an axially extending entry slot only on the arm side of said link opening for receiving said ball member when turned to have the opposing sides of the ball member parallel to the axis of said link opening.

5,005,992

SEAL FOR SELF-ALIGNING BEARINGS

Peter Dreschmann, Dittelbrunn, and Wilhelm Walter, Oberthulba/Reith, both of Fed. Rep. of Germany, assignors to FAG Kugelfischer George Schafer (KGaA), Fed. Rep. of Germany

Filed Apr. 5, 1990, Ser. No. 505,055

Claims priority, application Fed. Rep. of Germany, Apr. 11, 1989, 8904504[U]

Int. Cl.' F16C 33/72, 23/08

U.S. Cl. 384—484 7 Claims

1. A seal for self-aligning bearing wherein said bearing has an inner and an outer concentric bearing ring, said bearing rings each having opposite first and second axial ends, and said bearing rings are rotatable relative to one another and are supported relative to one another by interposed bearing roller means between said rings;

a first seal ring fastened to said first axial end of said inner bearing ring said first seal ring also having a radially extending portion,

a second seal ring fastened to said first axial end of said outer bearing ring that is adjacent said first axial end of said inner bearing ring, said first and second seal rings partially overlapping radially and having an annular gap between them,

a first resilient sealing lip fixed to said first seal ring and extending across said annular gap and resiliently pressing against said second seal ring, a second resilient sealing lip fastened to said second seal ring and shaped and oriented to rest with oblique inclination against said radially extending portion of said first seal ring,

said second seal ring having a mostly axially outwardly extending portion which is approximately spherically radially and axially outwardly convexly curved around the center of said bearing and said first sealing lip pressing against said convexly spherically curved portion, whereby said first lip continuously sealingly presses against said outwardly extending spherically and convexly curved portion when said bearing rings misalign.

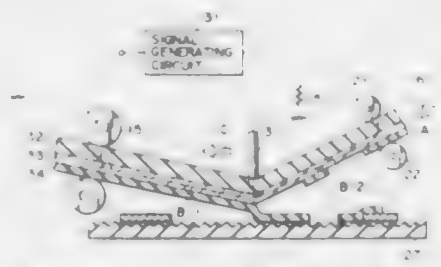
ELECTROTHERMAL PRINTER WITH A RESISTIVE INK RIBBON AND DIFFERING RESISTANCE CURRENT RETURN PATHS



Tadayoshi Ohno; Hitoshi Nagato, both of Kawasaki, and Tsutomu Kanai, Yokohama, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Continuation of Ser. No. 225,787, Jul. 29, 1988, abandoned. This application May 4, 1990, Ser. No. 517,452

Claims priority, application Japan, Jul. 31, 1987, 62-190365, Nov. 10, 1987, 62-282012

Int. Cl.' B41J 2/39

U.S. Cl. 400—120 21 Claims

1. An electrothermal printing apparatus for transferring ink onto a recording medium, thereby to record data on the recording medium, said apparatus comprising

an ink ribbon including a base film being electrically resistive and having first and second surfaces, an electrically conductive layer formed on the first surface of the base film; and an ink layer formed on the conductive layer, and having a surface to face and contact with the recording medium

ribbon feeding means for feeding said ink ribbon in a first direction;

current-supplying means contacting with the second surface of the base film for supplying a signal current to the electrically conductive layer through the base film, thereby to generate heat in the base film and transfer ink to the recording medium from the ink layer,

current-collecting means, contacting with the second surface of the base film, for collecting the signal current supplied from said current-supplying means to the electrically conductive layer, which includes first and second electrodes located upstream and downstream of said first direction with respect to said current-supplying means, respectively, the first electrode being connected to the ground, and a resistor connected between the second electrode and the ground, a first current path including the base film, the conductive layer and the first electrode, and a second current path including the base film, the conductive layer and the second electrode, the signal current flowing through the first and second current path into the ground, respectively.

5,005,994

PRINTING HEAD OF WIRE-DOT IMPACT PRINTER

Akio Yano, Tokyo, Japan, assignor to Fujitsu Limited, Kawasaki, Japan

Filed Mar. 15, 1989, Ser. No. 323,833

Claims priority, application Japan, Mar. 18, 1988, 63-63216; Jul. 15, 1988, 63-175068; Nov. 11, 1988, 63-283898

Int. Cl.' B41J 2/295

U.S. Cl. 400—124 15 Claims

1 A printing head comprising a frame, a plurality of impact printing wires constituting a wire-dot matrix and a plurality of actuators respectively corresponding to, and for selectively driving, said respective impact printing wires, each of said actuators comprising

a movable member to which the respective one of said impact printing wires is connected,

an electro-distortion device having a first end connected to said frame and responsive to selective application of an electrical voltage thereto to undergo longitudinal expansion and contraction and a second end,

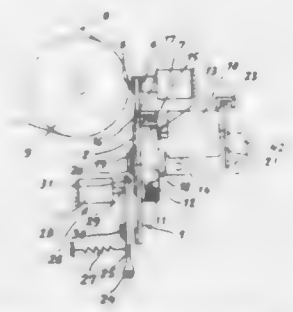
a first resilient member having a first end fixedly connected to the second end of said electro-distortion device and thereby to said frame and a second end fixedly connected to said movable member,

a second resilient member disposed in substantially parallel relationship to said first resilient member and having a first end fixedly connected to said frame and a second end fixedly connected to said movable member so that the extent of longitudinal expansion and contraction of said electro-distortion device in response to the selective application of an electrical voltage thereto is enlarged by said movable member and transmitted thereby to said impact printing wire, and

a third resilient member disposed substantially perpendicularly to said first and second resilient members and having a first end fixedly connected to said frame and a second end fixedly connected to said movable member.

5,005,995

METHOD OF AUTOMATICALLY IDENTIFYING A PRINT WHEEL



Ewald Bruns, and Rolf Bruns, both of Westerstede, Fed. Rep. of Germany, assignors to AEG Olympia Office GmbH, Wilhelmshaven, Fed. Rep. of Germany

Filed Apr. 27, 1990, Ser. No. 516,132

Claims priority, application Fed. Rep. of Germany, Apr. 29, 1989, 3914256

Int. Cl.' B41J 1/30, 7/76

U.S. Cl. 400—144.2 12 Claims

1 A method of automatically identifying a print wheel in a printing mechanism of a typewriter-like machine wherein, the print wheel includes a hub having a centrally disposed bearing bore, a plurality of spokes extending from the hub, type faces disposed on the outer ends of the spokes which can be charged with axial pressure for printing, and a stopping element and one coupling member of a pin/slot connector disposed on the hub of the print wheel, wherein the print wheel is disposed in a print wheel receptacle of the machine, with the print wheel receptacle being driven by a drive motor and coupled to the print wheel during operation by the other member of the pin/slot connection to fix a defined angle between the drive motor and the print wheel, wherein the machine is provided with a blocking member which cooperate with the stopping element disposed on the hub to stop rotation of the print wheel during a rotary search movement to cause engagement of the pin/slot connection and blockage of the drive motor, and wherein scanning means are provided to produce control signals indicating a zero position of the print wheel, the method comprising the step of

providing a print wheel having the stopping element and the coupling member on the hub readially spaced from one another and forming angle therebetween with the size of the formed angle uniquely indentifying the set of type faces provided on the spokes,

inserting the print wheel in the receptacle and rotating the print wheel in a first direction with the blocking member in a position to engage the stopping element on the hub of the print wheel to cause engagement of the pin/slot connection,

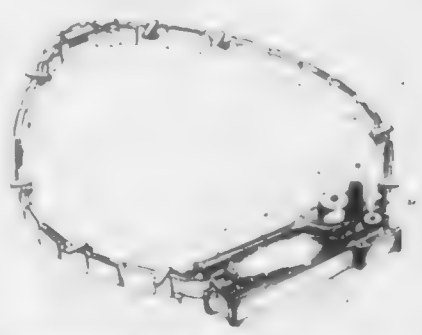
detecting blockage of the drive motor,

rotating the print wheel in the direction opposite the first direction after detection of drive motor blockage,

determining the size of said angle by counting the number of steps of movement of the print wheel until the zero position of the print wheel is reached, and

using the determined size of the angle to produce identification data for the print wheel which are stored as digital signals in a digital memory, to enable the sequence of printer functions of the printing mechanism to be controlled automatically for the particular set of print type faces of the identified print wheel.

5,005,996



RIBBON CARTRIDGE WITH ENDLESS RIBBON REINKING MECHANISM

Jeffrey H. Paterra, Charlotte, N.C., and Donald K. Rex, Highland Beach, Fla., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Sep. 15, 1989, Ser. No. 408,017

Int. Cl.' B41J 32/00

U.S. Cl. 400—196.1 15 Claims

1 A ribbon cartridge comprising,

a one piece housing having a cavity within defined by sides and a bottom having formed thereon a post,

a ribbon protector partially surrounding said post, a socket formed on a side of said housing, a bracket formed on yet another side of said housing, said bracket formed to provide a bearing surface for a rotating shaft,

a porous ink reservoir having an external circumference defined by points of rotation about an axis and having a central bore for rotatably mounting on said post,

a combination ink transfer and drive gear having a central

shaft, said central shaft rotatably mounted on said bracket, said ink transfer and drive gear mounted in frictional contact with the external circumference of said ink reservoir, said ink transfer and drive gear further having a splined shaft extending beyond said gear in axial alignment with the axis of rotation of said central shaft, said central shaft having a bored out center in the end opposite said splined shaft,

a circular opening in said housing bottom centered on said central shaft bored end for exposing said bored end through said housing bottom,

a toothed idler gear pivotally mounted in said socket on said housing and biased into engagement with said drive gear for engaging a ribbon therebetween, and

a cover for enclosing said housing, having a hole therein for exposing said splined shaft of said drive transfer gear beyond said cover

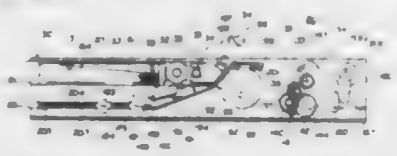
CARTRIDGE FOR A PRINTER SYSTEM



Itsuo Takanashi, Kamakura; Hedeshi Tanaka; Shigeru Kato, both of Yokohama; Naomi Onda, Yokohama, and Toshikatsu Ichito, Kawasaki, all of Japan, assignors to Victor Company of Japan, Ltd., Yokohama, Japan

Filed Nov. 4, 1988, Ser. No. 267,533

Claims priority, application Japan, Nov. 6, 1987, 62-280794; Mar. 9, 1988, 63-31345[U]

Int. Cl.[5] B41J *35/28*

U.S. Cl. 400—208 10 Claims

1. A cartridge for a printer system comprising a printer in which the cartridge is loaded, said cartridge being designed for storing a sheet to be fed to the printer for printing, said cartridge being designed further to hold an ink film also to be fed to the printer such that an image is printed on the sheet as a result of an action of a printer head of the printer performed under a state wherein the ink film and the sheet contact each other on a platen roller of the printer, said cartridge being adapted to be loaded on the printer in such a direction that a front end of the cartridge is first inserted into the printer when the cartridge is loaded, said cartridge comprising

an ink film storing part provided at the front end of the cartridge for storing an ink film, said ink film storing part removably holding a first roll and a second roll of the ink film in a state wherein the first and second rolls are mutually parallel and wherein the ink film is wound on the first and second rolls and stretched therebetween, said ink film storing part having a first opening generally facing a first direction which is perpendicular to the direction of loading of the cartridge on the printer, said first opening being configured to allow taking out of the first roll from the cartridge therethrough, said ink film storing part having a stationary part for covering the first and second rolls in a manner that prevents the first and second rolls being exposed in a second direction opposite to the first direction,

a sheet storing part provided behind the ink film storing part such that the sheet storing part and the ink film storing part form a unitary body, for storing one or more sheets in a stack, said sheet storing part having a second opening which exposes the sheet stored in the sheet storing part in the second direction so as to allow feeding of the sheet from the cartridge through said second opeing; and

a rotatable lid member hinged on the ink film storing part so as to be rotatable between a first position whereat said lid member closes the first opening and a second position whereat said lid member exposes the first opening, said rotatable lid member being hinged at a part of the cartridge where the sheet storing part is contiguous with the ink film storing part, said rotatable lid member having a part which engages a corresponding part of the printer when the cartridge is loaded on the printer such that the lid member is rotated to the second position upon loading of the cartridge on the printer

INK CASSETTE WITH CONTROL MEANS FOR ALTERNATELY DRIVING ONE OF TWO SPOOL BEARING THEREIN

Hans Raar, Cuyk, and Jan Kelders, Elshout, both of Netherlands, assignors to Merlin C.T.C. Production Division Nederland B.V., Zevenaar, Netherlands

Filed Mar. 15, 1989, Ser. No. 323,828

Claims priority, application Netherlands, Mar. 16, 1988, 8800650

Int. Cl.[5] B41J *35/28*

U.S. Cl. 400—208 4 Claims

1. An ink ribbon cassette for use in a printing device having a rotatable driver means and for use with first and second spools having an ink ribbon connected therebetween, said ink ribbon including trip means located near opposite ends thereof said cassette comprising

a housing,

spaced first and second bearing means rotatably mounted in said housing to respectively mount said first and second spools,

drive means mounted in said housing for alternatively rotating said first bearing means in a first rotational direction and said second bearing means in a second, opposite rotational direction and cause said first and second spools, when mounted on said first and second bearing means, to rotate and move said ink ribbon extending therebetween in alternatively first and second traveling directions within said housing, said drive means comprising a first shaft which is fixedly mounted on said housing and is rotatable by said rotatable driver means of said printing device, a toothed wheel having longitudinal grooves mounted on said first shaft, a second shaft which is fixedly mounted on said housing and which extends in parallel with the first shaft and mounts a tooth wheel having longitudinal grooves that are engaged with the longitudinal grooves of the toothed wheel on the first shaft, a first gear means for driving the first bearing means, and a second gear means for driving the second bearing means, the tooth wheel being slidable along the second shaft between a first position wherein the tooth wheel is in engagement with said first gear means and a second position wherein the tooth wheel is in engagement with said second gear means, and

control means mounted in said housing and through which said ink ribbon that extends between said first and second spools mounted on said first and second bearing means can pass, said control means controlling whether said tooth wheel is in said first position or said second position, based on actuation by said trip means

EDUCATIONAL AID WITH SUBSTITUTABLE MAGNETIC ITEMS

Charles E. House, 5055 Beatrice Way, Columbia, Md. 21044

Filed Jan. 23, 1990, Ser. No. 469,041

Int. Cl.[5] G09B *7/00*

U.S. Cl. 434—161 7 Claims

1 An educational aid, comprising

a a frame having a first part and a second part,

b a clear front means, mounted in the first part of the frame, for viewing an image formed therebehind,

c a protective plastic sheet spaced behind the clear front means in the first part of the frame;

d a plurality of magnetizable means, restricted within a first space defined between the clear front means and the protective plastic sheet, for forming the image in the first space;

e. backing means, arranged in the second part of the frame and spaced behind the protective plastic sheet in the first part of the frame, for defining a second space with the protective plastic sheet, and

f. a colored paper sheet means, arranged in the first space between the clear front means and the protective plastic sheet, for serving as a selectable background on which the plurality of magnetizable means form the image in the first part of the frame,

g substitutable magnetic means, having a preformed shape and being confinable within the second space between the protective plastic sheet and the backing means, for emanating a magnetic field that forms the plurality of magnetizable means into the image which is defined by the preformed shape

PORTABLE PRINTING APPARATUS WITH MOVABLE PAPER FEED GATE

Robert M. Brodbeck, Denver, Colo., assignor to Clancy Systems International, Inc., Denver, Colo.

Filed Apr. 11, 1989, Ser. No. 336,128

Int. Cl.[5] B41J *11/58*

U.S. Cl. 400—613.2 32 Claims

1. In a portable printing apparatus including a printer, the combination comprising

a housing for containing and supporting a printer, said housing having first and second separable sections with opposed first and second walls and mating peripheral edges that releasably interfit with one another to close the housing along said peripheral edges, said housing having an

access opening to admit into said housing printing sheets in a fan-fold stack having joined perforated edge portions defining perforations for tearing separation of the sheets and a cover for covering said access opening during use, said housing having a discharge slot through which each sheet is discharged after having printing performed thereon, and

sheet and printer support means mounted in said housing including a tray with an opening for receiving and supporting said stack, said tray opening being covered by said cover during use, a shelf-like support wall extending beyond a wall of said tray for supporting a printer and a movable feed gate adjacent an edge surface of said tray wall supported for bidirectional movement relative to said edge surface defining a sheet feed slot of a variable size to allow said perforations to pass through said feed slot as a succession of said sheets are passed from said stack through said feed slot, through said printer and out said discharge slot,

said tray including spaced side walls and spaced end walls, one of said end walls having a top edge terminating below the top edge of the side walls, said movable feed gate having ends and being slidably supported at said ends by said side walls with said top edge of said one end wall and a bottom edge of said gate defining said sheet feed slot,

said ends of said gate being slidably confined in a pair of opposed facing channel means along the inside of said side walls and including a slide coupling means slidably interconnecting the ends of said gate with said side walls,

said slide coupling means having cooperating means to hold said gate in a raised position when the cover is retracted to facilitate feeding of the top sheet of said stack into the printer

TYPEWRITER

Yuichi Harada, Nagoya, Japan, assignor to Brother Kogyo Kabushiki Kaisha, Nagoya, Japan

Continuation of Ser. No. 137,767, Dec. 24, 1987, Pat. No. 4,871,274. This application Aug. 15, 1989, Ser. No. 393,810
Claims priority, application Japan, Dec. 26, 1986, 61-313595
The portion of the term of this patent subsequent to Oct. 3, 2006, has been disclaimed.
Int. Cl.[5] B41J 29/00, 11/62
U.S. Cl. 400—697.1 6 Claims

1. A typewriter having a carriage member movable along a platten, a holder member having a correction ribbon movable in a vertical direction provided on said carriage member, said typewriter further comprising:

a cam member rotatably movable for controlling said holder member so as to be moved between an erase position at which said correction ribbon faces said platen and a rest position at which said correction ribbon is located below said erase position in accordance with a rotation of said cam member;

a single switch member mounted on said carriage;

a first actuate member for actuating said single switch member to be operated based upon a movement of said cam member in case that said cam member is located at a predetermined position,

a second actuate member for actuating said single switch member to be operated in case that said carriage member is located at a predetermined original position;

first judge means for judging the condition of said single switch member at the time when said typewriter is initially operated, and

first shift means for shifting said carriage member with a predetermined length so that said single switch member having been actuated by said second actuate member is released in case that it is judged by said first judge means that said single switch member has been actuated

TOPICAL APPLICATOR FOR LIQUID

Robert S. Dirksing, and Theodore F. Merz, both of Cincinnati, Ohio, assignors to The Proctor & Gamble Company, Cincinnati, Ohio

Filed Nov. 25, 1987, Ser. No. 125,291
Int. Cl.[5] A47L 13/30; B43K 5/00; B43M 11/06
U.S. Cl. 401—261 4 Claims

1. A dispenser for the substantially uniform topical application of a liquid product either to discrete isolated portions of the surface of an object or to the entire surface of said object, said dispenser comprising:

(a) a compressible reservoir for housing said liquid product

(b) an applicator tip comprised of substantially non-porous material and having a longitudinal axis and an external surface comprising an exposed portion and a non-exposed portion, said exposed and non-exposed portions being located adjacent one another along said longitudinal axis, said non-exposed portion of said applicator tip being secured in fluid communication with said compressible reservoir, said non-exposed portion of said applicator tip also being in fluid communication with the exposed portion of said applicator tip by means of at least one liquid passageway at least partially comprising said applicator tip, said liquid passageway extending from said compressible reservoir to the initial point of exposure of said exposed portion of said applicator tip, said liquid passageway having a cross-section which is sufficiently small that it will resist the flow of liquid from said compressible reservoir when said liquid is acted upon solely by gravitational forces, whereby liquid product can be transferred from said compressible reservoir to said exposed surface of said applicator tip along said liquid passageway when said reservoir is compressed, said exposed portion of said applicator tip extending beyond said at least one liquid passageway comprising a cylinder having a rounded end, said cylinder and said rounded end exhibiting a substantially non-porous surface which is sufficiently smooth that said liquid product will sheet substantially uniformly onto said smooth surfaced cylinder and rounded end of said applicator tip as soon as said liquid product exits said at least one liquid passageway, whereby said uniformly sheeted liquid product on said exposed portion of said applicator tip can thereafter be transferred either to discrete isolated portions of the surface of an object by contacting said discrete isolated portions with said liquid product coated rounded end portion of said applicator tip or to the entire surface of said object by tangentially stroking said entire surface with the periphery of said liquid product coated cylinder portion of said applicator

tip in a direction substantially perpendicular to the axis of said cylinder, and

(c) an applicator tip cover for totally enclosing the exposed portion of said applicator tip prior to placing said dispenser in service, said applicator tip cover being integrally formed with said compressible reservoir

LUBRICANT SUPPLY FOR UNIVERSAL JOINT

Nobuo Komeyama, Osaka, Japan, assignor to Koyo Seiko Co., Ltd., Osaka, Japan

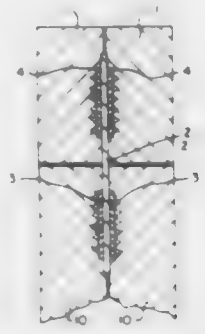
Continuation of Ser. No. 248,125, Sep. 22, 1988, abandoned. This application Mar. 8, 1990, Ser. No. 492,353
Claims priority, application Japan, Sep. 25, 1987, 62-146785[U]
Int. Cl.[5] F16D 3/26
U.S. Cl. 403—131 5 Claims

1. A lubricant supply assembly for a universal joint comprising

a universal joint,

two rotation shafts connected via said universal joint, each of said rotation shafts having a lubricant pathway defined therein and said two rotation shafts being bendable relative to one another,

ball-and-socket joints secured at said two rotation shafts, each ball of the ball-and-socket joints having a hole defined therein,



a coupling tube provided at said universal joint for introducing a lubricant from one of said pathways of one of the two rotation shafts to the other of said pathways of the other of the two rotation shafts, said coupling tube being a single tube having two ends, a first end of said coupling tube being fixed in the hole of one ball in one of said ball-and-socket joints while a second end of said coupling tube is engaged with and guided by an internal surface of the hole of the ball in the other of said ball-and-socket joints, the second end of said coupling tube slidably penetrates and protrudes through said ball in the other of said ball-and-socket joints, the second end of the coupling tube further extends into an opening defined in one of the rotation shafts, the opening in the one rotative shaft being a part of the lubricant pathway and having a diameter greater than a diameter of the coupling tube, said coupling tube being movable relative to the ball in the other of said ball-and-socket joints to thereby remain unflexed even during bending between said two rotation shafts.

5,006,006

CONNECTOR FOR CONNECTING WOODEN BEAMS TO ONE ANOTHER

Markku S. Lehtonen, Rautio, Finland, assignor to Metsa-Serla Oy, Kirkkalemi, Finland

Continuation of Ser. No. 14,191, Feb. 12, 1987, abandoned. This application Sep. 11, 1989, Ser. No. 404,041
Claims priority, application Finland, Feb. 13, 1986, 860665
Int. Cl.[5] F16B 15/00
U.S. Cl. 403—283 3 Claims

1. A connector for interconnecting beams made at least partly of wood, comprising

a frame plate having two opposite, toothless sides,

at least one toothed plate having two opposite sides, each toothed plate having a plurality of teeth protruding outwards from a first said side thereof for penetration into at least one beam at least partially made of wood, a second said side of each said toothed plate being toothless,

the toothless, second side of each said toothed plate being abuttingly disposed facewise against a said side of said frame plate, and

a permanently fixed surface joint securing each toothed plate against the respective said side of said frame plate against which such toothed plate is abuttingly disposed facewise,

said frame plate being thicker, between said opposite sides thereof, than each said toothed plate, exclusive of said teeth of each said toothed plate,

at least one said toothed plate being secured on each side of said frame plate, whereby in use, two beams made at least partly of wood can be interconnected by the connector by sandwiching the connector between wooden portions of the two beams and pressing the resulting sandwich construction together so that teeth of one of said toothed plates on one side of said frame plate penetrate into a wooded portion of one of the beams and teeth of another of said toothed plates on the opposite side of said frame plate penetrate into a wooded portion of the other of the beams

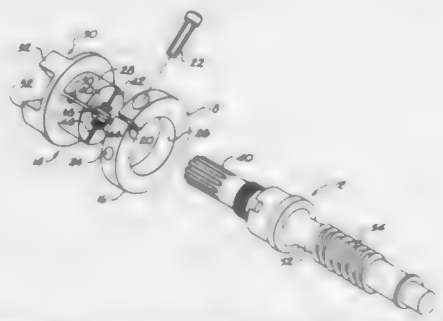
VIBRATION-PROOF COUPLING

Michael J. Fischer, Elizabethtown, and W. Eugene Wilson, Columbus, both of Ind., assignors to Reliance Electric Industrial Company, Greenville, S.C.

Filed Jun. 16, 1989, Ser. No. 367,260
Int. Cl.[5] B25G 3/24, F16B 2/02
U.S. Cl. 403—290 11 Claims

1. An improved coupling arrangement, comprising



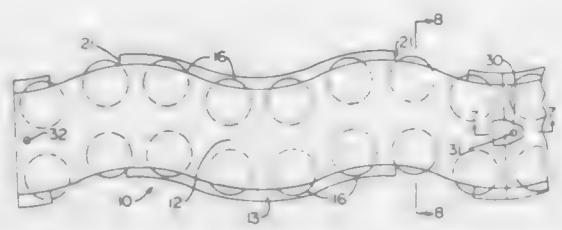
a substantially cylindrical non-deformable male splined member, adapted to be rotatively driven, such as a shaft,

a coupling hub, having at least a substantially cylindrical axial portion thereof provided with a substantially cylindrical bore formed with a female splined inside diameter for receipt of said male splined member,

at least one slot defined through the circumference of said hub in said substantially cylindrical axial portion thereof, and extending between said hub bore and the hub outside

diameter, said at least one slot permitting radial shrinkage of said coupling hub upon compression of said slot; and

collar means, adapted for removable receipt about the outside diameter of said coupling hub axial portion with said male splined member received in said coupling hub bore, for selectively clamping said hub to said male splined



member by compressing said slot for radially shrinking said hub, whereby play between said hub and said male splined member is eliminated so as to likewise eliminate fretting corrosion between such hub and member while permitting said hub and said male splined member to be subsequently decoupled when desired.

SECTIONAL HIGHWAY BARRIER WITH RESILIENT CYLINDRICAL INSERTS

Robert J. Bishop, 1083 Bloomfield Ave., West Caldwell, N.J. 07006

Filed Apr. 16, 1990, Ser. No. 509,209
Int. Cl.[5] E01F *13/00, 15/00*
U.S. Cl. 404—6 20 Claims

1. A shock-absorbing and motorist warning highway barrier comprising a plurality of elongated upstanding units adapted to be joined in end-to-end relation, each unit comprising an outwardly flared base and an upstanding central portion having interfitting protrusions at opposed ends thereof facilitating end-to-end coupling of adjacent units, opposed side surfaces of the upstanding portion having a plurality of transversely aligned and longitudinally spaced recesses to receive resilient cylindrical members in a manner to protrude substantially from such surfaces, the cylindrical members being insertable and removable through the top of the unit and being secured in place by a cover member having downward protrusions interfitting with the aligned recesses in said unit.

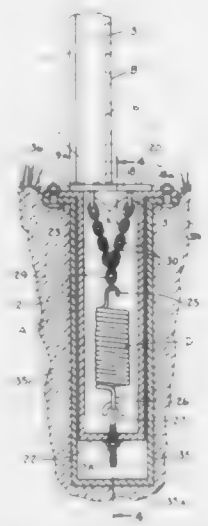
5,006,009

OUTDOOR POST ASSEMBLY

Richard D. Griffin, 107 Maplebrook, Laurens, S.C. 29360

Filed Apr. 27, 1990, Ser. No. 516,033
Int. Cl.[5] E01F *9/01*
U.S. Cl. 404—11 9 Claims

1. A spring biased outdoor post assembly for carrying a highway reflector, sign or the like comprising:



a support member positioned within the ground;

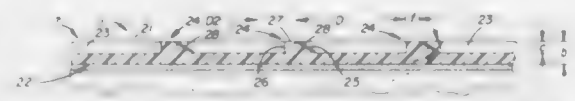
a post member carried in upright position upon said support member extending substantially above the ground;

a base carried at a lower end of said post member mounting said post member upon said support member forming a juncture therebetween;

a single coiled tension spring connected on one end to one of said members at laterally spaced locations adjacent said juncture; and

said coiled tension spring being connected on the other end to the other of said members remote from said spaced

locations to exert a resilient force between said support member and said post member at said juncture;



whereby said single coiled tension spring exerts at said spaced locations a torsional force for maintaining said post in proper horizontal alignment and for returning said post to upright position after being displaced laterally as by a highway maintenance device.

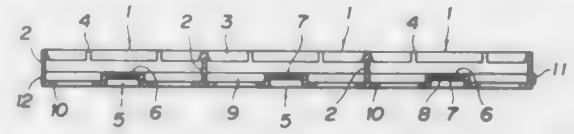
ROADWAY WITH UNI-DIRECTIONAL LIGHT REFLECTIVE LANE MARKER

John W. Duckett, 4905 Ranch Rd., Tiburon, Calif. 94920

Filed Nov. 3, 1989, Ser. No. 431,573
Int. Cl.[5] E01F *9/06, 9/08*
U.S. Cl. 404—12 19 Claims

1. A roadway defining at least one pair of side-by-side first and second traffic lanes for conveying traffic in first and second opposite directions, respectively, and a unidirectional light reflective lane marker secured on said roadway comprising at least one delineating strip separating said traffic lanes from each other, said delineating strip comprising light reflective means for visually displaying said delineating strip when it is subjected to light and viewed by a driver travelling in said first direction on said first traffic lane and for at least substantially rendering said delineating strip invisible when it is viewed by a driver travelling in said second direction on said second traffic lane, means defining an elongated groove in an upper surface of said roadway and wherein said lane marker, including said light reflective means, is secured and entirely confined within said groove, said delineating strip comprising an elongated, opaque and one-piece member defining a flat upper surface disposed in a horizontal plane flush with an upper surface of said roadway, and an elongated slot formed in the upper surface of said member and solely interrupted by a series



of longitudinally spaced segments formed integrally within said member and bridged laterally across said slot, each said segment comprising a leading surface on a proximal side of said segment, a trailing surface on a distal side of said segment and a flat intermediate surface flush with the flat upper surface of said member and with the upper surface of said roadway, said light reflective means being disposed and confined solely on the leading surface of said segment and in fully protected relationship within said groove.

FRAMES FOR INSTALLING WOODEN BRICKS

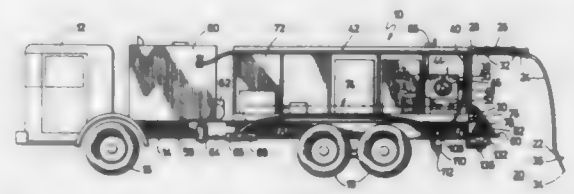
Isao Hiyashi, 10-15, Kanesawacho 1-Chome, Hitachi-Shi, Ibaragi 316, Japan

PCT No. PCT/JP87/00534, § 371 Date Sep. 30, 1988, § 102(e) Date Sep. 30, 1988, PCT Pub. No. WO89/00625, PCT Pub. Date Jan. 26, 1989
Continuation of Ser. No. 273,339, Sep. 30, 1988, abandoned. This PCT application Jul. 22, 1987, Ser. No. 541,198
Int. Cl.[5] E01C *5/00*
U.S. Cl. 404—37 8 Claims

1. A frame for installing wooden paving blocks, comprising:

a plurality of juxtaposed sections and each having a peripheral shape for holding a wooden paving block, said sections being arranged in a predetermined pattern, each of said plurality of sections being defined by a peripheral wall;

fixing means provided in each section for fixing a wooden paving block in the section, the peripheral wall for the section extending upwardly above said fixing means to a height such that when a wooden paving block is in position in a section, it will project at least slightly above the peripheral wall of the section; and



an elastic protruding piece provided around at least a portion of the peripheral wall of each section, said protruding piece projecting downwardly and inwardly into the interior of the section and having a free end spaced from the inner surface of the peripheral wall which is resiliently movable toward and away from the inner surface of the peripheral wall for being engaged by the edge of a wooden paving block positioned in the section and moving resiliently for accommodating changes in the shape of a wooden paving block in the section.

COMBINATION ROAD REPAIR MACHINE WITH IMPROVED CRACK-FILLING CAPABILITIES

Carl L. Sterner, 3860 North Rd., Bakersfield, Calif. 93312-9216

Filed Mar. 9, 1989, Ser. No. 321,591
Int. Cl.[5] E01C *23/02*
U.S. Cl. 404—107 5 Claims

1. a vehicle for transporting and dispensing materials required for filling and repairing cracks in roadways and highways or similar, said vehicle comprising:

a. a storage tank for asphalt mix or emulsion or the like liquid crack-filling material;

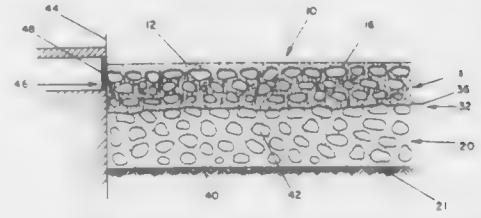
b. hose means leading from said tank to a dispensing area adjacent said vehicle;

c. manually directable applicator wands connected to said hose for manually directing crack-filling material from said tank into cracks in the roadway;

d. a hopper for carrying sand, rock chips, or other substantially dry structural material for covering the liquid crack-filler material and binding therewith to form in the aggregate substantially firm roadway surface;

e. a said dispensing platform attached to said vehicle adjacent said dispensing area;

f. a conveyor interconnected with said hopper for moving sand or other structural filler material therefrom to said dispensing area adjacent said vehicle; and



g. controls for driving said vehicle positioned on said vehicle immediately adjacent said dispensing area such that said dispensing area is clearly viewable by an operator at said driving control position.

GRANULAR TYPE STRUCTURE WITH MOISTURE RETAINING TOP SURFACE

Herman F. Burkstaller, and Emmet F. Brieger, both of Nogal, N. Mex., assignors to Burco, Inc., El Paso, Tex.

Continuation-in-part of Ser. No. 174,118, Mar. 28, 1988, Pat. No. 4,881,846. This application Aug. 28, 1989, Ser. No. 399,614
The portion of the term of this patent subsequent to Nov. 21, 2006, has been disclaimed.
Int. Cl.[5] A01G *25/00;* E02B *11/00*
U.S. Cl. 405—38 38 Claims

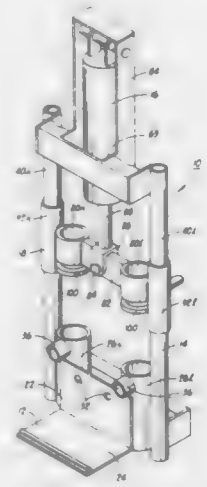
1. A built-up, moisture content controlling granular structure comprising:

an upper surface layer comprising fine aggregate material;

a barrier surface substantially impervious to moisture spaced beneath said upper surface layer;

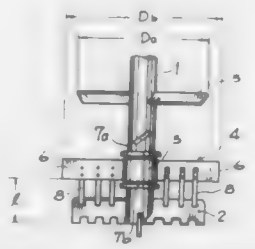
a containment means positioned essentially peripherally around said structure;

a subsurface reservoir bed disposed atop said barrier surface and beneath said upper surface layer, said subsurface reservoir bed being peripherally surrounded by said containment means; and



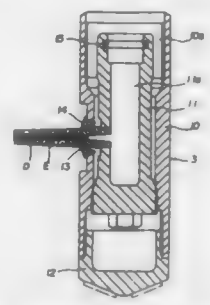
means for stabilizing said subsurface reservoir bed and for providing adequate fluid conductivity between said subsurface reservoir bed and said upper surface layer to substantially maintain the selected moisture content in said upper surface layer, said stabilizing and fluid conductivity providing means comprising a stabilizing layer of adhesive material disposed atop said subsurface reservoir bed, said layer of adhesive material comprising voids therein to provide adequate fluid conductivity between said subsurface reservoir bed and said upper surface layer thereabove to substantially maintain the selected moisture content in said upper surface layer, and said upper surface layer of fine aggregate material disposed atop and in said voids of said adhesive coated stabilizing layer.

5,006,014
BOOM STICKS
Ronald L. Greenough, Surrey, Canada, assignor to MacMillan Bloedel Limited
Filed Feb. 2, 1990, Ser. No. 473,756
Int. Cl.[5] E02B *15/04*
U.S. Cl. 405—72 10 Claims



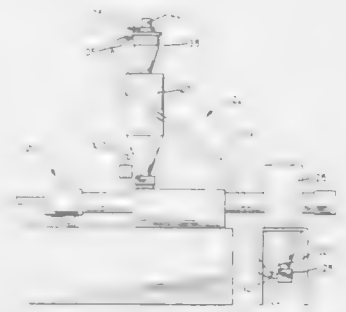
1. A boom stick comprising a plurality of substantially axially aligned vehicle tires of essentially the same diameter arranged in side by side relationship having tread surfaces forming an outer peripheral surface of said boom stick, axially extending reinforcing means passing through rim receiving holes in said tires and holding said tires together in said side by side relationship and a first rigidity imparting filling material having a specific gravity less than one contained within said tires and substantially filling said rim receiving holes in said tires, said rigidity imparting filling material cooperating with said reinforcing means.

5,006,015
HYDRAULIC JACKING APPARATUS
Jerry B. Stephens, 4725 Lamar Ave., Paris, Tex. 75460; Richard E. Jackson, Rte. 1, Box 443, and David H. Conder, Rte. 1, Box 211, both of Powderly, Tex. 75473
Filed Mar. 12, 1990, Ser. No. 491,721
Int. Cl.[5] E02D *7/20*
U.S. Cl. 405—230 7 Claims



1. Apparatus for driving foundation leveling pile members to raise the foundation comprising:
- a foundation support member including a support foot plate, a backing plate and two vertical guide sleeves receiving a respective two pile members downward therethrough;
- a frame assembly including two parallel side bars, an upper cross beam and a lower cross beam attachable to the foundation support member;
- a gripper assembly including means actuatable to grip said two pile members in parallel configuration;
- first and second side guide sleeves rigidly attached to the gripper assembly and slidably disposed around the respective side bars of the frame assembly; and
- a hydraulic linear actuator interconnected between the upper cross beam of the frame assembly and the gripper assembly, said hydraulic actuator being energizable to actuate the gripping assembly and drive the piles downward.

5,006,016
COROTATING PREVENTOR OF EXCAVATED SOILS IN A GROUND IMPROVEMENT APPARATUS
Kosei Fukuda, Yokohama, Japan, assignor to Tenox Corporation, Tokyo, Japan
Filed Dec. 5, 1989, Ser. No. 446,147
Claims priority, application Japan, Dec. 17, 1988, 63-163824[U]
Int. Cl.[5] E02D *5/56*
U.S. Cl. 405—240 4 Claims



1. A ground improvement device comprising an excavation shaft having an excavation blade fixed to a tip end of the shaft, at least one agitation blade fixed on the shaft, and at least one radially extending corotation preventing blade rotatably mounted on the shaft, the corotation blade having a diameter greater than that of the excavation blade, and a plurality of radially spaced fingers extending from the corotation blade substantially in an axial direction towards the excavation blade.

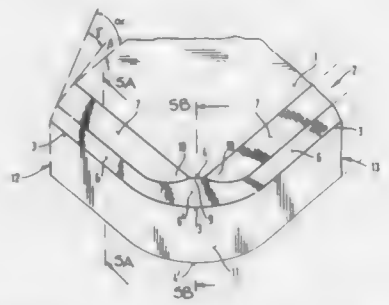
5,006,017
METHOD FOR IMPROVING GROUND OF LARGE SECTION AREA
Hiroshi Yoshida, Tokorozawa; Mitsuhiro Shibazaki, Tokyo; Hiroaki Kubo, Nakamuraminami, and Shunji Jinbo, Koyama, all of Japan, assignors to Kajima Corporation and Chemical Grouting Company, Ltd., both of Tokyo, Japan
Filed Jan. 29, 1990, Ser. No. 471,488
Claims priority, application Japan, Jan. 27, 1989, 1-16320
Int. Cl.[5] E02D *3/12*
U.S. Cl. 405—263 3 Claims

2. A method for improving a large-section ground area comprising the steps of:
- inserting a double pipe into a hole previously dug in the ground, said double pipe having a first nozzle at a top portion directed in a lateral direction and a second nozzle located near said first nozzle;
- injecting a ground improving agent at a high pressure from said first nozzle through one pipe of said double pipe;
- injecting a reproduced slurry, obtained by reproducing grouted slimes, from said second nozzle through another pipe of said double pipe at a pressure lower than said pressure of said ground improving agent;
- lifting said double pipe up from under the ground while rotating said double pipe; and
- injecting said reproduced slurry along with said ground improving agent to thereby reduce frictional resistance between said ground improving agent and sediments, increase arrival distance of said ground improving agent, and obtain an abrasive effect.

5,006,018
FEED AND SEPARATION DEVICE
Llewellyn E. Depew, Ontario, Canada, assignor to Filter Queen Ltd., Rexdale, Canada
Continuation of Ser. No. 63,624, Jun. 19, 1987, Pat. No. 4,834,586. This application Mar. 23, 1989, Ser. No. 327,832
Claims priority, application Canada, Jun. 19, 1986, 511905
Int. Cl.[5] B65G *53/66*
U.S. Cl. 406—18 9 Claims

1. Apparatus for elevating particulate material from the level to a higher second level and comprising:
- pick-up means for insertion into the material at the lower level and having an outlet and an inlet;
- a separator for removing the particulate material from an air stream;
- duplex duct means coupling the separator and the pick-up means to form a loop;
- actuator means operable to drive air around the loop so that air leaving the pick-up means outlet entrains the particulate material and then carries the material through the inlet and via the duct means to the separator where the material is substantially stripped from the air before the are returns via the duct means to the pick-up means;
- the separator comprising, concentric inner and outer funnels arranged about a vertical axis and defining an axially extending annular space, inlet means attached to the outer funnel and positioned to cause inflowing air to move between the funnels in an annular flow path, the annular space having an increasing cross-sectional area adjacent the inlet means and in that downward axial direction of the annular space so that particulate material carried by air in the flow path will tend to fly outwardly onto the outer funnel and fall axially, outlet means collecting air from the flow path and exhausting the air from the separator, and collection means coupled to the outer funnel for receiving falling particulate material and operable to withdraw such material periodically from the separator, the separator being located above the second level and the collection means including bottom exit means and resilient closure means coupled to the bottom exit means, the closure means being responsive to negative pressure in the separator to retain the closure means in a closed position; and
- control means including a timer operable in discrete time periods to energize the actuator means to drive the air around the loop and, upon completing one of said time periods, to provide time for the material in the collection means to fall under the force of gravity through the bottom exit means.

5,006,019
PNEUMATIC PICKUP PROBE
Joseph H. Dziedzic, Jr., Chicago; Daniel A. Rubino, Carol Stream, and Raymond J. Schaeffer, Lyons, all of Ill., assignors to AEC, Inc., Wood Dale, Ill.
Filed Jun. 29, 1989, Ser. No. 375,458
Int. Cl.[5] B65G *53/42*
U.S. Cl. 406—152 7 Claims

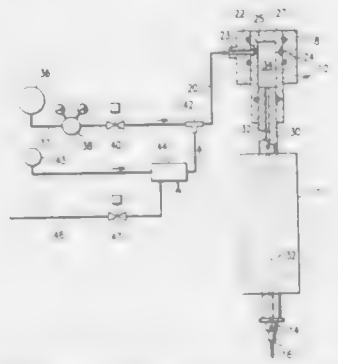


1. A pneumatic pickup probe for introducing a dry flowable material into a vacuum conveying system, comprising:
- an elongated single-walled pickup tube having a vacuum conveyor conduit connection end and a dry flowable material entry end,
- at least one air opening extending through the single wall of the pickup tube, adjacent to but spaced from the conveyor conduit connection end of the pickup tube,
- an anti-closing spacer mounted on the material entry end of the pickup tube and having a configuration adapted to preclude closing off of the material entry end of the pickup tube by proximity to a wall of a container,
- the material entry end of the tube being cut off at an acute angle A to the longitudinal axis of the tube to provide an inclined, oval-shaped opening in the material entry end of the tube, and
- a narrow, elongated flow modulation slot extending from the upper end of the oval-shaped opening in the material entry end of the tube towards the conveyor conduit connection end of the tube, the flow modulation slot having an axial length of about one to eight inches (2.5 to 20 cm).

5,006,020
CUTTER INSERT FOR MACHINING
Erwin Roos, Plochingen, Fed. Rep. of Germany, assignor to Feldmuehle Aktiengesellschaft, Düsseldorf, Fed. Rep. of Germany
Filed Jul. 6, 1989, Ser. No. 376,354
Claims priority, application Fed. Rep. of Germany, Jul. 8, 1988, 3823199
Int. Cl.[5] B23P *15/28*
U.S. Cl. 407—113 4 Claims

1. Cutter insert for machining, especially a polygonal rotatable cutter insert with rounded cutter corners and a protective bevel configured as a double bevel running along the cutting edge, comprising:
- a body having a top surface and a corner radius and having a double bevel comprising a flat primary bevel, except in the corner radius, with a width between 0.05 and 0.5 mm and an inclination α from the top surface between 20 and 35 degrees, and a flat secondary bevel, except in the cor-

ner radius, with a width between 0.5 and 3.0 mm and in inclination β from the top surface of 5 degrees to 15 degrees, the primary and secondary bevels being at an angle



γ to one another, the secondary bevel terminating in the area of the corner radius in a strengthening area formed exclusively by the primary bevel.

HIGH PRESSURE GAS DRILLING

Michael J. Wheetley, Bedford, Tex., assignor to LTV, Dallas, Tex.

Filed Nov. 16, 1988, Ser. No. 272,109
Int. Cl.[5] B23B *35/00, 51/06*
U.S. Cl. 408—1 R **26 Claims**

1. In a method of forming a hole in a workpiece with a cutting tool having a cutting edge and a shank portion having a fluid passageway therein and at least one discharge port extending from said fluid passageway to the exterior of said cutting tool in the vicinity of said cutting edge, the method comprising the steps of:

rotating said cutting tool and advancing said cutting tool into said workpiece to cut a hole therein; and

supplying a circulation fluid comprised of gas having a liquid lubricant entrained therein into said passageway under an applied pressure of at least 500 psia to cause said circulation fluid to be discharged from said cutting port into said hole with an expansive cooling effect and outwardly from said hole to the entrance thereof to remove drill cuttings from said hole.

5,006,022

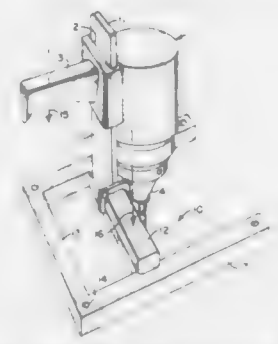
AXIALLY MOVABLE TOOL AND GUIDE

Bernard Miller, 5600 Munhall Rd., Pittsburgh, Pa. 15217

Filed May 2, 1989, Ser. No. 346,903
Int. Cl.[5] B23B *49/00*
U.S. Cl. 408—16 **19 Claims**

14. A hand-held tool and guide combination comprising:

said tool having a holder for a cutting means and having an axis along which said cutting means advances;



a gripping means on said tool for manually advancing said tool;

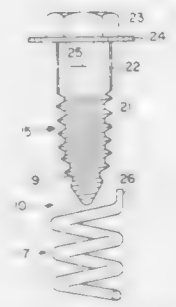
an elongated internal through opening forming a guideway adapted to receive said guide, said guideway being located adjacent said gripping means and in a plane between said gripping means and said axis along which said cutting means advances and being parallel to said axis along which said tool advances;

said guide having a base including spaced supports, the area between said supports defining a footprint;

a post attached to and projecting from said base;

a handle attaching means attached to said base and a handle attached to said handle attaching means, said handle and

said post being above and substantially within the area defined by said footprint;



said post passing through said internal guideway of said tool, said post positioned with respect to said base and internal guideway of said tool such that said tool gripping means is above said base so that the line of force applied to said handle is parallel to and in the direction of tool advance, and so that the line of force applied to said tool gripping means is parallel to and in the direction of tool advance, such that both said lines of force pass within the area defined by said footprint.

STRIP-OUT PREVENTING ANCHORING ASSEMBLY AND METHOD OF ANCHORING

Stanley Kaplan, 160 Sequams La. West, West Islip, N.Y. 11788

Filed Apr. 24, 1990, Ser. No. 513,549
Int. Cl.[5] F16B *13/04*
U.S. Cl. 411—17 **20 Claims**

1. An anchoring assembly for securing a threaded elongate member such as a bolt or screw in a material engaging position in a relatively frangible material such as concrete, cement or the like, said assembly comprising:

an elongate member having:

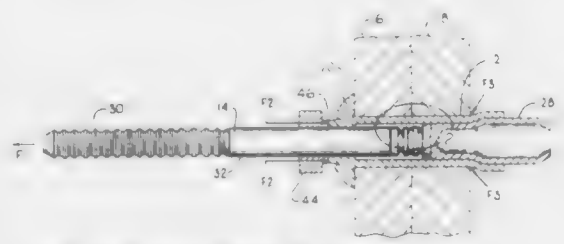
an entry tip,

a body portion;

threads on at least a part of said body portion; and

a head end;

a coil formed of wire having a diameter such that the coil is engageable in the threads on said elongate member, said coil having an external diameter greater than the maximum diameter of said elongate member, and an internal diameter such that the wire forming the coil seats in the threads on said elongate member; and



a tang on said coil extending at an angle to the axis of the wire forming an end wind of said coil from an end thereof, said tang having a thickness as measured in a direction transverse to said coil which is less than the diameter of the wire forming said coil, whereby the coil can be held against rotation as the elongate member is rotated in said coil to seat and retain the assembly in a hole in the frangible material in which the elongate member is to be secured.

DUAL-LOCK BLIND FASTENER

George Siebol, 1402 22nd St. NE., Space 552, Auburn, Wash. 98002

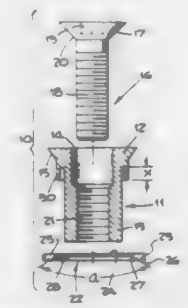
Filed Mar. 5, 1990, Ser. No. 488,646
Int. Cl.[5] F16B *13/06*
U.S. Cl. 411—43 **27 Claims**

1. A two piece blind fastener comprising:

a hollow sleeve having a shank and an enlarged head at one end and an axial through-bore extending from end to end, the through-bore having a section of reduced diameter,

a locking crown;

a pin having a pulling section and an enlarged head at one end, adapted to be inserted into the through bore of the sleeve for pulling therethrough and further having a first locking groove, one side of which is higher than the other side, the higher side forming a stop shoulder for engaging the reduced diameter section of the sleeve and adapted to cause material of the reduced diameter section to form into the first locking groove to form a first pin lock and having a second locking groove for receiving the locking crown to form a second pin lock; and



the enlarged pin head adapted to engage the sleeve shank and cause the sleeve shank to expand outwardly to form a blind head as the pin is pulled through the sleeve.

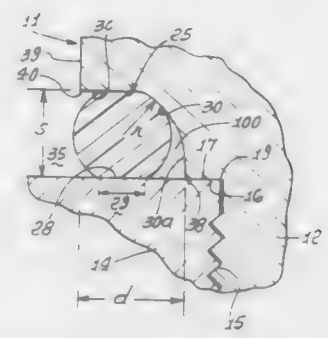
5,006,025

SELF-LOCKING NUT

John A. Duran, Glendora, Calif., assignor to Avibank Mfg., Inc., Burbank, Calif.

Filed Dec. 13, 1989, Ser. No. 450,284
Int. Cl.[5] F16B *37/04*
U.S. Cl. 411—183 **51 Claims**

1. A fastener assembly for securing a nut in an opening in a panel, said panel having an access side and a blind side, said assembly comprising:



a nut having an enlarged head at one end disposed in said opening on the access side of said panel, said nut having a shank portion extending through said opening to the blind side of said panel, such nut having a threaded portion on said shank portion for threadably securing said nut to a mating threaded member, said nut having locking means associated therewith including a washer encircling said nut between said head and said shank portion on the blind side of said panel and a thin-walled skirt extending about the exterior of said nut between said head and said shank portion on the blind side of said panel swaged against said washer holding said nut to the blind side of said panel in a locking relationship with respect to said panel.

5,006,026

PARTICLE RETENTION MEANS ASSOCIATED WITH FASTENER

Carlos I. Estrada, 3143 Commonwealth Ave., Alhambra, Calif. 91803

Filed Jun. 4, 1990, Ser. No. 532,898
Int. Cl.[5] F16B *33/00, 43/02*
U.S. Cl. 411—369 **10 Claims**

1. In apparatus to collect metal particles as generated by a fastener connection to a workpiece, the fastener having a head and an axially forwardly extending shank, the combination comprising

(a) an O-ring about the head,

(b) the head forming an outwardly open annular recess spaced from the shank to receive the bulk of the O-ring,

(c) the O-ring projecting from the recess to engage the workpiece and form with the head a recess portion to receive and retain the particles,

(d) said recess opening radially outwardly of the head, and also toward the workpiece, to allow radially outward deformation of the O-ring away from said particle collecting recess portion.

5,006,027

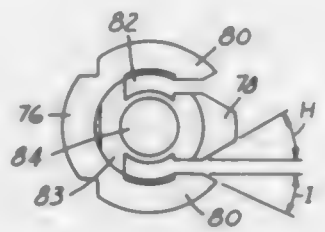
FASTENER RECEIVING CAP

Jon D. Smith, Fenton, Mich., assignor to Dry Dock Industries, Inc., Fenton, Mich.

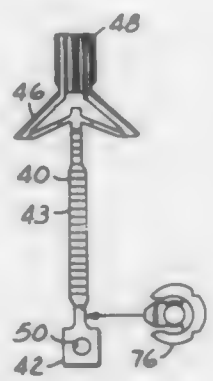
Continuation of Ser. No. 327,781, Feb. 23, 1989, Pat. No. 4,943,253. This application Feb. 20, 1990, Ser. No. 482,107
Int. Cl.[5] F16B *21/18*
U.S. Cl. 411—522 **2 Claims**

1. A cap member for use with a fastener receiving member comprising:

a center tooth adapted to be received between first and second longitudinally extending sides of a fastener receiving member, two side teeth adapted to be received on the outer periphery of the first and second longitudinally extending sides of a fastener-receiving member;



curved channels being defined between said center tooth and each side tooth and each extending in a first arc, said first arc being greater than an arc over which the longitu-



dinal sides of the fastener receiving member the cap is to be utilized with extends;

said curved channels extending between said center tooth and said side teeth to channels opening at a radially outer portion of said cap;

a central aperture formed in said center tooth for passage of a screw or other fastener, a line segment being drawn from a center of said central aperture to a center of one of said channel openings, in a plane drawn perpendicular to said center axis, is non-parallel to, and defines an angle of less than 180 degrees with, a line segment drawn in the same plane from said center of said central aperture to the center of the other of said channel openings, and both of said channel openings being received within a 180 degree arc drawn about said center of said central aperture:

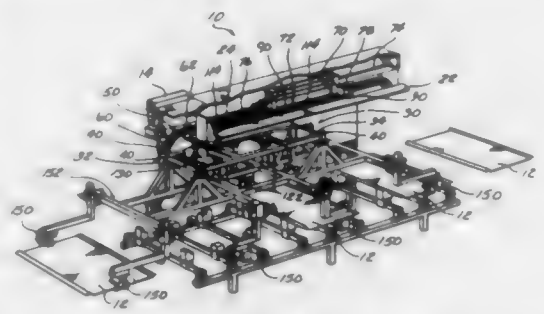
said side teeth being resiliently biased towards said center tooth such that the first and second longitudinally extending sides of a fastener-receiving member may be snapped into said curved channels, springing said side teeth radially outwardly, and said side teeth will be resiliently re-

turned to a first position securing said first and second longitudinal sides within said curved channel;

said channels being defined by a first channel portion of a first thickness at a radially inner portion of said cap, and a second channel portion of a second thickness spaced towards said radially outer portion from said first channel portion said first thickness being greater than said second thickness and said second thickness being less than the lateral thickness of the longitudinal sides of the fastener receiving member that the cap is to be utilized with, said second channel portion being located at the arc portion which is greater than the arc of the longitudinal sides of the fastener receiving member such that said second portion can snap over the longitudinal sides of the fastener receiving member; and

said cap having a nominal first plane and a neck extending outwardly from said first plane, said neck being generally cylindrical and centered about said central aperture, said neck being sized such that its cylindrical shape will fit within a hole that the fastener receiving member is to be utilized with.

5,006,028



CAM LIFT AND CARRY PARTS TRANSFER APPARATUS

Donald T. Jackson, 1159 Ashley, Troy, Mich. 48098

Filed May 18, 1990, Ser. No. 525,459

Int. Cl.[5] B65G *25/04*

U.S. Cl. 414—222 **5 Claims**

1. A parts transfer apparatus for progressively advancing workpieces through successive work stations comprising:

a rigid support structure surrounding the work stations and having first and station ends;

a movable frame;

workpiece engaging means, mounted on the frame, for engaging a workpiece;

cam means fixedly mounted on the support structure and disposed on opposite sides of the frame, the cam means defining a reciprocal path of movement for the frame;

cam follower means mounted on the frame and engaging the cam means; and

drive means, coupled to the support structure and the frame, for reciprocatingly driving the frame between the first and second ends of the support structure, wherein the drive means comprises:

first cart means movably mounted for horizontal bi-directional movement on the support structure;

a second cart movably mounted for horizontal bi-directional movement on the support structure, the movable frame being connected to the second cart for movement therewith; and

first and second fluid operated cylinders, each having a reciprocal cylinder rod;

the first and second cylinders being fixedly mounted on the first cart means with the ends of the cylinder rod of the first cylinder fixedly connected to the support structure and extending outward from one end of the first cart means, the cylinder rod of the second cylinder extending outward in an opposite direction from the first cart means and fixedly connected to the second cart.

5,006,029

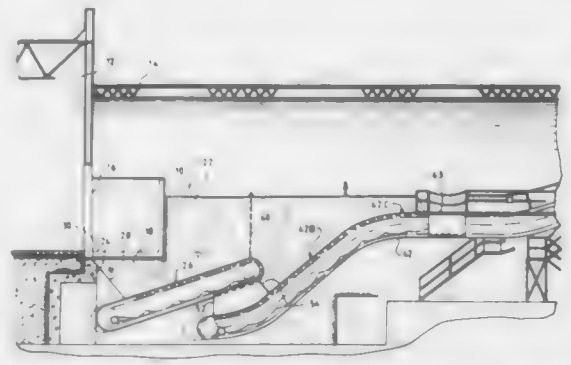
RECEIVING ASSEMBLY FOR SOLID WASTE DISPOSAL SYSTEM

Russell J. Galgana, Clarksville, N.Y., assignor to Smith & Mahoney, P.C., Albany, N.Y.

Filed Jul. 24, 1989, Ser. No. 384,500

Int. Cl.[5] F23K *3/00*; **B65G** *65/06*

U.S. Cl. 414—327 **20 Claims**



1. A receiving assembly for a solid waste disposal system, comprising:

a pit for receiving solid waste material;

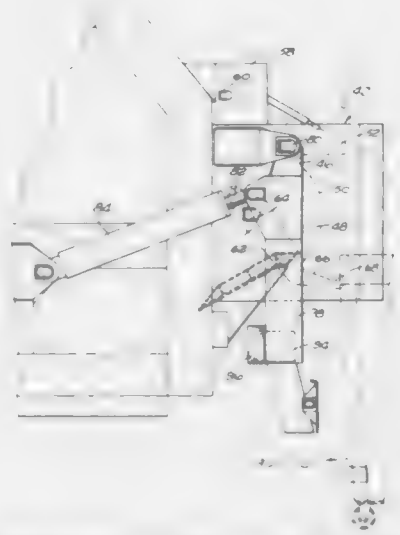
a substantially horizontal tipping floor defined about said pit;

a first conveyor positioned within said pit, said first conveyor including a discharge end for discharging solid waste material which may be present on said first conveyor;

a second conveyor, at least part of said second conveyor being positioned beneath said discharge end of said first conveyor so that waste material discharged from said first conveyor drops upon said second conveyor, each of said first and second conveyors being adapted to transport waste material in substantially the same directions; and

a curtain positioned between said first conveyor and said second conveyor, said curtain having an upper end adjacent to a lower surface of said first conveyor and a lower end adjacent to an upper surface of said second conveyor.

5,006,030



APPARATUS FOR TRANSFERRING REFUSE FROM CONTAINERS INTO REFUSE EQUIPMENT

Fred T. Smith, and Fred P. Smith, both of Alpine, Utah, assignors to Waste Management of North America, Inc., Oak Brook, Ill.

Filed Mar. 15, 1989, Ser. No. 323,776

Int. Cl.[5] B65F *3/02*

U.S. Cl. 414—406 **11 Claims**

1. In combination for use with a container for holding refuse and for depositing the refuse into a hopper through an opening at the rear end of the hopper, the container having a pin and having a lid at the top of the container and also having a peripheral wall extending downwardly from the lid,

first means constructed for coupling to the rear end of the hopper for engaging the peripheral wall of the container near the top of the container and for pivoting the bottom of the container upwardly about the pin on the container,

second means disposed relative to the first means for cooperating with the first means to retain the pin on the container in a fixed relationship when the first means pivots the container upwardly, and

third means independent in its movement of the movement of the first means and responsive only to the cooperative retention by the first and second means of the pin on the container in the fixed relationship for pivoting the container to a position where the bottom of the container is above the top of the container and is facing in a direction relative to the top of the container and the hopper to provide for the transfer of the refuse from the container into the hopper.

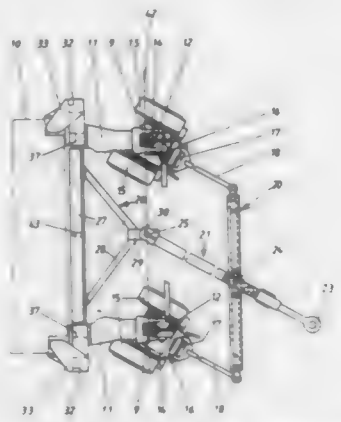
MOBILE AND STEERABLE LIFTING AND SETTING-DOWN APPARATUS FOR LARGE TRANSPORTABLE RECEPTACLES

Reinhold Riedl, Von-Berlichingen-Str. 3, D-8760 Miltenberg, and Konrad Lazarus, Am Steiggraben 9, D-6982 Freudenberg-/Main, both of Fed. Rep. of Germany

Filed Sep. 8, 1989, Ser. No. 404,428

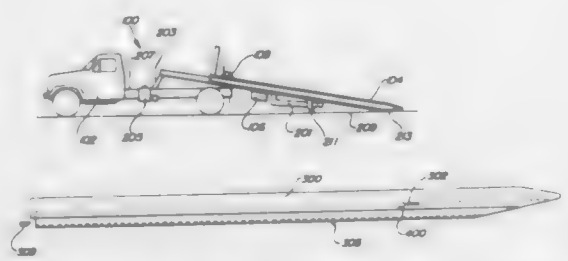
Claims priority, application Fed. Rep. of Germany, Sep. 8, 1988, 3830530



Int. Cl.[5] B60P *3/40*

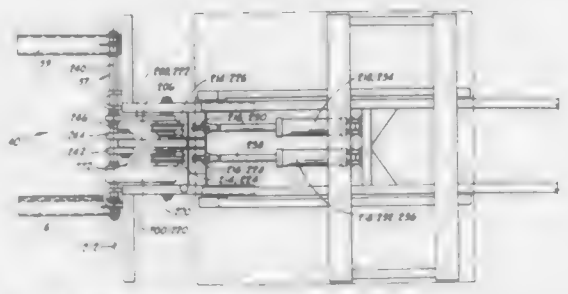
U.S. Cl. 414—458 **8 Claims**

1. Mobile and steerable lifting and setting-down apparatus for large transportable receptacles, with rack and pinion jacks which can be secured to corners of the receptacles by means of outriggers, whose racks of the rack and pinion jacks are provided on supports for the large receptacle so that the large receptacle can be raised and lowered relative to each support, the supports having running wheels mounted on wheel cradles, pivotable with respect to the supports for steering maneuvers and the wheel cradles being provided with upwardly and downwardly swingable steering arms connected at one end to said wheel cradles, characterized in that



(a) the steering arms (18) are articulated by another end to a steering rod (20) which is mounted to be movable rotationally about its axis,

(b) a central shaft (21) which is coupled to the steering rod (20) at a coupling point which is movable along the axis of the central shaft,
(c) the central shaft (21) is pivoted at one of its ends to a connecting piece (26) which is mounted directly or indirectly on the large receptacle (10) to be swingable about an axis (A) parallel to the ground,



(d) the point (25) where the central shaft (21) is pivoted to the connecting piece (26) is located laterally in alignment with the pivots (9) of two adjacent wheel cradles (14).

CARRIER VEHICLE WITH TILT LOCK-OUT ARRANGEMENT
Ralph E. McConnell, Chattanooga, Tenn., assignor to Century Wrecker Corporation, Ooltewah, Tenn.
Filed Jul. 7, 1989, Ser. No. 376,880
Int. Cl.[5] B60P *1/16*
U.S. Cl. 414—477 **17 Claims**

1. In a carrier vehicle having frame means, a carrier bed arranged for translational movement with respect to the frame means, and tilt means coupled to the carrier bed for pivoting the carrier bed between a first position substantially parallel to a supporting surface of the carrier vehicle and a second position in which a rearward-most end of the carrier bed abuts the supporting surface, the improvement comprising:
means secured to one of the carrier bed and the frame means, for emitting a control signal,
proximity type contactless sensor means secured to the other of the carrier bed and the frame means and operative upon sensing the control signal to generate a lock-out signal at a sensor means output, and
control means coupled to the sensor means output and to the tilt means, operative upon receipt of the lock-out signal to disable the tilt means.

LIFTING APPARATUS
Dale E. Bragg, and Calvin L. Stegemoeller, both of Duncan, Okla., assignors to Halliburton Company, Duncan, Okla.
Division of Ser. No. 199,730, May 27, 1988, Pat. No. 4,913,554.
This application Apr. 27, 1989, Ser. No. 343,964
Int. Cl.[5] B60P *1/44*
U.S. Cl. 414—555 **9 Claims**

1. A lifting apparatus, comprising:
a base;
a load support means for engaging and supporting a load as said load support means and said load are moved between a lowered position and a raised position relative to said base;
lifting arm means, connected at a first pivotal connection to said base and at a second pivotal connection to said load support means, for moving said load support means between said lowered and raised positions;
stabilizer arm means, connected at a third pivotal connection to said load support means and at a fourth pivotal connection to said base, for controlling a rotational orientation of said load support means about an axis of said second pivotal connection relative to said base;
sprocket means rigidly attached to said lifting arm means substantially coaxial with said first pivotal connection;
chain means operably engaging said sprocket means;
power drive means, mounted on said base and operably connected to said chain means, for moving said chain means to rotate said sprocket means and said lifting arm means and to thereby move said load support means between said lowered and raised positions; and
wherein one of said lifting arm means and said stabilizer arm means includes a pair of spaced arms, and the other of said lifting arm means and said stabilizer arm means includes one and only one arm located between said pair of spaced arms.

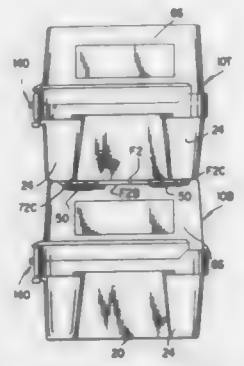
PORTAL SYSTEM
Hans-Joachim Massmann, Gottfried-Keller-Strasse 10, 6953, Gundelsheim, Fed. Rep. of Germany
Continuation of Ser. No. 70,474, Jul. 7, 1988, Pat. No. 4,832,563.
This application Dec. 27, 1988, Ser. No. 291,085
Claims priority, application Fed. Rep. of Germany, Aug. 6, 1986, 3626610
The portion of the term of this patent subsequent to May 23, 2006, has been disclaimed.
Int. Cl.[5] B25J *5/04*
U.S. Cl. 414—744.5 **12 Claims**



1. Portal system for the multidimensional movement of a holder member in at least x-, y- and z directions to selectable positions within a working space, the portal system comprising:
(a) a portal having a crossbeam extending in said x-direction with mounting means for mounting said crossbeam at a fixed location;
(b) a first unit movable along said crossbeam in said x-direction;
(c) means for moving said first unit in said x-direction;
(d) a second unit supported by said first unit for movement relative to said first unit in said z-direction; and
(e) means for moving said second unit in said z-direction;
said second unit comprising:
(i) a first hollow housing part movable in said z-direction relative to said first unit;
(ii) a first shaft having a first axis extending in said z-direction and having a first end and a second end, and being rotatably disposed within said first hollow housing part;
(iii) a second hollow housing part at said first end of said first shaft and rotatable with said first shaft about said first axis;
(iv) an axle rotatably disposed in said second housing part and offset to the side of said axis, with said holding member being provided at an end of said axle;
(v) a first motor mounted at said first housing part and drivingly connectable to said second end of said shaft;
(vi) a second motor mounted at said first housing part for driving said axle; and
(vii) a first transmission means extending from said second motor through said first and second housing parts to said axle for rotation of said axle, whereby movement of said holder in said y-direction is achieved by rotation of said second housing part about said axis under the influence of said first motor and by rotation of said axle by said second motor.

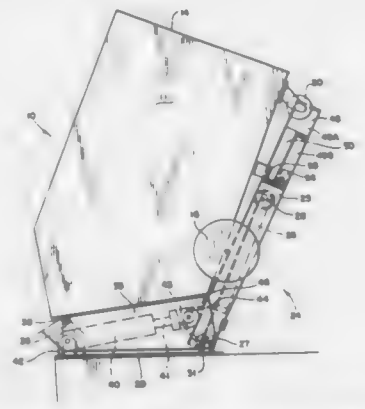
METHOD FOR CARRYING AND TRANSPORTING COMPUTER TAPE CARTRIDGES
David G. Leben, 105 S. Broadway, Ste. 640, Wichita, Kans. 67202
Division of Ser. No. 287,739, Dec. 21, 1988, Pat. No. 4,874,088.
This application Aug. 10, 1989, Ser. No. 392,210
Int. Cl.[5] B65D *25/18*
U.S. Cl. 414—786 5 Claims

1. A method for stacking containers in a superimposed posture to facilitate the carrying and transporting of the containers comprising the steps of:

(a) forming a first container for carrying and transporting computer tape cartridges and comprising

a first container base having a base bottom, a pair of base hollow upright side walls integrally secured to said base bottom, and a pair of base end walls integrally secured to said base bottom and to said base side walls, each of said base hollow upright side walls having a base outside wall and a base inside wall with said base outside wall having a structure defining a plurality of hollow dome-shaped protrusions spaced by an abridging outside wall member and with said base inside wall having a structure defining a plurality of hollow dome-shaped ribs spaced by an abridging inside wall member, and said base bottom having a base outside wall with a plurality of first protruding legs bound thereto and a base inside wall having a structure defining a plurality of hollow dome-shaped ridges spaced by an abridging base inside wall member, said dome-shaped ribs integrally connected to said dome-shaped ridges; and a first container lid pivotally secured to said first container base, said first container lid having a structure defining a first handle recess with a first handle recess depth and a first top recess with a first top recess depth;

(b) forming a second container comprising



a second container base pivotally secured to a second container lid with the second container lid having a structure defining a second handle recess with a second handle recess depth and a second top recess with a second top recess depth, and said second container base includes a plurality of second protruding legs bound to a bottom thereof;

(c) securing pivotally a second handle to said second container lid within said second handle recess of said second container lid, said second handle has a thickness less than the depth of said second handle recess depth;

(d) pivoting said second handle downwardly to be flushed against the bottom of said second handle recess such as to completely contain said second handle therein with no structural part of said second handle extending above said second handle recess;

(e) positioning the first protruding legs of the first container into said second top recess such that the first protruding legs prevent the first container from readiiy sliding away from the second container.

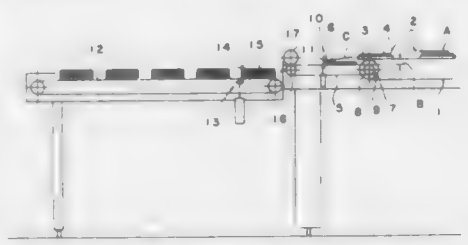
METHOD OF EMPTYING A CONTAINER
Kurt W. Niederer, Charlotte, N.C., assignor to Toter, Inc., Statesville, N.C.
Division of Ser. No. 366,789, Jun. 14, 1989, Pat. No. 4,948,324.
This application Apr. 10, 1990, Ser. No. 507,676
Int. Cl.[5] B60P *1/16;* B65G *67/22*
U.S. Cl. 414—786 2 Claims

1. A method of emptying a container comprising the steps of:

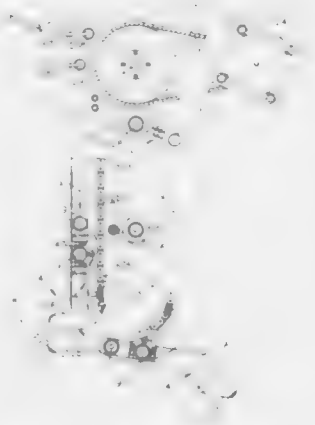
(a) supporting the container by a bottom thereof by means of a supporting surface of a plate including first and second telescoping elements;



(b) providing a piston and cylinder cooperating with said plate for lifting the container and returning the container to starting position;

(c) lifting and tipping said container through a first range of motion by retracting said piston into said cylinder progressively through said first range of motion to a point where said bottom and a side wall of said container are both supported;

(d) lifting and tipping said container through a second range of motion while both the bottom and side wall of said container are supported by retracting said piston into said cylinder progressively through said second range of motion to a point where the container is inverted to a degree sufficient to empty it; and



(e) returning the emptied container to its starting position by repeating steps (c) and (d) in reverse order as said piston extends outwardly from said cylinder.

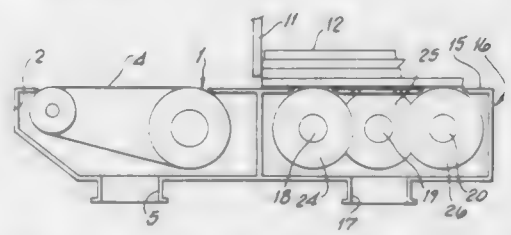
CONNECTION ASSEMBLY FOR TRANSMITTING THE LOAD OF AN INTERCEPT ARM DIRECTLY TO THE PITCH CENTERLINE OF THE DRIVE CHAIN
Christer A. Sjogren, Miami, Fla., assignor to Quipp, Incorporated, Miami, Fla.
Filed Aug. 23, 1989, Ser. No. 397,584
Int. Cl.[5] B65G *57/03*
U.S. Cl. 414—790.4 16 Claims

1. A coupling assembly for coupling a stacker bucket for stacking signatures to a drive chain comprising:

said drive chain including a plurality of pairs of link plates, said pairs being pivotally connected to one another in end-to-end fashion to form a closed loop;

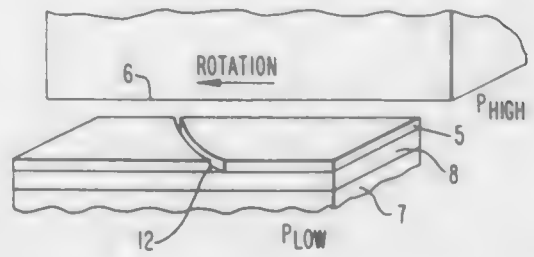
a connecting link having first and second ends;



first means for pivotally coupling said first end to said drive chain, said first end being arranged between and pivotally coupled to one of said pairs of link plates so that said drive chain and the connecting link lie in a common plane, the link plates being substantially parallel to the connecting link first end;

second means for pivotally coupling said second end to said bucket;

the pivot axis of said first means being coincident with the pitch centerline of said drive chain; and



said connecting link first and second ends being respectively rotatable relative to the drive chain and the bucket.

5,006,042
APPARATUS FOR FEEDING BOARDS OR SHEETS FROM A STACK
Marcus G. Park, Stockport, England, assignor to Simon Container Machinery Limited, Cheshire, England
Filed Jan. 10, 1990, Ser. No. 463,246
Claims priority, application United Kingdom, Jan. 18, 1989, 8901055
Int. Cl.[5] B65G *59/00*
U.S. Cl. 414—795.4 11 Claims

1. Apparatus for feeding boards in a single direction sequentially from the top or bottom of a stack through a feed gate at the top or base respectively of a front stack retaining wall, comprising at least two rotary conveying members displaced longitudinally in the direction of feed and each having a conveying surface effective transversely across at least a part of the width of the boards to be fed and continuously in conveying contact with the most adjacent board in the stack, a separate variable speed motor to drive each conveying member selectively in said direction, suction means for holding each consecutive board in contact with the conveying members, and control means to start and accelerate the motors and their conveying members to a pre-determined speed to advance said most adjacent board and to decelerate each motor and its conveying members after the board has advanced and before the next succeeding board in the stack has descended onto a conveying surface.

METHOD AND SYSTEM FOR CONTROLLING A MECHANICAL PUMP TO MONITOR AND OPTIMIZE BOTH RESERVOIR AND EQUIPMENT PERFORMANCE

Frank J. Walker, Sr., 8340 Northeast 2nd Ave., Miami, Fla. 33138, and Frank J. Walker, Jr., 5711 South Utica Ave., Tulsa, Okla. 74105

Continuation of Ser. No. 87,505, Aug. 19, 1987, abandoned, which is a continuation-in-part of Ser. No. 901,692, Aug. 29, 1986, abandoned. This application Nov. 2, 1989, Ser. No. 430,418

Int. Cl.[5] F04B *47/02*

U.S. Cl. 417—12 **35 Claims**

1. A method of preventing damage resultant from pump-off of well pump from pumping fluid from a well casing into which fluid from a surrounding earth formation fills to replenish the casing to a static fluid flow level, comprising the steps of:

measuring rate of flow of fluid pumped from the well casing and, in response, developing a fluid flow rate signal representing in real-time the instantaneous fluid flow rate of said flow of fluid;

processing said fluid flow rate signal during an initial interval of time to develop a constantly updated reference signal that varies over time in response to changes of said fluid flow rate signal;

processing said fluid flow rate signal over a latter interval of time to develop an average of said fluid flow rate signal;

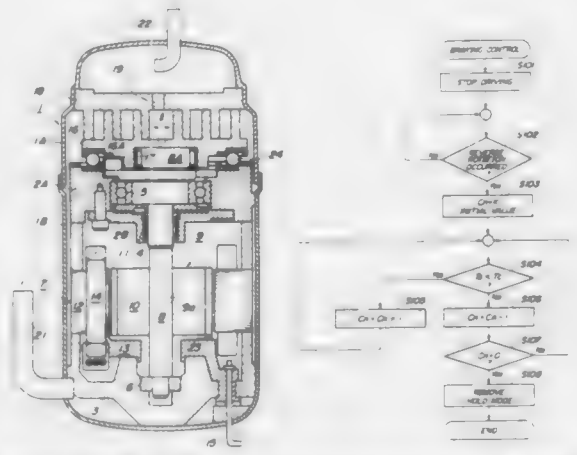
comparing said average of said fluid flow rate signal with the reference signal to detect pump-off and, in response, developing a pump-off signal;

controlling said pump with said pump-off signal; and

monitoring pump duty cycle, and displaying monitored duty cycle.

5,006,045

SCROLL COMPRESSOR WITH REVERSE ROTATION SPEED LIMITER



Tatsuya Shimoda; Takeshi Seto; Kenichi Endo, all of Nagano; Yamaha Yoshikazu, Tokyo, and Nobukazu Takagi, Saitama, all of Japan, assignors to Seiko Epson Corporation and Diesel Kiki Co., Ltd., both of Tokyo, Japan

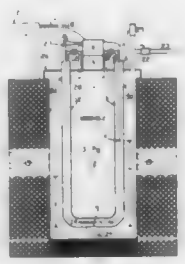
Filed Dec. 16, 1988, Ser. No. 286,365

Int. Cl.[5] F04B *49/00*

U.S. Cl. 417—42 **5 Claims**

1. An air conditioner having a compressor and a brushless DC motor directly coupled to a driving shaft of said compressor, wherein said compressor comprises a scroll type compressor; and a rotor of said brushless DC motor comprises a permanent magnet essentially composed of rare earth elements inclusive of yttrium, transition metal and boron; and further comprising a detecting means for sensing reverse rotation of said rotor, a means for presetting a reverse rotation amount and a means for applying a braking force to said motor by exciting coils of said motor such that a high braking force is applied if the sensed rotation is greater than said preset reverse rotation amount and said braking force is decreased as said sensed reverse rotation is less than said preset reverse rotation amount until said sensed reverse rotation becomes zero.

5,006,046



METHOD AND APPARATUS FOR PUMPING LIQUID FROM A WELL USING WELLBORE PRESSURIZED GAS

William G. Buckman, 504 Memphis Junction Rd.; Henry B. Steen, III, 109 Creekwood Ave., and William G. Buckman, Jr., 208 Whispering Hills, all of Bowling Green, Ky. 42101

Filed Sep. 22, 1989, Ser. No. 410,841

Int. Cl.[5] F04F *1/06*

U.S. Cl. 417—54 **25 Claims**

1. A method for removing liquid from a well bore and utilizing a tubing means having a gas inlet portion and a liquid discharge portion and a first valve connected to the liquid discharge portion, the tubing means having an opening therein comprising the steps of:

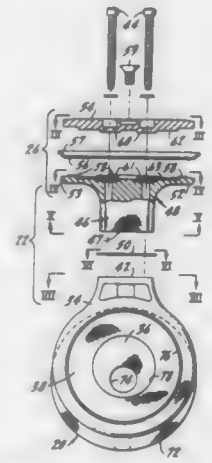
flowing liquid from said well bore into said tubing means through said opening;

flowing pressurized gas from the well bore into the gas inlet portion;

opening said first valve;

moving the liquid from said tubing means through the liquid discharge portion and out of the well.

5,006,047



COMPRESSOR WITH A SEGMENTED PISTON ROD ASSEMBLY

Mark O'Connell, Cedar Grove, Wis., assignor to Thomas Industries, Inc., Sheboygan, Wis.

Filed Feb. 27, 1989, Ser. No. 317,886

Int. Cl.[5] F04B *19/00*

U.S. Cl. 417—238 **2 Claims**

1. A compressor comprising a motor, a housing, a cylinder in said housing, a shaft driven by said motor, a reciprocating rod and piston assembly having a resilient annual seal for engaging said cylinder, means accessible from an upper surface of said rod and piston assembly for replacing said seal and for adjusting the length of said assembly,

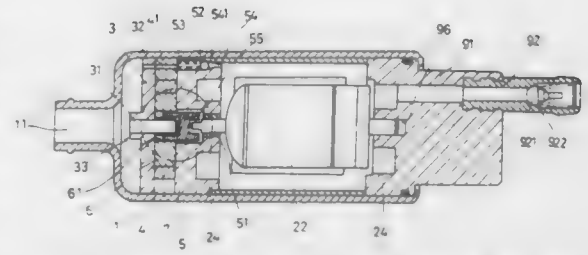
said means comprising a lower rod section having fastener engaging means, a main piston section having means for allowing passage of a fastener therethrough, a seal clamp for fixing said seal into engagement with said main piston section, and connecting means for fixing said main piston section, said seal clamp, and said seal to said lower rod section,

said means for replacing and adjusting said assembly including shim means insertable between a lower end of said main piston section and an upper end of said lower rod section,

said main piston section having at least one rib disposed on an upper surface thereof to positively engage said seal,

said main piston section and said seal clamp have alignment means for facilitating their relative alignment.

5,006,048



ELECTRICALLY-OPERATED GEAR ROTOR PUMP

Wen-Yuh Jow, Taichung, Taiwan, assignor to Mingyen Electronics Industry Co., Ltd., Taichung Hsien, Taiwan

Filed Sep. 19, 1989, Ser. No. 409,306

Int. Cl.[5] F04B *17/00*

U.S. Cl. 417—410 **1 Claim**

1. An improved dc motor operated pump of gear rotor type adapted for automobile fuel injection system comprising

a cylindrical casing having an extended fuel inlet tube;

an inlet end portion having an arcuate fuel inlet port disposed thereon being located right next to said fuel inlet tube in said casing with a shaft fixing hole being disposed at the center thereof in which a central fixed shaft is secured in place by way of interference fit;

a gear rotor unit having an inner rotor rotatably on said fixed shaft in engagement with said central shaft fixing hole; and an inner cam ring; and an outer rotor disposed within said inner cam ring and means to allow rotating of said outer rotor together with said inner rotor; said gear rotor unit being disposed adjacent said inlet end portion and in abutment therewith at one side thereof and in abutment with an outlet end portion at the other side thereof;

said outlet end portion having an arcuate fuel inlet port in communication with the gear rotor unit, and a central tubular opening having two sections of different diameters; said outlet end portion being located next to said gear rotor unit; a bearing means being secured in place in the section having smaller diameter of said tubular opening at the end away from said gear rotor unit;

a dc motor having an extended driving shaft, the terminal end thereof being defined in rectangular form; said driving shaft being rotatable with said bearing;

a pair of semi-circular through grooves symmetrically disposed on the wall of said inner rotor with said central shaft fixing hole located therebetween; and

a floating coupling means having an H-shaped cross section; one end of said coupling means being defined in solid form with a rectangular groove disposed thereon and being rotatably located in the central tubular opening in the section having a larger diameter of said outlet end portion so that a rectangular terminal end of said driving shaft of the dc motor can be in engagement therewith; the other end of said coupling device being provided with a pair of semi-circular arms which are in registry with said semi-circular through grooves on said inner rotor so that the floating coupling device can operatively join the inner rotor rotatably with respect to said fixed shaft and the driving shaft of said dc motor together;

a fuel outlet assembly having a pair of holes for the disposition of carbon brushes of said dc motor, and at the front end of each said hole is disposed an electrode rod; a hexagon-shaped hole being disposed at the center thereof for the location of a support end of said dc motor at the opposite end of said driving shaft;

a fuel outlet passage having a valve means disposed at the frontmost end thereof,

wherein the improvement consists in the adoption of said floating coupling device which is used to couple the driving shaft of said dc motor and said inner rotor which is rotatably mounted on said fixed shaft so as to permit the power of said dc motor to transmit to said gear rotor pump without the consideration of axial alignment.

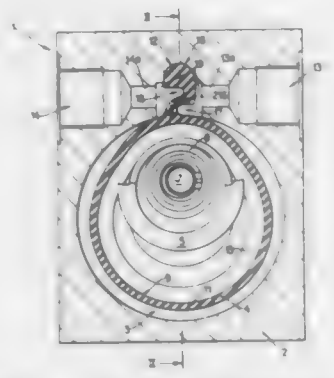
PERISTALTIC PUMP



Richard von der Heyde, Breisach, and Erich Becker, Bad Krozingen, both of Fed. Rep. of Germany, assignors to KNF Newberger GmbH, Frieburg-Munzingen, Fed. Rep. of Germany

Filed May 5, 1989, Ser. No. 348,298

Claims priority, application Fed. Rep. of Germany, May 5, 1988, 3815252

Int. Cl.[5] **F04B** *43/17, 45/08*

U.S. Cl. 417—476 **19 Claims**

1. A peristaltic pump comprising a hollow housing having an annular internal surface, a fluid-admitting inlet and a fluid-discharging outlet; an elastically deformable diaphragm including an annular section disposed in said housing and defining with said internal surface an annular pumping chamber which communicates with said inlet and said outlet, said diaphragm further including an extension anchored in said housing and extending from said section substantially radially outwardly between said inlet and said outlet, said extension having at least one elastically-enhancing weakened portion, a first side confronting said inlet and a second side confronting said outlet, said at least one weakened portion having at least one first recess in said first side and at least one second recess in said second side, said at least one first recess being offset with reference to said at least one second recess in the radial direction of said section; a rotary piston disposed in said section with radial play; and means for rolling said piston circumferentially of and along said section to thereby move successive increments of said second toward said internal surface so that the section draws fluid into said chamber by way of said inlet and expels fluid from said chamber by way of said outlet.

5,006,050

HIGH ACCURACY DISPOSABLE CASSETTE INFUSION PUMP

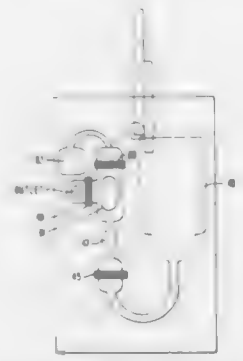
James E. Cooke, 1506 Madrono Ave., Palo Alto, Calif. 94306; Philip Barkan, Stanford, and Gregory Kovacs, Palo Alto, both of Calif., assignors to James E. Cooke, Tampa, Fla.

Filed Dec. 9, 1988, Ser. No. 283,107

Int. Cl.[5] **F04B** *43/04*

U.S. Cl. 417—478 **15 Claims**

1. A pump for supplying a controlled quantity of liquid comprising:



cassette means for defining a liquid path, the cassette means including an inlet region for receiving the liquid, an outlet region for discharging the liquid, and a pressurization region for forcing the liquid from the outlet region;

flexible membrane means disposed over the cassette means to enclose the liquid path;

controllable piston means disposed to move the flexible membrane means to pressurize the liquid in the pressurization region, thus forcing liquid from the outlet region;

inlet valve means disposed in proximity to the flexible membrane means and the inlet region for controlling liquid flow through the inlet region, the inlet valve means capable of operating independently of the controllable piston means;

outlet valve means disposed in proximity to the flexible membrane means and the outlet region for maintaining the outlet region closed except when liquid is being forced from the outlet region;

a second outlet region for discharging any gas in the cassette means, the second outlet region being disposed in the liquid path before the outlet region; and

additional outlet valve means disposed in proximity to the second outlet region for controlling gas flow through the second outlet region.

U.S. Cl. 418—60 **11 Claims**

1. A rotary compressor comprising:

a pair of cylinders, each defining a hollow space therein;

a shaft mounted for rotary movement in the cylinders;

a motor for rotating the shaft;

a piston corresponding to each cylinder, each piston surrounding the shaft for eccentrically rotating with the shaft in one of the spaces and compressing gas in the one space;

blade means for continuous slidable contact with each piston, including an individual planar blade for dividing each space into a suction chamber and a compression chamber;

first and second journal bearings for rotatably supporting the shaft, including an inner bearing surface on each bearing;

oil-guiding groove means for distributing oil from a source thereof over the entire bearing surfaces between the bearing surfaces and the shaft upon rotation of the shaft; including oil-guiding grooves respectively provided within said first and second bearings, said respective oil-guiding grooves being provided in the regions having constant negative pressure with respect to the outsides of the first and second bearings during operational rotation of said shaft.

9. A rotary compressor having a rotating shaft driven by an electric motor and two compression mechanisms driven by said rotating shaft in common, each comprising:

a cylinder;

a piston supported and rotated by said rotating shaft eccentrically within said cylinder;

a blade attached to said cylinder so as to always make a slidable contact with the outer circumferential surface of said piston for dividing said cylinder into a suction chamber and a compression chamber;

a gas suction inlet communicating with said suction chamber;

a gas discharge outlet communicating with said compression chamber;

said two compression mechanisms being disposed coaxially so as to cause the phases of said blades to coincide with each other;

a pair of journal bearings for supporting said rotating shaft at portions projecting from both the upper and lower sides of two compression mechanisms;

said two rotary compression mechanisms having the compression phases being determined such that the starting point of compression phase of one of said rotary compression mechanism separated from said motor being delayed by an angle θ from the starting point of compression phase of the other one of said rotary compression mechanism disposed near said motor, said angle of θ being defined as $\pi - \alpha < \theta < \pi$, where

$$\alpha = \cos^{-1}\left(\frac{c}{a+c}\right)$$

a: the axial distance along said rotating shaft between the centers of said two pistons,

c: the axial distance along said rotating shaft between the other end of said motor and the center of one of the pistons closest to said motor.

ORBITAL ROTOR COMPRESSOR HAVING AN INLET PASSAGE IN THE ROTOR

Kenichi Kazaoka, Nagoya, and Hiroshi Okazaki, Kariya, both of Japan, assignors to Aisin Seiki Kabushiki Kaisha, Kariya, Japan

Filed Dec. 28, 1989, Ser. No. 458,510

Claims priority, application Japan, Dec. 29, 1988, 63-331388

Int. Cl.[5] **F04C** *18/02, 29/08*

U.S. Cl. 418—61.1 **1 Claim**

1. A compressor comprising:

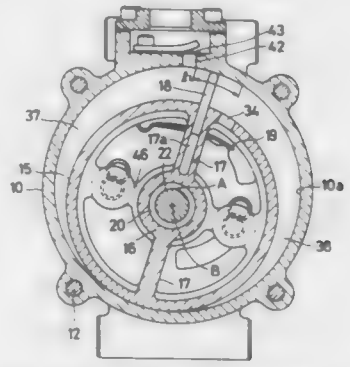
a cylinder,

a crank shaft having an eccentric shaft,

a hub member rotatably supported by said crank shaft,

a rotor disposed in said cylinder and supported by said eccentric shaft,

end plates fixed to each end of said cylinder and provided with inlet passages extending to the inside of said cylinder,



a support element extending between and connecting said hub member and said rotor and having a groove provided therein,

a vane member disposed in said groove,

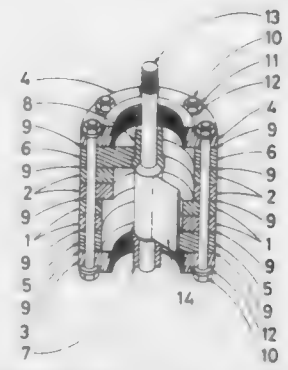
spring means disposed between said end plates and said vane member for continuously urging said vane member to contact an inner surface of said cylinder,

a chamber defined by said cylinder, said rotor and said end plates,

an inlet port provided in said rotor to connect said inlet passage with said chamber, and

an outlet port provided in said cylinder to communicate with said chamber, wherein volume of said chamber is varied by movement of said rotor driven by said crank shaft.

5,006,053



VERTICAL SINGLE BLADE ROTARY PUMP

Cornelio L. Seno, c/o Ibrahim Abunayyan Organization, P.O. Box 71, Riyadh, 11411, Saudi Arabia

Filed Mar. 12, 1987, Ser. No. 25,187

Int. Cl.[5] **F04C** *2/344*

U.S. Cl. 418—150 **1 Claim**

1. A vertical single blade rotary pump comprising:

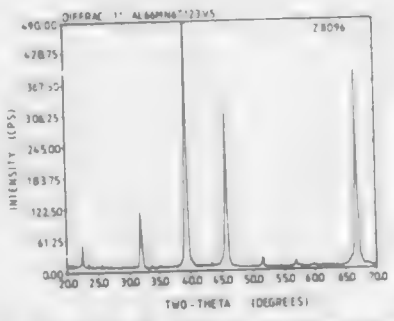
A. single round shaft having continuous radial slot that holds and allows rectilinear oscillation of the blade, said shaft tapers off after the slot towards both ends to reduce diameter, the longer end protruding out of the casing assembly to receive the brakepower needed to run the pump;

B. single rectangular flat plate blade with round horizontal edges and wedge shaped vertical edges;

C. a shell assembly comprising multiple number of shell modules that can be varied in quantity to achieve the required flow, having interior surface following the curve of the function $r = B(1 + 0.5 \sin \theta)$, where B is slotted shaft's diameter and r is the distance of the curve from the center at an angle θ from the horizontal, each shell module having a port in one quadrant bounded by the circular arc about the center whose radius is equal to one and a half times the slotted shaft's diameter, the horizontal line passing through the center from which θ is reckoned, the vertical line located half the thickness of the blade from the center, and the sweeping cavity; said shell modules being divided into two contiguous uniformly arranged sets, the bottom set being attached to the suction end plate

and having the same relative position of the ports forming an integral suction port, the top set being attached to the discharge end plate having the same relative position of the ports forming an integral discharge port, the radial sides of the two integral ports being colinear orthographically in the assembled pump;

D. suction and discharge end plates serving as sidings of the pumping chamber which are similar to the shell module in all respects except that the sweeping cavity is replaced by a continuous bore and countersunk recess in the center where the sleeve bearing is force fitted; and



E. two sleeve bearings pressed into the center holes of the end plates, both having continuous round holes with countersunk tapered recesses that journal, support and prevent or minimize the radial and axial movement of the slotted shaft.

LOW DENSITY HEAT RESISTANT INTERMETALLIC ALLOYS OF THE AL_3TI TYPE

Donald E. Nikkola, Houghton, Mich., assignor to Technology Development Corporation, Houghton, Mich.

Continuation-in-part of Ser. No. 289,543, Dec. 23, 1988, Pat. No. 4,891,184. This application Mar. 30, 1989, Ser. No. 331,626
The portion of the term of this patent subsequent to Jan. 2, 2007, has been disclaimed.
Int. Cl.[5] **C22C** *21/00, 21/06*
U.S. Cl. 420—552 **11 Claims**

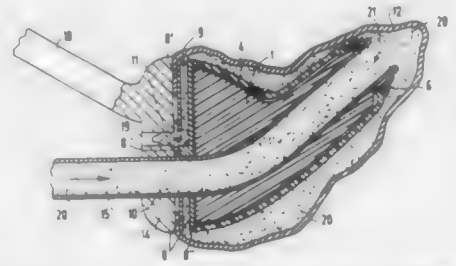
1. A low density heat resistant aluminum-titanium alloy composition comprising from about 15 to about 35 atomic percent titanium, from about 3 to about 15 atomic percent manganese, or chromium, or combinations of manganese and chromium, and the balance substantially aluminum.

5,006,055

APPARATUS FOR MANUFACTURING AN OTOPLASTIC

Helmut Lebisch; Rainer Basel, both of Erlangen; Georg Fuchs, Hembofen; Hermann Dietmar, Scheinfeld; Ernst Wipfelder, Munich, and Wilhelm Hekele, Kolbermoor, all of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Berlin and Munich, Fed. Rep. of Germany

Division of Ser. No. 185,794, Apr. 22, 1988, Pat. No. 4,871,502. This application Aug. 4, 1989, Ser. No. 389,860
Claims priority, application Fed. Rep. of Germany, May 6, 1987, 3715082
Int. Cl.[5] **B29C** *33/10, 39/24, 41/02*
U.S. Cl. 425—2 **6 Claims**



1. An apparatus for manufacturing an otoplastic, comprising:

(a) a die for simulating the outside contour of an in-the-ear hearing aid module;

(b) an over-shell positioned substantially over the die, the over-shell being provided with holes;

(c) a first deformable envelope located substantially over the die and the over-shell; and

(d) an admission channel formed by at least an open end of the first deformable envelope provided for the introduction of a flowing otopolastic material between the shell

and the envelope; wherein there is a space between the first deformable envelope and the over-shell

FILM EXTRUSION APPARATUS INCLUDING A QUICKLY REPLACEABLE CHILL ROLL

Kenneth A. Mainstone, Cincinnati, Ohio, and Robert F. Moeller, Baldwinsville, N.Y., assignors to The Black Clawson Company, Middletown, Ohio

Continuation of Ser. No. 403,231, Sep. 1, 1989, abandoned. This application Jul. 5, 1990, Ser. No. 548,441
Int. Cl.[5] **B29C** *47/88*
U.S. Cl. 425—186 **9 Claims**

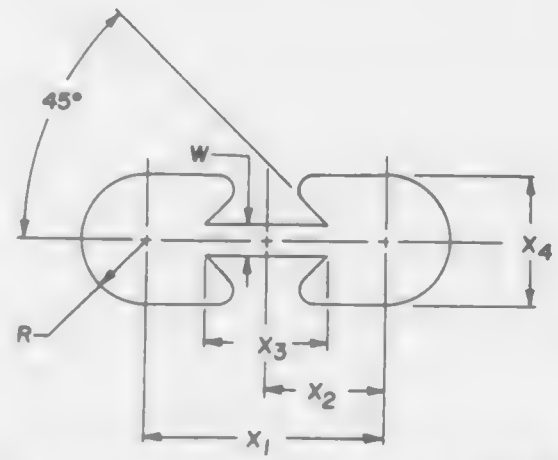
1. In extrusion apparatus for producing a continuous film of thermoplastic material which includes a main frame, a chill roll having hollow journals at each end thereof, drive means for said chill roll including a drive member on said frame and a complementary drive member on one of said journals, means for coupling said journals to a system for circulating liquid coolant through said chill roll, and means for extruding a film of thermoplastic material onto and into wrapping engagement with said chill roll, the combination of:

(a) a movable base for said chill roll which is separate from said frame and includes bearing means for directly supporting said chill roll journals,

(b) means defining an operating position of said chill roll with respect to said extruding means,

(c) means supporting said base for rolling movement lengthwise of said chill roll into and out of said operating position to expedite removal and replacement of said chill roll without requiring lifting thereof,

(d) means effective with said chill roll in said operating position thereof for connecting said drive members, and



(e) releasable means for securing said movable base in fixed relation with said frame.

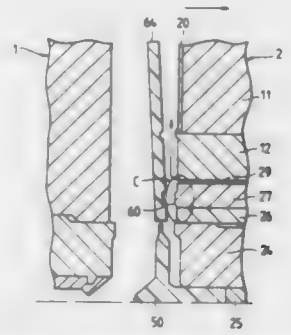
MODIFIED GROOVED POLYESTER FIBERS AND SPINNERET FOR PRODUCTION THEREOF

Shriram Bagrodia, Kingsport, and Bobby M. Phillips, Jonesborough, both of Tenn., assignors to Eastman Kodak Company, Rochester, N.Y.

Division of Ser. No. 299,904, Jan. 23, 1989, Pat. No. 4,954,398, which is a division of Ser. No. 157,551, Feb. 16, 1988, Pat. No. 4,842,792. This application Apr. 24, 1990, Ser. No. 513,714
Int. Cl.[5] **D01D** *5/253;* **B29C** *47/30*
U.S. Cl. 425—464 **2 Claims**

1. A spinnerette having at least one orifice wherein the orifice has an overall mirror-image, rounded, spade-shape wherein the mirror images join at the small ends wherein the shape of the orifice is defined as follows: the central portion of the orifice is in the shape of a slot wherein W is the width of the slot and Y_3 is the length of the slot, said orifice being further defined as having two substantially equal, symmetrical, mirror-image, end portions continuous with each end of the slot, the slot being narrower than the end portions, each end portion having three distinct regions continuous with each other to form a single shape wherein the region most distal from the center of the orifice is a semicircle having a center directly aligned with the center of the slot, the diameter of the semicircle, X_4, being aligned perpendicular to the length of the slot and being closer to the center of the orifice than the rounded part of the semicircle, wherein the radius of the semicircle is R, the distance between the center of one semicircle to the center of the slot is X_2, and the distance between the center of one semicircle to the center of the other semicircle is X_1, the second most distal region is rectangular wherein the ends of the rectangle defining the rectangle's width are tangents to the ends of the semicircle are parallel to the slot length and extend a distance from the semicircle to the end of the slot, and the end portion region most proximal to the center of the orifice is in the form of two right triangular mirror images above and below the terminal portion of the slot, wherein one non-hypotenuse side of each triangle is continuous with the portion of the rectangle from the end of the slot to the end of the semicircle tangent, the other non-hypotenuse side is continuous with the semicircle tangent, and the hypotenuse of each triangle is at a 45° angle from the slot length, and wherein the angles of each of the triangles closest to the opposite end portions are rounded off, wherein:

$0.06\ \text{mm} \leqq W < 0.10\ \text{mm}$, $6\,W \leqq X_1 \leqq 12\,W$,



$2\,W \leqq X_3 \leqq 6\,W$ $3\,W \leqq X_2 \leqq 6\,W$, and $W \leqq R \leqq 3W$.

5,006,058

APPARATUS FOR INJECTION MOLDING INFORMATION RECORDING DISKS

Haruhisa Maruyama; Ken-ichi Ishiguro; Hiroaki Watanabe, and Osamu Yagisawa, all of Yamanashi, Japan, assignors to Pioneer Electronic Corporation, Tokyo, Japan

Filed Dec. 7, 1988, Ser. No. 280,920
Claims priority, application Japan, Dec. 19, 1987, 62-322508; Jun. 9, 1988, 63-142626
Int. Cl.[5] **B29C** *45/43*
U.S. Cl. 425—556 **9 Claims**

1. An apparatus for injection molding a substrate of an information recording disk, comprising:

a pair of mold bodies having molding surfaces opposed to each other so as to form a mold space therebetween, said mold bodies being movable relative to each other in a direction substantially perpendicular to said molding surfaces;

a mold clamping means for clamping said mold bodies;

an injecting means for injecting method molding material into said mold space after mold clamping;

a cutting means provided on one of said mold bodies for cutting said molding material after said molding material has cured, said molding material forming said substrate after said molding material has cured;

a pressurized gas supply means provided on a molding surface of said one of said mold bodies, said gas supply means having an opening for supplying pressurized gas to release said cured molding material from said mold; and

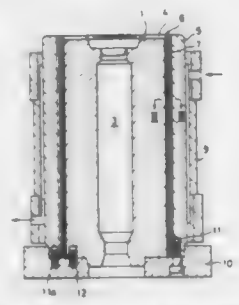
an annular uneven region in said molding surface of said one of said mold bodies between said cutting means and said opening, said annular uneven region of said molding surface forming a corresponding annular uneven region within a side of said substrate, wherein a connection between said annular uneven regions form an airtight seal.

5,006,059

MOLD FOR INJECTION MOLDING OF TOOTHED POWER TRANSMISSION BELT

Keizo Hakoda, and Hisashi Samejima, both of Kobe, Japan, assignors to Bando Kagaku Kabushiki Kaisha, Kobe, Japan

Filed Feb. 22, 1990, Ser. No. 483,251
Int. Cl.[5] **B29C** *45/27*
U.S. Cl. 425—573 **2 Claims**



1. Apparatus for injection molding of toothed power transmission belts, comprising:

an outer mold having a cylindrical interior space, a columnar inner mold having a plurality of axial tooth-shaped grooves on the external circumferential surface thereof, said inner mold being mounted in said interior space and defining, when inserted in said space, an annular cavity between said external circumferential surface of the inner mold and the internal circumferential surface of the outer mold,

a plurality of axially extending runners being formed in the outer mold adjacent the internal circumferential surface thereof at substantially equal angular intervals about the

internal circumferential surface, means for injecting a molten molding material into said runners, and

each of said runners being provided with a slit-shaped gate opening to the internal circumferential surface of the outer

mold over the full length of the runner such that the inflow of the molten molding material from each runner into said cavity is gradually decreased downstream from said injecting means.

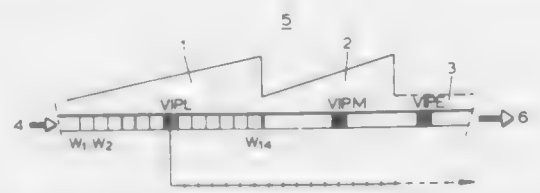
METHOD FOR BRINGING A PLURALITY OF STEEL SLABS TO ROLLING TEMPERATURE IN A FURNACE



Rudy Westdorp, Beverwijk, and Frans P. Muysken, Haarlem, both of Netherlands, assignors to Hoogovens Groep B.V., Ijmuiden, Netherlands

Continuation of Ser. No. 268,374, Nov. 7, 1988, abandoned. This application Feb. 5, 1990, Ser. No. 481,644

Claims priority, application Netherlands, Nov. 11, 1987, 8702689

Int. Cl.[5] F27D *3/00*

U.S. Cl. 432—11 **6 Claims**

1. Method for bringing a plurality of steel slabs at temperatures of from 20°-600° C. to a mean rolling temperature of 1200°-1260° C. in a furnace having a controllable energy supply to raise the temperatures of said slabs comprising the steps of

(i) determining the mean temperatures of all slabs introduced into the furnace,

(ii) determining the mean temperature of at least one virtual slab from the mean tempertures of the corresponding group of steel slabs,

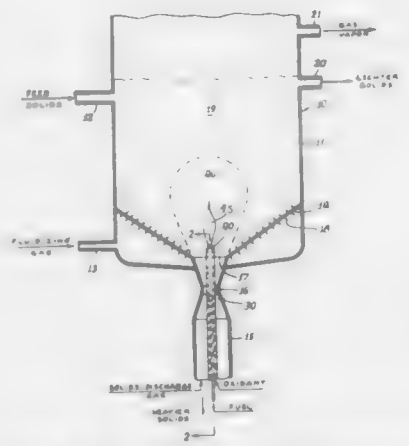
(iii) calculating the mean exit temperature of the virtual slab from the furnace,

(iv) measuring the mean temperature of the slabs exiting from the furnace, and

(v) adjusting the energy supply in dependence on the difference in mean temperatures at the exit from the furnace of said virtual slab and the plurality of steel slabs.

5,006,062

TREATMENT OF SOLIDS IN FLUIDIZED BED BURNER



Bernard S. Lee, Lincolnwood; Paul B. Tarman, Elmhurst, and Dharam V. Punwani, Bolingbrook, all of Ill., assignors to Institute of Gas Technology, Chicago, Ill.

Continuation of Ser. No. 862,325, May 12, 1986, Pat. No. 4,693,682. This application Sep. 14, 1987, Ser. No. 96,935

The portion of the term of this patent subsequent to Sep. 15, 2004, has been disclaimed.

Int. Cl.[5] F27B *15/00*

U.S. Cl. 432—14 **15 Claims**

1. In a process for thermal treatment of solid particles in a fluidized bed of the type providing density/size particle classification discharge of heavier weight particles through a necked density/size particle classification heavier particle discharge conduit at the bottom of opposing downwardly sloping bed supports and recirculation of lighter weight particles to said fluidized bed, the improvement comprising: supplying fuel and oxidant through a burner extending upwardly through the central portion of said necked selective heavier particle discharge conduit to maintain a discrete fluid fueled flame in said fluidized bed in the region above an opening of said necked heavier particle discharge conduit forming a higher temperature zone in said fluidized bed in and surrounding said flame, said higher temperature zone at least about 100° F. higher than the remainder bed temperature, and passing solids discharge gas upwardly through an annular necked passage between said burner and said discharge conduit whereby multiple passage of said solids through said higher temperature zone prior to discharge is enhanced.

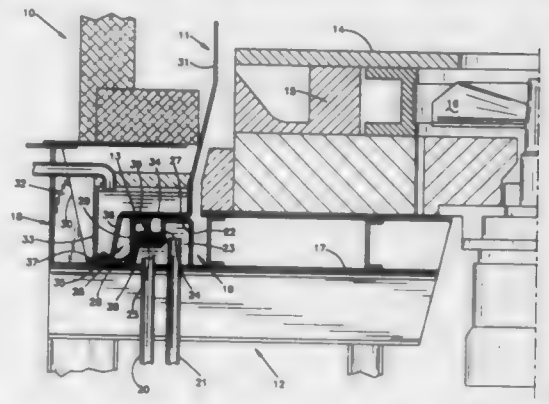
FURNACE SEAL

William P. Freund, Lakewood, Ohio, assignor to Alloy Engineering Company, Berea, Ohio

Filed Dec. 28, 1989, Ser. No. 458,320

Int. Cl.[5] F27B *5/04*

U.S. Cl. 432—205 **7 Claims**



1. In a bell type furnace having a cover structure removably supported on a base structure an improved gas seal assembly comprising:

(a) one of the structures defining as endless seal receiving trough;

(b) heat resistant sealing pad material positioned in the trough, the material being capable of resisting permanent deformation, the material including an endless sealing surface;

(c) the other of the structures including an endless ring mechanism positioned when in use in compressing engagement with the pad material surface to effect a fluid seal between the mechanism and the pad;

(d) at least a first of the structures defining a cooling jacket

positioned in heat transfer relationship with the trough whereby to cool the material when the furnace is in use;

(e) inlet and outlet conduits communicating with the jacket for circulating a cooling medium through the jacket when the furnace is in use; and,

(f) the structure including coacting elements supporting the cover structure on the base structure when in use while permitting and at the same time limiting compression of the pad material by the surface engaging ring mechanism.

DENTAL ARTICULATOR

Bernard Wayenson, 55, Allees Jean-Jaures, 31000 Toulouse, France

Filed Aug. 17, 1989, Ser. No. 395,263

Claims priority, application France, Feb. 17, 1988, 88 02262

Int. Cl.[5] A61C *11/00*

U.S. Cl. 433—63 **4 Claims**

1. A dental articulator for reproducing the motion of a patient's mandible, comprising

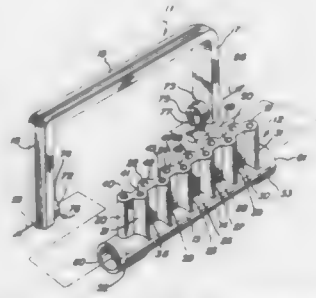
a member corresponding to a model of the patient'upper jaw,

a mandible member corresponding to a model of the patient's mandible, and movement means connected to said mandible member allowing six degrees of freedom of motion of the said mandible member relative to said upper jaw member,

said movement means comprising six servo motors, each of said servo motors being connected to said mandible member for executing a single translation or rotation relative thereto, said servo motors comprising a first servo motor for movement along a first axis of translation, a second servo motor for movement along a second axis of translation, a third servo motor for movement along a third axis of translation, a fourth servo motor for movement about a first axis of rotation, a fifth servo motor for movement about a second axis of rotation, and a sixth servo motor for movement about a third axis of rotation,

wherein said three axes of translation are orthogonal, and said three axes of rotation are orthogonal.

5,006,066



AUTOCLAVABLE DENTAL BURR HOLDER

Melvin R. Rouse, 1056 Serpentine La., Pleasanton, Calif. 94566

Filed Feb. 17, 1989, Ser. No. 312,137

Int. Cl.[5] A61G *15/00*

U.S. Cl. 433—77 **16 Claims**

1. For use in holding a plurality of dental burrs each having elongated shaft portions and cutting ends, a dental burr holder comprising:

an elongated burr block defining a plurality of bores extending into said burr block in a first common direction for receiving the shaft portions of dental burrs such that the cutting ends thereof extend beyond said bores, and a plurality of drain passages extending from said bores in a second common direction;

a burr block cover having a cross member extending transverse to said first direction and a pair of side members; and

detent support means coupling said side members to said burr block in a detented rotatable attachment.

5,006,067

DRIP PREVENTING DEVICE FOR DENTAL INSTRUMENTS

Giorgio Pignattini, Bologna, Italy, assignor to Castellini, S.p.A., Bologna, Italy

Filed Jan. 27, 1989, Ser. No. 303,466

Claims priority, application Italy, Feb. 9, 1988, 3330 A/88

Int. Cl.[5] A61C *1/02*

U.S. Cl. 433—98 **6 Claims**

1. A device serving to prevent dental surgery instruments and accessories from dripping water at the moment of switch-off, comprising at least one plenum for each instrument, connected to relative water and air circuits at a point immediately upstream of the instrument and charged with air, received under pressure from the relative circuit at the moment when the instrument is switched on, in such a way as to generate

negative pressure through the water circuit when the instrument is subsequently switched off.

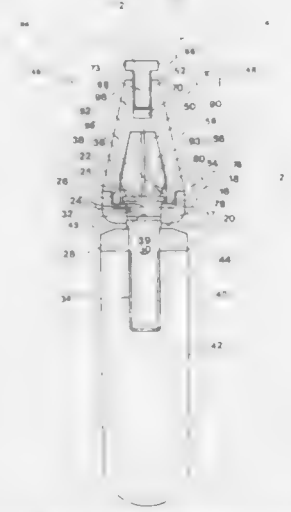
DENTAL IMPLANT



Chong Jin Lee, 291-1, Namgajwa-Dong, Seodaemun-gu, and Dong Seok Kim, 5-5, 852-744, Mia 7-Dong, Dobong-gu, both of Seoul, Rep. of Korea

Filed Aug. 28, 1990, Ser. No. 574,486

Claims priority, application Rep. of Korea, Jul. 14, 1990, 90-10696

Int. Cl.[5] A61C *8/00*

U.S. Cl. 433—169 **14 Claims**

1. A dental implant for placement into a jaw bone, the dental implant comprising:

a carrier body having a first end and a second end with a first aperture extending from said first end and partially into said carrier body and a second aperture coaxially formed with said first aperture and extending through said carrier body;

a foundation shaft having a first end and a second end with said first end of said foundation shaft terminating in a head having a diameter less than the diameter of said first aperture of said carrier body and greater than the diameter of said second aperture of said carrier body and said second end of said foundation shaft terminating in a jaw bone securing means for fixing the dental implant to the jaw bone;

a supporting ring secured proximate said first end of said foundation shaft and spaced apart relative to said second end of said carrier body such that in use said head prevents axial movement of said carrier body along said foundation shaft in a first direction beyond said head and said supporting ring prevents axial movement of said carrier body along said foundation shaft in a second direction beyond said supporting ring thereby enabling axial movement of said carrier body along said foundation shaft between said second end of said carrier body and said supporting ring;

an elongated body having a first end and a second end, with said second end having an aperture formed therein;

a means for attaching in use an artificial tooth at said first end of said elongated body;

connecting means to secure said elongated body to said carrier body such that in use the attachment of said artificial tooth to said elongated body attached to said carrier body defines a tooth assembly; and

a resilient force dampening means positioned in use into said aperture of said elongated body for maintaining contact of said carrier body and said head in the absence of masticatory movement of the jaw thereby maintaining said tooth assembly in a natural no-load appearance and for resisting axial movement of said tooth assembly in said second direction along said foundation shaft generated masticatory movement of the jaw thereby cushioning the masticatory forces received by said foundation shaft during use.

TECHNIQUE FOR THE PREVENTION OF ALVEOLAR OSTEITIS

Dewey G. Car..., 3002 Tanbark Ct., Burlington, N.C. 27215

Filed May 9, 1988, Ser. No. 191,413

Int. Cl.[5] A61C *5/00*

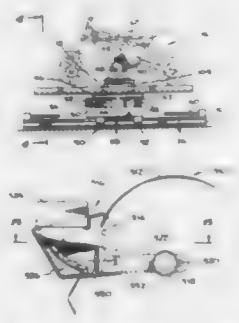
U.S. Cl. 433—215 **16 Claims**

1. A method for the prevention of alveolar osteitis following the extraction of a tooth or removal of a cyst which comprises:

preparing a dressing of semi-liquid paste containing primarily plaster of Paris;

packing said dressing into the cavity formed by the extraction whereby said dressing substantially fills and assumes the shape of the cavity;

suturing the tissues above said dressing to enclose said dressing; and



allowing said dressing to stand to form a putty-like consistency prior to packing said dressing in the cavity.

5,006,072

HIGH PERFORMANCE MOTORCYCLE SIMULATOR AND HELMUT DISFLAY

Howard Letovsky, Los Angeles, and Bernard Fried, Beverly Hills, both of Calif., assignors to Bernie Fried Racing Enterprises, Inc., Beverly Hills, Calif.

Continuation-in-part of Ser. No. 324,172, Mar. 16, 1989, Pat. No. 4,887,967. This application Jun. 27, 1989, Ser. No. 372,690
Int. Cl.[5] G09B 9/04
U.S. Cl. 434—61 5 Claims

4. A motorcycle stimulator which is capable of movement with six degrees of freedom to provide an operator with a realistic simulation of riding a motorcycle, said simulator comprising:

a support structure having a left side, a right side, a front end and a rear end;

a motorcycle mount assembly attached to said support structure;

a motorcycle frame having a front end and a rear end and including a front fork assembly, main frame and rear fork assembly wherein said motorcycle frame is attached to said mount assembly at said main frame;

sway means for controllably moving said motorcycle mount assembly between the left and right sides of said support structure;

surge means for controllably moving said motorcycle mount assembly between the front and rear ends of said support structure;

roll means for controllably moving the motorcycle frame from a vertical position to inclined positions on the left or right side of said vertical position;

yaw means for controllably pivoting the motorcycle mount assembly to provide horizontal rotation of said motorcycle frame relative to said support structure;

front fork elevator means for controllably lowering and raising the front end of said motorcycle frame;

rear fork elevator means for controllably lowering and raising the rear end of said motorcycle frame independently of said front fork elevator means wherein said sway means, surge means, roll means, yaw means, front fork elevator means and rear fork elevator means can be controlled to provide movement of said motorcycle frame with six degrees of freedom to thereby provide a realistic simulation of riding a motorcycle; and

visual display means for providing a visual representation which simulates the riding of a motorcycle, said visual display means comprising a helmet mounted visual display system comprising:

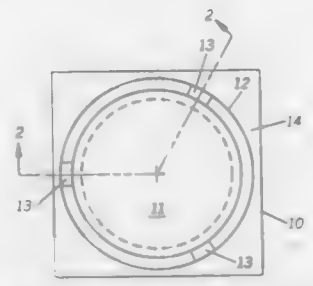
a. a helmet shaped to be worn by an individual, said helmet having a surface defining a front visual opening in front of the individual's eyes;

b. a visor assembly located in front of said front visual opening, said visor assembly comprising:

(1) a horizontal video display;

(2) a parabolic mirror having a curvature sufficient to expand said horizontal video display and being positioned to reflect said horizontal video display to provide a vertical video display;

(3) collimating lens means for focusing said vertical video display at infinity to thereby provide a wide field of view video display; and



c. means for mounting said visor assembly to said helmet.

5,006,073

SNAP FIT CONTACT ASSEMBLY

Vincent J. Mennona, Jr., Boca Raton, Fla., assignor to Motorola, Inc., Schaumburg, Ill.

Continuation of Ser. No. 357,913, May 30, 1989, abandoned. This application May 15, 1990, Ser. No. 524,674
Int. Cl.[5] H01R 9/09
U.S. Cl. 439—77 20 Claims

1. A snap fit contact for insertion into a housing opening having a shoulder therein comprising:

a substantially planar top contact surface,

a wall depending from the periphery of the top contact surface, the wall including a snap feature protruding from the wall, and

electrical circuit connection means carried by said wall.

5,006,074

ADJUSTABLE GROUND CLAMP

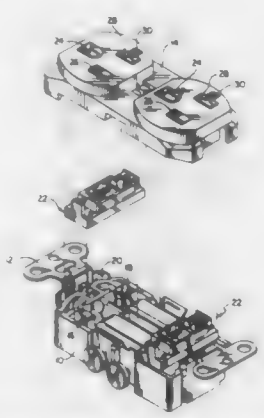
George J. Franks, Jr., 664 Thompson Cir., Inverness, Ill. 60067

Continuation-in-part of Ser. No. 204,397, Jun. 9, 1988, which is a continuation-in-part of Ser. No. 116,899, Nov. 3, 1987, Pat. No. 4,828,504. This application Mar. 8, 1989, Ser. No. 320,360
Int. Cl.[5] H01R 4/66
U.S. Cl. 439—92 21 Claims

1. An adjustable clamping device for mechanical and electrical connection to the sides of a conductor which may have a variety of different widths, comprising:

a base spanning the conductor, said base having two separate elongated members, each member having an arm extending from one end of the base member positionable adjacent one side of the conductor;

one of the arms including a threaded opening and a threaded bolt moveable therein for engagement with its adjacent side of the conductor, the threaded bolt having an abrading surface for abrading the side of the conductor to penetrate the outer surface thereof; and



adjustment means for varying the length of the base within a predetermined range of lengths by securing the members to each other at a plurality of different positions whereby the clamping device is adjustable for different width conductors.

5,006,075

ELECTRICAL RECEPTACLE WITH SHUTTERED PRONG-RECEIVING OPENINGS

Wade R. Bowden, Jr., Northport, N.Y., assignor to Pass & Seymour, Inc., Syracuse, N.Y.

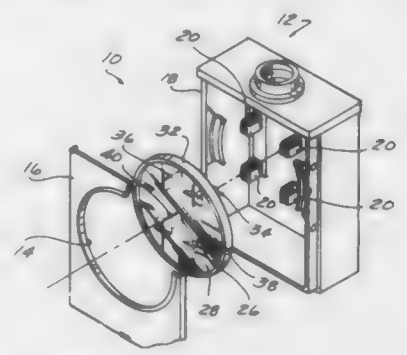
Filed Feb. 9, 1989, Ser. No. 307,910
Int. Cl.[5] H01R 13/44
U.S. Cl. 439—137 17 Claims

1. In an electrical receptacle of the type having a cover and a base held in a predetermined assembled relationship, said cover having at least one pair of spaced openings, one of which is generally elongated along a first axis and the other of which is T-shaped, having a first portion which is elongated in a direction parallel to said first axis and a second portion extending contiguously from the longitudinal mid-point of the first portion along a second axis, perpendicular to said first axis, and wherein blade-receiving terminals are positioned in said base in alignment with both of said openings to receive the blades of either a parallel blade or tandem blade type of plug which is connected to said receptacle, a safety shutter assembly for preventing an object inserted through only one of said openings from contacting the terminals aligned therewith, said assembly comprising:

(a) a first shutter element including a first, elongated side member, a first camming member having a first camming surface, and a first blocking member, said camming and blocking members extending in the same direction, perpendicularly from said first side member and spaced by a distance substantially equal to the distance between said one opening and said first portion of said other opening;

(b) a second shutter element including a second, elongated side member, a second camming member having a second camming surface, and a second blocking member, said second camming and blocking members extending in the same direction, perpendicularly from said second side member and spaced by a distance substantially equal to the spacing of said first camming and first blocking members;

(c) a third shutter element having a third camming surface;



(d) support means upon which each of said first, second and third shutter elements are supported for independent movement between first and second positions, said shutter elements being so supported and arranged relative to one another and to said cover and base that, when all of said shutter elements are in said first position, said first camming surface is aligned with said one opening and said second blocking member is positioned between said first camming member and the terminals aligned with said first opening, said second camming surface is aligned with said first portion of said T-shaped opening and said first blocking member is positioned between said second camming member and the terminals aligned with said first portion of said T-shaped slot, and said third camming surface is aligned with said second portion of said T-shaped opening and a portion of one of said side members is positioned to block movement of said third shutter element to said second position thereof.

5,006,076

BLADED METER SOCKET COVER

Darrell Robinson, Highland, Mich., and John T. Shincovich, North Canton, Ohio, assignors to Ekstrom Industries, Inc., Farmington Hills, Mich.

Filed Aug. 23, 1990, Ser. No. 572,473
Int. Cl.[5] H01R 13/44, 31/08
U.S. Cl. 439—146 20 Claims

1. A cover for a meter socket having a plurality of jaw terminals and a cover plate having an aperture formed therein for normally receiving a watt hour meter therethrough, the cover comprising:

a planar base having first and second opposed major surfaces;

a plurality of blades mounted on and extending outward from the second major surface of the base for releasably engaging the jaw terminals of the meter socket to mount the cover in the meter socket; and

rib means, mounted on and extending between the base and at least one of the blades, for supporting the one blade and preventing movement of the one blade relative to the base, the rib means having a predetermined height such that an exterior edge of the rib means contacts one of the jaw terminals of the meter socket when the cover is mounted in the meter socket.

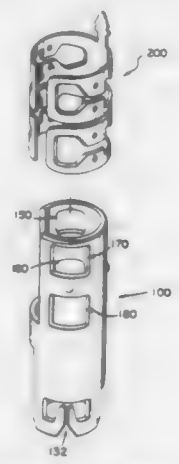
5,006,077

INSULATION DISPLACING BARREL TERMINAL

Winfield W. Loose, Lingelstown; James W. Robertson, Oberlin, and Francis J. Shay, Palmyra, all of Pa., assignors to AMP Incorporated, Harrisburg, Pa.

Continuation-in-part of Ser. No. 211,483, Jun. 24, 1988, abandoned. This application Jul. 28, 1989, Ser. No. 386,475
Int. Cl.[5] H01R 4/24
U.S. Cl. 439—409 38 Claims

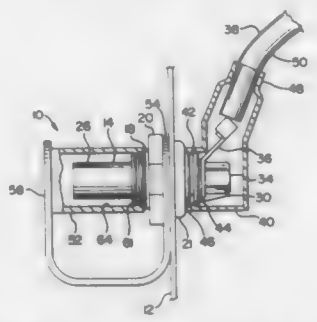
1. An insulation displacement type connector for terminating a conductor of an insulated wire thereto, comprising:



an insulating housing having at least one terminal receiving cavity defined by a cylindrical wall, and a wire receiving opening through the wall into the interior of the cavity;

a cylinder formed of a conductive material defining a tubular wall, said cylinder having at least one wire receiving entry through the wall of the cylinder which is in communication with a slot that partially extends circumferentially around a terminal, and

a cap which is positioned adjacent to the cylinder and rotatable with respect to the housing, having means for engaging the cylinder for simultaneous rotation of the cylinder with the rotation of the cap;



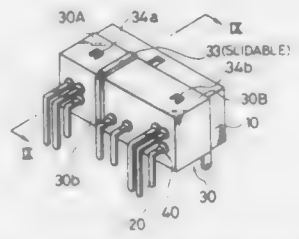
whereby, when a wire is placed within the wire receiving

entry and the cap is rotated relative to the housing, the cap engages the cylinder thereby rotating the terminal into the

wire thereby terminating the conductor of said wire within the slot in the terminal.

5,006,078
JUMP START STUD ASSEMBLY
Jerry A. Crandall, Bluffton; James A. Witta, and Stuart S. Bower, both of Fort Wayne, all of Ind., assignors to Navistar International Transportation Corp., Chicago, Ill.
Filed Feb. 22, 1990, Ser. No. 484,136
Int. Cl.[5] H01R *13/52*
U.S. Cl. 439—521 **23 Claims**

1. A jump start stud assembly which is mountable on a vehicle surface away from the starting circuit of the vehicle, but electrically engaged thereto, said stud assembly comprising:



a conductive stud;

a cylindrical nonconductive insulating body molded around a medial portion of said stud between exposed ends thereof, said insulating body having a distal end and a proximal end, said insulating body including a threaded main hub portion and distal and proximal collar portions of smaller diameter than said hub portion disposed respectively at each end thereof;

a nonconductive boot sealingly fixed over a proximal end of said stud assembly, said boot being secured at one end to insulation of a battery cable electrically engaged to said stud at said proximal end thereof, the other end of said boot being sealingly secured to said proximal collar of said insulating body; and

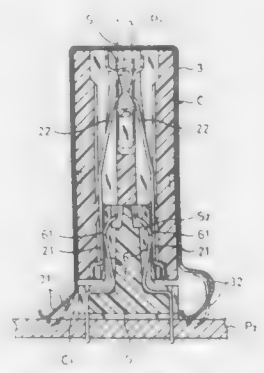
an insulating cap releasably covering the distal end of said conductive stud for isolating said stud from the ambient environment.

5,006,079
CONNECTOR WITH BUILT-IN THROUGH CAPACITORS
Hiroyuki Okamoto, and Kunio Hoshino, both of Shizuoka, Japan, assignors to Yazaki Corporation, Japan
Filed Nov. 30, 1989, Ser. No. 443,330
Claims priority, application Japan, Dec. 8, 1988, 63-310749
Int. Cl.[5] H01R *13/648, 13/66*
U.S. Cl. 439—607 **2 Claims**

1. A connector provided with built-in through capacitors, comprising:

(a) an insulated connector housing;

(b) at least two connector pins passing through and supported by said insulated connector housing;



(c) a conductive shield casing for covering said insulated connector housing;

(d) at least two through capacitors formed between said connector pins and said conductive shield casing, respectively; and

(e) means for reducing thermal stress due to difference in thermal expansion coefficient between said insulated connector housing and said conductive shield casing, said thermal stress reducing means being formed in any one of said insulated connector housing and said conductive shield casing, and being made of a material with a smaller thermal expansion coefficient,

wherein said insulated connector housing is made of a synthetic resin; said conductive shield casing is made of a metal; and said thermal stress reducing means is said metallic shield being divided into at least two parts slidably overlapped at a joint end portion thereof, respectively.

5,006,080
ELECTRICAL CONNECTOR
Norio Ichitsubo, and Keishi Sugiyama, both of Yao, Japan, assignors to Hosiden Electronics Co., Ltd., Yao, Japan
Filed Jun. 11, 1990, Ser. No. 535,526
Claims priority, application Japan, Jun. 21, 1989, 1-72694[U]
Int. Cl.[5] H01R *23/70*
U.S. Cl. 439—634 **15 Claims**

1. In an electrical connector having:

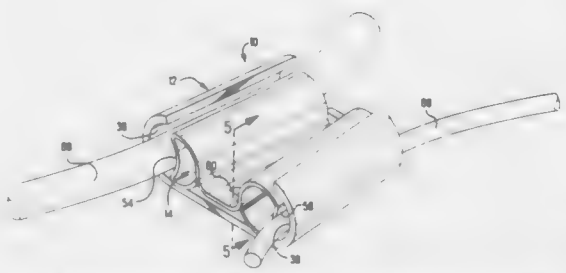
a housing made of an insulating material;

a board connection space which is formed at one end of said housing, and into or from which a circuit board is adapted to be inserted or removed;

a connector connection portion which is formed at the other end of said housing, and into or from which other connector is adapted to be inserted or removed; and

thin plate-like contact members extending over said connector connection portion and said board connection space, said electrical connector comprising:

resilient contact portions formed at the tips of said contact members disposed in said board connection space and adapted to be resiliently deformed, as pushed, by a circuit board inserted into said board connection space;



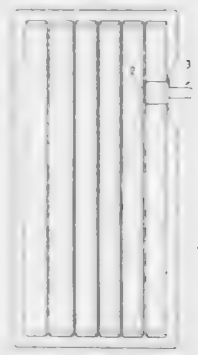
contacts formed on said contact portions and adapted to resiliently come in contact with external terminals of said circuit board when said contact portions are resiliently deformed;

flat plate-like terminal portions formed at the longitudinal center portions of said contact members disposed in said connector connection portion and adapted to be pressingly contacted with the contacts of resilient contact pieces of other connector connected to said connector connection portion when said contact pieces are resiliently deformed as pushed by the terminal portion;

projecting pieces formed by bending the base ends next to said terminal portions of said contact members, transversely of said terminal portions; and

engagement pawls formed on said contact members for holding, together with said projecting pieces, a portion of said housing.

5,006,081
ELECTRICAL WIRE CONNECTOR
Eugene F. Counsel, Clearwater, Fla., and Walter M. Werner, Downingtown, Pa., assignors to AMP Incorporated, Harrisburg, Pa.
Filed Aug. 14, 1990, Ser. No. 567,228
Int. Cl.[5] H01R *4/50*
U.S. Cl. 439—783 **3 Claims**



1. An electrical wire connector for electrically commoning and mechanically securing a pair of electrical wires, comprising:

a C-member having converging sides towards one end and rolled over edges defining a pair of inwardly facing channels along respective sides and a web attached to and extending between said channels, and further having a hole through said web intermediate said channels; and

a wedge having converging sides towards one end to be conformably received in said C-member, said wedge having concave, outwardly facing surfaces on each side and an outwardly extending dimple intermediate said sides, said dimple adapted to enter said hole when said wedge is pressed into said C-member to secure said wedge from inadvertently backing out of said C-member.

5,006,082
ACTUATING-DEVICE FOR SMALL-TYPE AIR-FEEDED WATER FLOATERS
Feng-Lin Hwang, No. 21, Pa Te Rd., Chi Tu District, Keelung City, Taiwan
Filed Dec. 14, 1989, Ser. No. 450,490
Int. Cl.[5] B63H *21/17*
U.S. Cl. 440—6 **1 Claim**

1. An actuating device for utilization with small inflatable floats for use in swimming pools and other bodies of water comprising:

a spring actuated jaw clip for attachment to an inflatable float comprising an upper jaw piece and a bottom jaw piece;

a top plate with solar cells mounted thereon;

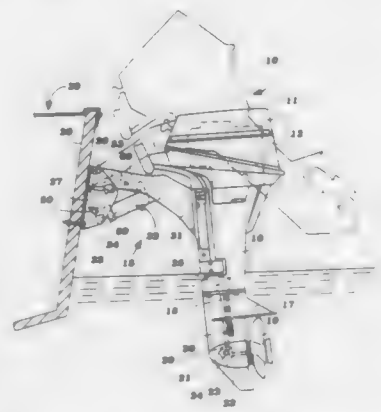
said top plate pivotally connected to said upper jaw piece to permit adjustment for maximum exposure of said solar cells to sunlight;

a waterproof housing mounted on said bottom jaw piece comprising;

an air pump including an air outlet pipe protruding through said housing for inflating an inflatable float;

a motor having a drive shaft protruding through said housing, said shaft having a propeller mounted on an end thereof;

a rechargeable battery for actuating said air pump and said motor; and



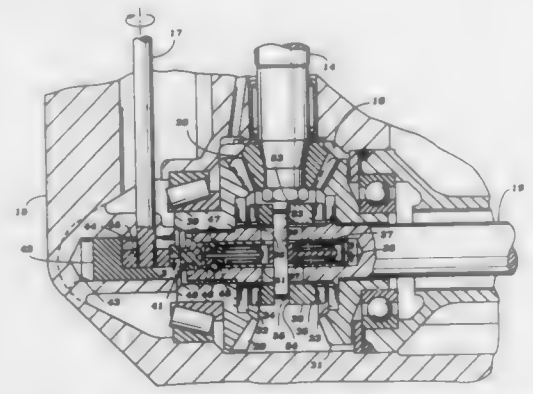
a PC board including first electrical connections protruding through said housing to said solar cells and other electrical connections from said PC board to said rechargeable battery, said air pump and said motor;

wherein said solar cells are adapted to charge said rechargeable battery and said battery is adapted to selectively drive said air pump and said motor for the purpose of inflating a float and propelling the float through water.

5,006,083
TILTING DEVICE FOR MARINE PROPULSION UNIT
Yukio Sumigawa, Hamamatsu, Japan, assignor to Sanshin Kogyo Kabushiki Kaisha, Hamamatsu, Japan
Filed Jun. 19, 1989, Ser. No. 367,564
Claims priority, application Japan, Jun. 17, 1988, 63-148299
Int. Cl.[5] B63H *5/12*
U.S. Cl. 440—61 **14 Claims**

1. An outboard drive unit carrying propelling means for propelling a marine vessel having a hull through water, comprising a clamp bracket having a slot and a slot stop surface therein, a tilt shaft, and a swivel bracket having a slot, said clamp bracket being attached to the hull of said vessel, and said swivel bracket being rotatably secured to said clamp bracket by said tilt shaft for movement about a generally horizontally extending tilt axis between a tilted-down position wherein said propelling means is positioned beneath the water and a tilted-up position wherein said propelling means is out of the water, a lower position stop pin, engageable with said swivel bracket, for setting the downward position of said swivel bracket, said outboard drive unit further comprising a tilting device in

which said swivel bracket, when in the tilted-down position, is prevented from freely moving toward the tilted-up position during normal operation of said drive unit, said tilting device



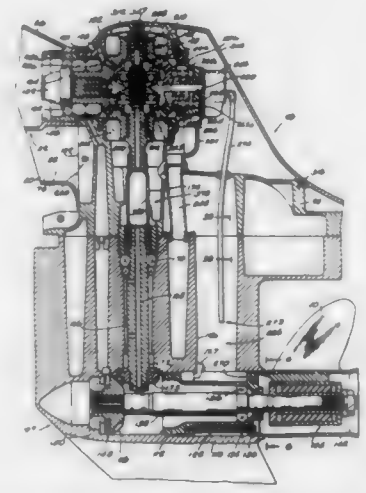
comprising a tilt-lock arm rotatably supported about said tilt shaft and a first spring for rotating said lock arm in a locked position when said swivel bracket is in the tilted-up position.

5,006,084

SHIFT DEVICE FOR MARINE PROPULSION

Kenichi Handa, Hamamatsu, Japan, assignor to Sanshin Kogyo Kabushiki Kaisha, Hamamatsu, Japan

Filed Oct. 14, 1988, Ser. No. 257,710
Claims priority, application Japan, Oct. 16, 1987, 62-261444
Int. Cl.[5] B63H *23/02*
U.S. Cl. 440—75 5 Claims



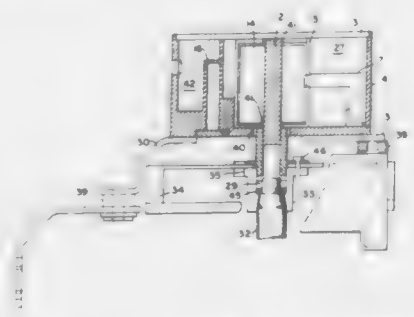
1. In a shifting arrangement for a transmission comprising a pair of counter-rotating gears journaled relative to a shaft, a dog clutching element having dog clutching teeth for cooperation with cooperating teeth on said gears for selectively coupling said dog clutching element for rotation with selected of said gears, said dog clutching element being moveable in a first direction to couple with a first of said gears and in an opposite direction for coupling with the other of said gears, and shifting means for moving said dog clutching element in either of said directions, the improvement comprising a single biasing coil spring for yieldably connecting said shifting means to said dog clutching element in both directions of movement for cushioning engagement of the dog clutching teeth, said coil spring having one of its ends fixed and the other of its ends moveable when shifting into engagement with one of the gears and the other of its ends moveable and the one of its ends fixed when shifting into engagement with the other of the gears.

5,006,085

MARINE PROPULSION DEVICE WITH REMOVABLE CLUTCH ASSEMBLY

Gerald F. Bland, Glenview; Martin J. Mondek, Wonder Lake, and Lawrence E. Zdanowicz, Waukegan, all of Ill., assignors to Outboard Marine Corporation, Waukegan, Ill.

Filed May 12, 1989, Ser. No. 351,830
Int. Cl.[5] B63H *23/08*
U.S. Cl. 440—75 29 Claims



29. A marine propulsion device comprising a gear housing adapted to be mounted on the transom of a boat, a clutch assembly including a clutch assembly substantially enclosed by said gear housing, a shaft rotatably supported within said clutch housing and adapted to be drivingly connected to a propeller, opposed bevel gears coaxially supported within and substantially enclosed by said clutch housing for rotation relative to said shaft, and clutch means located between said bevel gears for causing selective and alternative driving engagement of said bevel gears and said shaft, and means for affording insertion of said clutch assembly as a unit into said gear housing and for affording removal of said clutch assembly as a unit from said gear housing.

5,006,086

HYDRAULIC POWER SYSTEM FOR OUTBOARD MOTOR

Robert P. Latham, 280 SW. 32nd Ct., Fort Lauderdale, Fla. 33315

Filed Mar. 19, 1990, Ser. No. 495,624
Int. Cl.[5] B63H *21/10*
U.S. Cl. 440—88 6 Claims

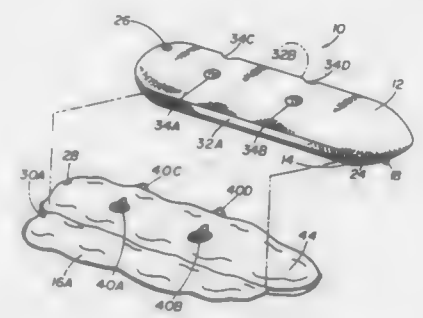
1. A compact, integral hydraulic power assembly for mounting on top of the engine block of a marine propulsion unit having a flywheel at the upper end of a vertical crankshaft, said assembly comprising:

(a) a vertical pump shaft arranged for operatively coupling with coupling means to said crankshaft in coaxial alignment;

(b) hydraulic pump impeller means for pumping hydraulic fluid fixedly connected to said pump shaft;

(c) pump housing means for enclosing said impeller means, said housing means defining a fluid space with low pressure inlet and high pressure outlet, said pump shaft being journaled in said housing means;

(d) a fluid reservoir means for storing a substantial amount of hydraulic fluid to be pumped, said reservoir means arranged in an annulus around said pump housing means, and said reservoir means in fluid communication with said low pressure inlet of said pump housing means; and



(e) resilient connecting means attached to said reservoir means for connecting said hydraulic power assembly to said engine block while maintaining said coaxial alignment.

5,006,087

TOWABLE INFLATABLE COVER

Leroy L. Peterson, 13614 Pierce St., Omaha, Nebr. 68144

Filed Feb. 20, 1990, Ser. No. 481,520
Int. Cl.[5] B63B *7/08*
U.S. Cl. 441—66 15 Claims

1. A protective cover for an inflatable apparatus having a central elongated chamber and two elongated stabilizer chambers connected to and arranged on opposite sides of said central chamber, said protective cover comprising

a flexible enclosure having opposite sides and shaped to conform to and be substantially filled by the inflated central chamber of said inflatable apparatus,

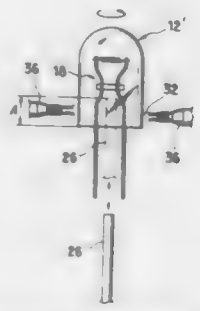
said enclosure having a pair of elongated side openings on respective opposite sides thereof, each side opening being of such size and position to accommodate extension of a stabilizer chamber therethrough upon insertion of an at least partially deflated inflatable apparatus through one of said side openings and upon inflation of said apparatus within the enclosure, and

tow means for attaching a tow rope to said flexible enclosure whereby towing force is distributed by said enclosure across a substantial surface area of the inflatable apparatus to minimize stress on said inflatable apparatus.

5,006,088

METHOD OF MAKING A PINCH-SEALED, GAS-FILLED INCANDESCENT LAMP

Chikara Tokuhara, Shimizu, and Tetsuro Hara, Nagano, both of Japan, assignors to Koito Manufacturing Co., Ltd., Shizuoka, Japan and Nissei Industries, Nagano, Japan



Filed Nov. 29, 1989, Ser. No. 442,768
Claims priority, application Japan, Dec. 1, 1988, 63-304950
Int. Cl.[5] H01J *9/32*
U.S. Cl. 445—27 7 Claims

1. A method for producing a pinch-sealed incandescent lamp, comprising the steps of:

(a) providing an envelope blank of vitreous material having an open end portion;

(b) inserting a mount assembly comprising a pair of lead wires supporting a filament into said blank;

(c) heating said end portion to a temperature at which said end portion becomes moldable;

(d) inserting a gas exhaust/supply tube of vitreous material into said end portion after said end portion has reached said moldable temperature; and

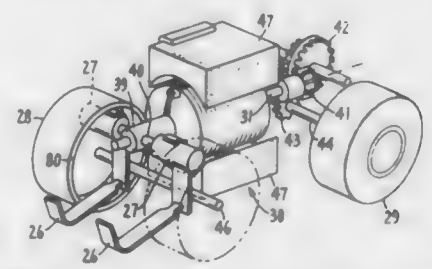
(e) pinch-sealing said end portion with said mount assembly and said gas exhaust/supply tube inserted therein.

5,006,089

LIFE-LIKE TOY ANIMAL

James S. W. Lee, Long Island, N.Y., assignor to C. J. Associates, Ltd., Monrovia, Liberia

Filed Sep. 22, 1989, Ser. No. 411,406
Int. Cl.[5] A63H *3/02*
U.S. Cl. 446—267 12 Claims



1. A stuffed animal having a closed envelope of non-porous material in the shape and form of an animal, a simulated skeleton inside said closed envelope, a plush covering of simulated fur surrounding said envelope of non-porous material, and a viscous material filling said closed envelope, said viscous material and said simulated skeleton having the feel of an animal body.

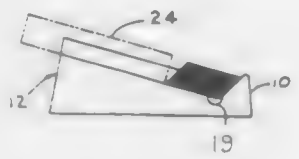
5,006,090

ULTRA-MINIATURE VEHICLE

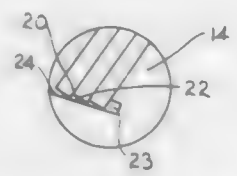
Melvin R. Kennedy, New York, N.Y., and Joseph J. Labinski, Canton, Hong Kong, assignors to Lewis Galoob Toys, Inc., South San Francisco, Calif.

Filed Feb. 9, 1990, Ser. No. 479,093
Int. Cl.[5] A63H *29/22*
U.S. Cl. 446—462 4 Claims

1. A miniature electrically powered vehicle having a front



axle and rear axle supported by a vehicle chassis, said front axle supporting front wheels each being characterized as having a circumferential surface for contact with a track and a web portion for enclosing said circumferential surface and for supporting said front wheels on said front axis such that said front wheels are substantially hollow and open to said vehicle chassis, said vehicle having an electric motor operatively connected to at least one drive wheel of the vehicle, the electric motor being energized through a pair of pick-up shoes which engage the track, the track including electric power means contained therein, said electric motor being mounted in the vehicle chassis such that said brush assembly casings extend into the hollow portions of said front wheels for rotating a drive shaft extending axially along the length of said vehicle, said pick-up shoes being attached to brush assemblies which are, in turn, connected to a commutator of said electric motor for energizing said electric motor, said brush assemblies including brush assembly casings for housing springs and shafts, said springs urging said shafts against said commutator, said brush assembly casings being located substantially perpendicular to the vehicle chasis and substantially parallel and proximate to said front axle and extending outwardly of said vehicle chasis



5,006,091

COIN COUNT VERIFIER

Francis Reavley, 206-20 Bradmon Drive, St. Catharines, Ontario, Canada L2M 3S2

Filed Dec. 27, 1988, Ser. No. 289,820
Int. Cl.[5] G07D 9/00
U.S. Cl. 453—59 3 Claims

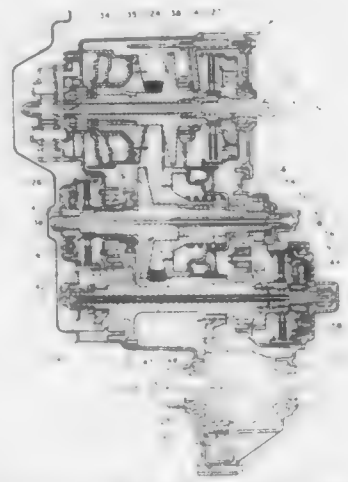
1. The combination of a coin counter verifier, cylinder means and a pad of paper containing sheets which are capable of being removed from said pad, said sheets adapted to be rolled about said cylinder means so as to produce coin cartridges for use in association with said coin count verifier, said coin count verifier including:

(a) an elongated body having a lower surface and an upper surface and one end opposite to another end;

(b) coin receiving means having a curved cross section for receiving said coins, said coin receiving means extending longitudinally along said upper surface of said elongated body between the said ends, said coin receiving means declining from said one end of said body to said other end;

(c) abutment means disposed at said other end of said body, said abutment means spanning across and integral with said coin receiving means, said coin receiving means disposed at an angle greater than 90° relative said coin receiving means, and extending beyond said upper surface;

(d) said coin receiving means disposed at an acute angle relative said lower surface;



(e) recess means presented by said abutment means in the vicinity of said recess means for receiving a portion of said coin cartridge so as to facilitate the introduction of coins into said coin cartridge from said coin receiving means.

5,006,[illegible]12

CONTINUOUSLY VARIABLE TRANSMISSION POWER TRAIN CONFIGURATION

Guenter Neuman, and William J. Haley, both of Ithaca, N.Y., assignors to Borg-Warner Automotive, Inc., Sterling Heights, Mich.

Filed May 24, 1990, Ser. No. 529,010
Int. Cl.[5] F16H 63/00
U.S. Cl. 474—8 10 Claims

1. A continuously variable transmission system to provide transmission of torque from a torque input means to a torque output means, comprising:

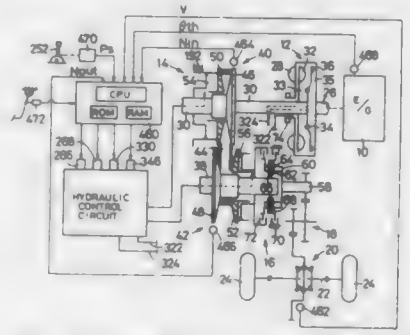
an input shaft disposed for operative connection to a torque input means, said torque input means being operable to transmit torque up to a first limiting value;

a continuously variable drive system having a variable input pulley, a variable output pulley and a belt means interconnecting said input pulley and said output pulley, said belt means being operable to transmit torque up to a second limiting value, said second limiting value being greater than said first limiting value;

a slippable start clutch means for selectively connecting said input shaft and said input pulley; and,

a non-dynamic clutch system means for selectively connecting said output pulley with an output shaft, said output shaft being operatively connected to said torque output means, said non-dynamic clutch system means having a predetermined torque capacity, said predetermined torque capacity being between said first limiting value and said second limiting value.

5,006,093



HYDRAULIC CONTROL APPARATUS FOR VEHICLE POWER TRANSMITTING SYSTEM HAVING CONTINUOUSLY VARIABLE TRANSMISSION

Hiroshi Itoh, Toyota; Masami Sugaya; Yoshinobu Soga, both of Susono; Kunio Morisawa, Toyota; Ryoji Habuchi, Aichi; Katsumi Kouno, Toyota, and Yuji Hattori, Susono, all of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Toyota, Japan

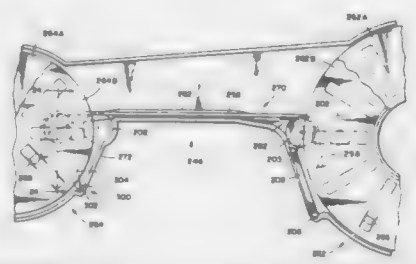
Filed Feb. 7, 1990, Ser. No. 476,601
Claims priority, application Japan, Feb. 13, 1989, 1-33147; Feb. 13, 1989, 1-33150; Feb. 13, 1989, 1-33151; Apr. 11, 1989, 1-91072
Int. Cl.[5] F16H 11/02
U.S. Cl. 474—28 7 Claims

1. A hydraulic control apparatus for a power transmitting system for an automotive vehicle having a continuously variable transmission which has a first and a second shaft, a pair of variable-diameter pulleys provided on the first and second shafts, respectively, a belt connecting the pulleys, and a pair of hydraulic actuators for changing effective diameters of the pulleys, the apparatus including a directional control valve for supplying a working fluid from a pressure line to one of said pair of hydraulic actuators while discharging the working fluid from the other hydraulic actuator, for controlling a speed ratio of the transmission, wherein the improvement comprises:

a first fluid passage connected to said directional control

valve, for primarily supplying said working fluid from said pressure line to a driving side actuator of said pair of hydraulic actuators which is provided on a driving one of said first and second shafts;

a second fluid passage connected to said directional control valve, for primarily supplying the working fluid from said pressure line to a driven side actuator of said pair of hydraulic actuators; and



flow restrictor means for restricting a flow of the fluid through said first fluid passage so that a fluid flow resistance of said first fluid passage is higher than a fluid flow resistance of said second fluid passage.

5,006,094

SELF-POSITIONING BELT TENSIONER

George H. Leonard, Darien, Conn., assignor to Hamlin Transmission Corporation, Wilton, Conn.

Continuation-in-part of Ser. No. 403,571, Sep. 6, 1989, Pat. No. 4,946,426. This application Jul. 13, 1990, Ser. No. 552,295
Int. Cl.[5] F16H 7/08, 55/54
U.S. Cl. 474—101 15 Claims

1. A self adjusting drive means tensioning system for a variably transmission comprising:

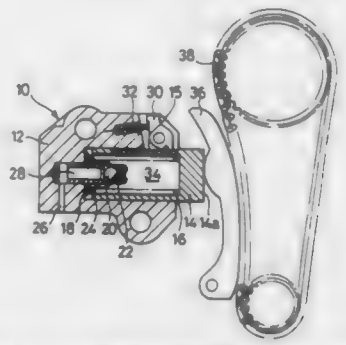
frame means;

a pair of spaced apart variable diameter sheaves mounted on said frame means;

endless drive means wrapped at least partially around each said sheave for transmitting rotational force from one said sheave to the other;

tensioning means for said drive means including a carrier and at least two spaced apart guides adjacent said drive means for placing force through said guides against said drive means whereby said guides maintain said drive means around said sheaves in optimum driving relationship for all diameters of said sheaves, said guides being supported by said frame means for movement in a non-rotational path as determined by the geometry of said drive means depending upon the diameters of said sheaves for any given ratio of the transmission whereby as the ratio of the transmission changes and said drive means achieves a new geometry in response to the changing diameters of said sheaves, said drive means automatically adjusts the position of said tensioning means;

means mounting said guides on said carrier, said carrier having a longitudinal axis substantially parallel with a line connecting said mounting means; and



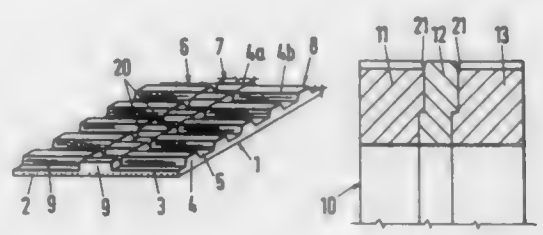
stabilizer means extending between said frame means and said carrier for counteracting rotational movement of said carrier about said longitudinal axis.

5,006,095

RATCHET TYPE TENSIONER

Tadasu Suzaki, Kawagoe, Japan, assignor to Tsubakimoto Chain Co., Osaka, Japan

Filed May 29, 1990, Ser. No. 530,548
Claims priority, application Japan, May 31, 1989, 1-62463
Int. Cl.[5] F16H 7/08
U.S. Cl. 474—111 3 Claims



1. A ratchet type tensioner comprising a ratchet having a plurality of teeth and a rack, characterized in that the teeth of said teeth of the ratchet is n times that of the teeth of the rack, where n is an integer which is 2 or greater.

5,006,096

BELT DRIVE COMPRISING A TOOTHED BELT AND A TOOTHED PULLEY

Rudolf Breher, Porta Westfalica, Fed. Rep. of Germany, assignor to Breco Kunststoffverarbeitungs-GmbH & Co. KG, Porta Westfalica, Fed. Rep. of Germany

Filed Mar. 14, 1990, Ser. No. 494,179
Claims priority, application Fed. Rep. of Germany, Mar. 25, 1989, 3909950
Int. Cl.[5] F16H 7/02
U.S. Cl. 474—153 3 Claims

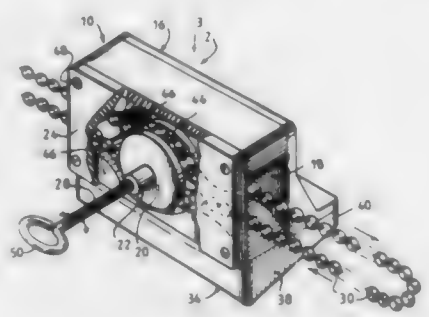
1. In a belt drive comprising a toothed belt and a toothed pulley, with said belt having a toothed side on which are formed guide surfaces that are disposed along at least one line that extends in the longitudinal direction of said belt, with said guide surfaces extending transverse to teeth and grooves of said belt, whereby when said belt rotates about said pulley, in

order to provide lateral guidance for said belt said guide surfaces rest against corresponding abutment surfaces of said pulley that extend transverse to teeth of said pulley, the improvement wherein:

said teeth of said belt are divided into at least two strip-like rows of teeth that are disposed next to one another, with adjacent rows of teeth being offset relative to one another in the longitudinal direction of said belt in such a way that the teeth of one of said rows are disposed at least partially laterally adjacent to the grooves between the teeth of the adjacent row; and

said pulley, in conformity with the number of rows of teeth of said belt, is provided with at least two rows of teeth that are disposed next to one another and are staggered relative to one another in conformity with the offset of said rows of teeth of said belt.

5,006,097



CONTROL UNIT FOR SINGLE AND DOUBLE TRACK BLINDS

Henry Cook, 32 Smith St., Freeport, N.Y. 11520

Filed Jan. 25, 1990, Ser. No. 543,095

Int. Cl.[5] F16G *15/00*

U.S. Cl. 474—154 **7 Claims**

1. A control unit for single and double track blinds comprising:

(a) a housing having a passageway therethrough;

(b) a sprocket wheel having a hub rotatably carried in the center of the passageway within said housing;

(c) a front cover plate having a central aperture therethrough and is attached to said housing over said sprocket wheel so that the hub extends through the central aperture; and

(d) an operating handle extending into the hub of said sprocket wheel so that said operating handle can be turned to rotate said sprocket wheel, thus driving a bead chain through the passageway of said housing to operate louvers in the single and double track blinds.

5,006,098

POWER TRANSFER MECHANISM FOR MOTOR VEHICLE

Toshio Yoshinaka, Nagoya; Hideo Hamano; Hiroshi Minami, both of Toyota, and Shinji Ogawa, Toyota, all of Japan, assignors to Toyota Jidosha Kabushiki Kaisha, Toyota, Japan

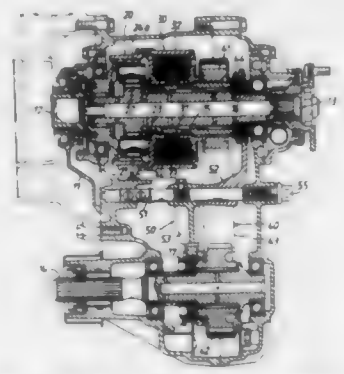
Filed Feb. 14, 1990, Ser. No. 480,144

Claims priority, application Japan, Feb. 14, 1989, 1-34685

Int. Cl.[5] B60K *17/348*

U.S. Cl. 475—86 **6 Claims**

1. A power transfer mechanism adapted for use in a motor vehicle, comprising:



a casing structure;

an input shaft rotatably mounted within said casing structure to be applied with drive torque from a prime mover of the vehicle;

a first output shaft arranged coaxially with said input shaft and rotatably mounted within said casing structure for drive connection to a first set of drive axles;

a second output shaft arranged in parallel with said first output shaft and rotatably mounted within said casing structure for drive connection to a second set of drive axles;

a double pinion planetary gearset mounted on said first output shaft to transfer the drive torque from said input shaft to said first and second output shafts, said planetary gearset including a ring gear in drive connection to said

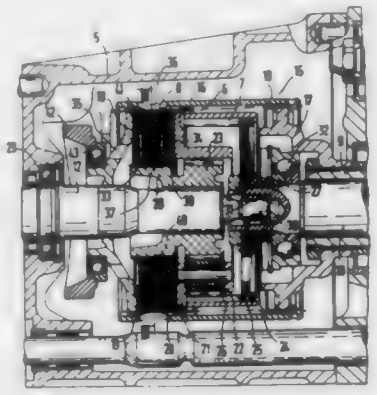
input shaft, a sun gear in drive connection to said first output shaft and a planet carrier for drive connection to said second output shaft;

a limited-slip differential selectively connecting the ring gear and planet carrier of said planetary gearset; and

a drive train for providing drive connection between said planet carrier and said second output shaft.

5,006,099

FOUR WHEEL DRIVE FOR A MOTOR VEHICLE



Robert Müller, Moensheim, and Gerhard Weller, Maulbronn, both of Fed. Rep. of Germany, assignors to Dr. Ing. h.c.F. Porsche AG, Fed. Rep. of Germany

Filed Oct. 13, 1989, Ser. No. 421,326

Claims priority, application Fed. Rep. of Germany, Oct. 15, 1988, 3835224

Int. Cl.[5] F16H *47/04*

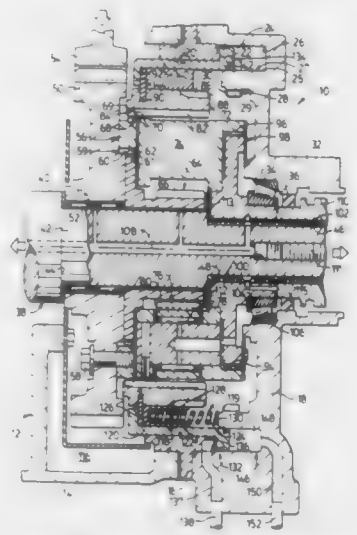
U.S. Cl. 475—86 **17 Claims**

1. A four wheel drive for a motor vehicle having a locking system arranged in a rear axle/front axle drive line comprising:

a planet gear transfer transmission having a sun gear, planet gears disposed at a planet carrier and a ring gear, the planet carrier being non-rotatable with respect to an input shaft of the locking system, the ring gear being non-rotatably connected with a first output shaft which is concentric with respect to the input shaft, and the sun gear being non-rotatably connected with a second output shaft, wherein the input shaft is constructed as a hollow shaft, the first output shaft being rotatably disposed inside the hollow shaft, and the second shaft being supportably disposed in an opening n the first output shaft; and

a bundle of disks which can be pressed against the planet carrier in a frictionally engaged manner by means of a pressure applying means to lock the gear transfer transmission in response to a predetermined slip difference between the first and second output shafts, said bundle of disks including internal disks and external disks, wherein the disk bundle and the planet gear transfer transmission are surrounded, with a slight radial and axial gap, by a cylindrical lock housing.

5,006,100



TWO-SPEED PLANETARY GEAR MECHANISM

Christopher D. Brandt; David C. Kettler, both of Peoria; Willis E. Windish, Pekin, and William W. Blake, Kewanee, all of Ill., assignors to Caterpillar Inc., Peoria, Ill.

Continuation-in-part of Ser. No. 350,809, May 12, 1989, abandoned. This application Mar. 7, 1990, Ser. No. 496,718

Int. Cl.[5] F16H *57/10*

U.S. Cl. 475—138 **24 Claims**

1. In a two-speed planetary gear mechanism of the type having a sun gear, a ring gear, a planet carrier, and a plurality of planet gears rotatably supported by the planet carrier and operatively connected to the sun gear and the ring gear, the improvement comprising:

a stationary coupling;

a rotating coupling connected to rotate with the sun gear;

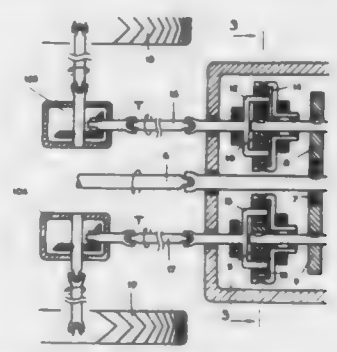
first means for urging the ring gear in a first direction longitudinally away from the stationary coupling and into engagement with the rotating coupling;

second means for urging the ring gear in a second direction longitudinally away from the rotating coupling and into engagement with the stationary coupling; and

wherein one of the first and second means includes a compressible spring apparatus, and the other includes an annular piston closely disposed to the ring gear and hydraulic means for hydraulically moving and extending the annular piston axially in opposition to the compressible spring apparatus.

5,006,101

LOCKING-FOUR-WHEEL DRIVE LOCKING-TWO-WHEEL DRIVE



Tran-dinh Truong, 803 E. Spreading Oak, Houston, Tex. 77076

Filed Apr. 18, 1989, Ser. No. 339,669

Int. Cl.[5] F16H *1/44*

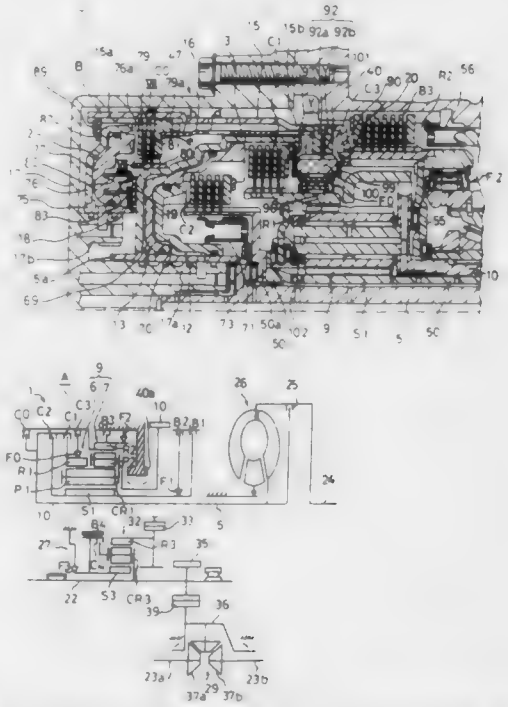
U.S. Cl. 475—221 **15 Claims**

1. A gear box for locking-four-wheel drive mechanism consists of four planetary gearing systems each having a sun gear and a carrier, a plurality of pinions connected to each said carrier each said sun gear and said pinions are connected inside of a ring gear and said systems are connected to an input shaft

and give outputs to four wheels and said systems are connected to four worm gears which are driven by three differential gearing units.

5,006,102

FLOATING STRUCTURE FOR INTERCONNECTING THREE CLUTCHES WITH A SINGLE ACTUATOR IN AN AUTOMATIC TRANSMISSION



Isao Takase, Aichi; Haruki Takemoto, Chiryu; Mitsugu Tatsuta, Anjo; Shinobu Maseki, Kariya; Takenori Kano; Fumitomo Yokoyama, both of Anjo, and Mamoru Niimi, Handa, all of Japan, assignors to Aisin Aw Co., Ltd., Japan

Filed Jan. 23, 1989, Ser. No. 300,404

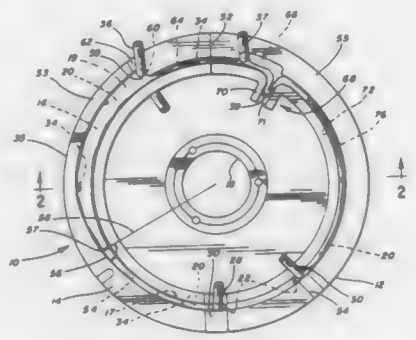
Claims priority, application Japan, Sep. 27, 1988, 63-242877; Oct. 19, 1988, 63-263680

Int. Cl.[5] F16H *57/10*

U.S. Cl. 475—282 **12 Claims**

1. An automatic transmission with a forward four speed automatic transmission mechanism, comprising,

a planetary gear unit formed of a single planetary gear and a dual planetary gear having ring gears, sun gears and carriers, respectively, said sun gears and carriers of both plane-



tary gears being respectively connected together to form a common sun gear and a common carrier,
first, second and third clutches having hydraulic actuators, respectively,
an output member connected to the carrier,
an input shaft connected to the ring gear of the single planetary gear unit through the first clutch, to the sun gear through the second clutch and to the ring gear of the dual planetary gear through the third clutch,
restraining means for restraining the sun gear and the ring gear of the dual planetary gear at a predetermined time,
a clutch drum fixed to the input shaft, said clutch drum covering the first and second clutches with the actuators for the first and second clutches, said third clutch and its actuator being situated adjacent to the clutch drum,
a drum member for connecting the third clutch and the ring gear of the dual planetary gear,
a fourth clutch and a one-way clutch situated between the ring gear of the single planetary gear and the drum member, and
a strut member situated between the third and fourth clutches,
whereby axial force generated by the hydraulic actuator for the third clutch when hydraulic pressure is supplied thereto is absorbed by the drum member and the strut member, and an axial movement in one direction of the hydraulic actuator for the third clutch is supported by contacting with the clutch drum, and an axial movement in the opposite direction of the hydraulic actuator for the third clutch is supported by fastening an end of the drum member to the ring gear of the dual planetary gear.

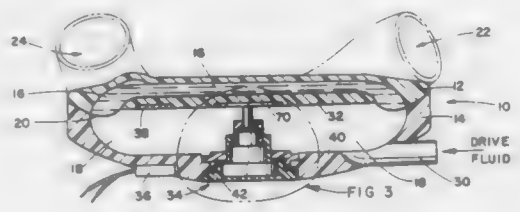
5,006,103

DISPOSABLE CONTAINER FOR A CENTRIFUGE

David V. Bacehowski, Wildwood, Ill.; Herbert M. Cullis, Silver Spring, Md., and Armand R. Van Baelen, Rolling Meadows, Ill., assignors to Baxter International Inc., Deerfield, Ill.

Division of Ser. No. 824,182, Aug. 12, 1977, Pat. No. 4,934,995.
This application Jan. 11, 1990, Ser. No. 463,694
Int. Cl.[5] B04B 7/08
U.S. Cl. 494—45 13 Claims

1. A disposable container for use in a centrifuge for separating cellular material, which comprises:



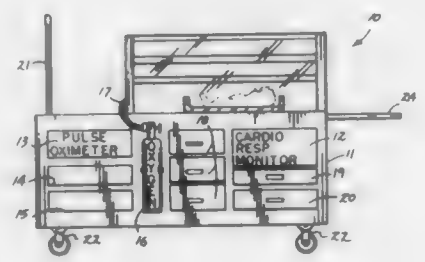
an elongated, flat container formed of a flexible plastic material, said flat container being sufficiently flexible to allow it to be easily bent and inserted into an elongated curvilinear channel defined in a centrifuge for separating cellular material; said container including a fluid receptacle portion, a first port communicating with a first location of said fluid receptacle portion for introducing cellular material, and a second port communicating with a second location of said fluid receptacle portion for extracting a first cellular material component.

5,006,104

HEART PUMP HAVING CONTRACTIBLE GUIDE MECHANISM FOR PUSHER PLATE

William A. Smith, Lyndhurst, and Ji-Feng Chen, Cleveland, both of Ohio, assignors to The Cleveland Clinic Foundation, Cleveland, Ohio

Filed Nov. 7, 1988, Ser. No. 268,020
Int. Cl.[5] A61M 1/12; F04B 43/02
U.S. Cl. 600—016 30 Claims



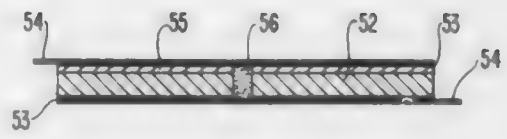
9. A guide mechanism for a blood pump having an elastomeric diaphragm and a pusher plate to support the diaphragm comprising a plurality of nestable sleeves disposed for selective telescopic reciprocatory movement between extended and nested positions, and including means for restricting the pusher plate stroke to a linear motion, and a maximum length.

5,006,105

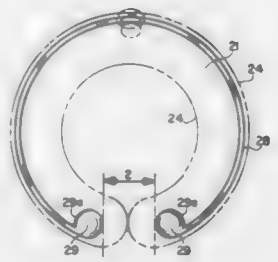
NEWBORN INFANT THERAPY APPARATUS

Timothy L. Sherard, 307 S. Hite Ave., Louisville, Ky. 40218

Filed Aug. 17, 1990, Ser. No. 568,906
Int. Cl.[5] A61G 11/00
U.S. Cl. 600—22 7 Claims



1. A newborn infant therapy apparatus comprising,
a support cabinet housing, including a front vertical wall, the front vertical wall including a cardio-respirator monitor device, and a pulse-oximeter mounted through the front wall, and a first and second shelf mounted within the housing, and an oxygen tank mounted the front wall adjacent the pulse oximeter, and a plurality of aligned supply draws mounted to the front wall, and the housing including a planar left support shelf, the planar left support shelf including an intravenous support post and hook fixedly and orthogonally mounted to the left support shelf, and a right support shelf coplanar with the left support shelf extending longitudinally of and beyond the housing and fixed thereto, and a support chamber floor mounted between the left and right support shelves coplanar therewith, including a chamber housing overlying the chamber floor, wherein the chamber housing includes a left and right support arch fixedly mounted orthogonally overlying the support chamber floor, with the left and right support arch arranged parallel relative to one another, and each arch including a support track coextensive with the arch and formed to a bottom surface thereof, and an aligned parallel series of elongate therapy bulb members, each bulb member longitudinally aligned relative to the chamber housing and each bulb including a bulb socket mounted at each end of each respective bulb to define a bulb socket pair, each bulb socket pair rotatably mounting a support wheel, with each support wheel rotatably mounted within a respective track of each respective left and right support arch.



5,006,106

APPARATUS AND METHOD FOR LAPAROSCOPIC IMPLANTATION OF ANTI-REFLUX PROSTHESIS

Jean P. Angelchik, 522 W. Northview, Phoenix, Ariz. 85021

Filed Oct. 9, 1990, Ser. No. 594,011
Int. Cl.[5] A61F 2/00, 13/00; A61B 19/00
U.S. Cl. 600—37 2 Claims

1. A laparoscopically implantable prosthesis for treating esophageal reflux comprising:
(a) a normally generally C-shaped cushion member, the inside diameter of which is generally larger than the normal outside diameter of the distal esophagus, said normally C-shaped member being temporarily deformable to a shape adapted for inserting said member into a torso cavity through a laparoscopic portal; and
(b) shaping spring means formed with said cushion member to normally maintain said cushion member in said C-shape, said shaping spring means being temporarily deformable, with said C-shaped member to said insertable shape.

5,006,107

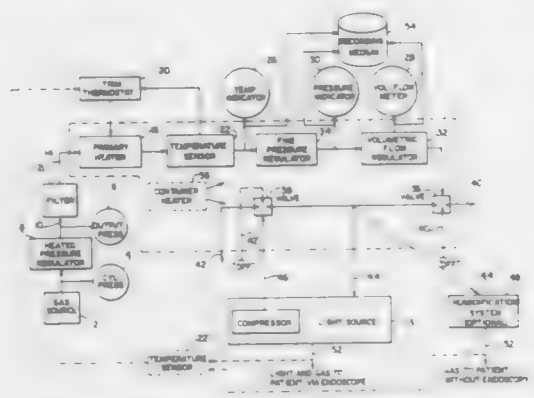
Patent Not Issued For This Number

5,006,108

APPARATUS FOR IONTOPHORETIC DRUG DELIVERY

Ronald E. LaPrade, Miami, Fla., assignor to Noven Pharmaceuticals, Inc., Miami, Fla.

Filed Nov. 16, 1988, Ser. No. 271,600
Int. Cl.[5] A61N 1/30
U.S. Cl. 604—20 9 Claims



1. An iontophoretic device for delivery of a drug comprising:
a flexible, non-conductive backing layer;
first and second conductive electrodes in a plane composed of a substantially non-ionizing material, attached to one side of which plane is said backing layer and the other side of which plane is adapted to be affixed to one side of a flexible and electrically conductive layer containing drug to be delivered;
a source of electrical current;
means for reversing the polarity of the two electrodes;
a pulse generator means for delivering current to the electrodes in timed intervals;
a switch means for reversing the polarity between electrodes during an intermission period of the therapeutic pulse; and
ion exchange means for separating the electrodes and the conductive layer to inhibit the flow of ions to the electrically conductive layer from the electrode having a charge similar to that of the drug.

5,006,109

METHOD AND DEVICE FOR CONTROLLING PRESSURE, VOLUMETRIC FLOW RATE AND TEMPERATURE DURING GAS INSUFFICATION PROCEDURES

Donald D. Douglas, 703 White Swan Dr., Arnold, Md. 21012, and James A. Hamel, Virginia Beach, Va., assignors to Donald D. Douglas

Filed Sep. 12, 1989, Ser. No. 406,351
Int. Cl.[5] A61M *13/00*
U.S. Cl. 604—26 41 Claims

1. A gas delivery system for use in an endoscopic or medical procedure involving a patient, comprising:

a gas source supplying gas for use in the endoscopic or medical procedure;

a heated pressure regulator, connected to and receiving gas from the gas source, for pre-heating the gas to ensure that it is in its gaseous state and for initially regulating the pressure of the gas;

a gas source output pressure gauge, connected to the heated pressure regulator, for measuring the pressure of the gas output through the heated pressure regulator;

a filter, connected to the heated pressure regulator, for receiving the heated gas from the heated pressure regulator and filtering out foreign matter from the gas;

a gas delivery system main body, connected to an output of the filter for receiving filtered gas, comprising:

(a) a primary heater for heating the gas from the filter to a temperature having a relationship to a physiologically desired temperature for administration to the patient;

(b) a temperature sensor, connected to an output of the primary heater, for measuring the temperature of the gas exiting the primary heater;

(c) a thermostat, connected to an output of the temperature sensor and to an input of the primary heater, for receiving temperature measurements from the temperature sensor, for governing the primary heater in regulating the temperature of the gas;

(d) a fine pressure regulator, for controlling the pressure of the gas administered to the patient in the endoscopic or medical procedure; and

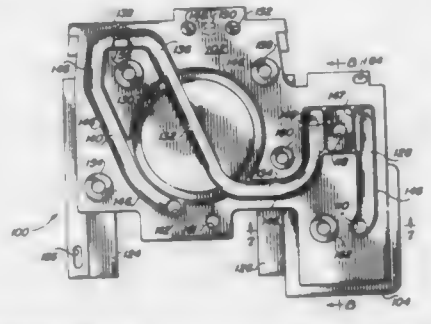
(e) a volumetric flow regulator, for controlling the volumetric flow rate of the gas administered to the patient in the endoscopic or medical procedure;

wherein the primary heater, fine pressure regulator, and volumetric flow regulator are connected substantially in series, not necessarily in the recited order;

a temperature indicator, a pressure indicator, and a flow meter, connected, respectively, to the temperature sensor, the fine pressure regulator, and the volumetric flow regulator, for respectively indicating the temperature, pressure and volumetric flow rate of the gas;

a recording medium, connected to the temperature sensor, fine pressure regulator and volumetric flow regulator, for recording the temperature, pressure, and volumetric flow rate of the gas as a function of time during the endoscopic or medical procedure;

an endoscopic light source comprising a compressed air source for producing compressed air as an alternative gas; and



a valve assembly, connected to the main body and to the endoscopic light source, for controllably directing either (1) the gas from the main body, or (2) the compressed air from the endoscopic light source compressed air source, into an endoscope for administration to the patient.

5,006,110

AIR-IN-LINE DETECTOR INFUSION SYSTEM

Michi E. Garrison, Granada Hills; John P. Pelmulder, Chatsworth, and Herman L. Renger, Calabasas, all of Calif., assignors to Pacesetter Infusion, Ltd., Sylmar, Calif.

Filed Dec. 1, 1987, Ser. No. 128,121
Int. Cl.[5] A61M *31/00*
U.S. Cl. 604—65 16 Claims

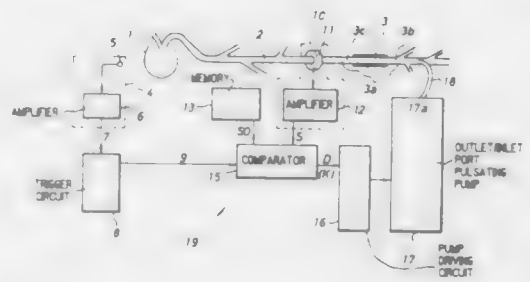
1. An apparatus for detecting the presence of air bubbles in liquid passing through a disposable cassette installed on a main unit in a medication infusion system or the like, comprising:

an optical receiving module adapted for mounting on said main unit;

optical signal source means for providing a light beam, said optical signal source means being located in said optical receiving module;

optical signal sensor means for receiving said light beam, said optical signal sensor means also being located in said optical receiving module;

a liquid channel located in a disposable cassette, said liquid channel having a first wall, said liquid channel also having a second wall located opposite said first wall, liquid passing through said disposable cassette passing through said liquid channel in an area between said first wall and said second wall, said first wall being transparent to said light beam from said optical signal source means, said second wall being absorptive of light of the type provided by said optical signal source means, said first wall of said liquid channel being located adjacent said optical receiving module when said disposable cassette is installed on said main unit; and



an optical viewing area located in said first wall, a first portion of said optical viewing area in said first wall being located adjacent said optical signal source means, a second portion of said optical viewing area in said first wall being located adjacent said optical signal sensor means, said optical viewing area comprising means for reflecting said light beam from said optical signal source means onto said optical signal sensor means when said area of said liquid channel has air therein, said light beam from said optical signal source means thereby passing through said optical viewing area when said area of said liquid channel has liquid therein.

5,006,111

MEDICAL PUMP DEVICE AND A METHOD FOR COMPENSATING A DEVIATION OF A MEASURED BLOOD FLOW RATE

Kiyoshi Inokuchi; Kenichiro Okadome; Yoichi Muto, all of Fukuoka; Yoshio Kawai, Musashino; Tadashi Ouuma, Inashiki, and Toshiharu Shirakami, Tokyo, all of Japan, assignors to Kureha Kagaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 2,709, Nov. 24, 1986, abandoned. This application Jul. 18, 1988, Ser. No. 220,990
Claims priority, application Japan, Apr. 5, 1985, 60-71997
Int. Cl.[5] A61M *5/14*
U.S. Cl. 604—67 16 Claims

1. A medical pump apparatus for compensating a deviation of a measured blood flow rate in an artery from a reference blood flow rate to thereby bring said measured blood flow rate near to said reference blood flow rate, comprising:

means for detecting a heart beat and outputting a triggering signal in response to said detected heart beat;

means for measuring a blood flow rate in said artery and for outputting a measured blood flow rate signal;

memory means for storing a reference blood flow rate signal;

means for determining a first difference and a second difference in response to said reference blood flow rate signal from said memory means and said measured blood flow rate signal from said blood flow rate measuring means to thereby issue a characterizing signal representing said first and second differences in response to said triggering signal from said heart beat detecting means,

said first difference comprising a difference between said reference blood flow rate and said measured blood flow rate during a first period in which said measured blood flow rate is less than said reference blood flow rate,

said second difference comprising a difference between said reference blood flow rate and said measured blood flow rate during a second period in which said measured blood flow rate is more than said reference blood flow rate;

means for discharging a liquid from a source of said liquid to said artery and for sucking said discharged liquid from said artery in response to said characterizing signal; and

means for connecting said discharging and sucking means to said artery.

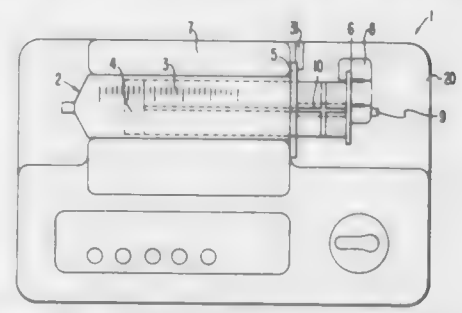
5,006,112

SYRINGE PUMP

Dieter Metzner, Schweinfurt, Fed. Rep. of Germany, assignor to MTS Schweinfurt GmbH, Schweinfurt, Fed. Rep. of Germany

Filed Nov. 13, 1989, Ser. No. 435,013
Claims priority, application Italy, Nov. 12, 1988, 3838465
Int. Cl.[5] A61M *37/00*
U.S. Cl. 604—155 10 Claims

1. A motor-driven syringe pump device for controlled dosage dispensing of a liquid from an injection syringe having a syringe piston disposed therein and a pushing member acting on one end of said syringe piston, said device comprising:



a casing having a mounting for a syringe;

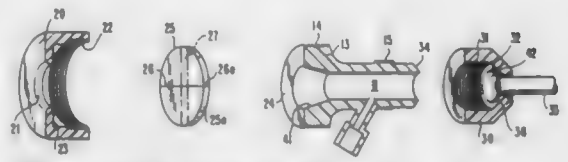
a screw spindle transmission means for transmitting a driving force from the motor to the syringe piston, said transmission having a threaded screw spindle and a drive element coupled to the pushing member;

a clutch member permanently and rotatably engaged with the threads of the screw spindle;

a releasable brake means for alternatively braking or releasing said clutch member for movement along said screw spindle;

an actuation means for releasing said brake means from said clutch member and applying said brake means to said

clutch member, said actuation means being coupled to said brake means, said brake means being urged into contact with the clutch member by a spring which has one end engaging said pushing member;



wherein the brake means comprises a brake tube and said spring is disposed within the brake tube, said brake tube being disposed within a pull-shaft, the other end of the spring engaging the brake tube, the actuation means being disposed on the pushing component.

5,006,113

HEMOSTASIS CANNULA

Frank Fischer, Bloomington, Ind., assignor to Cook Incorporated, Bloomington, Ind.

Continuation-in-part of Ser. No. 477,345, Feb. 8, 1990, which is a continuation-in-part of Ser. No. 357,041, May 25, 1989, abandoned. This application Apr. 17, 1990, Ser. No. 510,591
Int. Cl.[5] A61B *5/178*
U.S. Cl. 604—167 22 Claims

1. A hemostasis cannula comprising:

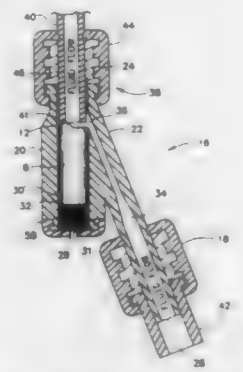
a body having an elongated passage therethrough adapted to receive a catheter; and

a flexible, elastic gasket having an axial thickness and mounted in said passage, including:

opposite first and second surfaces separated from each other by said axial thickness;

an elongated first slit extending across said first surface and into said gasket toward said second surface a first slit depth without passing entirely through said gasket;

an elongated second slit extending across said second surface and into said gasket toward said first surface a second slit depth without passing entirely through said gasket;



a generally axial opening running inbetween said first slit and said second slit in said gasket an axial opening depth;

wherein the sum of said first slit depth and said second slit depth is less than said axial thickness so that said gasket includes elastic material axially inbetween said first and second slits; and

wherein the sum of said first slit depth, said second slit

depth and said axial opening depth is equivalent to said axial thickness of said gasket to provide a resealable path for insertion of the catheter through said thickness of said gasket.

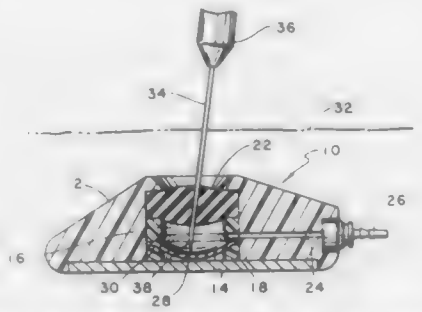
5,006,114
MEDICAL VALVE ASSEMBLY
Bobby E. Rogers, 1885 Sienna Canyon Dr., Encinitas, Calif. 92024, and Robert L. Zimmer, 11705 Gillette, Overland Park, Kans. 66210
Filed Apr. 20, 1990, Ser. No. 512,658
Int. Cl.[5] A61M *5/178*
U.S. Cl. 604—167 18 Claims

1. A valve assembly adapted to facilitate the administration and withdrawal of fluid from a patient comprising

valve assembly housing having an input side and an output side, a fluid channel having an input opening, a piston and biasing means housing wherein said fluid channel extends between the output side of said valve assembly housing and said piston and biasing means housing, said input opening of said fluid channel is connected to said piston and biasing means housing,

piston means located in said piston and biasing means housing, said piston means being movable between an open and closed position, said piston means sealing the input opening of said fluid channel from said input side of said valve assembly housing when said piston means is in said closed position, said piston means having a top surface forming a part of said valve assembly housing input side, said top surface being flat except for at least one raised portion, said raised portion being adapted to contact the output end of a syringe, said piston means is adapted to be displaced into said open position when a syringe is connected to the input side of said valve assembly housing, thereby permitting fluid connection between said output end of said syringe and the input opening of said fluid channel, the input side of said valve assembly housing having a sealing means for forming a seal between said input side of said valve assembly housing and said output end of said syringe, and

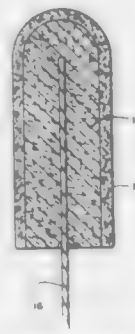
biasing means located in said piston and biasing means housing for biasing said piston means in said closed position.



5,006,115
NEEDLE PLACEMENT SENSOR
Ray S. McDonald, St. Paul, Minn., assignor to Medtronic, Inc., Minneapolis, Minn.
Filed Jul. 25, 1989, Ser. No. 385,131
Int. Cl.[5] A61M *25/00*
U.S. Cl. 604—175 4 Claims

1. An implantable medical device comprising:

a device body;



port means in said device body for receiving a medical instrument percutaneously; and

means, mounted in the device for communication with the medical instrument for flexing from a first rest position to a second position after contact with the medical instrument, and for providing an extracorporeal response signal

resulting from the flexion from the first position to the second position.

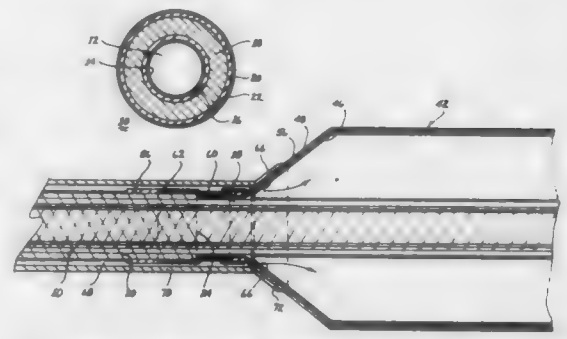
LIQUID TRANSFER ASSEMBLIES
Bruce Yule, 56, Grange Road, Saltwood, Hythe, Kent, England
Filed Jan. 9, 1989, Ser. No. 294,703
Claims priority, application United Kingdom, Jan. 9, 1988, 8800448
Int. Cl.[5] A61B *19/00*
U.S. Cl. 604—408 7 Claims

1. A liquid transfer assembly for enabling the transfer of liquid from a container to a syringe comprising:



the syringe having a nose portion;

the liquid container comprising a reservoir and defining an opening therein;

a valve in said opening for selectively permitting the flow of liquid from said container to the syringe, said valve including means urging said valve to a normally closed position in which it blocks the flow of the liquid from the container to the syringe, said valve means further including means responsive to the forcible insertion of said nose portion of the syringe into said container opening to open said valve means to permit the flow of liquid from the container to the syringe, said valve having a tapered bore that forms a fit with the syringe inserted within said bore that is sufficient to retain said container on said syringe during normal use of the assembly;

a flexible wall for said container adapted to collapse about the contents of said container as the liquid is withdrawn therefrom thereby causing the internal volume of said container to be maintained substantially equal to the volume of the liquid remaining in the container, and at least one continuous, non-collapsible elongate channel extending longitudinally along substantially the full length of the interior side of at least one said flexible wall surface in the direction of flow of the liquid as it is emptied from said container in normal use thereof, said at least one channel being in communication over at least most of its length with the interior of said container to thereby maintain continuous liquid flow into said syringe as the opposite wall surfaces of the container collapse in response to the emptying of said container.

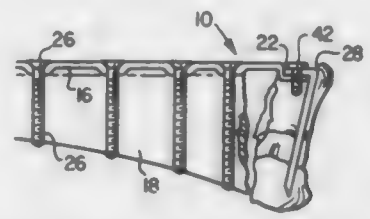
HOLLOW CORE COAXIAL CATHETER
Loren C. Acker, and Daniel C. Harmony, both of Tucson, Ariz., assignors to Engineering & Research Associates, Inc., Tucson, Ariz.
Filed May 25, 1989, Ser. No. 357,058
Int. Cl.[5] A61B *17/36*
U.S. Cl. 606—27 62 Claims

1. A flexible hollow core coaxial catheter usable in angioplasty procedures for transmitting electrical energy, said catheter comprising in combination:

(a) a flexible hollow member defining a passageway extending therewithin and having an inner surface and an outer surface;

(b) a first electrical conductor juxtaposed with the inner surface, said first conductor maintaining a substantial part of the cross sectional area of the passageway unoccupied;

(c) a second electrical conductor juxtaposed with the outer surface;



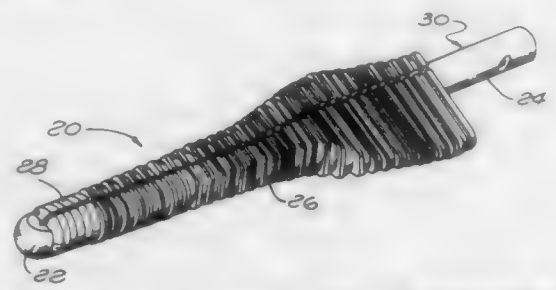
(d) first means for electrically insulating said first electrical conductor within the passageway;

(e) second means for electrically insulating said second electrical conductor about said hollow member;

(f) a load supported by said hollow member and responsive to application of electrical energy for heating arterial plaque during the angioplasty procedure; and

(g) means for electrically interconnecting said first and second electrical conductors with said load.

5,006,120
DISTAL RADIAL FRACTURE SET AND METHOD FOR REPAIRING DISTAL RADIAL FRACTURES
Peter R. Carter, 3707 Gaston Ave., Suite 520, Dallas, Tex. 75246
Filed Oct. 10, 1989, Ser. No. 418,582
Int. Cl.[5] A61F *5/04*
U.S. Cl. 606—69 17 Claims

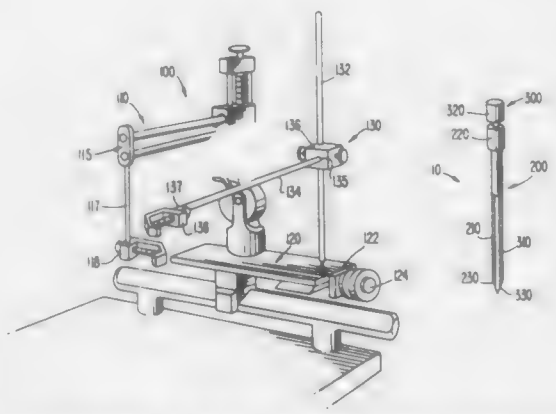


1. A bone fixation set for the treatment of distal radial fractures comprising:

a fixation plate, said plate having a plurality of bone screw holes formed therethrough, said plate having a proximal end and a distal end, said plate having an upper surface and a lower surface, said lower surface of said plate constructed to substantially conform to the dorsal surface of the radius bone, said upper surface and said lower surface of said plate being depressed proximate said bone screw holes formed through said plate; and

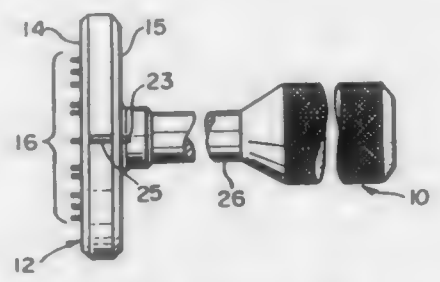
an attachable blade, said blade comprising a blade insertion

portion and an attachment portion, said attachment portion of said blade being attachable to said distal end of said plate.



5,006,121
BONE BROACHES AND METHODS OF MANUFACTURING THEREOF
Paul B. Hafeli, El Toro, Calif., assignor to Artifex Ltd., Newport Beach, Calif.
Filed Apr. 23, 1990, Ser. No. 513,070
Int. Cl.[5] A61F 5/04
U.S. Cl. 606—85 22 Claims

1. A bone broach for removing tissue and shaping the surface of a bone for receiving an implant comprising:
a support mandrel defining a mandrel axis and having first and second mandrel ends;
a plurality of broach plates stacked on said mandrel between said first and second ends thereof, each broach plate having an opening therethrough through which said mandrel passes, and first and second substantially flat and parallel surfaces substantially perpendicular to said mandrel axis circumscribed by a peripheral surface shaped at least in part to form a cutting edge defining at least part of the desired bone opening for the respective axial position of the respective said broach plate on said mandrel;
alignment means for maintaining each of said broach plates at a fixed angular alignment on and with respect to said mandrel; and,
clamping means for maintaining said broach plates tightly stacked on said mandrel.

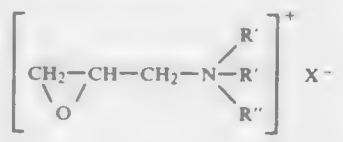


5,006,122
TISSUE TRANSPLANTATION SYSTEM
Richard J. Wyatt, Washington, D.C.; William J. Freed, Ft. Washington, and Richard A. Staub, Waldorf, both of Md., assignors to The United States of America as represented by the Department of Health and Human Services, Washington, D.C.
Continuation of Ser. No. 278,821, Dec. 2, 1988. This application Sep. 20, 1990, Ser. No. 588,242
Int. Cl.[5] A61M 5/178
U.S. Cl. 606—130 6 Claims

1. Apparatus for transplanting tissue into a brain, comprising:
first tubular cannula means for penetrating a brain to a predetermined depth to form a transplant site;
second tubular cannula means for releasably holding said tissue to be transplanted, said second cannula means including a portion at one end thereof of reducible volume, said portion being adapted to obtain and hold a predetermined quantity of donor tissue;
first mechanical support means for releasably receiving and maintaining said first cannula means at said predetermined depth within the brain while said second cannula means is inserted into said first cannula means to such an extent that the tissue-filled portion of the second cannula means is located in the vicinity of said transplant site;
second mechanical support means for releasably receiving and maintaining said second cannula means fixed in position relative to said transplant site following insertion of said second cannula means into said first cannula means;
mechanical means for moving said first cannula means relative to said second cannula means and in a direction away from said transplant site;
whereby movement of said first cannula means relative to

said transplant site in said direction causes a reduction in volume of said reducible volume portion such that the tissue held in said second cannula means is released and deposited at said transplant site.

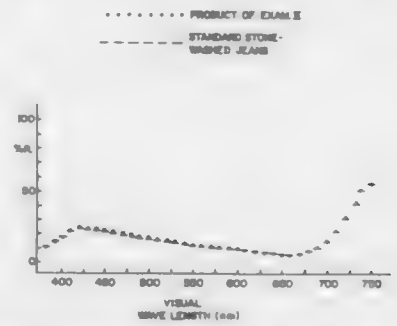
5,006,123
SCLERA AND/OR LIMBUS MARKING DEVICE FOR USE IN INTRAOCULAR SURGERY
David B. Soll, 5001 Frankford Ave., Philadelphia, Pa. 19124, and Stephen J. Failla, 39 Dogwood Dr., Chester, N.J. 07930
Division of Ser. No. 177,716, Apr. 5, 1988, Pat. No. 4,880,017.
This application Sep. 7, 1989, Ser. No. 404,146
Int. Cl.[5] A61F 9/00
U.S. Cl. 606—166 28 Claims



1. A marking device for marking a sclera and/or limbal portion of an eye during intraocular surgery comprising a generally arcuate body member having opposed first and second major surfaces, the first major surface being substantially planar, a first set and a second set of plurality of projections extending from the first major surface, the first set of projections being generally equiangularly spaced from each other and radially arranged in a pattern along an arc of a circle, the second set of projections being radially aligned with and equidistically spaced from the first set of projections, the projections being adapted to be inked and to transfer to an eye the ink in markings corresponding to the projections so that incisions and sutures can be placed in the sclera and/or limbal portion of the eye relative to the markings to standardize and define incisions and suture placement with respect to the sclera and/or limbus.

5,006,124
WET PROCESSING OF DENIM
Robert H. Tieckelmann, Trenton; Randy A. Bull, Hopewell, and Lisa M. Kurschner, Lawrenceville, all of N.J., assignors to FMC Corporation, Philadelphia, Pa.
Filed Dec. 15, 1989, Ser. No. 451,067
Int. Cl.[5] D06L 3/02
U.S. Cl. 8—111 19 Claims

1. In a process for wet processing denim fabric containing dyestuff colorbodies by desizing the denim fabric, washing the desized fabric, contacting the washed fabric with potassium permanganate to oxidize part of the colorbodies in the denim fabric to a form which is easily removed from the fabric surface, thereby decolorizing the denim fabric, and neutralizing the decolorized denim fabric by removing residues of the potassium permanganate and of the oxidized colorbodies, the improvement comprising the steps of (a) neutralizing the-oxidized denim fabric by (i) immersing the denim fabric in about 5 to 20 parts by weight of water per part by weight denim fabric, (ii) maintaining said water solution between pH 3.0 and 6.0, (iii) subsequently incorporating into the water about 2 parts by weight of either a monodentate or multidentate carboxylic acid chelating agent or salt or combination thereof owg to provide a first aqueous solution, and 1 part by weight hydrogen peroxide owg to provide a first aqueous solution, and (iv) maintaining said first aqueous solution at about 65° C. to 90° C. for 5 to 15 minutes, and (b) bleaching the decolorized denim fabric by contacting said denim fabric for 4 to 8 minutes at 65° C. to 90° C. with 5 to 20 parts by weight of an alkaline bleaching solution owg comprising from about 0.6 to about 4 parts by weight hydrogen peroxide owg and sufficient alkali to provide a pH of about 8 to 9.



5,006,125
PROCESS FOR IMPROVING THE DYEABILITY AND WHITENESS OF CELLULOSIC FABRICS
Robert T. Patton; John D. Kitchens, both of Lake Jackson, Tex., and David M. Hall, Auburn, Ala., assignors to The Dow Chemical Company, Midland, Mich.
Continuation-in-part of Ser. No. 243,575, Sep. 13, 1988, abandoned. This application Nov. 7, 1989, Ser. No. 432,954
Int. Cl.[5] D06M 13/322
U.S. Cl. 8—188 9 Claims

1. A process for improving the whiteness of a cellulosic fabric which comprises the steps of:
A. scouring said fabric in an aqueous sodium hydroxide solution so as to remove natural fats and oils;
B. treating said fabric from step A with steam;
C. removing excess sodium hydroxide solution from said fabric; and then,
D. treating said fabric with an aqueous solution with an epoxy compound of the formula:

where R, R' and R'' are each lower alkyl radicals and X is an anion whereby the whiteness of said fabric is improved.

5,006,126
CELLULASE COMPOSITIONS AND METHODS THAT INTRODUCE VARIATIONS IN COLOR DENSITY INTO CELLULOSIC FABRICS, PARTICULARLY INDIGO DYED DENIM
Lynne A. Olson, Mendota Heights, and Patricia M. Stanley, Minneapolis, both of Minn., assignors to Ecolab Inc., St. Paul, Minn.
Filed Sep. 15, 1988, Ser. No. 245,123
Int. Cl.[5] C11D 3/38, 11/00; D06B 11/00
U.S. Cl. 8—401 9 Claims

1. A gelled concentrate composition that can be used in aqueous solution to introduce, into the surface of dyed cellulosic fabrics, local areas of variations in color density, which consists essentially of:
(a) about 25–90 wt-% of a cellulase enzyme;
(b) about 0.01–10 wt-% of a thickener selected from the group consisting of a hydratable alkali metal or alkaline earth metal inorganic salt, a polyethylene oxide polymer, a polypropylene oxide polymer, a polyvinyl alcohol polymer, a polyvinyl pyrrolidone polymer, a polyalkyloxazoline polymer, a xanthum gum and mixtures thereof;
(c) about 0.1–50 wt-% of a buffer than can maintain the pH of the aqueous solution to about the optimum pH for enzyme activity;
wherein the variation in color density is substantially the same as that produced by conventional pumice stone processing.

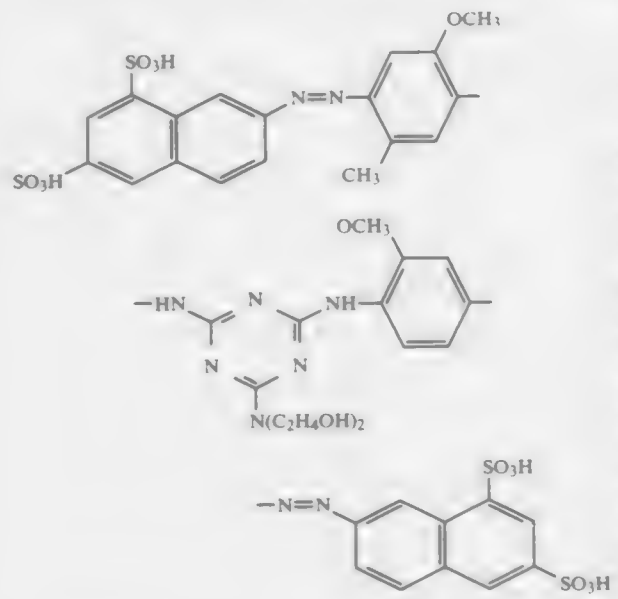
5,006,127
AGENT FOR THE OXIDATIVE DYEING OF HAIR, METHOD FOR THE PREPARATION OF THE AGENT AND USE OF THE AGENT
Jürgen Tennigkeit, Seeheim, and Herbert Lorenz, Gross-Bieberau, both of Fed. Rep. of Germany, assignors to Goldwell GmbH, Darmstadt-Eberstadt, Fed. Rep. of Germany
PCT No. PCT/EP87/00465, § 371 Date Apr. 14, 1988, § 102(e) Date Apr. 14, 1988, PCT Pub. No. WO88/01161, PCT Pub. Date Feb. 25, 1988
PCT Filed Aug. 19, 1987, Ser. No. 187,029
Claims priority, application Fed. Rep. of Germany, Aug. 21, 1986, 3628397
The portion of the term of this patent subsequent to Oct. 11, 2005, has been disclaimed.
Int. Cl.[5] A61K 7/13
U.S. Cl. 8—406 10 Claims

1. An agent for dyeing human or animal hair, comprising: a mixture of approximately one-third by weight of an oxidation dye in creme or gel form containing an effective amount of an oxidation dye and approximately two-thirds by weight of a developer solution containing approximately two percent of hydrogen peroxide, and as a catalyst 0.0001 to 1.00 per cent by weight of at least one salt selected from the group consisting of potassium iodide, potassium bichromate, lithium chloride, magnesium acetate, calcium chloride and barium nitrate, said agent having a pH between 5.9 and 6.9.

5,006,128

SUBSTITUTED 2,4-DI[4'-(DISULFONAPHTH-2''-YLAZO)-PHENYLAMINO]-6-AMINO-1,3,5-TRIAZINES

Reinhard Pedrazzi, Allschwil, Switzerland, assignor to Sandoz Ltd., Basel, Switzerland



Filed Aug. 25, 1989, Ser. No. 399,665

Claims priority, application Fed. Rep. of Germany, Aug. 26, 1988, 3828909

Int. Cl.[5] **C09B** *33/02, 43/40;* **D06P** *1/39;* **C07D** *251/34*

U.S. Cl. 8—437 **5 Claims**

1. The compound having the formula SO_3H

or a salt thereof.

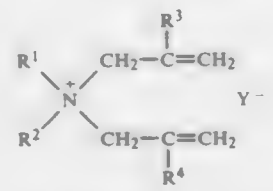
DYEING TEXTILE MATERIAL WITH PIGMENT DYES: PRE-TREATMENT WITH QUATERNARY ALLY AMMONIUM SALT POLYMER

Thomas Martini, Kelkheim; Karl-Heinz Keil, Hanau; Ulrich Karsunky, Hünfelden, and Klaus Sternberger, Bad Vilbel, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany

Filed Dec. 29, 1989, Ser. No. 459,270



Claims priority, application Fed. Rep. of Germany, Dec. 29, 1988, 3844194

Int. Cl.[5] **D06P** *1/44;* **D06M** *5/04, 15/35*

U.S. Cl. 8—554 **14 Claims**

1. A process for coloring textile material with pigment colorants, which comprises

a. pretreating the textile material with a polymer which consists wholly or partly of nonomeric units of the formula I

(I)

where R^1 and R^2 are each hydrogen, (C_1-C_{22})alkyl which may be interrrupted by —CO—NH— or C_1-C_4-hydroxyalkyl,

R^3 and R^4 are each hydrogen or methyl, and

Y^- is a monovalent anion or one equivalent of a polyvalent anion,

b. then coloring with a pigment colorant in the presence of a leveling or dispersing agent by the exhaust method and optionally,

c. treating in a liquor with a pigment binder and subsequently fixing it.

5,006,130

GASOLINE COMPOSITION FOR REDUCING INTAKE VALVE DEPOSITS IN PORT FUEL INJECTED ENGINES

Robert P. Aiello, Cypress; Michael J. Riley, and Herbert D. Millay, both of Houston, all of Tex., assignors to Shell Oil Company, Houston, Tex.

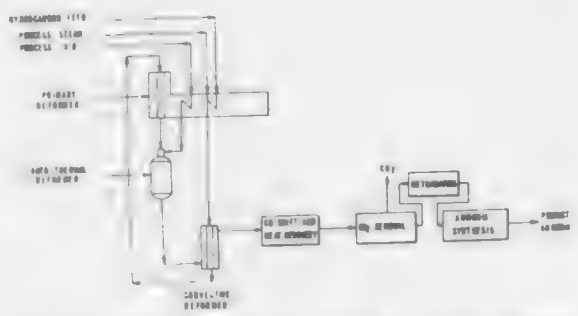
Filed Jun. 28, 1989, Ser. No. 372,578

Int. Cl.[5] **C10L** *1/14*

U.S. Cl. 44—432 **38 Claims**

1. An unleaded fuel composition comprising a major amount of a hydrocarbon base fuel of the gasoline boiling range containing an effective amount to reduce intake valve deposits in electronic port fuel injected engines of a mixture of (a) about 2.5 ppmw or higher of basic nitrogen based on the fuel composition in the form of an oil soluble aliphatic alkylene polyamine containing at least one olefinic polymer chain attached to at least one nitrogen or carbon atom of the alkylene radical connecting the amino nitrogen atoms and said polyamine having a molecular weight in the range of from about 600 to about 10,000 and (b) from about 75 ppmw to about 125 ppmw based on the fuel composition of at least one component selected from (i) a polymer of a C_2 to C_6 monoolefin, (ii) a copolymer of a C_2 to C_6 monoolefin, (iii) the corresponding hydrogenated polymer or copolymer, (iv) an oil soluble poly(oxyalkylene) alcohol, glycol or polyol or a mono or di ether thereof, which has the formula R_1—O—$(R_2O)_n$—R_3 wherein R_1 and R_3 each independently is a hydrogen atom or an aliphatic, cycloaliphatic or mononuclear aromatic hydrocarbon group of up to 40 carbon atoms, R_2 represents an alkylene group and n is an integer of at least 7, (v) a naphthenic or paraffinic oil having a visocity of 100° C. of from about 2 to about 15 cenetistokes, the weight ratio of (a) as basic nitrogen to (b) in the mixture being in the range of about 0.020 or higher.

5,006,131



APPARATUS FOR PRODUCTION OF SYNTHESIS GAS USING CONVECTIVE REFORMING

Maxim Karafian, Cold Spring Harbour, and Irving C. Tsang, Flushing, both of N.Y., assignors to Stone & Webster Engineering Corporation, Boston, Mass.

Division of Ser. No. 944,327, Dec. 19, 1986, Pat. No. 4,824,658, which is a division of Ser. No. 749,869, Jun. 27, 1985, abandoned. This application Oct. 3, 1988, Ser. No. 253,542

Int. Cl.[5] **B01J** *7/00*

U.S. Cl. 422—201 **1 Claim**

1. A system for the steam reforming of hydrocarbons into a hydrogen-rich gas, which comprises in series:

(a) a convective reformer device having indirect heat-exchange means for partially reforming a feed mixture of hydrocarbons and steam;

(b) a steam reforming furnace having a radiant section, reforming tubes in the radiant section, and means for producing radiant heat for the further reforming of the partially reformed effluent from (a);

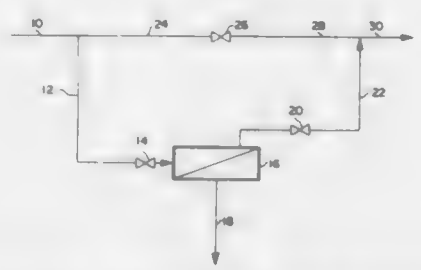
(c) an auto-thermal reformer for fully reforming the effluent from (b);

(d) conduit means for passing the partially reformed effluent from (a) to (b);

(e) conduit means for passing the effluent from (b) to (c); and

(f) conduit means for passing the fully reformed effluent from (c) to (a), to supply the heat of reaction for the partial reformation of the hydrocarbon-steam feed mixture.

5,006,132



MEMBRANE PROCESSED PURIFIED PIPELINE GAS

Stephen P. DiMartino, Sr., Topton, and James C. Sorensen, Allentown, both of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Filed Jun. 12, 1990, Ser. No. 537,182

Int. Cl.[5] **B01D** *53/22*

U.S. Cl. 55—16 **27 Claims**

1. A process for removing a higher purity component sidestream product gas from a lower purity main product pipeline gas containing that component, with insignificant main pipeline gas pressure drop and purity loss so as to maintain the approximate pressure and purity of the main product pipeline gas downstream of the sidestream product gas removal, comprising: (a) contacting at least a portion of the main product pipeline gas with the feed side of a membrane, that selectively permeates the component product gas over any other components of the main product pipeline gas, (b) permeating the component product gas through the membrane preferentially over the other components of the main product pipeline gas by reduced pressure on the permeate side of the membrane, (c) recovering a higher purity component sidestream product gas from the permeate side of the membrane, and (d) commingling the reject gas from the feed side of the membrane with the main product pipeline gas downstream of the sidestream product gas removal.

5,006,133

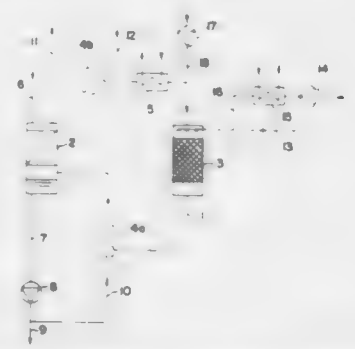
METHOD AND APPARATUS FOR DEOXIDATION OF SEA-WATER

Charles Mandrin, Winterthur, and Rene Keller, Zell, both of Switzerland, assignors to Sulzer Brothers Limited, Winterthur, Switzerland

Filed Mar. 19, 1990, Ser. No. 495,838

Claims priority, application Switzerland, Apr. 5, 1989, 01252/89

Int. Cl.[5] **B01D** *19/00*



U.S. Cl. 55—53 **18 Claims**

1. In a method of deoxidizing sea water, the steps of

delivering a flow of oxygen-charged stripping gas to a catalytic combustion chamber during a start up phase;

delivering a flow of a first fuel having a low ignition temperature to the catalytic combustion chamber during said start-up phase for combustion therein with the oxygen of the stripping gas until a predetermined temperature is reached; and

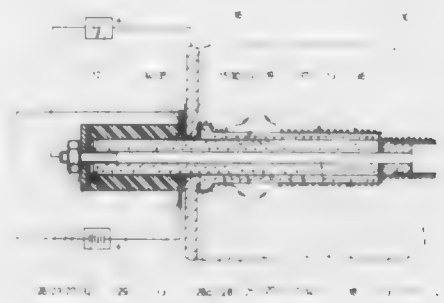
thereafter delivering a flow of a second fuel having a higher ignition temperaturere than said first fuel to the combus-

tion chamber to maintain combustion of the oxygen of the delivered flow of stripping gas.

5,006,134

COAGULATOR FOR SYSTEMS FOR THE PURIFYING OF EXHAUST GASES OF FOSSIL FUELS

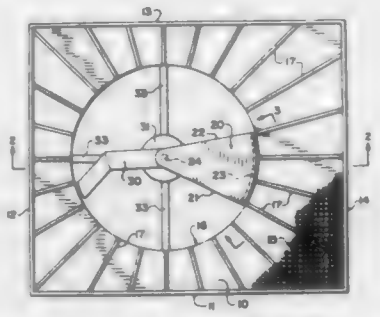
Guenter Knoll, Stuttgart; Rolf Leonhard, Schwieberdingen; Wolfgang Kraft, Leonberg-Rutel, and Bernhard Lucas, Weissach, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany



PCT No. PCT/DE89/00320, § 371 Date Dec. 15, 1989, § 102(e) Date Dec. 15, 1989, PCT Pub. No. WO89/12731, PCT Pub. Date Dec. 28, 1989

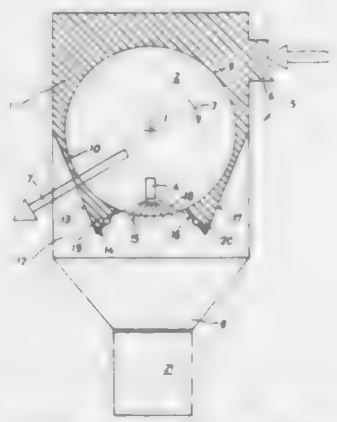
PCT Filed May 20, 1989, Ser. No. 455,410

Claims priority, application Fed. Rep. of Germany, Jun. 18, 1988, 3820740



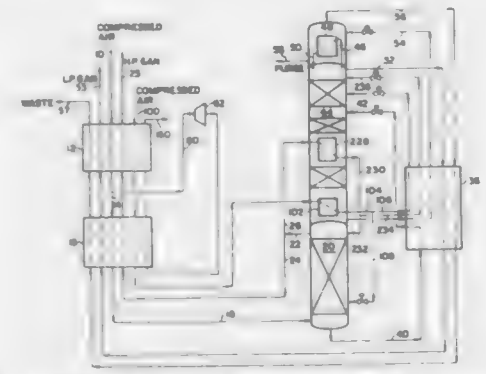
Int. Cl.[5] **B03C** *3/00*

U.S. Cl. 55—146 **17 Claims**



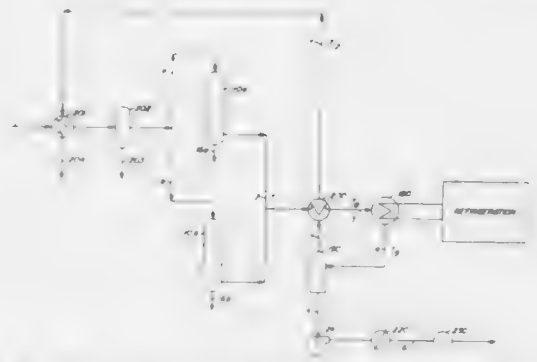
1. Coagulator for systems for purifying the exhaust gases of fossil fuels from diesel internal-combustion engines, with a housing, poled as counter-electrode and cylindrical electrode, arranged concentrically in the housing and at high voltage, and with at least one insulator surround the electrode over a section of its length for the insulated leading of the electrode through the housing, which insulator bears an electric heating conductor track for the prevention or elimination of an agglomerate deposit on its surface, wherein the insulator (13; 13') is in two parts and consists of a ceramic inner tube (17; 17') and a ceramic projective tube (18; 18'), surrounding the latter, the heating conductor track (19) is applied to the circumference of the inner tube (17; 17') and the protective tube (18; 18') is sintered on to the inner tube (17; 17') in such a way that the parting line (14) between inner and protective tubes (17, 18; 17', 18') is gas-tight.

5,006,135
SELF CLEANING SCREEN
David Friesen, 305-1825-4th St. N., Cranbrook, British Columbia, Canada (V1C 3L9)
Filed Dec. 12, 1989, Ser. No. 448,124
Int. Cl.[5] B01D *46/04*
U.S. Cl. 55—286 8 Claims



1. A self cleaning screen for separating particles from an air stream comprising a housing defining a front surface which is covered by a filter screen having perforations sized to halt the particles while allowing the air stream to pass through, a rear surface spaced from the front surface and a surrounding side wall means extending between the front surface and the rear surface to cause all airflow exiting the rear surface to be drawn through the front surface and the screen, a plurality of divider plates each extending from a front edge of the plate at the screen in a rearward direction to a rear edge of the plate at said rear surface of the housing, said divider plates being spaced each from the next so as to divide the screen into plurality of separate screen elements, the air flow through the screen element being confined on respective sides by said divider plates, the rear surface of the housing having at least a portion thereof which is open to allow passage of the air through the screen and between the plates, and baffle means for halting flow of air through each one of said separate screen elements in turn to allow material collecting on said each element in turn to be discharged from the screen.

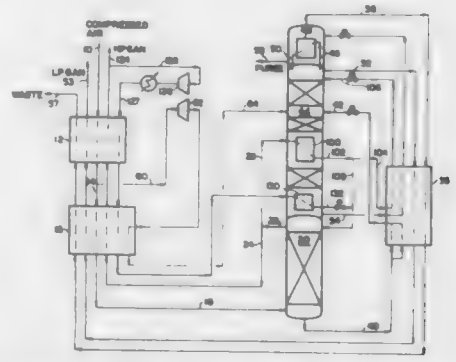
5,006,136
ROTARY DRUM FILTER
Peter Wetter, Im Rigiblick 23, 8623 Wetzikon, Switzerland
Filed Dec. 20, 1989, Ser. No. 453,578
Claims priority, application Switzerland, Jan. 10, 1989, 67/89-1
Int. Cl.[5] B01D *33/044, 46/20*
U.S. Cl. 55—290 9 Claims



1. A rotary drum filter having a drum which is rotatable around a substantially horizontal axis and having a filter cake cleaning-off unit, which drum and which cleaning-off unit are located inside a filter housing that includes a raw air inlet, a clean air outlet and a filter cake discharge section, which raw air inlet faces an outer jacket surface of said drum and which clean air outlet faces an inner jacket surface of said drum, said filter housing comprising a vertically upper filter zone and a filter cake settling zone located below said filter zone such that the filter housing is partitioned into two zones, whereby a part of a partitioning plane is formed as cleaning-off zone and the rest of the partitioning plane is formed substantially air-tight.

5,006,137
NITROGEN GENERATOR WITH DUAL REBOILER/CONDENSERS IN THE LOW PRESSURE DISTILLATION COLUMN
Rakesh Agrawal, Allentown, and Donald W. Woodward, New Tripoli, both of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.
Filed Mar. 9, 1990, Ser. No. 491,756
Int. Cl.[5] F25J *3/00*
U.S. Cl. 62—11 11 Claims

1. A cryogenic process for the production of nitrogen by distilling air in a double column distillation system comprising a high pressure column and a low pressure column comprising:
(a) cooling a first compressed feed air stream to near its dew point an rectifying the cooled, compressed feed air stream in the high pressure distillation column thereby producing a high pressure nitrogen overhead and a crude oxygen bottoms liquid,
(b) removing the crude oxygen bottoms liquid from the high pressure distillation column subcooling the removed, crude oxygen bottoms liquid an :ding the subcooled, crude oxygen bottoms liquid to an intermediate location of the low pressure column for distillation;
(c) removing the high pressure nitrogen overhead from the high pressure column and dividing the removed, high pressure nitrogen overhead to a first and second portion;
(d) condensing the first portion of the high pressure nitrogen overhead in an intermediate reboiler/condenser located in the upper portion Of the stripping section of the low pressure column thereby providing at least a portion of the heat duty rreboil the low pressure column;
(e) warming the second portion of the high pressure nitrogen overhead to recover refrigeration thereby producing a high pressure nitrogen product;
(f) refluxing the high pressure column with at least a portion of the condensed nitrogen generated in step (d);
(g) cooling a second compressed feed air stream., totally condensing the cooled, second compressed feed air stream and dividing it into a first and second substream;
(h) feeding the first substream to a lower intermediate location of the high pressure column for distillation;
(i) reducing in pressure the second substream and feeding the reduced pressure, second substream to an upper intermediate location of the low pressure column for distillation; and
(j) removing a low pressure nitrogen stream from the top of the low pressure column, warming the removed, low pressure nitrogen stream to recover refrigeration and recovering the warmed, low pressure nitrogen stream from the process as a low pressure nitrogen product.



5,006,138
VAPOR RECOVERY SYSTEM
J. Paul Hewitt, P.O. Box 1091, Angleton, Tex. 77515
Filed May 9, 1990, Ser. No. 521,028
Int. Cl.[5] F25J *3/00*
U.S. Cl. 62—18 13 Claims

1. A system for removing substantially all of the organic compound vapors from an air-organic compound vapor mixture, comprising:
(a) a collection header for collecting said mixture;
(b) a first heat exchanger in fluid communication with said header to effect indirect heat exchange between the mixture entering and a refrigerant and thereby cool said entering mixture to condense a portion of the water contained therein;
(c) a knock out pot in fluid communication with said first heat exchanger to collect and remove said portion of water condensed;
(d) at least one desiccant vessel in fluid communication with said knock out pot to receive the vapor therefrom and for removing any water remaining within said mixture;
(e) a second heat exchanger in fluid communication with said dehydration means;
(f) a vapor chiller in fluid connection with said second dehydration to condense substantially all of said organic compounds in said mixture by indirect heat exchange with a refrigerant gas at a cryogenic temperature;
(g) a separator in fluid communication with said chiller to separate said condensed organic compounds from said mixture;
(h) a flow line connecting said separator to carry the uncondensed vapors from said separator to said second heat exchanger to effect indirect heat exchange between said uncondensed vapors and the dehydrate mixture prior to entering said chiller;
(i) a means to remove substantially all of said condensed organic compounds from said vapor chiller; and
(j) a vent to remove said vapor less substantially all of said hydrocarbons from said second heat exchanger.

5,006,139
CRYOGENIC AIR SEPARATION PROCESS FOR THE PRODUCTION OF NITROGEN
Rakesh Agrawal, Allentown, and Donald W. Woodward, New Tripoli, both of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.
Filed Mar. 9, 1990, Ser. No. 491,420
Int. Cl.[5] F25J *3/02*
U.S. Cl. 62—24 13 Claims

1. A cryogenic process for the production of nitrogen by distilling air in a double column distillation system comprising a high pressure column and a low pressure column comprising:
(a) cooling a compressed feed air stream to near its dew point and rectifying the cooled, compressed feed air stream in the high pressure distillation column thereby producing a high pressure nitrogen overhead and a crude oxygen bottoms liquid;
(b) removing the crude oxygen bottoms liquid from the high pressure distillation column, subcooling the removed, crude oxygen bottoms liquid and feeding the subcooled, crude oxygen bottoms liquid to an intermediate location of the low pressure column for distillation;
(c) removing the high pressure nitrogen overhead from the high pressure column and dividing the removed, high pressure nitrogen overhead into a first and second portion;
(d) condensing the first portion of the high pressure nitrogen overhead in an intermediate reboiler/condenser located in the upper portion of the stripping section of the low pressure column thereby providing at least a portion of the heat duty to reboil the low pressure column;

(e) warming and dividing the second portion of the high pressure nitrogen overhead into a high pressure nitrogen product and a recycle nitrogen stream;
(f) compressing the recycle nitrogen stream and condensing it in a reboiler/condenser located in the bottom of the low pressure column thereby providing another portion of the heat duty to reboil the low pressure column;
(g) refluxing the high pressure column with at least a portion of the condensed nitrogen generated in steps (d) or (f); and
(h) removing a low pressure nitrogen stream from the top of the low pressure column, warming the removed, low pressure nitrogen stream to recover refrigeration and recovering the warmed, low pressure nitrogen stream from the process as a low pressure nitrogen product.

PROCESS FOR THE MANUFACTURE OF MINERAL FIBRE COMPOSITIONS
Juergen Loercks, Rees-Androp, and Horst Neisius, Kleve, both of Fed. Rep. of Germany, assignors to Cerestar Holding B. V., Sas Van Gent, Netherlands
Filed Dec. 14, 1989, Ser. No. 451,959
Claims priority, application United Kingdom, Dec. 16, 1988, 8829405
Int. Cl.[5] C03C *25/02*
U.S. Cl. 65—3.1 12 Claims

1. A process for the production of a mat of glass or other mineral fibre composition having heat and sound insulating properties and enhanced water resistance comprising, melting glass or other mineral, forcing the molten glass or mineral through a plurality of openings to produce fibres, spraying the hot fibres with a water dispersion of a binder comprising a gelatinized starch sulphamate product and a hydrophobic agent, depositing the fibres on a conveyer as glass wool, passing the glass wool through a drier where the fibres are dried at an elevated temperature and the wool is formed into a mat.

5,006,141
THERMALLY EFFICIENT MELTING FOR GLASS MAKING

Michael S. K. Chen, Zionsville; Corning F. Painter; Steven P. Pastore, both of Allentown; Gary Roth, Trexlertown, and David C. Winchester, Allentown, all of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Filed Jan. 30, 1990, Ser. No. 474,200
Int. Cl.[5] C03B *5/04*
U.S. Cl. 65—27 **12 Claims**

1. An integrated process for the production of glass utilizing combustion heat to melt glass making materials in a glassmaking furnace, comprising:

(a) heating glass making materials of batch and cullet feedstocks in a glassmaking furnace by the combustion of fuel with an oxygen-enriched oxidant stream.,

(b) removing an hot offgas from said glassmaking furnace comprising a substantially carbon dioxide-containing combustion product and feedstock volatiles and quenching the offgas using a relatively cooler process stream to condense out said volatiles;

(c) further cooling at least a portion of the offgas against the fuel fed to the glassmaking furnace and at least a portion of the glassmaking materials to the furnace;

(d) separating carbon dioxide in substantially pure form from the offgas as a product of the process by a separation selected from the group consisting of cryogenic distillation, adsorptive separation, membrane separation or combinations thereof; and

(e) recovering a refined glass as a product of the process.

5,006,142
OXYNITRIDE GLASS PRODUCTION PROCEDURE

Jerry R. Weidner; Stanley T. Schuetz, and Michael H. O'Brien, all of Idaho Falls, Id., assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Filed Mar. 28, 1990, Ser. No. 500,352
Int. Cl.[5] C03C *3/11;* **C03B** *8/04*
U.S. Cl. 65—32.5 **12 Claims**

1. A method of preparing an oxynitrite glass comprising.

mixing low-melting temperature glass with discrete particles of a nitrogen-containing compound to form a first batch,

heating the first batch, under an atmosphere of flowing nitrogen to a temperature sufficient to melt the glass but below the decomposition temperature of the nitrogen-containing compound,

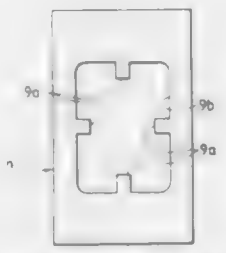
maintaining the temperature for a period of time sufficient for the glass to melt, forming a first melt of molten glass containing particles of nitrogen-containing compound,

cooling the melt to form a glass containing particles of nitrogen-containing compound,

grinding the glass to form particles of nitrogen-containing compound encapsulated in low-melting temperature glass,

mixing the particles with glass-forming oxides in an amount sufficient to bring the composition of the mixture into a glass-forming region, forming a second batch,

heating the second batch, under an atmosphere of flowing nitrogen and in the presence of a buffer gas, to a temperature sufficient to melt the low-melting temperature glass and to dissolve the nitrogen-containing compound and glass-forming oxides in the molten glass to form a second melt,



maintaining the temperature of the second melt for a period of time sufficient for the nitrogen-containing compound and the glass-forming oxides to dissolve in the molten glass to form a molten mixture and for the molten mixture to homogenize to form a homogeneous melt, and

cooling the homogeneous melt, thereby forming an oxynitrite glass.

5,006,143
METHOD OF PRODUCING A JOINED ARTICLE THROUGH BONDING WITH LOW MELTING POINT GLASS

Hideyuki Kawase; Noboru Sahashi, and Tamotsu Hashizume, assignors to NGB Spark Plug Co., Ltd., Aichi, Japan

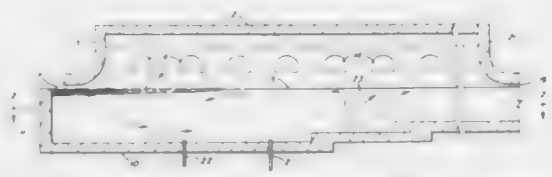
Continuation of Ser. No. 335,325, Apr. 10, 1989, abandoned. This application Oct. 12, 1990, Ser. No. 596,414
Claims priority, application Japan, Apr. 11, 1988, 63-88547
Int. Cl.[5] C03B *29/00;* **C03C** *29/00*
U.S. Cl. 65—43 **6 Claims**

1. A method of joining two articles by means of a low-melting point glass, said method comprising the steps of:

(a) providing a first article to be joined, said first article having a first bonding surface;

(b) applying a layer of low-melting point glass to said first bonding surface, said layer having a plurality of open recesses in flow communication with the outer peripheral edge of said layer;

(c) applying a second article to said layer to a low melting point glass;



(d) heating said first and second articles and said layer of low-melting point glass to a temperature above the melting point of said glass; and

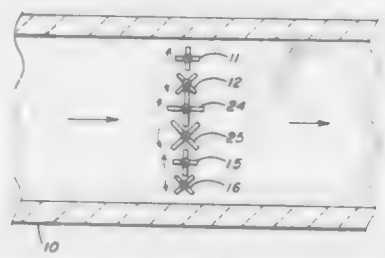
(e) solidifying said glass to join said first and second articles.

5,006,144
MELTING GLASS WITH OXIDATION CONTROL AND LOWERED EMISSIONS

Leonard A. Knavish, Plum Boro, and William C. Harrell, Sarver, both of Pa., assignors to PPG Industries, Inc., Pittsburgh, Pa.

Filed Jun. 25, 1990, Ser. No. 543,006
Int. Cl.[5] C03C *3/087;* **C03B** *5/04*
U.S. Cl. 65—134 **26 Claims**

1. A method of making glass so as to control the final valence state of multivalent ions contained in the glass, comprising:



melting glass batch materials containing a source of the multivalent ion and a fining agent at an upstream zone in which redox conditions in the melting glass are maintained relatively oxidizing as measured by the ratio of ferrous iron to total iron, whereby the batch material is substantially liquefied while avoiding undue premature dissociation of the fining agent and assuring the presence of sufficient fining agent in the molten glass entering a downstream fining zone to provide adequate fining;

at a downstream zone introducing a reducing agent uniformly throughout the melt to alter the redox conditions to be more reducing as measured by an increase in the ratio of ferrous iron to total iron of at least twenty percent compared to the ratio in the upstream zone, thereby reducing solubility of the fining agent in the melt to induce dissociation of the fining agent to thereby aid in fining, and thereby controlling the final valence state of the multivalent ions in the glass product by inducing a greater proportion of the multivalent ions to be present in their lower valence state.

5,006,145
CENTER BIASED STIRRING FOR IMPROVED GLASS HOMOGENIZATION

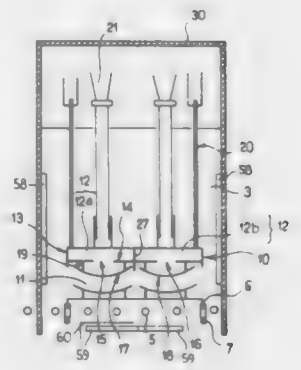
Sheldon R. Brinker, Natrona Heights, Pa., assignor to PPG Industries, Inc., Pittsburgh, Pa.

Filed Feb. 26, 1990, Ser. No. 484,311
Int. Cl.[5] C03B *5/187*
U.S. Cl. 65—134 **11 Claims**

1. A method for mixing molten glass or the like in which a stream of molten glass is passed along a channel, and the molten stream is stirred by means of a row of at least five stirrers extending substantially across the channel, characterized by carrying out the stirring in the center portion of the row with stirrers having diameters at least ten percent greater than stirrers in outboard portions of the row to provide substantially greater stirring force than the stirring force used in outboard portions of the row comprised of at least two stirrers on each side of the center portion, whereby a more thorough homogenization is achieved.

5,006,146
APPARATUS FOR BENDING GLASS PLATES INTO CONVEX SHAPE

Denis Mathivat, Thourotte; Daniel Colmon, Franconville, and Daniel Philibert, Thourotte, all of France, assignors to Saint-Gobain Vitrage, Courbevoie, France



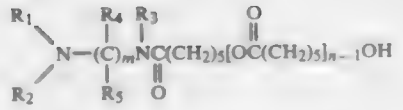
Filed Nov. 6, 1987, Ser. No. 117,513
Claims priority, application France, Nov. 6, 1986, 86 15489
Int. Cl.[5] C03B *23/023*
U.S. Cl. 65—273 **10 Claims**

1. An apparatus for bending or shaping glass plates, comprising:

a reheating furnace,

a means for conveying said glass plates, said means comprising longitudinally sequential separable sections, said conveying means passing through said furnace and through

a cell for bending or shaping said glass plates downstream of said furnace, said cell comprising a series of stations for bending or transferring one of said glass sheets at any given time, said stations comprising a common upper unit above said conveyor for lifting said glass plates off said conveyor, each said station further comprising a means for temporarily retaining one of said glass plates mounted on said common upper unit, each said station further comprising a lower unit that comprises a means for receiving said one glass plate from said temporary retaining means, each said temporary retaining means being provided with separate vacuum means for retaining one of said glass plates, each said vacuum means being capable of operation independent of the remaining vacuum means connected to said common upper unit.



5,006,147
BIODEGRADABLE BARRIER FILMS OF IONOMER POLYMER

Warren A. Thaler, Flemington; Pacifico V. Manalastas, Edison; Evelyn N. Drake, Lebanon, and Robert D. Lundberg, Bridgewater, all of N.J., assignors to Exxon Research and Engineering Company, Florham Park, N.J.

Continuation-in-part of Ser. No. 131,583, Dec. 11, 1987, which is a continuation-in-part of Ser. No. 883,533, Jul. 9, 1986, Pat. No. 4,741,956. This application Jul. 17, 1989, Ser. No. 380,940
The portion of the term of this patent subsequent to May 3, 2005, has been disclaimed.
Int. Cl.[5] C05G *3/00*
U.S. Cl. 71—27 **4 Claims**

1. An encapsulated water soluble fertilizer which comprises a polymeric film of about 2 to about 100 micrometers coated on a surface of said fertilizer, said polymeric film comprising a sulfonated polymer having about 10 to about 200 meq of sulfonate groups per 100 grams of said sulfonated polymer, said sulfonate groups being neutralized with a polycaprolactone polymer being characterized by the formula

wherein R_1 or R_2 is an alkyl, cycloalkyl or aryl group; R_3, R_4 and R_5 are a hydrogen or alkyl, cycloalkyl, or aryl groups; m equals 1 to 20 and n equals 1 to 500.

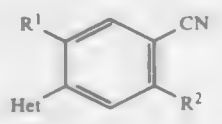
N-ARYL-SUBSTITUTED NITROGEN-CONTAINING HETEROCYCLES, AND THEIR USE AS HERBICIDES AND PLANT GROWTH REGULATORS

Reiner Fischer, Monheim; Uta Jensen-Korte, Duesseldorf; Franz Kunisch, Odenthal-Gloebusch; Albrecht Marhold, Leverkusen; Pieter Ooms, Krefeld; Otto Schallner, Monheim; Hans-Joachim Santel, Leverkusen; Robert R. Schmidt, Bergisch-Gladbach; Birgit Krauskopf, Bergisch-Gladbach, and Harry Strang, Duesseldorf, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

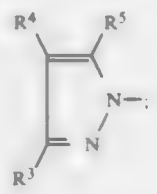


Filed Nov. 13, 1989, Ser. No. 435,898

Claims priority, application Fed. Rep. of Germany, Nov. 23, 1988, 3839480

Int. Cl.[5] A01N *43/56;* **C07D** *231/22*

U.S. Cl. 71—72 **7 Claims**



1. An N-Aryl-substituted nitrogen-containing heterocycle of the general formula (I)

(I)

in which

Het represents a heterocycle of the formula

R^1 represents hydrogen or alkyl, and

R^2 represents a radical —X—R^9,

where

R^3 represents hydrogen or alkyl, and

R^4 represents halogen,

R^5 represents hydrogen or alkyl

R^9 represents an alkoxy-carbonylalkyl and

X represents oxygen or sulphur.

6. A method for regulating the growth of plants which comprises applying to such plants or to a locus in which such plants are grown or to be grown a plant growth regulating effective amount of a compound according to claim 1.

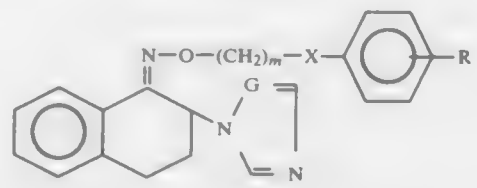
AZOLE DERIVATIVES OF NAPHTHALENONE OXIME ETHERS



Hoi K. Lai, Guelph, Canada; Robert A. Davis, and Allen R. Blem, both of Cheshire, Conn., assignors to Uniroyal Chemical Company, Inc., Middlebury, Conn. and Uniroyal Chemical Ltd./Ltee., Don Mills, Canada

Filed Nov. 29, 1989, Ser. No. 443,294

Int. Cl.[5] A01N *43/50;* **C07D** *233/60*

U.S. Cl. 71—92 **8 Claims**

1. A compound having the structural formula (I)

(I)

in which:

R is a substituent or group of substituents selected from the group consisting of halogen, lower alkyl of 1 to 6 carbon atoms, phenyl, phenoxy, naphthyl, nitro, cyano, lower alkoxy, lower alkoxycarbonyl, or trifluoromethyl;

X is a single bond, oxygen, sulfur or sulfonyl;

G is CH; and

m is an integer from 1 to 4.

5,006,154

METHOD OF SYNCHRONIZING FLOWERING IN PLANTS

Stuart L. Kaplan, and John R. Goss, both of Modesto, Calif., assignors to Shell Oil Company, Houston, Tex.

Filed Jul. 24, 1986, Ser. No. 889,532

Int. Cl.[5] A01N *43/60, 43/08*

U.S. Cl. 71—92 **27 Claims**

1. A method for synchronizing the flowering of two genotypes of a species of a plant that is to be used in cross-breeding, which genotypes do not naturally flower at the same time after emergence from the soil, that method comprising providing in the soil in which the genotype that naturally flowers earlier is to be grown, or is growing, up to the stage of its development just prior to when anthesis begins, a chemical that is absorbed into the vascular system of a plant from its soil rhizosphere via the underground parts of the plant, and that inhibits biosynthesis of gibberellic acid(s) in the plant by inhibiting oxidation of kaurene to kaurenoic acid, the amount of said chemical being sufficient to delay the time of flowering of that genotype sufficiently to synchronize its flowering with the flowering of the later-flowering genotype.

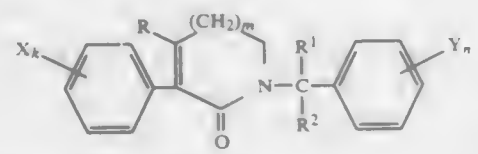
PYRROLIN-2-ONE COMPOUNDS WHICH ARE USEFUL AS HERBICIDES

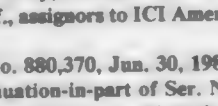
Nobuyuki Obba, Iwata; Atsuhiko Ikeda, Shizuoka; Kenji Matsunari, Fujieda; Yuji Yamada; Michiya Hirata, both of Shizuoka; Yasuo Nakamura, Tokyo; Akira Takeuchi, Kakegawa, and Hiroyuki Karino, Shizuoka, all of Japan, assignors to Kumiai Chemical Industry Co., Ltd. and Ihara Chemical Industry Co., Ltd., both of Tokyo, Japan



Filed Nov. 28, 1989, Ser. No. 442,735

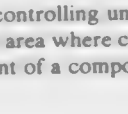
Claims priority, application Japan, Dec. 9, 1988, 63-311635; Oct. 12, 1989, 64-265900

Int. Cl.[5] **C07D** *207/20;* **A01N** *43/36*



U.S. Cl. 71—95 **17 Claims**

1. A cyclic amide compound of the formula



wherein X is a hydrogen atom, a halogen atom, a C_1–C_4 alkyl group, a C_1–C_4 haloalkyl group, a C_1–C_4 alkoxy group, a C_1–C_4 haloalkoxy group, a C_1–C_4 alkylthio group or a nitro group;

Y is a hydrogen atom, a halogen atom, C_1–C_8 alkyl group, a C_3–C_6 cycloalkyl group, a C_2–C_8 alkenyl group, a C_2–C_8 alkynyl group, a C_1–C_8 haloalkyl group, a phenyl group, a C_1–C_8 alkoxy group, a C_3–C_6 cycloalkoxy group, a C_3–C_6 cycloalkyl–C_1–C_8 alkoxy group, a C_3–C_8 alkenyloxy group, a C_3–C_8 alkynyloxy group, a benzyloxy group, a phenoxy group, a C_1–C_8 haloalkoxy group, a C_1–C_4 alkoxy–C_1–C_4 alkoxy group, a C_1–C_4 cyanoalkoxy group, a C_1–C_8 alkylthio group, a C_1–C_8 haloalkylthio group, a C_3–C_8 alkenylthio group, a C_3–C_8 alkynylthio group, a benzylthio group, a phenylthio group,

(wherein W is an oxygen atom or a sulfur atom, R^3 is a hydrogen atom or a C_1–C_4 alkyl group and R^4 is a C_1–C_4 alkyl group),

(wherein each of R^5 and R^6 is a hydrogen atom or a C_1–C_4 alkyl group), a methanesulfonyl group,

(wherein R^5 and R^6 are as defined above), a C_1–C_4 alkyl carbonyl group, a C_1–C_4 alkoxy carbonyl group, a hydroxy carbonyl group, a nitro group, a cyano group or a hydroxyl group;

R is a hydrogen atom or a C_1–C_4 alkyl group;

each of R^1 and R^2 is independently a C_1–C_4 alkyl group, or R^1 and R^2 together with the adjacent carbon atom form a C_3 ring;

m is zero;

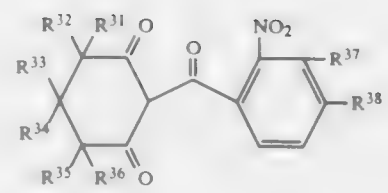
n is an integer of from 1 to 5; and

k is an integer of 1 or 2.

17. A method for killing weeds which comprises applying a herbicidally effective amount of a cyclic amide compound of the formula I as defined in claim 1, to crops to be protected.

5,006,158

CERTAIN 2-(2-SUBSTITUTED BENZOYL)-1,3-CYCLOHEXANEDIONES



Charles G. Carter, San Francisco; David L. Lee, Martinez; William J. Michaely, Richmond, and Gary W. Kraatz, San Jose, all of Calif., assignors to ICI Americas Inc., Wilmington, Del.

Division of Ser. No. 880,370, Jun. 30, 1986, Pat. No. 4,780,127, which is a continuation-in-part of Ser. No. 802,135, Nov. 29, 1985, abandoned, which is a continuation-in-part of Ser. No. 683,900, Dec. 20, 1984, abandoned. This application Feb. 23, 1988, Ser. No. 128,128

Int. Cl.[5] **A01N** *37/34, 33/32;* **C07C** *255/50, 205/06*

U.S. Cl. 71—98 **69 Claims**

26. The method of controlling undesirable vegetation comprising applying to the area where control is desired, an herbicidally effective amount of a compound having the structural formula

wherein

R^{31} is hydrogen or C_1–C_4 alkyl;

R^{32} is hydrogen or C_1–C_4 alkyl; or

R^{31} and R^{32} together are alkylene having 3 to 6 carbon atoms;

R^{33} is hydrogen or C_1–C_4 alkyl;

R^{34} is hydrogen or C_1–C_4 alkyl;

R^{35} is hydrogen or C_1–C_4 alkyl;

R^{36} is hydrogen or C_1–C_4 alkyl; and

R^{37} is hydrogen or 3-C_1–C_4 alkoxy; and

R^{38} is (1) hydrogen; (2) halogen; (3) C_1–C_4 alkyl; (4) C_1–C_4 alkoxy; (5) trifluoromethoxy; (6) cyano; (7) nitro; (8) C_1–C_4 haloalkyl; (9) R^bSO_n— wherein n is the integer 0, 1 or 2; and R^b is (a) C_1–C_4 alkyl; (b) C_1–C_4 alkyl substituted with halogen or cyano; (c) phenyl; or (d) benzyl; (10) —NR^cR^d wherein R^c and R^d independently are hydrogen or C_1–C_4 alkyl; (11) $R^eC(O)$— wherein R^e is C_1–C_4 alkyl or C_1–C_4 alkoxy; or (12) $SO_2NR^cR^d$ wherein R^c and R^d are as defined, or its herbicidally effective salts.

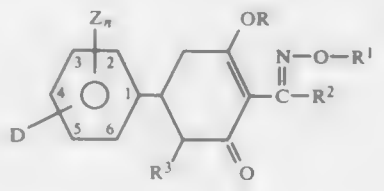
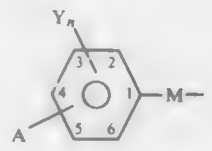
SUBSTITUTED CYCLOHEXANEDIONES AND THEIR HERBICIDAL USES



Lowell D. Markley; Christopher T. Hamilton, both of Midland, Mich.; Beth A. Swisher, Fairfield, Calif., and Jacob Secor, Midland, Mich., assignors to DowElanco, Indianapolis, Ind.

Filed Mar. 30, 1990, Ser. No. 503,199

Int. Cl.[5] **A01N** *31/06*



U.S. Cl. 71—98 **18 Claims**

1. Substituted cyclohexanedione compounds corresponding to the formula

Wherein

D is a group corresponding to the formula, with

the proviso that D is only attached in the 3 or 4 ring position;

A represents C_1–C_4 alkylthio, C_1–C_4 alkylsulfinyl or C_1–C_4 alkylsulfonyl, with the proviso that A is only attached in the 3 or 4 ring position:

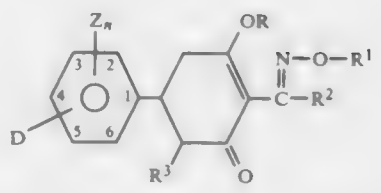
R represents hydrogen, C_1–C_4 alkyl, C_1–C_4 haloalkyl, C_2–C_4 alkenyl, C_3–C_4 alkynyl, C_1–C_4 alkylsulfonyl, phenylsulfonyl or acyl:

R^1 represents C_1–C_4 alkyl, C_1–C_4 haloalkyl, C_2–C_4 alkenyl, C_2–C_4 haloalkenyl, C_3–C_4 alkynyl, or C_3–C_4 haloalkynyl:

R^2 represents C_1–C_4 alkyl, C_1–C_4 fluoroalkyl, C_2–C_4 alkenyl, C_3–C_4 alkynyl or phenyl:

R^3 represents hydrogen, halo, C_1–C_4 alkyl, cyano, or C_1–C_4 alkoxycarbonyl:

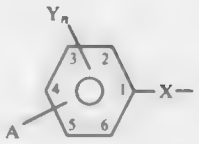
Y represents hydrogen, halo, C_1–C_4 alkyl, C_1–C_4 alkoxy, C_1–C_4 alkylthio, C_1–C_4 alkylsulfinyl or C_1–C_4 alkylsulfonyl or —CF_3, with the proviso that when M is =S(O), Y cannot be C_1–C_4 alkylthio and when M is $=S(O)_2$, Y cannot be C_1–C_4 alkylthio or C_1–C_4 alkylsulfinyl:



M represents =O, =S, =S(O) or $=S(O)_2$;

Z represents hydrogen, halo, C_1–C_4 alkyl, C_1–C_4 alkoxy or —CF_3; and

n represents the integer 1, 2 or 3;



and the herbicidally acceptable organic and inorganic salts thereof.

13. A method for the kill or control of grassy weeds which comprises contacting said weeds or their habitat with a herbicidally effective amount of a composition which comprises an inert carrier in intimate admixture with a herbicidally active ingredient which is a substituted cyclohexanedione compound corresponding to the formula

Wherein

D is a group corresponding to the formula, with

the proviso that D is attached only in the 3 or 4 ring position:

A represents C_1–C_4 alkylthio, C_1–C_4 alkylsulfinyl or C_1–C_4 alkylsulfonyl, with the proviso that A is attached only in the 3 or 4 ring position:

R represents hydrogen, C_1–C_4 alkyl, C_1–C_4 haloalkyl, C_2–C_4 alkenyl, C_3–C_4 alkynyl, C_1–C_4 alkylsulfonyl, phenylsulfonyl or acyl:

R^1 represents C_1–C_4 alkyl, C_1–C_4 haloalkyl, C_2–C_4 alkenyl, C_2–C_4 haloalkenyl, C_3–C_4 alkynyl, or C_3–C_4 haloalkynyl:

R^2 represents C_1–C_4 alkyl, C_1–C_4 fluoroalkyl, C_2–C_4 alkenyl, C_3–C_4 alkynyl or phenyl:

R^3 represents hydrogen, halo, C_1–C_4 alkyl, cyano, or C_1–C_4 alkoxycarbonyl:

Y represents hydrogen, halo, C_1–C_4 alkyl, C_1–C_4 alkoxy, C_1–C_4 alkylthio, C_1–C_4 alkylsulfinyl or C_1–C_4 alkylsulfonyl or —CF_3, with the proviso that when M is =S(O), Y cannot be C_1–C_4 alkylthio and when M is $=S(O)_2$, Y cannot be C_1–C_4 alkylthio or C_1–C_4 alkylsulfinyl;

X represents =O, =S, =S(O) or $=S(O)_2$;

Z represents hydrogen, halo, C_1–C_4 alkyl, C_1–C_4 alkoxy or —CF_3; and

n represents the integer 1, 2 or 3:

and the herbicidally acceptable organic and inorganic salts thereof.

IMINO[(3-HALOGENOPHENYL)AMINO]ACETIC ACID DERIVATIVES AND HERBICIDES CONTAINING SAME

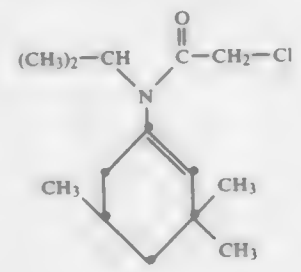
Yuichi Sugiyama; Takashi Isono; Yukihiro Nakamura; Akihiro Takaiwa, and Kenichi Komatsubara, all of Tokyo, Japan, assignors to SDS Biotech Kabushiki Kaisha, Japan

Filed Jul. 5, 1989, Ser. No. 375,587
Claims priority, application Japan, Jul. 6, 1988, 63-166798; Jul. 7, 1988, 63-167717
Int. Cl.[5] A01N *37/10*
U.S. Cl. 71—111 6 Claims

3. A herbicide containing as its active ingredient a compound represented by the following general formula

[I]

wherein X_1, X_2, X_3 and X_4 are each hydrogen, halogen or methyl, and R is hydrogen or a lower alkyl.



5,006,161

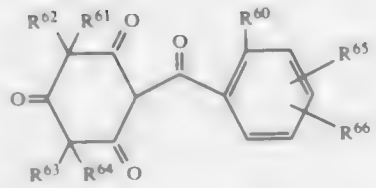
HERBICIDAL COMPOSITION

Hans W. Hässlin, Grenzach-Wyhlen, and Wolfgang P. Iwanzik, Sissein, both of Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.

Filed Mar. 1, 1988, Ser. No. 162,534
Claims priority, application Switzerland, Mar. 6, 1987, 849/87
Int. Cl.[5] A01N *37/18, 25/28*
U.S. Cl. 71—118 12 Claims

1. A herbicidal composition which comprises an aqueous suspension of microcapsules having a capsule wall of polyurea and encapsulating a herbicidally active N-chloroacetylcyclohexeneamine of the formula I

(I)



5,006,162

CERTAIN 2-(2-SUBSTITUTED BENZOYL)-1,3,5-CYCLOHEXANETRIONES

Charles G. Carter, Silver Spring, Md., assignor to ICI Americas Inc., Wilmington, Del.

Division of Ser. No. 126,449, Nov. 30, 1987, Pat. No. 4,797,150, which is a continuation-in-part of Ser. No. 110,988, Oct. 21, 1987, abandoned, which is a division of Ser. No. 880,370, Jun. 30, 1987, Pat. No. 4,780,127, which is a continuation-in-part of Ser. No. 872,067, Jun. 9, 1986, abandoned. This application Oct. 11, 1988, Ser. No. 255,293
Int. Cl.[5] A01N *35/06*
U.S. Cl. 71—123 17 Claims

1. The method of controlling undesirable vegetation comprising applying to the area where control is desired, an herbicidally effective amount of a compound having the formula

wherein

R^{60} is hydrogen; halogen; C_1–C_2 alkyl; C_1–C_2 alkoxy; nitro; cyano; C_1–C_2 haloalkyl; or R^aSO_n— wherein n is 0 or 2 and R^a is C_1–C_2 alkyl, trifluoromethyl or difluoromethyl; or trifluoromethoxy or difluoromethoxy;

R^{61} is hydrogen or C_1–C_4 alkyl;

R^{62} is hydrogen or C_1–C_4 alkyl; or

R^{61} and R^{62} together are C_2–C_5 alkylene;

R^{63} is C_1–C_4 alkyl;

R^{64} is C_1–C_4 alkyl; or

R^{63} and R^{64} together are C_2–C_5 alkylene;

R^{65} and R^{66} independently are (1) hydrogen; (2) halogen; (3) C_1–C_4 alkyl; (4) C_1–C_4 alkoxy; (5) trifluoromethoxy; (6) cyano; (7) nitro; (8) C_1–C_4 haloalkyl; (9) R^bSO_n— wherein n is the integer 0, 1 or 2; and R^b is (a) C_1–C_4 alkyl; (b) C_1–C_4 alkyl substituted with halogen or cyano; (c) phenyl; or (d) benzyl; (10) —NR^cR^d wherein R^c and R^d independently are hydrogen or C_1–C_4 alkyl; (11) $R^eC(O)$— wherein R^e is C_1–C_4 alkyl or C_1–C_4 alkoxy; or (12) —$SO_2NR^cR^d$ wherein R^c and R^d are as defined; and (13) —$N(R^c)C(O)R^d$ wherein R^c and R^d are as defined and their salts.

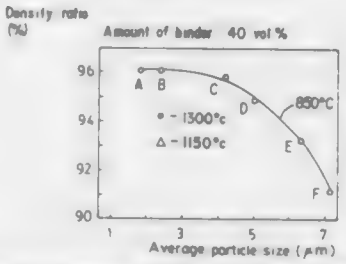
TURBINE BLADE SUPERALLOY II

Raymond C. Benn, Huntington, W. Va.; Jeffrey M. Davidson, Summit, N.J., and Kenneth R. Andryszak, Goshen, N.Y., assignors to Inco Alloys International, Inc., Huntington, W. Va.

Continuation of Ser. No. 711,199, Mar. 13, 1985. This application May 8, 1989, Ser. No. 348,383
Int. Cl.[5] B22F *1/00*
U.S. Cl. 75—229 2 Claims



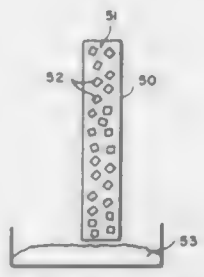
1. A zone-annealed recrystallized alloy body especially useful in hot stages of industrial gas turbines having improved resistance to long term stress at temperatures in the range 800° to 1100° C. combined with enhanced oxidation and corrosion resistance comprising, in at least part, an aggregation of elongated, essentially parallel metallic crystals having grain boundaries therebetween wherein the average grain aspect ratio of said metallic crystals is at least about 7, said metallic crystals (1) having a γ′ phase dispersed therein at a temperature lower than about 1180° C. and (2) having dispersed therethrough particles in the range of about 5 to 500 nanometers in major dimension of a stable yttrium-containing oxidic phase, said metallic crystals and grain boundary material consisting essentially in weight percent of about 19 to about 21% chromium, about 6 to about 7% aluminum, up to about 1% titanium, up to about 4% tantalum, up to about 2% niobium about 1.5 to 2.5% molybdenum, about 3 to about 4.5% tungsten, up to about 10% cobalt, up to about 2% hafnium, about 0.4 to about 1% oxygen, about 0.4 to about 1% yttrium, up to about 0.2% carbon, up to about 0.05% boron, up to about 0.5% zirconium, up to about 2% iron, up to about 0.5% nitrogen, up to about 4% rhenium in replacement of an equal percentage of molybdenum or tungsten, the balance, except for impurities being essentially nickel.

5,006,164

STARTING MATERIAL FOR INJECTION MOLDING OF METAL POWDER

Yoshisato Kiyota, Chiba, Japan, assignor to Kawasaki Steel Corporation, Japan

Continuation-in-part of Ser. No. 342,795, Apr. 25, 1989, abandoned, which is a division of Ser. No. 282,489, Dec. 12, 1988, Pat. No. 4,867,943. This application Feb. 26, 1990, Ser. No. 484,531
Claims priority, application Japan, Dec. 14, 1987, 62-314271
Int. Cl.[5] B22F *1/00*
U.S. Cl. 75—255 6 Claims



1. A starting material for injection molding of a metal powder, which provides a sintered part having a density ratio of higher than 94% by sintering at a temperature lower than an A_3 transformation point, comprising from 38 to 46% by volume of an organic binder and the balance of a spherical iron powder with an average particle size from 2 to 6 μm wherein the value of said average particle size (μm) does not exceed the value of $\{25 - \frac{1}{2}\}$.

5,006,165

METHOD FOR MERCURY REFINEMENT

Mark W. Grossman, Belmont; Richard Speer, Reading, and William A. George, Rockport, all of Mass., assignors to GTE Products Corporation, Danvers, Mass.

Filed Dec. 23, 1988, Ser. No. 289,640
Int. Cl.[5] C22B *43/00*
U.S. Cl. 75—407 5 Claims

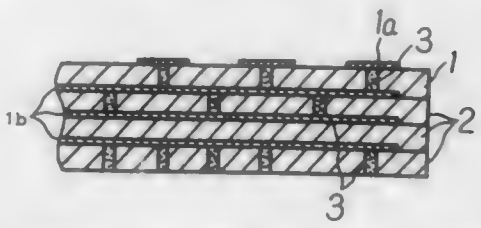
1. A process for the purification of the effluent formed in a photochemical enrichment reactor during the operation thereof for the photochemical isotope enrichment of mercury for the production of the ^{196}Hg isotope, which comprises separating the effluent, which contains both ^{196}Hg and one or more of the particulate mercury compounds selected from the group consisting of Hg_2Cl_2 and HgO, by mechanical means.

5,006,166

RECOVERY OF NOBLE METALS

David J. Gulliver, Hull, England, assignor to BP Chemicals Limited, London, England

Filed Oct. 20, 1988, Ser. No. 260,193
Claims priority, application United Kingdom, Oct. 24, 1987, 8724972
Int. Cl.[5] B01J *80/11;* C01G *55/00*
U.S. Cl. 75—413 11 Claims



1. A process for recovering a Group VIII noble metal from a mixture consisting essentially of the Group VIII noble metal, tar and methyl iodide which comprises the steps of (a) preparing a mixture consisting essentially of the Group VIII noble metal, tar and methyl iodide, (b) feeding the mixture into a vessel, (c) isolating the inside of the vessel from the outside, (d) heating the vessel and its contents to a temperature in excess of 50° C., (e) removing a mixture consisting essentially of tar and methyl iodide from the vessel and (f) removing the Group VIII metal in solid form from the vessel.

5,006,167

METALLIZING COMPOSITION

Asao Morikawa, and Kazuo Kondo, both of Aichi, Japan, assignors to NGK Spark Plug Co., Ltd., Aichi, Japan

Filed Jan. 25, 1989, Ser. No. 301,291
Claims priority, application Japan, Jan. 25, 1988, 63-12670
Int. Cl.[5] C23C *30/00*
U.S. Cl. 106—1.18 9 Claims

1. A metallizing composition that comprises 100 parts by weight of Au powder, from 2 to 7 parts by weight of CuO powder, from 0.3 to 2 parts by weight of a glass-based inorganic powder free from PbO, and from 3 to 8 parts by weight of a resin.

5,006,168

WATER SOLUBLE POLYMERS AS ALCOHOL REPLACEMENT IN LITHOGRAPHIC FOUNTAIN SOLUTIONS

Jashawant J. Modi, and Bruce E. Banyai, both of Hockessin, Del., assignors to Aqualon Company, Wilmington, Del.

Filed Apr. 3, 1989, Ser. No. 331,741
Int. Cl.[5] C09K *3/18*
U.S. Cl. 106—2 9 Claims

1. An improved lithographic printing fountain solution comprising:

(a) an aqueous solution of a oxidatively degraded hydroxypropylcellulose or oxidatively degraded hydrophobically modified hydroxyethyl cellulose with a molecular weight between 5,000 and 100,000 wherein a 30% by weight solution has a viscosity below 4000 cps at 25° C.;

(b) a desensitizing agent;

(c) an acid and a buffer; and

(d) a wetting agent or surfactant;

where the aqueous solution is used in an amount of about 1% by weight of the weight of the fountain solution.

5,006,169

LIPOPHOBICATING SOLUTION FOR ELECTROPHOTOGRAPHIC PLATES FOR OFFSET PRINTING

Hajime Yoshida, Nagoya, Japan, assignor to Nikken Chemical Laboratory Co., Ltd., Nagoya, Japan

Division of Ser. No. 268,948, Nov. 8, 1988, Pat. No. 4,954,173. This application Jun. 11, 1990, Ser. No. 536,495
Claims priority, application Japan, Nov. 19, 1987, 62-292630
Int. Cl.[5] C09K *3/00;* B41M *5/25*
U.S. Cl. 106—2 11 Claims

1. In a method for offset printing with an electrophotographic plate, the improvement comprising using a lithophobicating solution comprising:

(a) an effective amount of phytic acid to prevent oily print-

ing ink from sticking to nonimage areas of the surface of said electrophotographic plate,

(b) an amount of a diamine, having the general formula NH_2—R—NH_2 wherein R is an alkyl or aryl group having from 2 to 8 carbon atoms, effective to adjust the pH of said lipophobicating solution to a value in the range of from about 3.0 to about 6.0,

(c) at least about 60 mol% by weight, based on said phytic acid, of a mixture of at least two dicarboxylic acids selected from the group consisting of dicarboxyic acids represented by the formula HOOC—$(CH_2)_n$—COOH (wherein n is an integer in the range from 1 to 6) and phthalic acid, and

(d) water.

5,006,170

HOT MELT INK COMPOSITIONS

William M. Schwarz, Webster, N.Y.; Robert H. Marchessault, Montreal; Lupu Alexandru, Toronto, both of Canada, and Bernard Heurisset, Grenoble, France, assignors to Xerox Corporation, Stamford, Conn.

Filed Jun. 22, 1989, Ser. No. 369,797

Int. Cl.[5] C09D *11/00*

U.S. Cl. 106—20 **39 Claims**

1. A hot melt ink composition which comprises a colorant, a binder, and a propellant selected from the group consisting of hydrazine; cyclic amines; ureas; aldehydes; ketones; biphenyl; hexane; benzene; phenols; amides; imides; halocarbons; urethanes; ethers; sulfones; sulfamides; methyl sulfonamide; phosphites; phosphonates; alkyl sulfides; alkyl acetates; and sulfur dioxide, said ink being a solid at room temperature.

5,006,171

INK ERADICATOR FOR INKS CONTAINING TRIARYL METHANE DYESTUFFS

Norbert Mecke, Hanover, and Albert Schmedes, Pattensen, both of Fed. Rep. of Germany, assignors to Pelikan Aktiengesellschaft, Hanover, Fed. Rep. of Germany

Filed Dec. 19, 1989, Ser. No. 454,778

Claims priority, application Fed. Rep. of Germany, Dec. 19, 1988, 3842774

Int. Cl.[5] C09D *11/00, 13/00;* **C08C** *3/00;* **B05D** *3/10*

U.S. Cl. 106—21 **20 Claims**

1. An aqueous ink eradicator solution for decoloring a triarylmethane dyestuff ink on a substrate, comprising:

(a) substantially 2 to 50 wt % of a sugar component selected from the group consisting of at least one sugar, at least one solid sugar alcohol and mixtures thereof; and

(b) substantially 0.1 to 5 wt % of a reducing sulfur component consisting of at least one reducing sulfur compound.

5,006,172

INK-JET INKS FOR THE MARKING OF PLASTICS

Ching K. Chieng, Bukit Merah Central, Singapore, and Charles L. Thierheimer, Jr., Corvallis, Oreg., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Filed Aug. 17, 1989, Ser. No. 395,224

Int. Cl.[5] C09D *11/02*

U.S. Cl. 106—22 **28 Claims**

1. In a method of printing plastics with a thermal ink-jet printer, said plastic having a given solubility parameter, the improvement consisting of printing an ink onto the surface of said plastic, said ink consisting essentially by weight:

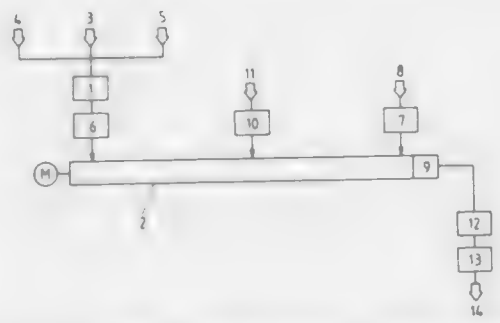
(a) from about 1% to about 10% dyestuff;

(b) from about 1% to about 25% jetting agent, comprising at least one component selected from the group consisting of water and an organic liquid;

(c) the balance being substantially at least one organic solvent which is capable of dissolving, swelling, or penetrating the plastic material and which is a solvent for said dyestuff, said at least one organic solvent also having a given solubility parameter, said solubility parameter of said at least one solvent being comparable to that of said plastic.

said printing being performed at a contact angle relative to said plastic surface of about 40° to 70°.

5,006,173



TRANSFORMING CRUDE COPPER PHTHALOCYANINES INTO A PIGMENTARY STATE

Wolfgang Fath, Hirschberg, Rainer Nachtrab, Ludwigshafen, and Rudolf Polster, Frankenthal, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Fed. Rep. of Germany

Filed Jun. 23, 1989, Ser. No. 370,727

Int. Cl.[5] C09B *67/50*

U.S. Cl. 106—410 **7 Claims**

1. A process which comprises subjecting a suspension of the (organic solvent) and the milled crude (copper phthalocyanine) (hereinafter referred to as the solvent/pigment suspension), which has a pigment concentration of from 15 to 55% by weight and a solvent concentration of from 15 to 85% by weight and which may contain water in a concentration of from 0 to 30% by weight, to a shear gradient of from 1000 to 20000 s^{-1} for a period of from 2 to 1000 s with an energy uptake during shearing of from 0.01 to 0.2 kWh/kg of pigment throughput, then metering water into the solvent/pigment suspension in an amount of from 0.1 to 10 times the amount of the solvent, to effect a defined discontinuation of the conditioning process, and finally mixing the suspension until homogeneous.

5,006,174

SMOKE SUPPRESSANT ADDITIVE FOR HALOGENATED POLYMER COMPOSITION

Ernest W. J. Michell, North Harrow, and Shona M. Page, Greenford, both of United Kingdom, assignors to Cookson Group PLC, United Kingdom

Continuation of Ser. No. 57,275, Jun. 1, 1987, abandoned. This application Jul. 10, 1989, Ser. No. 378,427

Claims priority, application United Kingdom, Jun. 2, 1986, 8613294

Int. Cl.[5] C08K *3/22;* **C04B** *14/30*

U.S. Cl. 106—426 **12 Claims**

1. A smoke suppressant additive for halogenated polymer compositions which comprises a starting mixture consisting of from 30% to 70% by weight of zinc oxide and from 70% to 30% by weight of caustic calcined magnesium oxide, the starting mixture having been doped with a positive amount of up to 20% by weight of finely divided silica based upon the total weight of the zinc oxide and magnesium oxide, and the silica-doped mixture having been subjected to calcination at a temperature in the range of from 700° to 1100° C. for a period of time of from 1 to 6 hours.

5,006,175

HIGH INFRA RED REFLECTING BROWN RUTILE PIGMENT COMPOSITIONS

Zoltan M. Modly, Shaker Hts., Ohio, assignor to Engelhard Corporation, Edison, N.J.

Filed Feb. 27, 1990, Ser. No. 485,464

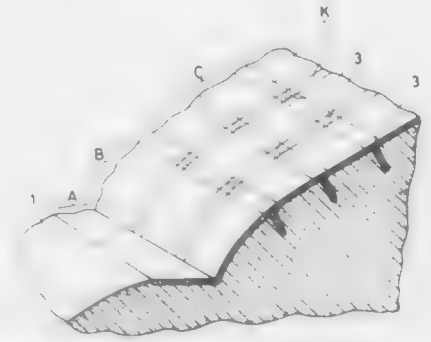
Int. Cl.[5] C09C *1/36*

U.S. Cl. 106—439 **11 Claims**

1. A brown rutile pigment composition comprising about 40 to about 50% by weight of titanium present as titanium dioxide, from about 2.3 to about 4.5% by weight of manganese, from about 7.3 to about 11% by weight of tungsten, from 0.05 to about 5% of lithium and from about 0.1 to about 20% of cerium.

5,006,176

COAGULANT FOR SOIL AND/OR SAND METHOD FOR PREVENTING WASHOUT USING THE SAME



Yoshiyuki Oka, Fuchu, Japan, assignor to Shiro Sejima; Yoshiyuki Oka and Ken Murata, all of Tokyo, Japan

Filed Mar. 27, 1990, Ser. No. 500,251

Claims priority, application Japan, Apr. 5, 1989, 1-84770

Int. Cl.[5] C04B *12/04*

U.S. Cl. 106—633 **4 Claims**

3. A method for preventing washout of soil and/or sand using a coagulant, the method comprising the steps of:

preparing a coagulant by premixing approximately 10 parts by weight of each of carboxymethylcellulose, calcium chloride and sodium metasilicate powder, 0.3 to 100 parts by weight of silicon dioxide and 1 to 300 parts by weight of calcium carbonate;

scattering said coagulant over the surface of the soil and/or sand in a manner such that 500 to 2000 g of said coagulant is applied to a volume of surface area of 1 m^2 and a depth of 10 cm;

scattering portland cement over the local area of the construction site in a manner such that 1 to 20 kg of said portland cement is applied to a volume of surface area of 1 m^2 and a depth of 10 cm; and

excavating said soil and/or sand and mixing said coagulant, said portland cement and said soil and/or sand, while adjusting water content of said soil and/or sand in the range of 35 to 45% by sprinkling water, so as to form, as time elapses, high strength local area and low strength local area in said construction site.

5,006,177

PROCESS AND COMPOSITION FOR CEMENTING WELLS PASSING THROUGH SALT FORMATIONS

Rüdiger Oberste-Padtberg, Merrheim, France, assignor to Dowell Schlumberger Incorporated, Tulsa, Okla.

Filed Dec. 4, 1984, Ser. No. 677,965

Claims priority, application France, Dec. 19, 1983, 83 20303

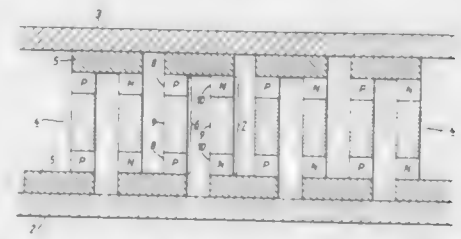
Int. Cl.[5] C04B *24/34*

U.S. Cl. 106—805 **3 Claims**

1. A process for cementing a borehole passing through a salt formation comprising the step of injecting into the annular space, the composition consisting of a cement, mix water and additives selected so as to be capable of reacting or participating in a reaction on the salts of the formations traversed in order to form fibrous minerals capable of solidly bonding the cement and the salt strata traversed, said mix water containing at the start less than 18 percent sodium chloride by weight of mix water, and containing a set retarding amount of a combination of a lignosulfonate and borax or citric acid.

5,006,178

THERMO-ELECTRIC DEVICE WITH EACH ELEMENT CONTAINING TWO HALVES AND AN INTERMEDIATE CONNECTOR PIECE OF DIFFERING CONDUCTIVITY



Theodorus Bijvoets, Joh. Strausslaan 36, 5583 XX Waalre, Netherlands

Filed Apr. 27, 1989, Ser. No. 344,335

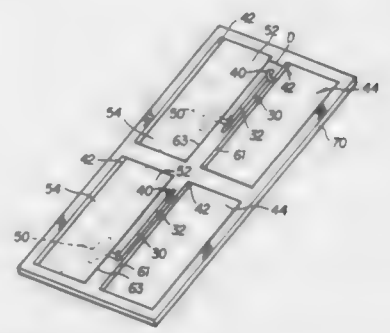
Claims priority, application Netherlands, Apr. 27, 1988, 8801093

Int. Cl.[5] H01L *35/28*

U.S. Cl. 136—211 **10 Claims**

1. A thermoelectric device comprising a number of thermoelectric elements electrically connected in series and thermally connected in parallel, said thermoelectric elements each being provided with two element halves, electrically connected in series and thermally connected in parallel, of opposite conductivity types, characterized in that each element half has two semiconducting end pieces and an electrical conductivity intermediate piece of differing electrical conductivity which are electrically connected in series.

5,006,179



INTERCONNECT FOR ELECTRICALLY CONNECTING SOLAR CELLS

Edward M. Gaddy, Potomac, Md., assignor to Solarex Corporation, Frederick, Md.

Filed May 24, 1989, Ser. No. 356,208

Int. Cl.[5] H01L *31/05*

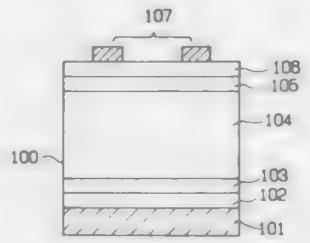
U.S. Cl. 136—244 **11 Claims**

7. A solar cell array, comprising:

a plurality of solar cells arranged in an array, each said solar cell having an upper electrical contact and a lower electrical contact;

a plurality of interconnects for electrically connecting said solar cells, each said interconnect comprising:

a stress relief part comprised of a single longitudinally ex-



tended member having a central portion and first and second end portions defining a planar surface;
a first connecting part attached to the upper contact of a respective one of said solar cells;
a second connecting part attached to the lower contact of a solar cell adjacent to said respective one of said solar cells;
means for joining said first and second connecting parts to respective first and second end portions of said stress relief part such that said central portion of said stress relief part is disposed substantially parallel to adjacent edges of the solar cells which are electrically connected by the interconnect and such that said planar surface defined by said stress relief part extends substantially perpendicularly relative to the top surface of the solar cell array.

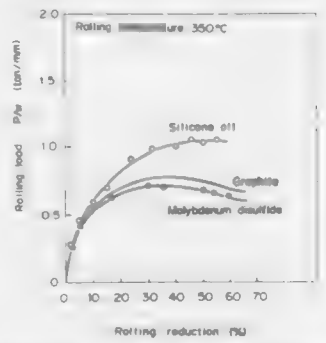
PIN HETEROJUNCTION PHOTOVOLTAIC ELEMENTS WITH POLYCRYSTAL GAP (H,F) SEMICONDUCTOR FILM

Masahiro Kanai, Tokyo; Tatsuyuki Aoike; Koichi Matsuda, both of Nagahama, and Soichiro Kawakami, Hikone, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 19, 1990, Ser. No. 467,538
Claims priority, application Japan, Jan. 21, 1989, 1-12507
Int. Cl.[5] H01L *31/075, 31/0368, 31/0376*
U.S. Cl. 136—258 **4 Claims**

1. A pin heterojunction photovoltaic element which generates photoelectromotive force by the junction of a p-type semiconductor layer, an i-type semiconductor layer and an n-type semiconductor layer, characterized in that at least one of said p-type and n-type semiconductor layers comprises a polycrystal semiconductor film comprised of gallium atoms (Ga), phosphorus atoms (P), hydrogen atoms (H), and atoms (M) of a p-type or n-type dopant element, said polycrystal semiconductor film contains crystal grains of an average size in the range of 50 to 1000 Å, and said polycrystal semiconductor film contains the hydrogen atoms (H) in an amount of 0.5 to 5 atomic %; and said i-type semiconductor layer comprises a non-single crystal semiconductor film containing silicon atoms (Si) as a matrix and at least one kind of atoms selected from the group consisting of hydrogen atoms (H) and fluorine atoms (F).



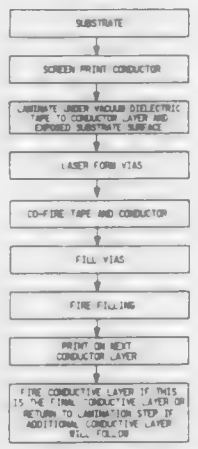
5,006,181

LUBRICATING METHOD FOR WARM ROLLING OF HIGH SILICON STEELS

Sadakazu Masuda; Fumio Fujita; Tadayoshi Murakami; Masahiko Yoshino; Ryuichi Yagi, and Masamoto Kamata, all of Tokyo, Japan, assignors to Nippon Kokan Kabushiki Kaisha, Tokyo, Japan

PCT No. PCT/JP88/00491, § 371 Date Dec. 15, 1988, § 102(e) Date Dec. 15, 1988
PCT Filed May 23, 1988, Ser. No. 294,666
Int. Cl.[5] H01F *1/04*
U.S. Cl. 148—111 **3 Claims**

1. A lubricating method for warm rolling of high Si steels, wherein warm rolling is carried out on a high Si steel at temperatures between 200° and 600° C., while a lubricant is sprayed on to the working rolls or assistant rolls, the lubricant



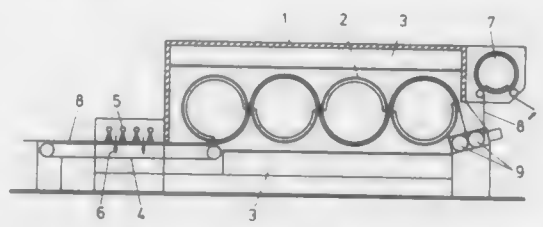
having been produced by mixing graphite or MoS_2 into a heat resistant grease.

5,006,182

METHOD FOR FABRICATING MULTILAYER CIRCUITS

John E. Gantzhorn, Jr., Hockessin, and Steven R. Nann, Newark, both of Del., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Nov. 17, 1989, Ser. No. 438,653
Int. Cl.[5] B32B *31/26*
U.S. Cl. 156—089 **17 Claims**



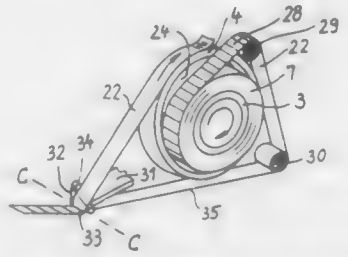
1. A method for the fabrication of multilayer circuits comprising the sequential steps of:
(a) applying to an electrically non-conducting layer a patterned conductive layer in registry with the vias, if any, formed in the non-conducting layer;
(b) laminating to the conductive layer and exposed areas of the non-conducting layer a dielectric layer while under vacuum, at least one of the electrically non-conducting layer(s) and dielectric layer(s) being an unfired dielectric tape optionally having a via pattern formed therein which is in registry with the patterned conductive layer;
(c) if the unfired dielectric tape of step (b) lacks a via pattern, forming vias in selected positions through the layer of unfired dielectric tape in registration with the patterned conductive layer;
(d) firing the assemblage of step (c);
(e) filling the vias in the dielectric tape with a conductive metallization;
(f) firing the assemblage of step (e);
(g) applying a patterned conductive layer to the dielectric tape in registry with the vias therein; and
(h) firing the assemblage of step (g).

5,006,183

PROCESS FOR PRODUCING NONWOVEN FABRICS WITH STEAM PRETREATMENT OF BINDER POWDER

Gerold Fleissner, Chur, Switzerland, assignor to Fleissner Maschinenfabrik AG, Rebstein, Switzerland

Filed Sep. 18, 1989, Ser. No. 408,730
Claims priority, application Fed. Rep. of Germany, Sep. 16, 1988, 3831496
Int. Cl.[5] B27N *1/00*
U.S. Cl. 156—62.2 **9 Claims**



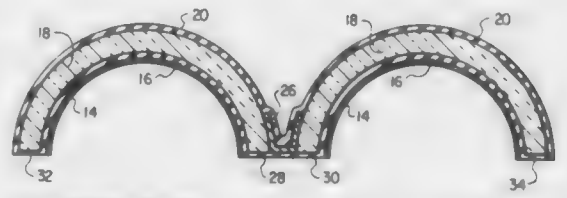
1. A process for thermal bonding of a web of fibers with binder powder wherein the fibers comprised of reclaimed wool, cotton, spun rayon, synthetic polymer, or glass fibers are uniformly mixed with binder powder comprising a phenolic resin or novolak resin to form a binder-containing nonwoven web; the nonwoven web containing the binder powders is passed through a steam treatment zone wherein steam is drawn through the nonwoven to wet the binder powders with steam condensate so that the binder powders will adhere more tenaciously to the fibers; and heated air is passed through the binder-containing nonwoven web for bonding of the fibers with said binder powder in a heat treatment zone by passing the binder-containing nonwoven web successively over a plurality of sieve drums, said binder powder remaining within the nonwoven web without adhering to surfaces of the sieve drums.

5,006,184

HAND OPERATED DEVICE FOR TRANSFERRING A FILM FROM A CARRIER TAPE TO A SUBSTRATE

Cristoph Manusch, Hemmingen, and Hans-Jürgen Harp, Hanover, both of Fed. Rep. of Germany, assignors to Pelikan Aktiengesellschaft, Hanover, Fed. Rep. of Germany

Filed Nov. 3, 1989, Ser. No. 431,610
Claims priority, application Fed. Rep. of Germany, Nov. 5, 1988, 3837621
Int. Cl.[5] B32B *31/00*
U.S. Cl. 156—577 **16 Claims**



1. Hand operated device for transferring film from a carrier tape to a substrate, in which in a casing the carrier tape is guided from a smaller supply reel to a pressure edge of an application foot projecting at the bottom of the casing in the outwards direction and from there back into the casing onto a larger take-up reel, the supply and take-up reel being coupled together by means of a slip clutch acting in the rotation direction, and with guide means for guiding the carrier tape fitted to the casing, characterized in that the supply reel (3) and take-up reel (4) are axially juxtaposed and are reciprocally inclined by an acute angle (α), the supply reel (3) projecting at the bottom into the inner area (24) of the core (6) of the larger take-up reel (4) open on the side facing reel (3), whilst its top surface is located completely outside the same, that the slip clutch (25–27) is located centrally between the two reels (3,4), that the guide means in the tape guide of the carrier tape (22) are fitted between the supply reel (3) and the application foot (31) and that the pressure edge (33) is followed by a guiding edge (34) inclined at an angle (δ) the lateral deflection of the carrier tape (22) towards the take-up reel (4).

5,006,185

PIPE INSULATION AND CORROSION PROTECTION SYSTEM

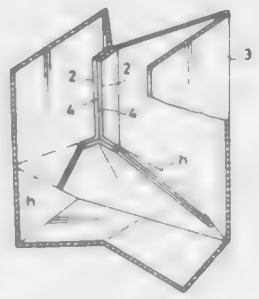
Donald R. Anthony, Plano, and George C. Williamson, III, Wylie, both of Tex., assignors to Atlantic Richfield Company, Los Angeles, Calif.

Filed Dec. 29, 1987, Ser. No. 139,232
Int. Cl.[5] B31C *13/00*
U.S. Cl. 156—193 **4 Claims**

1. A method of making a segment of pipe insulation comprising the steps of:
(a) covering a mandrel with an inner sleeve material forming an elongated cylindrical inner support;
(b) applying an inner jacket layer of elastomeric material to the exterior of the inner sleeve;
(c) applying a layer of insulating material to cover the inner jacket and form a thermal insulating barrier;
(d) cutting a hinge seam longitudinally through said layer of insulating material and said inner jacket and said inner sleeve;
(e) overlapping the hinge seam with a hinge element;
(f) applying an outer jacket layer of elastomeric material to the exterior and ends of the layer of insulating material and covering the hinge element;
(g) cutting an opening seam through the outer jacket, the insulating material, the inner jacket layer, and the inner sleeve at a location on the opposite side of the mandrel from the hinge seam;
(h) removing the insulation segment in two hingedly connected semi-cylindrical portions from the mandrel; and
(i) applying an outer jacket layer of elastomeric material to opposed sides of the hinge seam and the opening seam and joining and sealing with the inner jacket and the outer jacket to completely encapsulate the insulating material.

5,006,186

MANUFACTURING METHOD OF SQUARE BOTTOM BAGS



Naoomi Yokoyama, Ichikawa, Japan, assignor to Altech Co., Ltd., Tokyo, Japan

Filed May 17, 1989, Ser. No. 353,096
Claims priority, application Japan, May 17, 1988, 63-118273, 63-118274
Int. Cl.[5] B31B *1/22, 1/26, 1/62*
U.S. Cl. 156—211 **4 Claims**

1. A manufacturing method of a square bottom bag comprising the steps of: folding each of the two brims of a sheet bag raw material blank to an identical face side and butting them together to form a flat cylindrical body;
providing one of a coating of a bonding agent and a heat seal layer to the outside of both the butted brims;
arranging the flat cylindrical body in an inverted V-shaped form by providing a fold at a mid-section of the cylindrical body and providing folds at each side of the mid-sec-

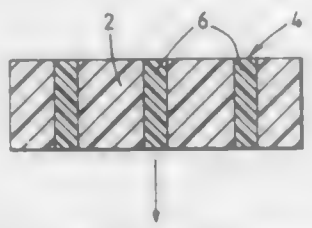
tion fold to arrange the cylindrical body in a W-shape with the one of coated and layered brim sections in substantially face to face relationship.;

press-fitting the section of cylindrical body formed into W-shape from the outside for adhering the one of coated and layered brim sections with said bonding agent to the opposing the one of the coated and layered brim sections;

forming the blank with cuts lying at about 90 degrees with respect to each other forming two notches positioned on both of the brims, each of the notches of each brim being spaced a substantially equal distance from said mid section, said inverted V-shaped fold of said flat cylindrical body is provided between said notches, said W-shaped folded section being provided at the center of said notches.

5,006,187

PLUGGED MICROPOROUS FILM



John A. Cook, Faringdon, and Raymond W. Singleton, Cirencester, both of Great Britain, assignors to Scimat Limited, Great Britain

Continuation of Ser. No. 88,623, Aug. 21, 1987, abandoned. This application Jun. 15, 1989, Ser. No. 366,360

Claims priority, application United Kingdom, Aug. 22, 1986, 8620484

Int. Cl.[5] B29C *47/00*; B05D *3/06, 5/00*; B32B *31/20*

U.S. Cl. 156—244.11 17 Claims

1. A method of making a plugged microporous film from a film which comprises a structural component having pores extending therethrough, and a plugging material within the pores, the method comprising:

(a) selectively modifying the plugging material so that its susceptibility to a crosslinking treatment differs from a first region of the film to a second region thereof, the modification step comprising treatment of the film with a reagent;

(b) crosslinking the plugging material at the second region of the film; and

(c) removing the uncrosslinked plugging material from the first region of the film leaving plugs of crosslinked plugging material in the pores at the second region of the film.

5,006,188

METHOD FOR PRODUCING PLASTIC MOLDINGS

Mitsuji Usui; Takeo Hanamura, and Junichi Kurihara, all of Wako, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 1, 1989, Ser. No. 304,455

Claims priority, application Japan, Feb. 3, 1988, 63-024406

Int. Cl.[5] B29C *51/14*

U.S. Cl. 156—245 6 Claims

1. A method for producing plastic molding made of a laminate of a skin material and a base material, having the steps of:

placing the skin material in a mold;

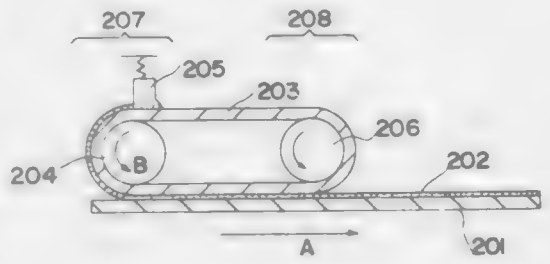
melting a predetermined quantity of the base resin and charging it onto the kin material in the mold; and

closing the mold and cooling to form the laminated plastic molding; wherein the improvement comprises;

all of said quantity of said molten resin being charged onto the skin material after having been stored outside the mold in a molten state and in a shape that corresponds to or resembles the shape of the plastic molding being produced.

5,006,189

COATING METHOD AND CLEANING METHOD FOR HEAT-SOLUBLE MATERIAL



Masahide Tsukamoto, Nara; Yutaka Nishimura, and Yasuo Fukui, both of Kadoma, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed May 26, 1989, Ser. No. 357,597

Claims priority, application Japan, May 26, 1988, 63-128946; May 31, 1988, 63-133262

Int. Cl.[5] B32B *31/16*

U.S. Cl. 156—247 9 Claims

1. A cleaning method for removing an image-forming material formed on a surface of an image-carrying substrate from said surface of said image-carrying substrate, comprising the steps of:

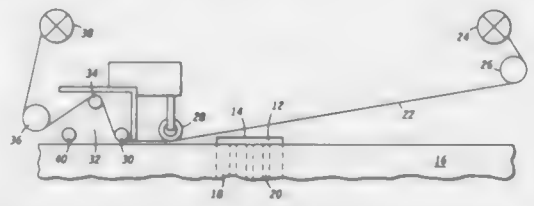
supplying a heat-soluble material in a heated and melted condition onto said surface of said image-carrying substrate on which said image-forming material has been formed;

laying a cleaning sheet member on said heat-soluble material supplied onto said surface of said image-carrying substrate;

cooling said heat-soluble material to solidify said heat-soluble material; and

separating said image-carrying substrate and said cleaning sheet member from each other such that said image-forming material is moved from said surface of said image-carrying substrate to said cleaning sheet member together with the solidified heat-soluble material.

5,006,190



FILM REMOVAL METHOD

Richard W. Earle, Phoenix, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Feb. 5, 1990, Ser. No. 474,894

Int. Cl.[5] B32B *31/16*

U.S. Cl. 156—247 1 Claim

1. A method of removing an adhered film from a wafer, said method comprising the steps of:

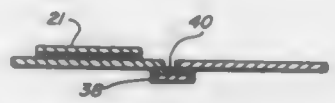
placing a wafer having a film to be removed adhered thereto on a vacuum stage to hold said wafer in a stationary position;

applying an adhesive tape along a length of the non-adhered surface of said film, said tape being applied by applying means which apply pressure to said tape along said length which is in the range of 5 to 50 percent of the entire length of said film;

lifting said applying means away from said film following the application of said adhesive tape; and

pulling said tape with pulling means so that said film initially separates from a portion of said wafer and is then completely removed therefrom, said pulling means comprising a top roller, a front bottom roller and a back bottom roller, said top roller serving to guide tape into a tape take-up reel, said front bottom roller serving to hold said tape approximately planar to rolling means so that it will apply said tape along the length and said back bottom roller serving to pull said tape following its adherence to said film.

5,006,191



METHOD OF PRODUCING A LABEL-PROVIDING CONTINUOUS BUSINESS FORM

Eric R. Schmidt, Elgin, Ill., assignor to Wallace Computer Services, Inc., Hillside, Ill.

Continuation-in-part of Ser. No. 178,497, Apr. 7, 1988, Pat. No. 4,865,669. This application Jun. 19, 1989, Ser. No. 367,891

Int. Cl.[5] B32B *31/10*

U.S. Cl. 156—268 5 Claims

1. A method of producing a label-providing continuous business form comprising the steps of: advancing a composite first web along a predetermined path, said composite web including a bottom release ply, a top label stock ply, and an adhesive layer therebetween; advancing a second web in said path in spaced relation to said composite web and in co-planar relationship to said composite web; adhering a continuous splicing strip to said composite and second webs in the edge portions adjacent each other to provide a label supplying business form; removing a continuous portion of said top label stock ply of said first web.

5,006,192

APPARATUS FOR PRODUCING SEMICONDUCTOR DEVICES

Mikio Deguchi, Itami, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Japan

Filed Nov. 21, 1988, Ser. No. 273,556

Claims priority, application Japan, Jun. 28, 1988, 63-158062

Int. Cl.[5] H01L *21/304*; C23C *14/00*

U.S. Cl. 156—345 7 Claims

1. An apparatus for treating wafers utilizing a plasma produced by a gas discharge comprising:

an electrically conductive, grounded vacuum vessel;

a main electrode, an opposing electrode, means for supporting a wafer, said means for supporting a wafer being disposed on one of said main and opposing electrodes, and a limiter electrode disposed between said main and opposing electrodes, said main, opposing, and limiter electrodes being disposed within said vacuum vessel and generally enclosing a first discharge space and defining a second discharge space outside the first discharge space within said vacuum vessel;

means for introducing a gas into said vacuum vessel;

a high voltage source having a high voltage terminal and a ground terminal for forming a high voltage electrical field in the first discharge space and generating a plasma in the first discharge space in a gas introduced into said vacuum vessel, one of said main and opposing electrodes being electrically connected to said high voltage terminal and the other of said main and opposing electrodes being electrically connected to said ground terminal; and

means for selectively alternatively electrically connecting said limiter electrode to said ground terminal for generating the plasma in the first discharge space and to said high voltage terminal for generating a plasma in the first and second discharge spaces.

5,006,193

AUTOMATIC CLAMP TIGHTENER

Bradley S. Quick, Staatsburg, N.Y., assignor to James L. Taylor Manufacturing Co., Poughkeepsie, N.Y.

Continuation-in-part of Ser. No. 244,915, Sep. 14, 1988, Pat. No. 4,952,269, which is a continuation of Ser. No. 846,363, Mar. 31, 1986, Pat. No. 4,778,555. This application Jul. 19, 1989, Ser. No. 353,699

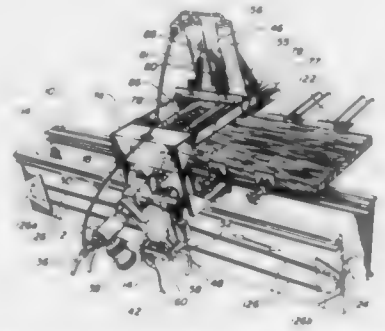
The portion of the term of this patent subsequent to Oct. 10, 2005, has been disclaimed.

Int. Cl.[5] B23Q *3/08*

U.S. Cl. 156—350 4 Claims

1. In a device for allowing glued pieces of wood to dry, said device incorporating clamps to hold the pieces of wood in close and high pressure engagement, the improvement comprising:

means for automatically tightening and loosening said clamps including fluid driven rotating means mounted for engagement with said clamp;



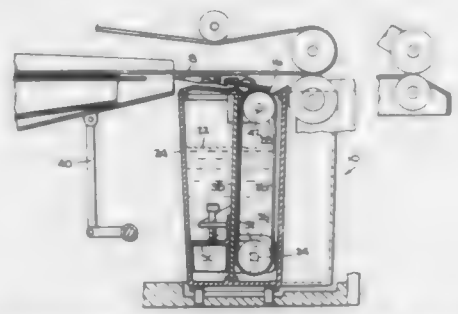
means connected to said tightening means for automatically flattening and securely holding the wood when said clamp are being tightened including a hold-down means actuated momentarily before said tightener means to:

(i) flatten the work piece before said clamp is tightened and

(ii) to hold down and align the work piece at the location to be tightened; and

a sensor of a proximity type for generating electrical signals

on the sensing of the location of a clamp to be tightened and means in said clamp for generating an electrical signal



indicative of the force exerted on said clamp by said tightener.

5,006,194

APPARATUS FOR MOISTENING ENVELOPE FLAP

Roderick N. Schmaling, Brookfield Center, Conn., assignor to Pitney Bowes Inc., Stamford, Conn.

Filed Dec. 9, 1988, Ser. No. 281,607
Int. Cl.[5] B05G *1/02*
U.S. Cl. 156—442.1 5 Claims

1. An apparatus for moistening the flap of an envelope, comprising:

a tank for holding a volume of water;

a moistening brush pivotably mounted on said tank, said tank having a vertical wall located beneath said brush;

an envelope feeding means, said feeding means adapted to transport an envelope whereby the flap of the envelope makes contact with said moistening brush;

a first roller rotatably journalled in said tank;

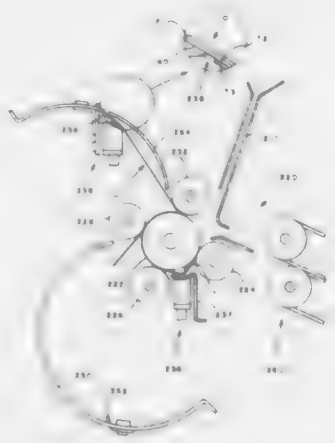
a second roller rotatably journalled in said tank and situated below said first roller;

an endless belt trained over said first and second rollers, said belt having one reach situated adjacent but spaced from said vertical wall by an amount which permits a meniscus to be formed between said reach and said wall, whereby water is conveyed from said tank to said brush; and

an envelope flap sealing means.

5,006,195

APPARATUS FOR FOLDING AND SEALING A FORM ALONG A TRANSVERSE EDGE



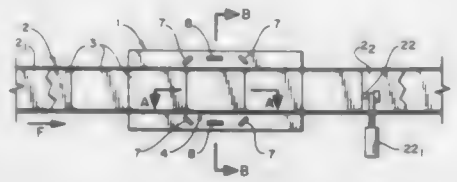
Samuel W. Martin, Martin Rd., Weston, Conn. 06883, and Steven A. Supron, 11 Comstock Hill Ave., Norwalk, Conn. 06850

Filed Sep. 14, 1989, Ser. No. 407,488
Int. Cl.[5] B43M *5/04*
U.S. Cl. 16—442.1 14 Claims

1. Apparatus for folding and sealing a form sheet along a transverse edge comprising:

(a) folding means for folding said form sheet so that leading and trailing edges of said form sheet are superimposed and in contact, said folding means including a curved, one-sided buckle chute, open towards its concave side; and,

(b) sealing means for applying adhesive fluid to a portion of said form sheet adjacent said leading transverse edge; wherein,



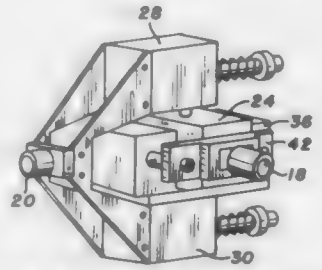
(c) said sealing means is positioned in relation to said concave side and the stop of said buckle chute so that said form sheet bypasses said sealing means as it enters said buckle chute and touches said sealing means as it is withdrawn, whereby said adhesive fluid is applied to said portion without activation or displacement of said sealing means.

5,006,196

INSTALLATION FOR APPLYING LABELLING SLEEVES TO ARTICLES SUCH AS CANS

Jean-Claude Vandevoorde, Montdidier, France, assignor to Protection Decoration Conditionnement Europe S.A., Montidier, France

Filed Dec. 12, 1988, Ser. No. 283,184
Claims priority, application France, Dec. 10, 1987, 87 17242
Int. Cl.[5] B32B *31/12*
U.S. Cl. 156—494 9 Claims



1. An installation for applying labelling sleeves to articles, which installation comprises a frame (1) provided with a table (4) to support the articles and bring the articles into a position for the application of the sleeves, a shaping device (25, 23, 27, 30, 31) to shape the sleeves about a vertical axis of the shaping device, pincers (7) to stretch the shaped sleeves and to apply them on the articles, the installation being characterized in that the shaping device is mounted on a framework (44) which is itself supported by the frame (1) via means (46, 47, 48) to allow the rotation of the framework (44) about a vertical axis (X—X') which passes through the middle of the table (4) and through the vertical axis of the shaping device.

5,006,197

MULTIPLE FIXTURE APPARATUS FOR FUSION BONDING

Raymond K. Newkirk, Plymouth, and William G. West, Edina, both of Minn., assignors to Forward Technology Industries, Inc., Minneapolis, Minn.

Filed Jul. 3, 1989, Ser. No. 375,045
Int. Cl.[5] B32B *31/00*
U.S. Cl. 156—514 16 Claims

1. An apparatus for forming a fusion bond between a fixed thermoplastic article and a movably supported thermoplastic attachment, comprising:

a mounting means for supporting a thermoplastic article in a fixed disposition;

a heating tool including axially aligned inner and outer end segments, and a heating element means for selectively heating said inner and outer end segments to respective first and second selected temperatures; and

a fixture including a base means, a first carrier reciprocably mounted with respect to the base means for supporting a thermoplastic attachment in a predetermined orientation with an end surface of the thermoplastic attachment facing said thermoplastic article, a first moving means mounted to the base means for reciprocating said first carrier to move said thermoplastic attachment longitudinally toward and away from a generally transverse mating surface of said thermoplastic article, a second carrier reciprocably mounted with respect to the base means for supporting said heating tool in a select orientation, a second moving means mounted to the base means for reciprocating said second carrier to move said heating tool longitudinally toward and away from said mating surface of said thermoplastic article, and a third moving means operatively coupled to the second carrier for reciprocating said second carrier generally transversely with respect to said base means to move said tool between an aligned position between said thermoplastic article and thermoplastic attachment, and a remote position removed from between said article and attachment, to permit longitudinal movement of said thermoplastic attachment toward said first thermoplastic article to form an engagement of said end surface and mating surface for fusion bonding of said first and second articles.

5,006,198

JIG FOR RETAINING WELDING MITERED JOINTS BETWEEN THE MEMBERS OF MOLDED PLASTIC WINDOW AND DOOR FRAMES

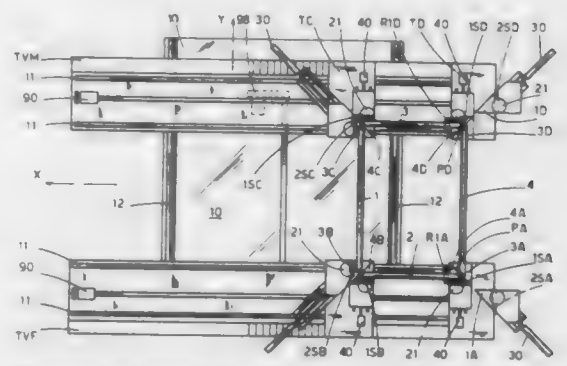
Luciano Pasquini, Via Adige, 13, 47037 Rimini (Forli), Italy

Filed Sep. 14, 1988, Ser. No. 244,100
Claims priority, application Italy, Oct. 15, 1987, 3653 A/87
Int. Cl.[5] B29C *65/20*
U.S. Cl. 156—559 4 Claims

1. A jig for retaining mitered joints defined between abutting members of a molded rectangular plastic closure frame in position to be welded, said jig comprising:

(a) a bed,

(b) a first carriage (TVF) anchored to said bed, and a second carriage movable relative to said bed,



(c) four clamp assemblies (TA, TB, TC & TD), each assembly occupying a position corresponding to one of the corners of the frame,

(d) said clamp assemblies being arranged in two pairs, of which a first pair (TB, TC) is located downstream of a second pair (TD, TA),

(e) means for traversing one of said pairs of clamp assemblies toward and away from said other pair of clamp assemblies to facilitate handling of the frame,

(f) four pairs of horizontal triangular rests (4A, 4B, 4C, and 4D) for supporting the corners of the frame, one side of each rest extending along a miter line,

(g) four pairs of vertically movable plates (1A–2A; 1B–2B, 1C–2C; and 1D–2D), one pair for each of said clamp assemblies, each plate being located above a corresponding one of said rests,

(h) means for moving said plates toward said rests to clamp ends of the frame members therebetween,

(i) a plurality of upwardly projecting fences (ISA, ISB, ISC, and ISD), one fence associated with each of said rests, a portion of said fences being integral with their respective rests, and the remainder of said fences being disposed transverse thereto, to check and align the frame members,

(j) said remainder of said fences being mounted for movement relative to their respective rests between a first limit position in which the frame members are checked, and a second limit position in which the fences are disengaged from the frame members to allow the frame to be conveyed along a flow path,

(k) first actuator means (40) for spreading apart, and drawing together, said fences integral with their respective rests.

PROCESS FOR PREPARING SINGLE CRYSTAL OF POTASSIUM TITANIUM ARSENATE

Toshiki Kishimoto, Mitaka, and Kuniyasu Imamura, Ome, both of Japan, assignors to Sumitomo Metal Mining Company Limited, Tokyo, Japan

Filed Jun. 21, 1990, Ser. No. 541,538
Claims priority, application Japan, Jul. 28, 1989, 1-193947
Int. Cl.[5] C30B *9/04*
U.S. Cl. 156—621 3 Claims

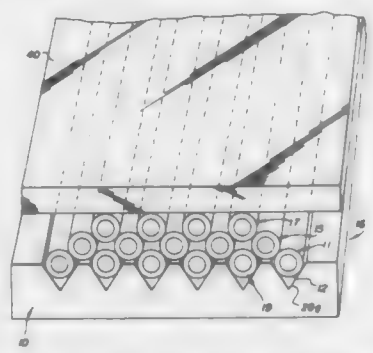
1. A process for preparing a single crystal of potassium titanium arsenate by flux growth method, wherein a compound of K_2ZO_4, in which Z represents at least one selected from the group consisting of W, S, Mo and Cr, is used as a flux and the said flux is blended with potassium titanium arsenate in such a way that the proportion of potassium titanium arsenate is from 15 to 50 mol % of the whole.

5,006,200

METHOD OF BONDING COPPER AND RESIN

C. J. Chen, Taipei, Taiwan, assignor to Compeq Manufacturing Co., Ltd., Tao Yuan Hsien, Taiwan

Filed May 7, 1990, Ser. No. 519,741
Int. Cl.[5] B44C 1/22; C23F 1/00; C03C 15/00, 25/06
U.S. Cl. 156—629 12 Claims



1. A method of bonding copper and resin comprising the steps of:
(a) forming a layer of copper oxide on a surface of copper by oxidation of copper;
(b) reducing said layer of copper oxide thus formed to cuprous oxide with a reducing solution of a controlled concentration and controlled pH at a controlled temperature under a well circulated condition within a controlled period of reaction time to modify the morphology thereof; and
(c) bonding the surface of said cuprous oxide formed by the reduction and a resin together by heat-pressing.

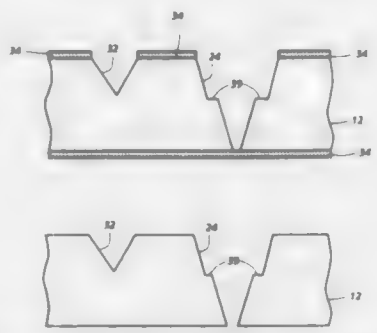
METHOD OF MAKING A FIBER OPTIC ARRAY

Joseph Y. Kaukeinen, Rochester, N.Y., assignor to Eastman Kodak Company, Rochester, N.Y.

Filed Nov. 22, 1989, Ser. No. 440,159
Int. Cl.[5] H01L 21/306; B44C 1/22; C03C 15/00, 25/06
U.S. Cl. 156—633 12 Claims



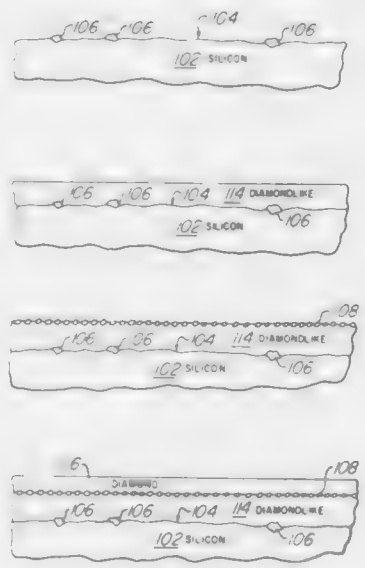
1. A method of making a fiber optic array, said array having stacked rows of optical fibers, said method comprising the steps of:
forming a plurality of grooves in a first substrate, said grooves extending to a first end of the substrate;
placing an optical fiber of a predetermined diameter in each of said grooves to form a first row of fibers in which the spacing of the fibers is determined by the pitch of said grooves;
cementing the fibers in the grooves;
forming a plurality of grooves in a second substrate;
cementing an optical fiber of a predetermined diameter in each of the grooves in said second substrate to form a second row of fibers in which a portion of each of said fibers extends beyond one end of said second substrate;
placing said second substrate and the fibers therein over said first substrate such that the fibers in the two substrates are in contact with each other and the spacing of said portions of the fibers in said second row is determined by the spacing of the fibers in said first substrate and the diameters of said fibers; and
cementing the fibers in said second substrate to the fibers in said first substrate.

5,006,202

FABRICATING METHOD FOR SILICON DEVICES USING A TWO STEP SILICON ETCHING PROCESS

William G. Hawkins, Webster; Donald J. Drake, Rochester, and James F. O'Neill, Penfield, all of N.Y., assignors to Xerox Corporation, Stamford, Conn.

Filed Jun. 4, 1990, Ser. No. 533,204
Int. Cl.[5] H01L 21/306; B44C 1/22; C03C 15/00, 25/06
U.S. Cl. 156—644 14 Claims



1. A method of fabricating a precision-etched, three dimensional device from a silicon wafer having a frontside and a backside surface, the device being produced by etching only the wafer frontside surface, comprising the steps of:
(a) depositing a first etch resistant masking layer on both frontside and backside surfaces of a clean wafer;
(b) depositing a first mechanical damage protective layer over the first masking layer on both the frontside and backside surfaces of the wafer;
(c) applying and patterning a first photoimagable layer on the first protective layer on the wafer frontside surface to produce first and second sets of vias in the first photoresist layer exposing the first protective layer through said sets of vias, the first masking layer on the wafer backside surface being concurrently protected from damage by the first protective layer thereover;
(d) etching the exposed first protective layer and underlying first masking layer on the wafer frontside surface through the first and second sets of vias in the first photoresist layer to form sets of vias therein which expose the wafer frontside surface;
(e) stripping the patterned first photoimagable layer from the frontside surface of the wafer;
(f) removing the first protective layer from the frontside and backside surfaces of the wafer;
(g) depositing a second etch resistant masking layer over the first etch resistant masking layer on both frontside and backside surfaces of the wafer, so that the vias in the first masking layer exposing the wafer frontside surface are covered by said second masking layer;
(h) depositing a second mechanical damage protective layer over the second masking layer on both frontside and backside surfaces of the wafer;
(i) applying and patterning a second photoimagable layer on the second protective layer on the wafer frontside surface to produce a set of vias similar to and aligned with the first set of vias in said first masking layer, the set of vias in the second photoresist layer being slightly smaller than the first set of vias in said first masking layer, the second masking layer on the wafer backside surface being concurrently protected from damage by the second protective layer thereover;
(j) etching the exposed second protective layer and underlying second masking layer through the set of vias in the second photoimagable layer to form a set of vias therein which expose the wafer frontside surface;
(k) stripping the patterned second photoresist layer from the frontside surface of the wafer;
(l) anisotropically etching the wafer in an etch bath, so that the frontside surface of the wafer exposed through the set of vias in the second protective layer and the second masking layer produce relatively large, loosely toleranced recesses therein;
(m) removing the second protective layer and then the second masking layer exposed by the removal of the second protective layer, thereby leaving a defect-free first masking layer on the wafer with the large, loosely toleranced recesses substantially completed; and
(n) anisotropically etching the wafer in an etch bath, so that the frontside surface of the wafer exposed through the first and second sets of vias in the first masking layer produce relatively small, closely toleranced recesses in the frontside wafer surface through second set of vias, while concurrently completing the etching of the relatively large recesses in the frontside wafer surface through the first set of vias.

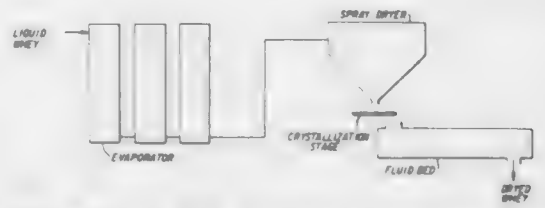
5,006,203

DIAMOND GROWTH METHOD

Andrew J. Purdes, Garland, Tex., assignor to Texas Instruments Incorporated, Dallas, Tex.

Filed Aug. 12, 1988, Ser. No. 231,750
Int. Cl.[5] B44C 1/22; C03C 15/00, 25/06
U.S. Cl. 156—646 9 Claims

7. A diamond film growth method, comprising the steps of:
(a) growing a film of diamondlike material;
(b) selectively removing graphitic-bonded material from a surface of said film of diamondlike material; and
(c) growing a film of diamond on said surface.



5,006,204

APPARATUS FOR CRYSTALLIZING WHEY

Jens P. Jensen, Hudson, Wis., assignor to A/S Niro Atomizer, Soeborg, Denmark

Continuation-in-part of Ser. No. 230,545, Aug. 10, 1988, abandoned. This application Oct. 31, 1988, Ser. No. 264,569
Int. Cl.[5] B01D 1/18
U.S. Cl. 159—3 8 Claims

1. Apparatus for drying whey comprising:
an evaporator, a pre-crystallizer, a spray dryer, a fluid bed, means for moving said whey from said evaporator to said pre-crystallizer, means for moving said whey from the pre-crystallizer to said spray dryer, a disc located between said spray dryer and said fluid bed and having a cone-shaped upper surface, a shaft supporting said disc for rotation in a horizontal plane, and means for rotating said disc whereby said surface of said disc will receive partially dried whey from said spray dryer and deliver said whey to

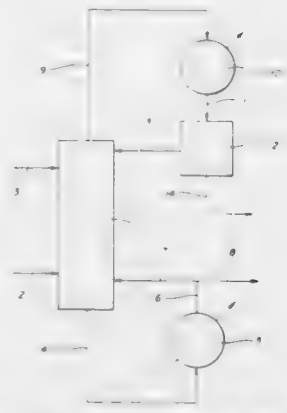
said fluid bed while permitting crystallization of said whey as it rests on said surface of said disc.

5,006,205

DEHYDRATION OF FORMIC ACID BY EXTRACTIVE DISTILLATION

Lloyd Berg, 1314 S. 3rd Ave., Bozeman, Mont. 59715; Kraig M. Wendt, and Rudolph J. Szabados, both of Bozeman, Mont., assignors to Lloyd Berg, Bozeman, Mont.

Continuation-in-part of Ser. No. 126,003, Nov. 27, 1987, abandoned. This application Jan. 17, 1989, Ser. No. 297,181
The portion of the term of this patent subsequent to Nov. 22, 2005, has been disclaimed.
Int. Cl.[5] B01D 3/40; C07C 51/44, 53/02
U.S. Cl. 203—15 2 Claims



1. A method for recovering formic acid from a mixture of formic acid and water which comprises distilling a mixture of formic acid and water in a rectification column in the presence of about one part of an extractive agent per part of formic acid - water mixture, recovering water as overhead product and obtaining the formic acid and the extractive agent from the stillpot, wherein said extractive agent consists of decanoic acid ad one material selected from the group consisting of butyl benzoate and methyl benzoate.

5,006,206

PROPYLENE OXIDE PURIFICATION

T. Thomas Shih, Bryn Mawr, and William J. Sim, Newtown Square, both of Pa., assignors to Arco Chemical Technology, Inc., Wilmington, Del.

Filed Mar. 12, 1990, Ser. No. 491,872
Int. Cl.[5] B01D 3/40; C07D 301/32
U.S. Cl. 203—55 3 Claims

1. An extractive distillation process for the separation of hydrocarbon impurities from propylene oxide which consists essentially introducing a feed comprises of propylene oxide containing hydrocarbon impurities into an intermediate section of an extractive distillation zone, introducing extractive distillation solvent consisting essentially of a mixture of about 2–50 wt.% water with t-butyl alcohol into the upper section of said extractive distillation zone, distilling said hydrocarbon impuri-

ties overhead from said extractive distillation zone and removing a mixture consisting essentially of said extractive distillation solvent and said propylene oxide substantially free of said hydrocarbon impurities from the lower section of the said extractive distillation zone.

5,006,207

METHOD OF DECORATING AN EXPANSIVE SURFACE OF A METALLIC FAUCET SPOUT OR OTHER PLUMBING FIXTURE

Eric C. Peterman, Elm Grove, and John S. Lindstedt, Hartland, both of Wis., assignors to Gerber Plumbing Fixtures Corp., Chicago, Ill.

Filed Jul. 27, 1989, Ser. No. 386,292
Int. Cl.[5] C25D *5/02*
U.S. Cl. 204—18.1 10 Claims

1. A method of providing a sharply defined, ornamental design on an expansive surface of a zinc, brass, or stainless steel faucet spout or other plumbing fixture, the method comprising steps of

(a) providing an initial finish on the expansive surface, the initial finish contrasting in color with what is beneath the initial finish,

(b) causing a mask to adhere to selected portions of the expansive surface, by means of an adhesive, leaving the expansive surface with unmasked portions where the mask does not adhere to the expansive surface,

(c) treating the unmasked portions so as to remove all of the initial finish from the unmasked portions, thereby to cause the unmasked portions to contrast in color with the initial finish when the mask is removed, and

(d) removing the mask,

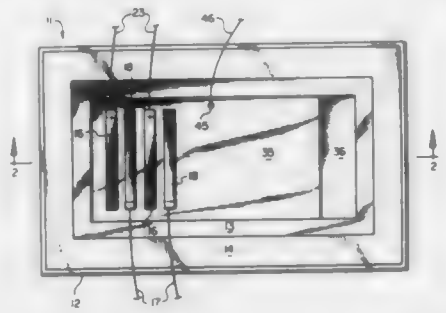
wherein the expansive surface is plated with at least two plating layers, which include a penultimate plating layer and an ultimate plating layer contrasting in color with the penultimate plating layer, and wherein step (c) is performed so as to remove all of the ultimate plating layer from the unmasked portions of the expansive surface, and so as to expose the penultimate plating layer on the unmasked portions of the expansive surface, and whereby the ornamental design is defined sharply by color-contrasted portions of the expansive surface.

5,006,208

GALVANIC GOLD ALLOYING BATH

Werner Kuhn, Rodenbach, and Wolfgang Zilske, Hanau, both of Fed. Rep. of Germany, assignors to Degussa Aktiengesellschaft, Frankfurt, Fed. Rep. of Germany

Filed Aug. 29, 1990, Ser. No. 574,359
Claims priority, application Fed. Rep. of Germany, Sep. 6, 1989, 3929569
Int. Cl.[5] C25D *3/62*
U.S. Cl. 204—44 5 Claims



1. A galvanic gold alloying bath comprising 1 to 15 g/liter gold as potassium gold (I) cyanide, 5 to 50 g/liter copper as potassium copper (I) cyanide, 0.05 to 5 g/liter silver as potassium silver (I) cyanide, free alkali cyanide, dipotassium hydrogenphosphate and potassium selenocyanate.

5,006,209

ELECTROLYTIC REDUCTION OF ALUMINA

Theodore R. Beck, and Richard J. Brooks, both of Seattle, Wash., assignors to Electrochemical Technology Corp. and Brooks Rand, Ltd., both of Seattle, Wash.

Filed Feb. 13, 1990, Ser. No. 479,164
Int. Cl.[5] C25C *3/06, 3/18, 3/08*
U.S. Cl. 204—67 65 Claims

1. A method for the electrolytic reduction of alumina to aluminum in a vessel having a bottom and sidewalls, said method comprising the steps of:

containing within said vessel a molten electrolyte bath consisting essentially of (1) $NaF+AlF_3$ eutectic, (2) $KF+AlF_3$ eutectic and (3) LiF;

said molten electrolyte bath having a density less than the density of molten alumina and less than the density of alumina;

maintaining said bath at a temperature substantially below 950° C.;

providing within said bath a plurality of vertically disposed, spaced apart, non-consumable anodes and a plurality of vertically disposed, spaced apart, dimensionally stable cathodes in close, alternating relation to said anodes, with a space defined between each pair of adjacent electrodes;

introducing finely divided alumina particles into said bath;

passing an electric current through said bath from said anodes to said cathodes;

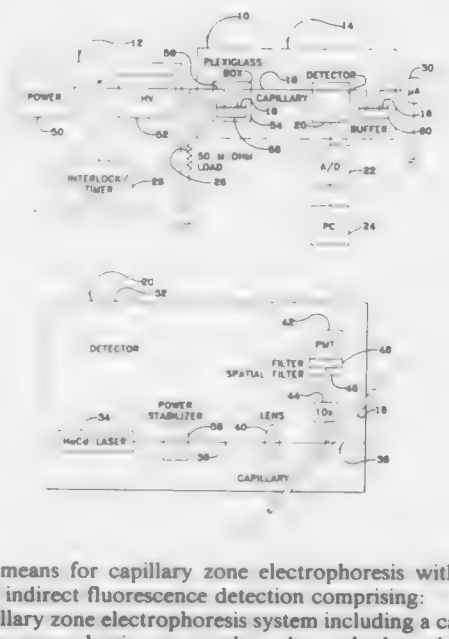
forming bubbles of gaseous oxygen at each of said anodes;

allowing said bubbles to pass upwardly from said anodes;

forming a slurry composed of said finely divided alumina particles suspended in said molten electrolyte bath;

forming metallic aluminum at each cathode;

allowing said metallic aluminum to flow downwardly as molten aluminum along each cathode at which aluminum is formed, toward the bottom of said vessel;



and accumulating said molten aluminum at the bottom of said vessel.

5,006,210

MEANS AND METHOD FOR CAPILLARY ZONE ELECTROPHORESIS WITH LASER-INDUCED INDIRECT FLUORESCENCE DETECTION

Edwards Yeung, Ames, Iowa, and Werner G. Kuhr, Riverside, Calif., assignors to Iowa State University Research Foundation, Inc., Ames, Iowa

Filed Feb. 6, 1989, Ser. No. 306,071
Int. Cl.[5] G01N *27/26;* B01D *57/02*
U.S. Cl. 204—180.1 10 Claims

1. A means for capillary zone electrophoresis with laser-induced indirect fluorescence detection comprising:

a capillary zone electrophoresis system including a capillary tube means having an anode and a cathode end, power means for imposing an electrical field upon the capillary tube means, specimen means for supplying specimen to the capillary tube means, buffer means for supplying buffer to the capillary tube means;

an indirect fluorescence detection system including a laser means for directing a laser beam upon a selected portion of the capillary tube means, a detector means for detecting fluorescence indirectly from the selected portion of the capillary tube means, the buffer containing as a principal component a fluorescing portion which fluoresces upon imposition of the laser beam and which allows indirect fluorescence detection by causing one of the set of displacement and ion-pairing of the sample and the electrophoresis portion of the buffer without labeling the sample with an electrophoretic portion, the detector measuring a signal independent of the spectral properties of the sample but related to fluorescing changes caused by the displacement or ion-pairing which indirectly allows sensitive detection of constituent components of the specimen during the electrophoresis process; and

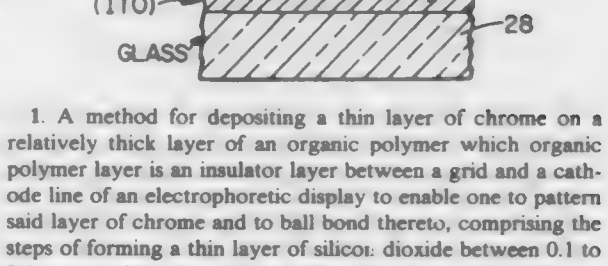
an interlock and timing means associated with the power means for controlling the periods of time the electrical field is created.

5,006,211

ELECTRODIALYLIC WATER SPLITTING PROCESS FOR THE TREATMENT OF AQUEOUS ELECTROLYTES

Michael Paleologou, Pierrefonds, and Richard M. Berry, Ile Perrot, both of Canada, assignors to Pulp and Paper Research Institute of Canada, Pointe Claire, Canada

Filed Apr. 19, 1989, Ser. No. 340,200
Int. Cl.[5] C25B *7/00, 1/16*
U.S. Cl. 204—182.4 34 Claims



1. a process which comprises the steps of

(a) providing a cell comprising an anode, a cathode and at least two compartments therebetween defined at least in part by a cation permselective membrane and at least a pair of bipolar membranes, said bipolar membranes having an anion side facing said anode and a cation side facing said cathode,

(b) feeding an aqueous alkaline solution comprising monosodium peroxide and sodium hydroxide into a first of said compartments to contact a first side of said cation permselective membrane,

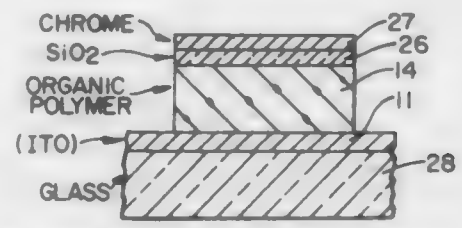
(c) feeding a liquid comprising water into a second of said compartments to contact an anion side of a said bipolar membrane,

(d) passing a direct current through said cell between said anode and cathode to effect:

(i) migration of sodium cations from said first compartment through said cation permselective membrane into said second compartment, and

(ii) splitting of water by said bipolar membrane of said second compartment with accumulation of hydroxide ions of the water in said second compartment and removal of hydrogen ions of the water from aid second compartment,

(e) removing accumulated NaOH from said second compartment, and



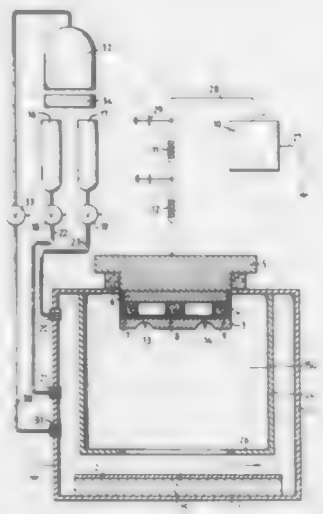
(f) removing accumulated dealkalized monosodium peroxide solution from said first compartment.

5,006,212

METHODS ENABLING STRESS CRACK FREE PATTERNING OF CHROME ON LAYERS OF ORGANIC POLYMERS

Frank J. DiSanto, North Hills; Denis A. Krusos, Lloyd Harbor, and Frederic E. Schubert, Shoreham, all of N.Y., assignors to Copytele, Inc., Huntington Station, N.Y.

Filed Mar. 10, 1988, Ser. No. 166,430
Int. Cl.[5] C23C *14/34*
U.S. Cl. 204—192.14 8 Claims

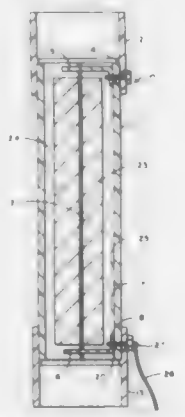


1. A method for depositing a thin layer of chrome on a relatively thick layer of an organic polymer which organic polymer layer is an insulator layer between a grid and a cathode line of an electrophoretic display to enable one to pattern said layer of chrome and to ball bond thereto, comprising the steps of forming a thin layer of silicon dioxide between 0.1 to 0.4 um on said polymer layer with said polymer layer between 4 - 15 um and then forming a layer of chrome between 0.5 to 0.75 um on said silicon dioxide layer with said layer of chrome being thicker than said layer of silicon dioxide to enable one to pattern and wire bond to said chrome layer.

5,006,213
PROCESS FOR COATING A SUBSTRATE WITH ELECTRICALLY CONDUCTIVE MATERIALS

Eggo Sichmann, Gelnhausen; Thomas Krug, Hanau, and Stephan Kempf, Alzenau, all of Fed. Rep. of Germany, assignors to Leybold Aktiengesellschaft, Hanau I, Fed. Rep. of Germany

Filed Aug. 31, 1989, Ser. No. 401,050
Claims priority, application Fed. Rep. of Germany, Jun. 12, 1989, 3919145
Int. Cl.[5] C23C *14/34*
U.S. Cl. 204—192.14 4 Claims



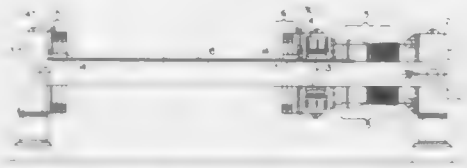
1. Process for coating a plastic substrate with electrically conductive material, comprising the steps of
providing an electrode in a coating chamber which can be evacuated, said electrode being connected to D.C. power source;
providing a target of the material to be coated in said chamber, said target being connected to said electrode;
disposing a plastic substrate in said chamber opposite said target;
introducing a process gas in said coating chamber;
introducing into said chamber at least one additional gas selected from the group consisting of hydrogen and water vapor so that the sputtering pressure is 7×10^{-3} mbar and the partial pressure of the additional gas is 1.40×10^{-3} mbar; and
sputtering said target to deposit said material on said substrate.

5,006,214
CATHODIC PROTECTION APPARATUS

Donald H. Burchnell, 7813 Napoleon St.; Donald J. Burchnell, 10607 Allisheim Ave., both of Orlando, Fla. 32825, and Joseph R. Burchnell, 2007 Dorris Dr., Orlando, Fla. 32807

Filed Feb. 5, 1990, Ser. No. 475,327
Int. Cl.[5] C23F *13/00*
U.S. Cl. 204—197 7 Claims

1. A cathodic protection system for building water supply pipes comprising:
a polymer pipe section;
a polymer pipe coupling on each end of said pipe section for coupling said polymer pipe section in a water supply pipe;
a sacrificial anode formed onto a conductor passing therethrough;
a pair of anode support brackets attached to said pipe section with connection means, said brackets supporting said sacrificial anode conductor at each end thereof to support said sacrificial anode in said pipe section while leaving a passageway between said pipe section and sacrificial anode mounted therein; and
a ground wire electrically coupled through said polymer pipe section to one of said anode support brackets and the sacrificial anode grounding said sacrificial anode whereby

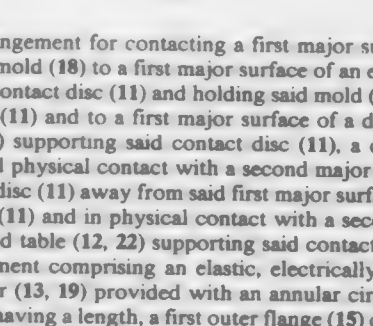


a building's water pipes are protected from corrosion due to electrolytic action.

5,006,215
SQUEEZER APPARATUS

Pierluigi A. Borrione, Milan; Vittorio Caizzi, Crema; Maurizio Marzupio, Capriate San Gervasio, and Jean E. Morris, Segrate-Milan, all of Italy, assignors to The Dow Company, Midland, Mich. and DeNora Permelec S.p.A., Milan, Italy

Filed Jul. 27, 1989, Ser. No. 386,875
Int. Cl.[5] C25B *9/00, 13/00;* B01D *25/00*
U.S. Cl. 204—253 23 Claims



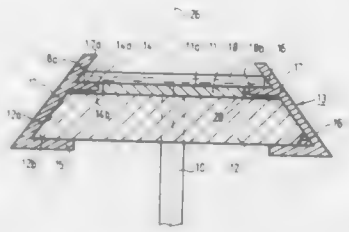
1. An apparatus for uniformly pressing a plurality of flat plate-type structures together comprising a first and second vertical support means, a pair of side rails spaced apart and supported on the support means, the side rails being perpendicular to the support means and adapted to support flat plate-like structures, a plurality of flat plate-like structures with hanger members to slidably and pivotably mount the structures on the side rails, a vertical mobile platen provided with top and bottom hanger guide members connected to a press means adapted for pressing the mobile platen against and toward the flat plate-type structures to compress them together and retracting the mobile platen from the plate-like structures, the press means comprising at least one coiled spring, a first contactor plate attached to the mobile platen and a second contactor plate attached to a positioning device secured to one of the support means and a first and second guide chamber for directing the positioning device and coiled spring perpendicularly to the face of the mobile platen and the support means.

5,006,216
METAL REMOVAL APPARATUS

Joseph J. Dietrich, Painesville; Andrew J. Niksa, Concord, and James J. Stewart, Chardon, all of Ohio, assignors to ELTECH Systems Corporation, Boca Raton, Fla.

Filed Dec. 7, 1989, Ser. No. 447,294
Int. Cl.[5] C25C *7/04;* C25B *11/03, 11/10*
U.S. Cl. 204—257 16 Claims

1. An electrolytic cell for reduction of metal ions comprising:
an electrically non-conductive cell box;
spaced-apart inlet and outlet means to pass an electrolyte containing metal ions into, through and out of said cell box;
at least one electrocatalytically coated, valve metal anode extending across said cell box;
at least one openly porous and metallic reticulated cathode extending across said cell box;
means positioning said anode and said cathode in said box in a spaced-apart relationship sequentially arranged between said box inlet and box outlet means; and

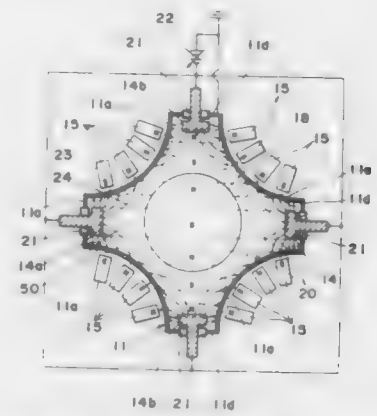


diffusion barrier means in the form of a diffusion barrier envelope enveloping said anode and separating said anode from said cathode and from said inlet and outlet means, said diffusion barrier means defining an anolyte zone containing said anode and a catholyte zone in flow communication with said inlet and outlet means containing said cathode, said diffusion barrier means impeding the access of metal ions to the anode and including means for flow of electrolyte through said cell bypassing said anolyte zone.

5,006,217
ARRANGEMENT FOR CONTACTING AND HOLDING A MOLD

Hermann Koop, Ronnenberg, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Jul. 21, 1989, Ser. No. 384,223
Claims priority, application Fed. Rep. of Germany, Jul. 28, 1988, 3825592
Int. Cl.[5] C25D *17/00*
U.S. Cl. 204—297 R 15 Claims



1. An arrangement for contacting a first major surface of a disc-shaped mold (18) to a first major surface of an electrically conductive contact disc (11) and holding said mold (18) to said contact disc (11) and to a first major surface of a disc-shaped table (12, 20) supporting said contact disc (11), a cathode in electrical and physical contact with a second major surface of said contact disc (11) away from said first major surface of said contact disc (11) and in physical contact with a second major surface of said table (12, 22) supporting said contact disc (11); said arrangement comprising an elastic, electrically non-conductive collar (13, 19) provided with an annular circumferential part and having a length, a first outer flange (15) contacting said second major surface (18*a*) of said table (12, 22), and together with said annular circumferential part (18*a*) collar (13, 19) surrounding said table (12, 22), a second radial annular flange (14) extending inwardly from said collar and into an annular space (28) formed between said table (12, 22) said mold (18) and said contact plate (11), said outer flange (15) being stretched around the table in such a manner so as, together with further holding members (17*a*, 19*a*) extending through the annular circumferential part of the collar (13, 19), to press mold (18) into the contact disc (11).

5,006,218
SPUTTERING APPARATUS

Yoshikazu Yoshida, Izumi, and Kunio Tanaka, Toyonaka, both of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed Jul. 16, 1990, Ser. No. 556,002
Claims priority, application Japan, Jul. 20, 1989, 1-187849
Int. Cl.[5] C23C *14/34*
U.S. Cl. 204—298.06 6 Claims

1. A sputtering apparatus comprising:
a discharge chamber having four adjacent curved side surfaces protruding toward a center of said chamber to form a discharge space surrounded by the side surfaces therein;
a gas inlet and a gas outlet each formed in said chamber;
cylindrical cathodes, each of which is arranged between the adjacent curved side surfaces of said chamber, to which a negative electric potential is applied;
plural adjacent permanent magnets arranged outside each of the side surfaces of said chamber, said adjacent permanent magnets having different magnetic poles from each other;
a sputtering electrode having a target arranged on a lower surface of the sputtering electrode arranged in the space surrounded by the adjacent curved side surfaces; and
a bed for holding a substrate, having a surface said bed being arranged in said chamber and opposed to said sputtering electrode, a surface of the substrate held by said bed being parallel to an opposed surface of said sputtering electrode, the surfaces of the substrate and said electrode being perpendicular to the adjacent curved side surfaces.

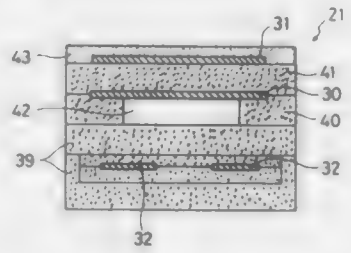
OXYGEN CONCENTRATION-DETECTING APPARATUS

Akira Uchikawa; Satoshi Anbe; Masami Kawashima; Tatsumasa Yamda; Tadao Suwa, all of Isesaki, Japan, assignor to Japan Electronic Control Systems Co., Isesaki, Japan



Filed Feb. 23, 1989, Ser. No. 313,690

Claims priority, application Japan, Mar. 1, 1988, 63-45739

The portion of the term of this patent subsequent to Sep. 27, 2005, has been disclaimed.

Int. Cl.[5] G01N *27/417*

U.S. Cl. 204—426 **18 Claims**

1. An oxygen concentration-detecting apparatus for an internal combustion engine which comprises:

a plate substrate;

an oxygen ion-conducting solid plate electrolyte for generating an electromotive force between a first surface contacted with air and a second surface contacted with an exhaust gas of said engine according to the difference between the concentrations of oxygen gases of said air and said exhaust gas, said oxygen ion-conducting solid electrolyte being laminated on a surface of said substrate and said substrate restricting a cavity portion therebetween where air is introduced into;

a pair of electrode members formed at said first and second surfaces, respectively, of said oxygen ion-conducting solid electrolyte, to take out said electromotive force as a detection signal; and

a nitrogen oxide-reducing catalyst layer for promoting the reduction of nitrogen oxide disposed on said second surface of said oxygen ion-conducting solid electrolyte and said electrode located on said second surface.

5,006,222

SOLVENT DEWAXING OF LUBRICATING OILS

Avilino Sequeira, Jr., Port Arthur, Tex., assignor to Texaco Inc., White Plains, N.Y.

Filed May 23, 1990, Ser. No. 526,745

Int. Cl.[5] C10G *71/00, 73/06*

U.S. Cl. 208—33 **11 Claims**

1. In a process for producing a dewaxed lubricating oil from a wax-bearing mineral oil by the steps comprising:

mixing the oil with a dewaxing solvent thereby forming an oil-solvent mixture,

chilling the oil-solvent mixture to a dewaxing temperature thereby crystallizing the wax and forming an oil-solvent-crystalline wax mixture,

separating the oil-solvent-crystalline wax mixture to form a dewaxed oil-solvent mixture and crystalline wax,

steam stripping the dewaxed oil-solvent mixture at a temperature of 300° F. to 600° F and pressure of 1 atm to 3 atm, to yield a solvent free dewaxed oil, the improvement which comprises:

contacting the solvent free dewaxed oil with an inert gas having a dew point about −100° F. or lower, at a contacting rate of about 0.5 to 10 SCF/bbl and dehydration pressure of about 0.2 to 16 psia, thereby yielding a dewaxed lubricating oil free of water haze.

ADDITION OF RADICAL INITIATORS TO RESID CONVERSION PROCESSES

Irwin A. Wiehe, Baton Rouge, La.; Martin L. Gorbaty, Westfield, and William N. Olmstead, Murray Hill, both of N.J., assignors to Exxon Research and Engineering Company, Florham Park, N.J.

Filed Sep. 29, 1989, Ser. No. 414,352

Int. Cl.[5] C10G *9/32*

U.S. Cl. 208—125 **11 Claims**

1. In a thermal conversion process wherein a petroleum feedstock is heated at elevated temperatures to form low boiling liquid products and wherein gaseous products are formed, the improvement consisting essentially of: carrying out the thermal conversion in the presence of a free radical initiator and in the absence of added hydrogen-donor diluent, the free radical initiator being present in an amount sufficient to increase the rate of thermal conversion without substantially increasing the formation of gaseous products.

5,006,224

START-UP OF A HYDROREFINING PROCESS

John A. Smegal; Haluk A. Bilgic; Robert C. Ryan, and Vance J. Grieshop, all of Houston, Tex., assignors to Shell Oil Company, Houston, Tex.

Filed Jun. 5, 1989, Ser. No. 361,197

The portion of the term of this patent subsequent to Apr. 16, 2008, has been disclaimed.

Int. Cl.[5] C10G *23/00*

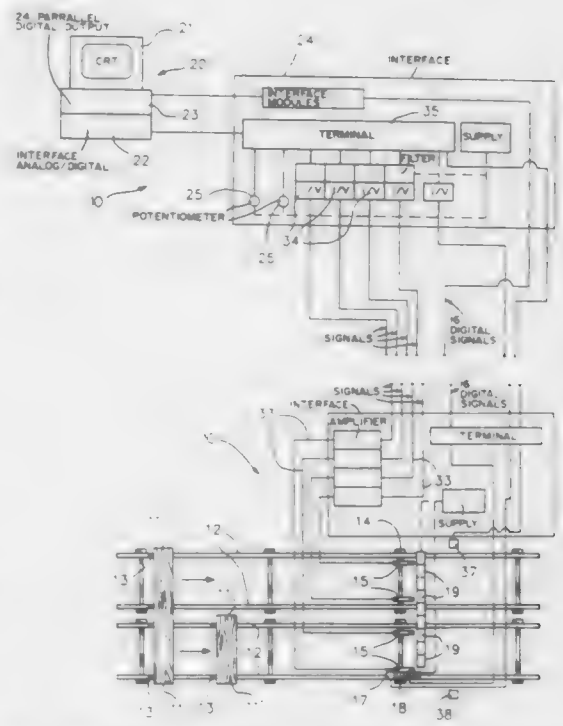
U.S. Cl. 208—254 H **13 Claims**

1. In a hydrorefining process which comprises contacting hydrocarbonaceous oil feed and hydrogen with a catalyst comprising a hydrogenation component selected from the group consisting of Group VIB metal component, Group VIII non-noble metal component and mixtures thereof, and an alumina-containing support, at hydrorefining conditions, the improvement which comprises heating the catalyst at initial start-up from a temperature below about 450° F. to hydrorefining temperature at an average rate of less than 10° F. per hour in the presence of hydrogen and said oil feed.

5,006,225

METHOD AND APPARATUS FOR DETECTING HUMIDITY IN CUT LUMBER

Gratien Beauchemin, Sillery; André Gadoury, Ste-Foy, and Claude Gravel, Beaupré , all of Canada, assignors to Centre de Recherche Industrielle du Quebec, Quebec, Canada



Filed Jun. 27, 1989, Ser. No. 371,810

Claims priority, application Canada, Jun. 29, 1988, 570709

Int. Cl.[5] B07C *5/34;* **G01N** *9/02, 9/36*

U.S. Cl. 209—3.3 **15 Claims**

1. An apparatus for automatically detecting the approximate percentage humidity in predetermined types of cut lumber, said apparatus comprising conveyor mans for conveying individual pieces of cut lumber to weighing means, sensing means associated with said conveyor means for detecting the length and cross-sectional dimension of said individual pieces of cut lumber, said weighing means having platform means for supporting individual ones of said pieces of cut lumber in movement thereover, and one or more weighing cells are secured to said platform means for detecting the weight of said one piece of lumber, control circuit means connected to said sensing means and said one or more weighing cells to receive information signals therefrom, and adjustable control means for conditioning said circuit means to identify and classify said individual lumber pieces in accordance with one or more reference

signals related to selected humidity content weight(s) of said lumber pieces.

FLUIDIZED, DRY BED, ORE CONCENTRATOR

Leo O. Burt, Jr., P.O. Box 567, Wickenburg, Ariz. 85358

Filed Nov. 2, 1987, Ser. No. 115,972

Int. Cl.[5] B07B *9/00*

U.S. Cl. 209—19 **26 Claims**

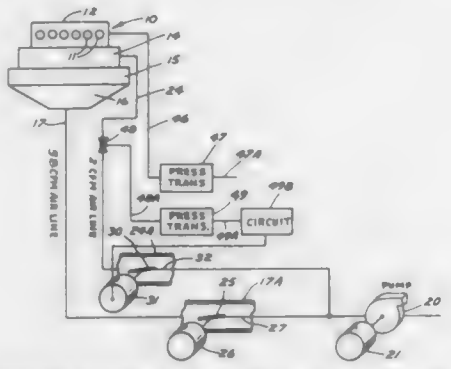
1. A fluidized, dry bed, concentrator comprising:

means for fluidizing a mass of dry particulate material so as to physically segregate within the fluidized mass relatively heavy particulates from relatively light particulates; and

means coupled to the fluidizing means for withdrawing from said fluidized mass selected particulate matter so physically segregated wherein said means for withdrawing selected particulate matter comprises:

first extraction means coupled to a region of said fluidized mass in which relatively light particulate matter is segre-

gated for extracting from said fluidized mass said relatively light particulate matter; and



second extraction means coupled to a region of said fluidized mass in which relatively heavy particulate matter is segregated for extracting from said fluidized mass said relatively heavy particulate matter.

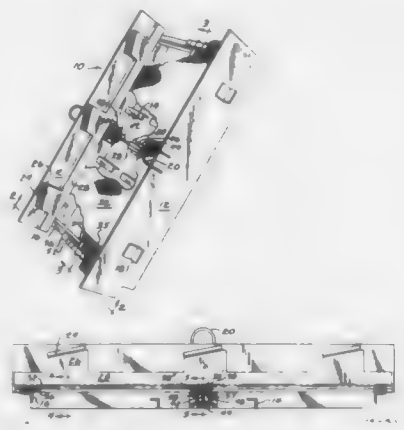
5,006,227

VOLUMETRIC FLOW CONTROLLER FOR AEROSOL CLASSIFIER

Steven M. Behm, Minneapolis; Virgil A. Marple, Maple Plain, both of Minn., and Robert M. Burton, Raleigh, N.C., assignors to MSP Corporation, Minneapolis, Minn.

Filed Jun. 26, 1989, Ser. No. 371,986
Int. Cl.[5] B07B 7/00
U.S. Cl. 209—143 12 Claims

1. Apparatus for use in combination with an aerosol classifier, having a flow inlet passageway means for carrying inlet flow, and an air pump for providing a flow carrying aerosols through said inlet passageway means, a conduit connecting said air pump and said passageway means to provide the flow, the classifier having means for classifying aerosols and dividing flow into at least two portions, wherein the improvement comprises valve means in said conduit, said valve means being movable and adjustable for adjusting the flow size of the conduit and thus the volume of air passing through the conduit at a substantially constant setting of the air pump, static pressure sensing means in said flow inlet passageway means, a pressure transducer responsive to said static pressure for providing an output signal proportional to the pressure in said flow inlet passageway means, means for comparing said output signal with a reference signal and for providing a drive signal, and a motor for controlling the position of said valve means in said conduit, said motor being operable in response to said drive signal to position the valve means at a position which is related to the drive signal.



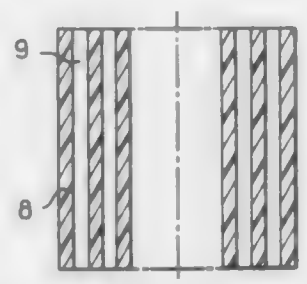
5,006,228

MOUNTING SYSTEM FOR INCREASING THE WEAR LIFE OF A VIBRATING SCREEN PANEL

Thomas A. Anderson, Placerville, Calif.; Richard G. Kalar, Coon Rapids, Minn.; Reinhold S. Markfelt, Moundsview, Minn., and Walter R. Wagner, Minneapolis, Minn., assignors to Johnson Filtration Systems Inc., New Brighton, Minn.

Filed Jan. 16, 1990, Ser. No. 464,929
Int. Cl.[5] B07B 1/46
U.S. Cl. 209—365.3 17 Claims

1. In a screen panel mounting system having a screen panel which includes a plurality of spaced wires which are welded to a series of spaced apart underlying support rod members positioned generally normal thereto so as to define a plurality of flow slots, and a screen box assembly having side walls and end wall portions for receiving and supporting said screen panel in its use position, the improvement comprising a vibrator bar assembly mounted to the opposed side walls of said screen box assembly; a vibrator support plate mounted to said vibrator bar assembly intermediate its end wall portion, said vibrator support plate being adapted to receive fastening means for attaching a vibrator thereto; said vibrator bar assembly including an elongated rigid bar portion having an upper contact surface; means for mounting said vibrator bar assembly to the opposed sides of said screen box assembly; an elongated elastomeric wear strip attached to the underside of said screen panel at a location wherein it will overlie and contact the said upper



contact surface of said vibrator bar assembly, said wear strip having side portions which extend downwardly past at least a portion of the upper contact surface of said rigid bar portion so as shield said contact surface from possible contact with materials passing through the flow slots of said screen panel; and hold-down means for retaining said screen panel relative to the sides of said screen box assembly.

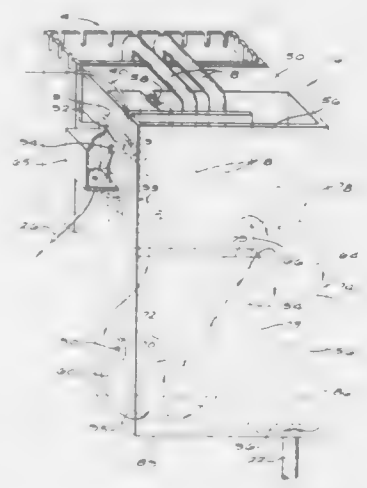
METHOD OF MANUFACTURING A UNIT ASSEMBLY OF FILTER MEMBRANES, A MOLD USED IN THE METHOD, AND A PRODUCT OBTAINED FROM THE METHOD

Jean-Michel Espenan, Toulouse, France, assignor to Lyonnaise des Eaux, Paris, France

Filed Dec. 11, 1989, Ser. No. 448,527
Claims priority, application France, Dec. 23, 1988, 88 17075
Int. Cl.[5] B01D 67/00
U.S. Cl. 210—321.89 10 Claims



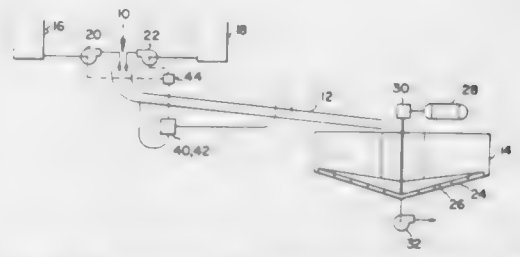
6. A unit filter assembly, constituted by a molded porous polymer block pierced by channels whose longitudinal axes are parallel to one another and whose inner surfaces created during the precipitation of the polymer constitute filter membranes.

5,006,230

DUAL-ACTION AQUARIUM FILTER

Paul Votava, III, 4723 Hamilton St., San Diego, Calif. 92116, and Daniel K. Mojonnier, P.O. Box 1005, Encinitas, Calif. 92024

Filed Apr. 3, 1989, Ser. No. 333,417
Int. Cl.[5] E04H 4/00; C02F 1/24
U.S. Cl. 210—94 11 Claims



2. Aquarium water filtration means including:
intake means for aquarium water,
prefilter means,
water transfer means for transferring aquarium water from the intake means to the prefilter means,
said prefilter means provided for both froth filtration and mechanical filtration of the aquarium water and comprising side walls, a plurality of chambers separated by partitioning walls, and means for permitting fluid flow between said chambers;
said prefilter means including means for the feeding of said aquarium water into and through the prefilter means;
said prefilter means comprising:
(a) a collection chamber for receiving aquarium water from the intake means;
(b) mechanical filter means for mechanical filtration of the aquarium water;
(c) froth filtration means for froth filtration of the aquarium water; and
(d) drainage means for drainage of aquarium water filtered by the mechanical filter means and the froth filtration means from the prefilter means; and
said prefilter means also including:
(a) an outlet filter chamber containing said mechanical filter means and said drainage means;
(b) a collection channel;
(c) a frothing chamber;
(d) a skimmed water exit channel;
(e) a first, a second, a third, a fourth, and a fifth opening comprising said means for permitting fluid flow;
(f) a first partitioning wall, mainly separating the collection chamber from the outlet filter chamber and extending from a bottom wall of the prefilter means to at least a first level, whereby the collection chamber and the outlet filter chamber communicated via said first opening, located in or above the first partitioning wall, for allowing water to flow from the collection chamber to the outlet filter chamber at or above the first level;
(g) a third partitioning wall, mainly separating the collection chamber from the collection channel and extending above the first level, whereby the collection chamber and collection channel communicate via said third opening, located in or below the bottom of said third partitioning wall;
(h) a fourth partitioning wall, mainly separating the collection channel from the frothing chamber and extending above the first level, whereby the collection channel and frothing chamber communicate via said fourth opening, located in said fourth partitioning wall and extending below the first level, for creating a counter-current of water in the frothing chamber;
(i) a second partitioning wall, separating the collection chamber from the skimmed water exit channel and mainly separating the frothing chamber from the skimmed water exit channel, whereby the frothing chamber and the skimmed water exit channel communicate via said second opening, provided at or below the bottom of the second partitioning wall;
(j) a fifth partitioning wall, mainly separating the skimmed water exit channel from the outlet filter chamber and extending from the bottom wall of the prefilter means to at least a second level, lower than the first level, whereby the skimmed water exit channel and the outlet filter chamber communicate via said fifth opening located in or above said fifth partitioning wall for allowing water to flow from the skimmed water exit channel to the outlet filter chamber at or above the second level; and
(k) frothing means for crating a vertical stream of gas bubbles in the frothing chamber for froth filtration of water entering the frothing chamber from the collection channel, whereby said counter-current of water flows counter to said vertical stream of gas bubbles;
(l) froth separation means disposed in the frothing chamber for removing froth created by the frothing means; and
(m) froth collection means for collecting and removing froth created by the frothing means from the prefilter means.

5,006,231

FLOCCULANT CONTROL SYSTEM

Hayward B. Oblad, and Gary F. Meenan, both of Bethel Park, Pa., assignors to Consolidation Coal Company, Pittsburgh, Pa.

Continuation of Ser. No. 325,837, Mar. 20, 1989, abandoned.
This application Aug. 24, 1990, Ser. No. 572,318
Int. Cl.[5] B01D 17/12, 21/30; C02F 1/52
U.S. Cl. 210—96.1 2 Claims

1. A system apparatus for automatically controlling the supply of additives to a feed slurry passing into a thickener in which the additives coagulate different solids in the feed slurry to separate the solids from the slurry water, comprising;
(a) a thickener including means to feed said slurry to the thickener, and to coagulate separate solids of the feed slurry and separate the solids from the slurry water;
(b) a first means coacting with the feed slurry passing into the thickener responsive to the light reflective characteristics of the solids of the feed slurry and the solids concentrations of the feed slurry, said first means comprising a first optoelectric detector having a transparent tube containing light emitting diodes passing light into the feed slurry and a photoconductor means for generating a first signal in response to the light reflected by the solids, and means to send said first signal to a controller means;
(c) a second means coacting witht the feed slurry passing into the thickener responsive to the light reflective characteristics of the solids of the feed slurry and less respon-

sive than said first means to the solids concentration of the feed slurry, said second means comprising an optoelectric detector having a transparent tube containing light emitting diodes passing light into the feed slurry and a photoconductor means for generating a second signal in response to the light reflected by the solids, and means to send second signal to said controller means;

d) first and second additive feed means each including variable means to supply the additives to the feed slurry; and,

e) said controller means comprising means to receive said first and second signals and means to generate signals controlling functioning of said variable means.

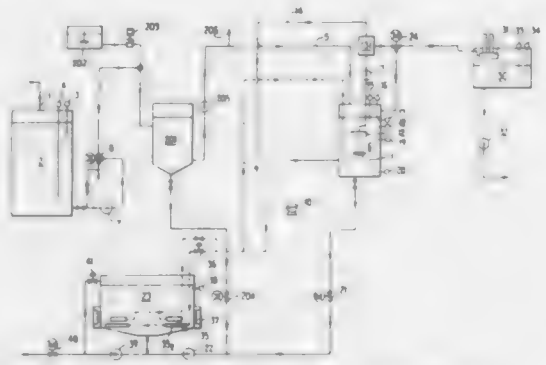
SEWAGE TREATMENT PLANT

Peter J. Lidgitt; Derek J. Freeman, both of Trowbridge, and Paul F. Cooper, Stevenage, all of Great Britain, assignors to The Secretary of State for Defence, in Her Britannic Majesty's Government of the United Kingdom of Great Britain and Northern Ireland, London, England



PCT No. PCT/GB88/00434, § 371 Date Jan. 22, 1990, § 102(e) Date Jan. 22, 1990, PCT Pub. No. WO88/09740, PCT Pub. Date Dec. 15, 1988

PCT Filed Jun. 2, 1988, Ser. No. 458,618

Claims priority, application United Kingdom, Jun. 5, 1987, 8713211

Int. Cl.[5] C02F *3/20*

U.S. Cl. 210—96.1 **11 Claims**

1. An aerobic sewage treatment plant comprising:

a vacuum flush system;

a sewage collection tank, connected to the vacuum flush system, for receiving sewage therefrom;

a settlement tank, connected so as to receive liquid sewage output from said collection tank, said settlement tank having a liquid sewage outlet and a settled solids outlet;

a water dilution means, connected to said liquid sewage outlet of the settlement tank, for diluting liquid sewage and for optimizing subsequent biological processing;

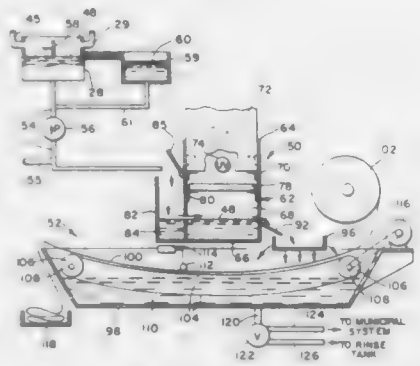
an aeration tank, connected to receive diluted liquid sewage from the settlement tank, said aeration tank having a sewage outlet and a sludge deposit outlet;

a sludge monitor, connected to the aeration tank, for providing a signal for controlling release of sludge;

transfer pump means for controllably pumping liquid sewage output from said sewage collection tank to said settlement tank, for controllably pumping liquid sewage from said settlement tank to said water dilution means, for controllably pumping diluted liquid sewage from said water dilution means to said aeration tank, for pumping said sewage from said aeration tank sewage outlet and sludge deposits from said aeration tank sludge deposit outlet, in response to and under the control of a transfer controller; and

a transfer controller, responsive to at least to said sludge monitor signal, for enabling said transfer pump means to pump between said sewage collection tank, said settlement tank, said water dilution means, said aeration tank and remove material from said aeration tank in controlled batches.

5,006,233



WATER PURIFICATION SYSTEM

Charles M. Muisener, Newington, Conn., assignor to Loctite Corporation, Newington, Conn.

Filed Jan. 11, 1988, Ser. No. 142,738

Int. Cl.[5] C02F *1/32, 1/52*

U.S. Cl. 210—96.1 **26 Claims**

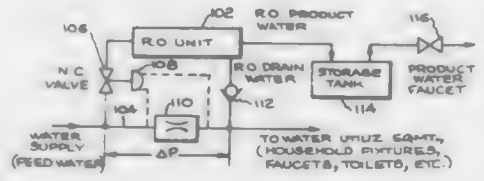
1. Apparatus for purifying, in a continuous operation, rinse water containing a monomer emulsion of the anaerobic or heat cure variety plus a photoinitiator to cause the generation of radicals to initiate polymerization upon exposure to UV energy comprising:

curing means proximate to but spaced from the rinse water for exposing the rinse water containing the monomer emulsion to UV energy to cause the emulsion to polymerize;

delivery means for directing uninterrupted flow of the rinse water containing the emulsion past and proximate to said curing means at a rate sufficient to substantially complete polymerization of the emulsion in the rinse water; and

filter means positioned downstream of said curing means to receive from said curing means the irradiated rinse water containing the polymer, said filter means operable for removing the polymer from the rinse water.

5,006,234



REVERSE OSMOSIS WATER PURIFICATION SYSTEMS

Krishna S. Menon, and Michael J. Witham, both of Liverpool, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

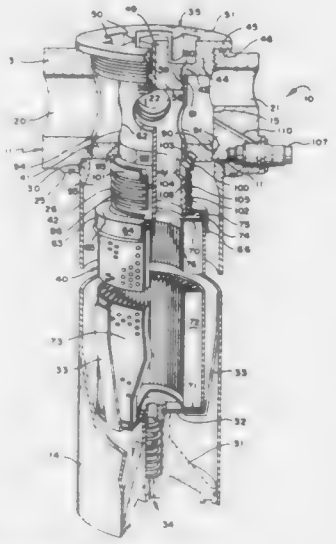
Filed Mar. 20, 1990, Ser. No. 496,570

Int. Cl.[5] B01D *61/08*

U.S. Cl. 210—98 **17 Claims**

1. A water purification system comprising a section of a water line which supplies water through said section to utilization equipment, such as faucets, toilets, washing machines and the like, a reverse osmosis system having a feed water inlet, a reject water outlet and a product water outlet, means in said line section for establishing a differential pressure thereacross when water flows through said line when demanded by said utilization equipment, and means for connecting said reverse osmosis system to said line so that water supplied by said line flows from the feed water inlet to the reject water outlet in response to said differential pressure and product water is produced at said product water outlet.

5,006,235



BARRIER FLANGE FILTER ASSEMBLY INCLUDING COVER

Roydon B. Cooper, Locust Valley, N.Y., assignor to Pall Corporation, Glen Cove, N.Y.

Filed Mar. 20, 1986, Ser. No. 841,614

Int. Cl.[5] B01D *27/06, 27/08*

U.S. Cl. 210—136 **28 Claims**

1. A filter assembly comprising:

a housing which has an opening;

a cover which is detachably and sealingly mounted to the housing at one end of the opening;

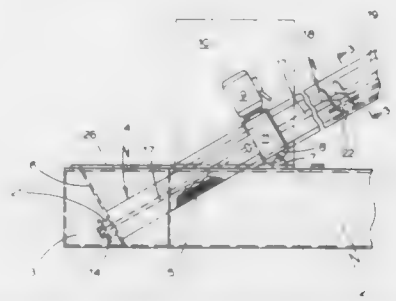
a barrier flange which is detachably and sealingly mounted to the housing within the opening and which has upstream and downstream sides and an aperture extending therebetween, said housing including at least one port which communicates with the opening between the cover and the barrier flange;

a flow tube which has first and second end means, which is joined at the first end means to the cover and extends through the aperture in the barrier flange, and which includes at least one orifice between the barrier flange and the cover, said barrier flange being joined to the flow tube; and

a filter unit which is mounted to the second end means of the flow tube and which includes a hollow, cylindrical filter element and first and second impervious end means for capping the filter element, said flow tube communicating with the interior of the filter element via an aperture in the first end means of the filter unit;

wherein the cover, barrier flange and filter unit are coaxially joined to the flow tube and wherein the barrier flange is no larger than the cover and the filter unit is no larger than the barrier flange, whereby the filter unit may be withdrawn through the opening by removing the cover from the housing.

5,006,236



CONTAMINANT ENTRAINED FLOW SEPARATING APPARATUS

Frank M. Croket, Louisville, Ky., assignor to Hallco Fabricators, Inc., Louisville, Ky.

Filed Sep. 25, 1989, Ser. No. 411,814

Int. Cl.[5] B01D *29/56, 29/94*

U.S. Cl. 210—162 **11 Claims**

1. Apparatus for separating solid contaminants from contaminant entrained fluid stream flows comprising:

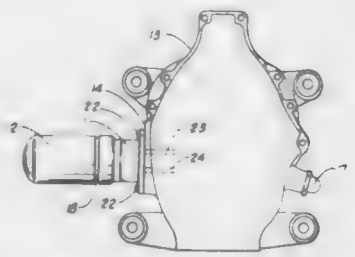
a sump for containing filtered flows from which solid contaminants have been removed; a longitudinally extending inclined filtering trough having lower and upper ends with said lower end pivotally disposable in said sump about a pivot axis intermediate said lower and upper ends to pass filtered flows thereto, said trough having an inlet above said lower end for introduction of contaminant entrained flows thereto for filtration thereof and an outlet adjacent said upper end for free passage therefrom of separated solids;

longitudinally extending conveyor means disposed within said filtering trough for removing the separated solids to said trough outlet;

power means spaced intermediate said trough inlet and said trough outlet above said sump substantially adjacent said pivot axis in cooperative drive connection with the lower extremity of said conveyor means to drive said conveyor means; and

means to remove said filtered flows from said pump.

5,006,237



SPIN-ON OIL FILTER ADAPTOR FOR FOUR CYLINDER CONTINENTAL AIRCRAFT ENGINES

Floyd B. Jones, P.O. Box 3052, Borger, Tex. 79008

Filed Aug. 14, 1989, Ser. No. 344,357

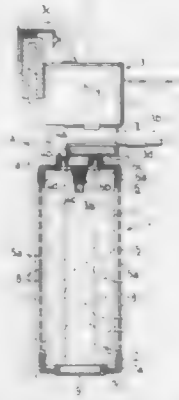
Int. Cl.[5] F01M *11/03*

U.S. Cl. 210—168 **1 Claim**

1. An apparatus, comprising:

a four cylinder Continental Aircraft engine with an oil cooler pad having two openings for oil passage on a crank case of the engine;

a filter adaptor body connected to said oil cooler pan and having an oil inlet passage and an oil outlet passage with the oil inlet passage in the filter adaptor body being aligned with one of the openings in the oil cooler pad and the oil outlet passage in the filter adaptor body being aligned with the other opening in the oil cooler pad; and



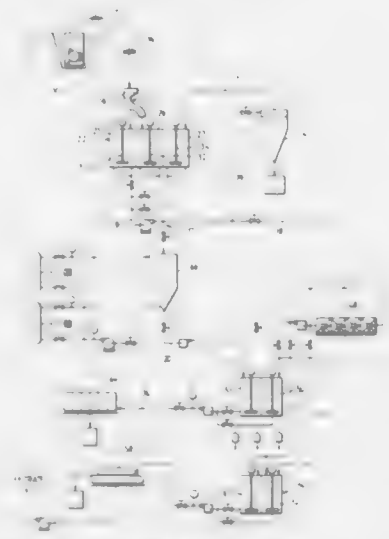
a spin on filter connected to the filter adaptor body with the oil inlet passage and the oil outlet passage being in flow communication with the spin on filter whereby oil is circulated from the oil inlet passage through the spin on filter from one of said holes and discharged back into said other hole through the oil outlet passage.

5,006,238

FILTER FOR USE IN A FISH CULTURING TANK

Kazutoshi Tominaga, Higashiosakashi, Japan, assignor to Kabushiki Kaisha Tominaga Jyushi Kogyosho, Osaka, Japan

Filed Jun. 20, 1989, Ser. No. 368,578
Int. Cl.[5] E04H *3/16*
U.S. Cl. 210—169 3 Claims



1. A filter for use in a fish culturing tank comprising:
a generally vertically-disposed, slotted outer cylindrical casing containing a cylindrical filter medium and having a top open end and a bottom open end, said casing also having a pair of removable caps, an upper cap associated with said top open end, and a lower cap associated with said bottom open end, each of which has an aperture formed therethrough, said upper cap additionally having a raised rim surrounding said aperture thereof and said lower cap having a plug removably mounted in said aperture thereof, so that said aperture is normally closed;
a watertightly-constructed electric pump having a downwardly depending inlet nozzle for drawing filtered water from said casing and an outlet nozzle for returning water to the tank;
an interchangeable attachment means for removably mounting said pump directly atop said top end of said casing with said inlet nozzle extending into said casing, said attachment means comprising a generally annular collar having a generally horizontally-disposed flange portion having a downwardly depending outer shank portion which is configured and dimensioned to sealingly mate with said raised rim of said upper cap and a downwardly depending inner shank portion, radially-inwardly spaced from said outer shank portion, which defines a central bore which is configured and dimensioned to allow said inlet nozzle to pass therethrough; and
means for removably mounting said filter inside said tank.

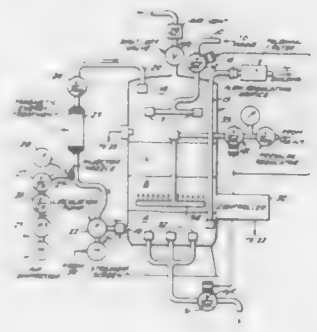
5,006,239

APPARATUS FOR TREATMENT OF OILY SLUDGE

Surendra K. Mishra, The Woodlands, Tex., assignor to Tetra Technologies, Inc., The Woodlands, Tex.

Continuation of Ser. No. 201,522, Jun. 2, 1988, abandoned, which is a continuation-in-part of Ser. No. 933,119, Nov. 20, 1986, Pat. No. 4,851,123. This application Apr. 23, 1990, Ser. No. 512,608
Int. Cl.[5] C02F *1/40*; B01D *17/032*
U.S. Cl. 210—181 9 Claims

1. A separation apparatus, comprising:
a size separator for separating a mixture of hydro-phobic oil, solid particulates, and water into a fines fraction and a coarse fraction; wherein the fines fraction includes under-sized particles, hydrophobic oil, and water; and wherein the coarse fraction includes over-sized particles;
a hydrocyclone connected to the size separator for separating the fines fraction into a low density fraction a high density fraction; and
a froth flotator connected to the hydrocyclone for separating the low density fraction into a substantially hydrophobic component and a substantially hydrophilic component.



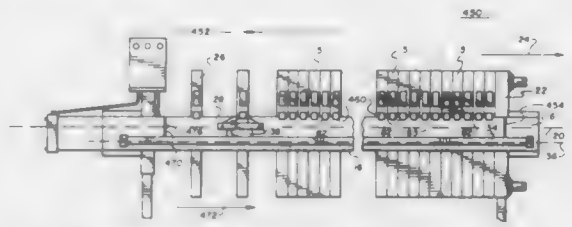
5,006,240

WATER-TREATMENT SYSTEM

Robert F. Steffero, Sr., Myrtle Beach, S.C., assignor to Aqua Systems Division of Chem-Free, Inc., Kennesaw, Ga.

Filed Feb. 6, 1990, Ser. No. 475,765
Int. Cl.[5] B01D *35/06*; C02F *1/48*
U.S. Cl. 210—223 11 Claims

1. A water-treatment system, comprising a tank having a lower filter-bed region and an upper region above said filter-bed region, a water-inlet connection to said upper region for admission of untreated water under delivery pressure, a circulation loop for conveying water from said lower region for discharge into the upper region of said tank, and a water-outlet connection from the lower region of said tank for external delivery of treated water; said circulation loop including in series a continuously running circulation pump, an air-admission connection and a magnetic-energy treatment device, and air-compressor means for delivering air through said air-admission connection to the flow of water in said loop prior to passage through said magnetic-energy treatment devices; and air-venting means above said water-outlet connection for venting air from said tank, whereby airborne oxygen is continuously exposed to recirculating water for oxidation of impurities to a state capable of magnetic-energy treatment to enhance impurity coagulation with density greater than unity, further whereby coagulated impurities will enable enhanced filter-bed accumulation of impurities; and a backwashing system comprising means to intermittently circulate upwardly directed flows of inlet water within a lower region of said filter-bed, whereby to dislodge and suspend filter-bed accumulations, and



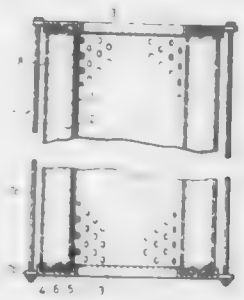
means including a selectively operable drain valve connected to the lower region of said tank for discharge of water with suspended accumulations from within said lower region of the filter-bed at least as long as inlet water is being admitted to the lower region of the filter bed.

5,006,241

APPARATUS FOR SHIFTING FILTER PLATES IN A FILTER PRESS

Steven S. Davis, Farmington, Utah, assignor to Envirotech Corporation, Menlo Park, Calif.

Continuation of Ser. No. 936,091, Nov. 28, 1986, Pat. No. 4,806,239. This application Feb. 21, 1989, Ser. No. 312,910
The portion of the term of this patent subsequent to Feb. 21, 2006, has been disclaimed.
Int. Cl.[5] B01D *25/34*
U.S. Cl. 210—225 6 Claims



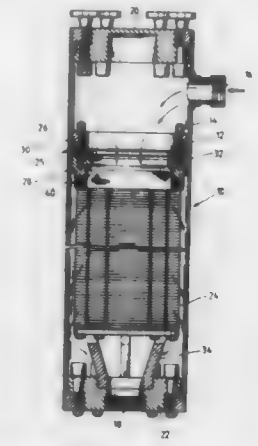
1. A filter press comprising:
an elongate frame;
a filter press head plate mounted on one end of said frame;
an upstanding follower slidably mounted on an opposing end of said frame;
a plurality of filter plates supported on said frame between said press head plate and said follower, said filter plates being made longitudinally slidable along said frame;
a rodless fluid pressure cylinder mounted on said frame;
a carriage mounted on said rodless fluid pressure cylinder for longitudinally displacement along said frame;
connection means, mounted on said carriage for effecting a releasable union with at least one of said filter plates wherein said filter plate is carried along said frame by said moving carriage.

5,006,242

MECHANICALLY SECURED WOOL FILTER CARTRIDGE

Mikio Sato, Sagamihara, and Tsuneo Yamaguchi, Kawasaki, both of Japan, assignors to Wako Sangyo Kabushiki Kaisha, Tokyo, Japan

Filed May 26, 1989, Ser. No. 357,935
Claims priority, application Japan, Sep. 30, 1988, 63-247231
Int. Cl.[5] B01D *27/04*
U.S. Cl. 210—232 2 Claims



1. A cartridge-type fluid filtration element for filtrating a fluid, comprising:
a porous core cylinder;
a filtration cylinder formed of glass wool of large thickness fitted around said porous core cylinder; and
end plates secured to both end surfaces of said filtration cylinder without bonding or molding; wherein highly densified portions for hindering permeation of the fluid are formed at the ends of said filtration cylinder by compression of said glass wool filtration material by fastening bands wound flexibly on end outer peripheries thereof, and wherein said end plates are press-fitted to highly densified end portions of said filtration cylinder by interposed mechanical means connecting said end plates.

5,006,243

FILTER BAG SECURING RING

Johnny Arnaud, Houston, Tex., assignor to Hydrotreat, Inc., Pasadena, Tex.

Continuation of Ser. No. 110,976, Oct. 20, 1987, abandoned. This application Aug. 24, 1989, Ser. No. 399,356
Int. Cl.[5] B01D *29/27*
U.S. Cl. 210—232 9 Claims

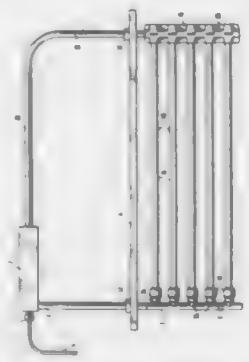
1. A filter apparatus, comprising:
a housing having a fluid inlet and a fluid outlet;
a filter basket situated inside said housing;
a filter bag adjacent said filter basket; and
a securing apparatus for securing a portion of said filter bag to said filter basket, comprising:

a receiving member having an inner surface for seating against said filter bag and having a ledge projecting radially inwardly from said inner surface, and

a securing ring having a generally V-shaped outer circumference, said securing ring having a lower surface adapted to rest against the interior of said filter bag and proximate said ledge, and sized to force its V-shaped outer circumference against said inner surface through said filter bag.

5,006,244

FLUID PURIFICATION DEVICE



Jan Maarschalkerweerd, Lambeth, Canada, assignor to Trojan Technologies, Inc., London, Canada

Division of Ser. No. 243,845, Sep. 13, 1988, Pat. No. 4,872,980. This application May 31, 1989, Ser. No. 359,647

The portion of the term of this patent subsequent to Oct. 10, 2006, has been disclaimed.

Int. Cl.[5] C02F *1/32*

U.S. Cl. 210—243 **16 Claims**

1. A fluid purification module adapted to be inserted in a body of water to be purified, the module comprising in combination a frame including a pair of opposed legs laterally spaced from each other and adapted for insertion into the water to be purified, a plurality of water purification lamps extending between and supported by said legs, each lamp having one end thereof located towards said one leg and an opposite end which is closed and located towards said other leg, said lamps including means permitting immersion of the lamps into water, a plurality of electrical lead wires respectively connected to said lamps, said frame having a first portion directly connected to at least one of said legs, and a ballast incorporated in said first portion of said frame and including means connected to said lead wires for controlling all of said lamps.

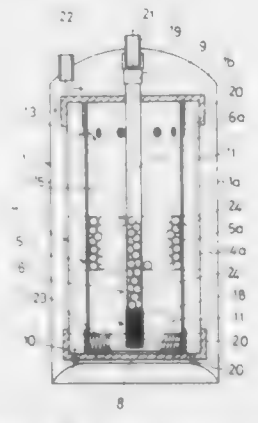
WATER PURIFYING DEVICE

Takeshi Yukishita, Toyohashi, Japan, assignor to Sanki System Product Co., Ltd., Tokyo, Japan



Filed Feb. 8, 1990, Ser. No. 477,324

Claims priority, application Japan, Feb. 13, 1989, 1-15696[U]

Int. Cl.[5] C02F *9/00*

U.S. Cl. 210—256 **3 Claims**

1. A water purifying device comprising a cylindrical housing equipped with a water inlet joint and a water outlet joint at a top cover of said housing, an outer cylinder coaxially mounted within said housing and having connection holes at a bottom of said outer cylinder to connect an inside space of said housing and an inside space of said outer cylinder, an intermediate cylinder coaxially mounted within said outer cylinder and having connection holes at a top portion of said intermediate cylinder across a wall of said intermediate cylinder, an upper cover plate air-tightly and commonly closing a top opening of both said outer cylinder and said intermediate cylinder with an air-tight fit, a lower cover plate commonly closing a bottom opening of both said outer cylinder and said intermediate cylinder, an inner cylinder coaxially mounted within said intermediate cylinder and having a top end projected from said upper cover plate to connect with said water outlet joint and having a connection hole at a lower end to open to an inner area of said intermediate cylinder, and water purifying materials packed in a gap between said outer cylinder and said intermediate cylinder and in a gap between said intermediate cylinder and said inner cylinder and in a space within said inner cylinder, and functioning so that water being introduced from said water inlet joint flows inside of said housing,

of said outer cylinder, of said intermediate cylinder, and of said inner cylinder to be purified by said water purifying materials and flows out from said water outlet joint and wherein said water purifying material packed in the gap between said outer cylinder and said intermediate cylinder and in the gap between said intermediate cylinder and said inner cylinder contains active carbon made from coconut shell and wherein said water purifying material packed within said inner cylinder is ceramic balls.

BAFFLED PARTICULATE MATERIAL HOUSING

Evan A. Edwards, Pittsford; Peter J. Harissis, Rush, and Krishna S. Menon, Liverpool, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Dec. 19, 1989, Ser. No. 452,924

Int. Cl.[5] B01D *27/02*

U.S. Cl. 210—264 **9 Claims**

1. A fluid treatment device including:

a cylindrical housing having first and second ends;

particulate material for treating said fluid, said particulate material being disposed within said housing;

inlet means for flow of fluid into the particulate material at or adjacent one end of said housing;

outlet means for flow of fluid out of the particulate material at or adjacent the other end of the housing; and

a helical baffle within said housing, said baffle extending at least part way between said inlet means and said outlet means and including a spine extending generally along the axis of said cylindrical housing and fins extending along the spine and away from the spine into continuous contact with the internal surface of the housing along helices.

5,006,247

ASYMMETRIC POROUS POLYAMIDE MEMBRANES

Kathleen A. Dennison, St. Paul; Bruce E. Kolcinski, Birchwood Village; Subramanian Krishnan, St. Paul, and Patrise M. Russell, Birchwood Village, all of Minn., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Filed Aug. 15, 1989, Ser. No. 394,229

Int. Cl.[5] B01D *67/00, 69/02, 71/56*

U.S. Cl. 210—500.38 **31 Claims**

1. An asymmetric, porous polyamide membrane permeable to fluid flow comprising:

(A) a porous skin layer, and

(B) adjacent to the skin layer, an integral, porous support layer having at least one region comprising a network of substantially parallel, hollow tube-like structures, each of the tube-like structures being oriented such that the longitudinal dimension of each tube-like structure is essentially perpendicular to the skin layer;

wherein:

the skin layer is relatively thin and dense compared to the support layer,

the pore diameters in the skin layer are relatively small compared to the diameters of the tube-like structures in the support layer,

in membranes having support layers with more than one region, the cross-sectional area of the tube-like structures is larger in regions located farther from the skin layer, and

the polyamide is an aliphatic polyamide having a glass transition temperature of less than 200° C.

26. A process for making a porous asymmetric membrane comprising the steps of:

(A) preparing a casting solution comprising an aliphatic polyamide, having a glass transition temperature less than 200° C., dissolved in an alcohol/salt solution;

(B) coating a film of preselected thickness of the casting solution onto the surface of a casting substrate;

(C) exposing the resulting film to a non-solvent liquid bath thereby precipitating the polyamide and forming the porous, asymmetric polyamide membrane; and

(D) recovering the membrane from the bath and drying it.

5,006,248

METAL OXIDE POROUS CERAMIC MEMBRANES WITH SMALL PORE SIZES

Marc A. Anderson, and Qunyin Xu, both of Madison, Wis., assignors to Wisconsin Alumni Research Foundation, Madison, Wis.

Continuation-in-part of Ser. No. 425,668, Oct. 23, 1989. This application Aug. 6, 1990, Ser. No. 563,013

Int. Cl.[5] B01D *63/00*

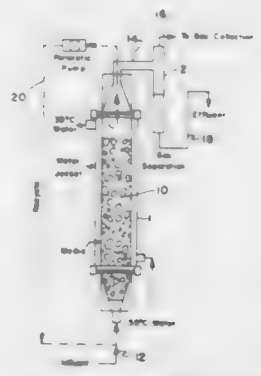
U.S. Cl. 210—500.25 **4 Claims**

1. A composition of matter comprising a porous, transparent titanium dioxide ceramic membrane having a mean pore diameter of less than 40 Angstroms and a surface area available for contact of a filtrate in excess of 200 sq. m/g.

3. A composition of matter comprising a porous, transparent metal oxide ceramic membrane having a mean pore diameter of less than 40 Angstroms, a metal selected from the group consisting of transition metals and mixtures thereof and a surface area available for contact of a filtrate in excess of 200 sq. m/g.

5,006,249

ANAEROBIC WASTE WATER TREATING PROCESS



George A. Green, Elizabeth, and Stanislaus A. Kaczmarek, Morris Plains, both of N.J., assignors to Exxon Research and Engineering Company, Florham Park, N.J.

Filed Dec. 29, 1988, Ser. No. 290,402

The portion of the term of this patent subsequent to Jan. 8, 2008, has been disclaimed.

Int. Cl.[5] C02F *3/28*

U.S. Cl. 210—603 **11 Claims**

1. A process for treating waste water separated from crude oil at a production well, said waste water comprising a Group IIA metal component of the Periodic Table of Elements, and an alkali metal component in an amount of at least about 7000 mg/l, calculated as elemental metal, which process comprises: contacting said water, in a contacting zone, in the absence of added molecular oxygen, with an acclimated biomass of anaerobic microorganisms at conditions to convert at least a portion of said organic pollutants to carbon dioxide and methane, wherein said biomass is acclimated by the steps which comprise:

(a) contacting a biomass of anaerobic microorganisms, in the absence of added molecular oxygen, with a water stream comprising organic pollutants, a Group IIA metal component of the Periodic Table of the Elements, and a low concentration of an alkali metal component; and

(b) incrementally adding an additional amount of said alkali metal component to said water of step (a) to acclimate said biomass of step (a).

5,006,250

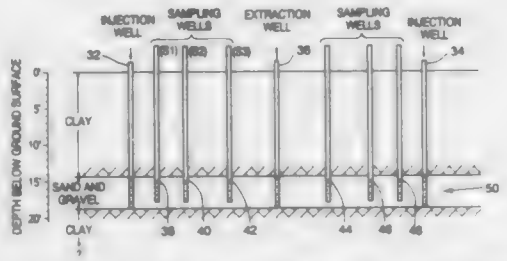
PULSING OF ELECTRON DONOR AND ELECTRON ACCEPTOR FOR ENHANCED BIOTRANSFORMATION OF CHEMICALS

Paul V. Roberts, Cupertino; Gary D. Hopkins, Sunnyvale; Lewis Semprini, Palo Alto; Perry L. McCarty, Stanford, and Douglas M. MacKay, Venice, all of Calif., assignors to The Board of Trustees of the Leland Stanford Junior University, Stanford, Calif.

Filed Dec. 4, 1987, Ser. No. 128,664

Int. Cl.[5] C02F *3/34*

U.S. Cl. 210—610 **29 Claims**



1. A method for purifying an underground water supply containing halogenated aliphatic compounds by in-situ biodegradation of said compounds, comprising:

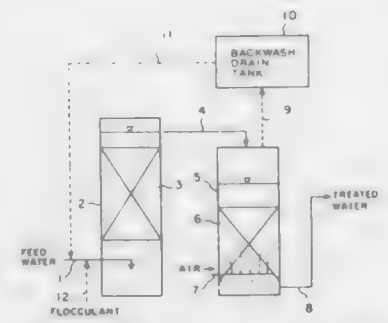
injecting at least two water aliquots into an aquifer zone, at least one of said aliquots containing an electron donor capable of being utilized by an indigenous population of microorganisms contained in said groundwater supply as a primary growth substrate, and at least one of said aliquots containing an electron acceptor for oxidation of said primary growth substrate, wherein each of said aliquots are injected in said aquifer zone at separate points of addition

into said aquifer zone, to stimulate growth of said microorganisms and to distribute them throughout said aquifer zone to cause in-situ degradation of said halogenated aliphatic compounds by metabolic activity of said microorganisms.

16. A method for purifying an underground water supply containing halogenated aliphatic compounds by in-situ biodegradation of said compounds, comprising:

(a) addition of an electron donor into at least one aliquot of water, said electron donor being capable of being utilized

by an indigenous population of microorganisms contained in said groundwater supply as a primary growth substrate, and addition of an electron acceptor into at least a second aliquot of water for oxidation of said primary substrate; and



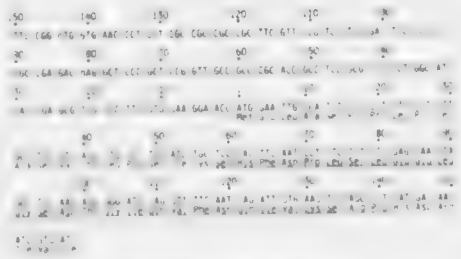
(b) injecting into an aquifer zone, in alternating pulsed cycles each of said aliquots containing said donor and said acceptor to stimulate growth of said microorganisms and to distribute them throughout said zone to cause in-situ degradation of said halogenated aliphatic compounds by the metabolic activity of said microorganisms.

5,006,251

PROCESS FOR TREATING ORGANIC WASTE WATER

Kazuo Takeishi, Ibaraki; Yasuhiro Okubo, and Takashi Itoh, both of Tokyo, all of Japan, assignors to Director General, Public Works Research Institute, Ministry of Construction, Ibaraki and Nishihara Environmental Sanitation Research Corporation Limited, Tokyo, both of, Japan

Filed Sep. 27, 1989, Ser. No. 413,188
Int. Cl.[5] C02F *3/06*
U.S. Cl. 210—618 5 Claims



1. A process for treating organic waste water which comprises a first step of introducing the organic waste water containing suspended solids into a solid-liquid separator packed with a filter medium having a void ratio of at least 70%, via a lower portion of the separator, and discharging the waste water from the separator via an upper portion of the separator to thereby remove the suspended solids from the waste water, and a second step of introducing the effluent from the first step into an aerobic filter bed packed with a granular filter medium and supplied with oxygen-containing gas from a lower portion of the filter medium-packed bed, via an upper portion of the filter bed, and discharging the effluent from the filter bed via a lower portion of the filter bed to thereby treat the effluent aerobically.

5,006,252

PURIFIED PROTEASE NEXIN

Randy W. Scott, Sunnyvale, and Joffre B. Baker, El Granada, both of Calif., assignors to Invitron, St. Louis, Mo. and University of Kansas, Lawrence, Kans.

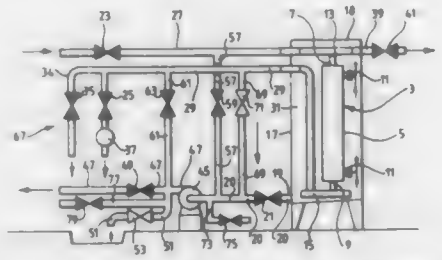
Continuation of Ser. No. 871,501, Jun. 6, 1986, abandoned, which is a continuation-in-part of Ser. No. 870,232, Jun. 3, 1986, abandoned. This application Jul. 10, 1989, Ser. No. 378,434
Int. Cl.[5] B01D *15/08*
U.S. Cl. 210—635 5 Claims

1. A method to purify native protease nexin 1 (PN-I), which method comprises:

applying a medium containing PN-I to a column containing heparin bound to solid support, said column being preequilibrated,

eluting said column with a gradient of 0.3–1M NaCl to obtain fractions,

recovering the fractions containing classes of PN-I, followed by



subjecting said fractions to gel exclusion chromatography using a gel with an exclusion of 100 kd.

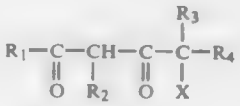
5,006,253

METHOD OF OPERATING MEMBRANE SEPARATION SYSTEMS

John Siegers, Breda, Netherlands, assignor to Rohm and Haas Company, Philadelphia, Pa.

Filed Mar. 31, 1989, Ser. No. 331,476
Claims priority, application United Kingdom, Mar. 31, 1988, 8807825
Int. Cl.[5] B01D *65/02*
U.S. Cl. 210—636 11 Claims

1. A method of cleaning a membrane separation system comprising one or more membranes, which method comprises inducing flow of liquid through the or each membrane by creating a pressure less than atmospheric on the fouled side of the or each membrane while maintaining substantially atmospheric pressure on said fluid on the other side of the or each of said membrane.



5,006,254

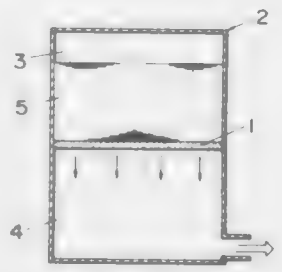
REDUCING THE RADIUM RADIOACTIVITY OF AQUEOUS EFFLUENTS

Francinet Cailly, Paris; Alain Leveque, La Rochelle, and Jean-Louis Sabot, Maisons Laffitte, all of France, assignors to Rhone-Poulenc Chimie, Courbevoie, France

Filed Apr. 26, 1988, Ser. No. 186,289
Claims priority, application France, Apr. 28, 1987, 87 6004
Int. Cl.[5] B01D *11/00*
U.S. Cl. 210—639 15 Claims

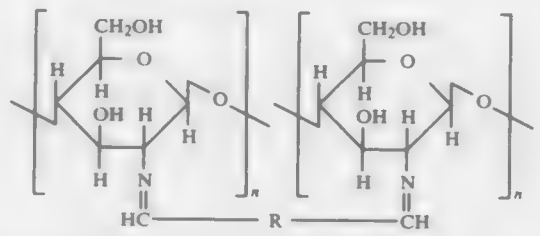
1. A process for reducing the radioactivity of an aqueous solution containing both nitrate and radium values, comprising adjusting the pH of the initial aqueous phase to at least 7.0, liquid/liquid extracting such solution with an organic phase which comprises at least one extractant having the formula (1):

(1)



wherein R_1 is an alkyl, aryl, arylalkyl, or alkylaryl radical, a halo-substituted such radical, or a heterocycle, R_2 is hydrogen or an alkyl radical, X is a halogen atom, and R_3 and R_4, which may be identical or different, are each hydrogen, halogen, an alkyl radical or a halogenated alkyl radical, whereby providing a final organic phase charged with said radium values and a final aqueous phase purified thereof, and recovering said purified final aqueous phase.

5,006,255



SELECTIVE PARMEABLE MEMBRANE FOR SEPARATION OF LIQUID SOLUTION

Tadashi Uragami, Osaka, Japan, assignor to Ligmyte Co., Ltd., Osaka, Japan

Filed Oct. 11, 1988, Ser. No. 255,304
Claims priority, application Japan, Oct. 15, 1987, 62-260067
Int. Cl.[5] B01D *61/36*
U.S. Cl. 210—640 6 Claims

1. A process of selectively separating water from a liquid solution containing water and an organic solvent, which comprises contacting the solution with a permeable membrane made of chitosan cross-linked with a dialdehyde and having the following general formula:

wherein n represents an integer of 200 to 20,000, and R represents a group of formula:

$-(CH_2)_m-$ wherein m represents an integer of 1 or more, or

whereby water selectively vaporizes and permeates the membrane.

5,006,256

AFFINITY MEMBRANES HAVING PENDANT HYDROXY GROUPS AND PROCESSES FOR THE PREPARATION AND USE THEREOF

James C. Davis, Hudson, Ohio, assignor to The Standard Oil Company, Cleveland, Ohio

Division of Ser. No. 478,392, Feb. 12, 1990, which is a division of Ser. No. 144,312, Jan. 14, 1988, Pat. No. 4,919,811. This application Aug. 10, 1990, Ser. No. 565,085
Int. Cl.[5] B01D *61/24*
U.S. Cl. 210—645 8 Claims

1. A process for selectively removing biological materials from fluids comprising the step of:

passing said fluids over a structure for binding a preselected biological consisting essentially of a hydrophilic precursor filtration membrane comprising a water-insoluble polymer matrix and a matrix-compatible copolymer; and a plurality of reaction sites provided on the surface of said membrane selective to bind a specific biological material, said reaction sites being selected from the group consisting of organic adducts synthesized from hydroxyl groups supplied by said matrix-compatible copolymer.

5,006,257

EXTRACTS OF THERMAL WATERS AND THEIR APPLICATIONS

Andre Lamothe, Plateu de Beauregard - Les Pinchinats, 13100 Aix-en-Provence, France

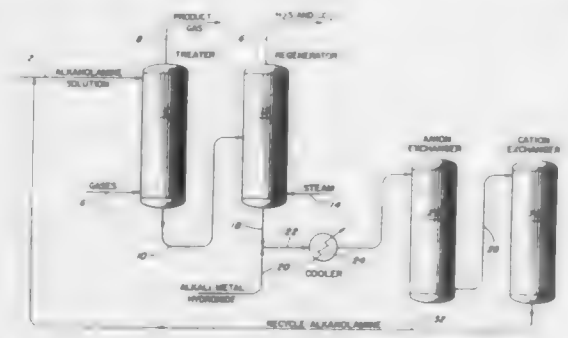
PCT No. PCT/FR88/00031, § 371 Date Sep. 20, 1988, § 102(e) Date Sep. 20, 1988, PCT Pub. No. WO88/05424, PCT Pub. Date Jul. 28, 1988
PCT Filed Jan. 21, 1988, Ser. No. 264,947
Claims priority, application France, Jan. 21, 1987, 87 00646
Int. Cl.[5] C02F *9/00*
U.S. Cl. 210—650 5 Claims

1. A process for regenerating polluted thermal waters containing thermal liquid with living thermal plankton therein, comprising the steps:

(a) providing a first portion of pure, unused thermal waters containing thermal liquid and living thermal plankton therein;

(b) obtaining a thermal plankton concentrate of said first portion of thermal waters by separating a quantity of thermal liquid from said first portion of thermal waters;

(c) filtering and sterilizing a second portion of thermal waters, said second portion being polluted; and



(d) regenerating said sterilized thermal waters by adding to it said thermal plankton concentrate in an amount sufficient to provide a predetermined population of living thermal plankton in said sterilized thermal waters.

5,006,258

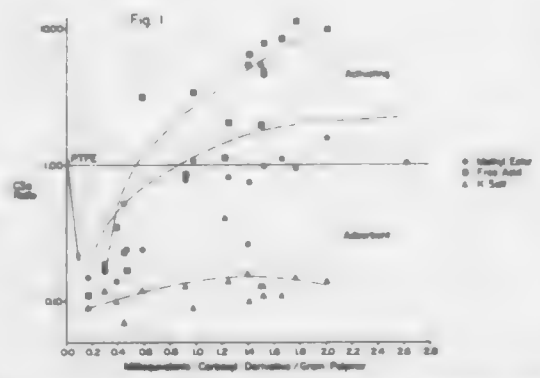
REGENERATION OF ACIDIC CATIONIC EXCHANGE RESIN USED IN THE REACTIVATION OF SPENT ALKANOLAMINE

Fred C. Veatch, Newkirk, and Alfred E. Keller, Ponca City, both of Okla., assignors to Conoco Inc., Ponca City, Okla.

Filed Oct. 26, 1989, Ser. No. 427,417
Int. Cl.[5] B01D *15/04*
U.S. Cl. 210—677 24 Claims

1. A process for regenerating an acidic cation exchange resin containing alkali metal cations and alkanolamine cations at the ionic sites on the resin, which comprises:

(a) eluting the resin with aqueous ammonia solution to displace the alkanolamines from the resin with minimal displacement of alkali metal cations,



(b) thereafter eluting the resin with a weak solution of mineral acid to displace the ammonia, metal cations and any remaining alkanolamine from the resin.

5,006,259

PROCESS AND MEANS FOR USE OF ANAPHYLATOXIN ADSORBENTS

Deborah L. Liczwek, West Chester, Pa., and Erwin A. Vogler, New Hill, N.C., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

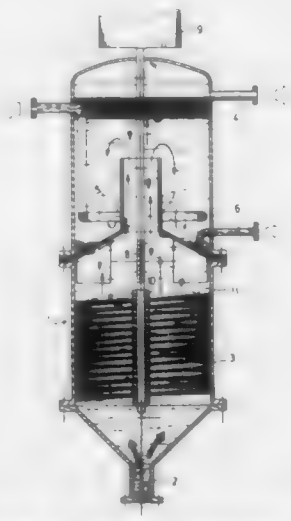
Division of Ser. No. 171,027, Mar. 21, 1988, abandoned. This application Mar. 2, 1989, Ser. No. 315,966
Int. Cl.[5] B01D *15/00*; A61K *31/74, 31/745*
U.S. Cl. 210—692 5 Claims

1. Process for adsorbing anaphylatoxins from anaphylatoxin-contaminated blood, which process comprises contacting the contaminated blood with at least one tetrafluoroethylene copolymer consisting essentially of recurring units of

(a) tetrafluoroethylene, and

(b) recurring units of one or more comonomers of the structure $CF_2{=}CF{-}O{-}B{-}OCF_2CF_{2-x}COOR$,

wherein B is perfluoro alkylene of 2–4 carbon atoms, x is a cardinal number of 0–4, and R is hydrogen, alkyl of 1 to 12 carbon atoms, or a metal cation,



wherein the units of component (b) are present in an amount sufficient to cause the copolymer to adsorb anaphylatoxins from blood.

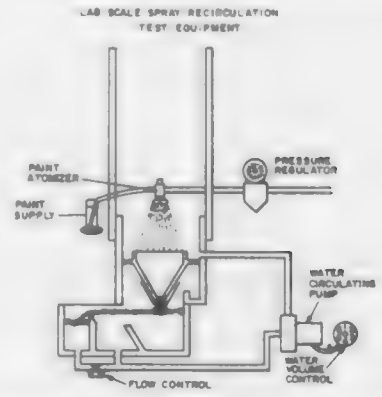
5,006,260

COALESCER DEVICE AND METHOD USING MOVABLE FILLING

Henri Roques, Portet S/Garonne; Yves Aurelle, Aucamville, and Louis Lopez, Portet sur Garonne, all of France, assignors to Institut National des Sciences Appliquees de Toulouse, Toulouse, France

PCT No. PCT/FR87/00454, § 371 Date May 26, 1989, § 102(e) Date May 26, 1989, PCT Pub. No. WO88/03831, PCT Pub. Date Jun. 2, 1988
PCT Filed Nov. 18, 1987, Ser. No. 368,343
Claims priority, application France, Nov. 28, 1986, 86 16784
Int. Cl.[5] B01D *17/04*
U.S. Cl. 210—708 13 Claims

6. An apparatus for separation of a dispersed phase in emulsion or suspension in a continuous phase of different density comprising a coalescing chamber (1) extending along an axis, an emulsion inlet (2) situated at one end of said chamber, a coalesced phase outlet (4) and a continuous phase outlet (5) situated at the opposite end of said chamber at different levels, a rotatable support (8, 10) associated with the coalescing chamber, means for causing rotation of said support (9) and a filling (11, 12, 14, 17) formed by fibers connected to said support, said filling having a high coefficient of void and an inherent volume of fiber less than about 20% of the useable volume of said coalescing chamber (1), said filling (11, 12) comprising a plurality of radial fibers connected to a central shaft extending along the axis of the chamber, each fiber having a length adapted to sweep the transverse section of the chamber during rotation and to be in contact with said chamber at the extremity of the fiber.



5,006,261

PAINT DETACKIFICATION USING WATER-DISPERSIBLE POLYMERIC LATEXES

Shu-Jen W. Huang, and Claudia V. Stenger, both of Naperville, Ill., assignors to Nalco Chemical Company, Naperville, Ill.

Continuation-in-part of Ser. No. 287,210, Dec. 21, 1988, abandoned. This application Apr. 11, 1990, Ser. No. 507,549
The portion of the term of this patent subsequent to Jun. 28, 2007, has been disclaimed.
Int. Cl.[5] C02F *1/56*
U.S. Cl. 210—712 3 Claims

1. A method of treating circulating wash water from a paint spray booth, said wash water containing an over-sprayed portion of an enamel paint which, prior to spraying, has a solids content of 35% by weight or less in order to prevent said over-sprayed paint contained in said wash water from adhering to the interior surfaces of the circulating water system, which method comprises adding to said water a water-dispersible, polymeric latex detackifier selected from the group consisting

of polyvinyl acetate, copolymers of vinyl acetate, polyvinyl chlorides, polystyrene and copolymers of styrene, said latex detackifier having an average particle size of less than 10 microns and being present in an amount to detackify said over-sprayed paint contained in said wash water.

5,006,262

PROCESS FOR RECOVERING COPPER FROM COPPER ION CONTAINING AQUEOUS SOLUTIONS

John Weyls, Cleveland, Ohio, and Ray C. Lindemann, Montgomery, Ala., assignors to Met. Rev. Inc., Cleveland, Ohio

Filed Nov. 21, 1989, Ser. No. 440,126
Int. Cl.[5] C02F *1/70*
U.S. Cl. 210—719 3 Claims

1. A process for recovering copper from cupric ion containing aqueous solutions which comprises

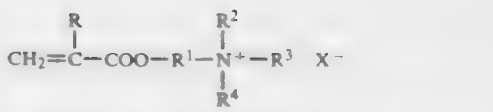
adding to the aqueous solution containing cupric ions an amount of reducing agent which corresponds from 0.1 to 10 moles of reducing agent per mole of cupric ion to produce a reaction mixture;

heating the reaction mixture in the absence of oxygen in a closed vessel to a temperature of from 170° to 240° C. at a pressure of from 10 to 50 bars, for a time from 2 to 80 hours to precipitate metallic copper; and

separating the precipitated metallic copper from the aqueous solution to recover the copper; and

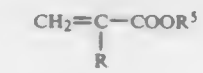
wherein the reducing agent is selected from the group consisting of isobutyric acid, α-hydroxy isovaleric acid, α-hydroxy isocaproic acid, valine, threonine, glutamic acid, and proline.

5,006,263



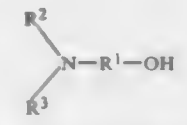
CATIONIC POLYMERS

Peter M. Robinson, Columbus, and Nguyen Van Det, Midland, both of Ga., assignors to Exxon Chemical Patents, Inc., Linden, N.J.



Division of Ser. No. 277,715, Nov. 30, 1988, Pat. No. 4,983,698, which is a continuation-in-part of Ser. No. 137,073, Dec. 23, 1987, abandoned. This application Sep. 7, 1990, Ser. No. 578,462
Int. Cl.[5] B01D *21/01*
U.S. Cl. 210—728 2 Claims

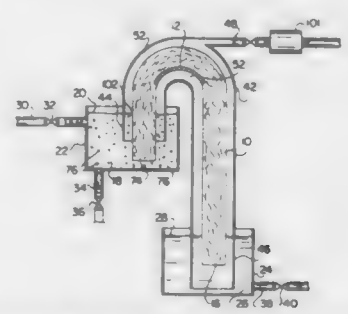
1. A method of dewatering sludge comprising contacting the sludge with the improved water-soluble cationic copolymer comprising



(i) a nonionic monomer selected from acrylamide and methacrylamide and (ii) a cationic monomer of the formula

wherein R is hydrogen or methyl, R^1 is alkylene C_2–C_4, R^2–R^4 are each individually alkyl C1–C4, and X is a counterion, the improvement which comprises replacing a portion of the nonionic monomer with an azeotropic waste stream which is produced and removed during a transesterification reaction between a starting acrylate of the formula

wherein R^5 is alkyl C_1–C_3, and a starting dialklamino alcohol of the formula



which was used to prepare the cationic monomer.

5,006,264

APPARATUSES AND METHODS FOR LIQUID-UNDISSOLVED-SOLIDS SEPARATION

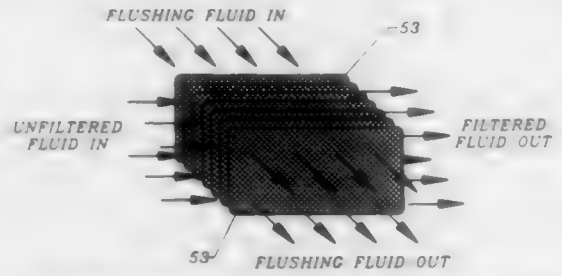
Eduardo M. Acuna, Paseo de los Descubridores 216 4° Sector, Monterrey, N.L.C.P., Mexico (64610)

Continuation-in-part of Ser. No. 892,995, Aug. 4, 1986, Pat. No. 4,759,857. This application Jul. 14, 1988, Ser. No. 219,294
Int. Cl.[5] B01D *1/00*
U.S. Cl. 210—741 3 Claims

1. A method for separation of particles suspended undissolved solids present in a liquid having a top surface, the method comprising the steps of:

intersecting at least one portion of an open siphon member comprising a porous medium through an interface between the liquid containing the suspended undissolved solids and a gas contacting both the liquid and the porous medium, said porous medium containing a plurality of interconnected internal passageways some of which are dimensioned to plug with particles of the suspended undissolved solids of a given size and some of which are dimensioned to exclude particles of a given size, so that the suspended undissolved solids are either prevented from flowing through the porous medium or are captured by it,

controlling the gaseous composition of the gas contacting both the liquid and the porous medium,



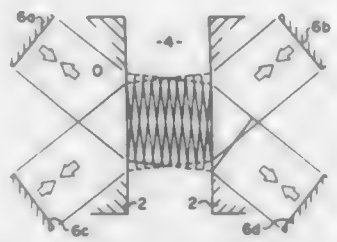
positioning at least one other portion of said porous medium lower than the top surface of the liquid and outside of the liquid,

isolating the gas contacting the liquid, and
siphoning the liquid and ejecting from the porous medium the liquid substantially free of the suspended undissolved solids.

5,006,265
FILTER APPARATUS AND METHOD FOR REMOVING SOLIDS FROM FLUIDS

Kishore K. Kar, Midland, and David J. Nowak, Auburn, both of Mich., assignors to The Dow Chemical Company, Midland, Mich.

Filed May 25, 1989, Ser. No. 357,457
Int. Cl.[5] B01D *25/00*
U.S. Cl. 210—741 9 Claims



1. A filter apparatus (F) for separating suspended solids (54*a*) from fluids, which comprises:
a filter housing that has a filter chamber (33) defined within the housing;
a filter bundle (36) positioned inside the filter chamber (33), the bundle including at least two filter screens, each screen being defined by an overlayer strand (50) of material joined to an underlayer strand (51) of material, the overlayer (50) and underlayer strands (51) being spaced apart and placed crosswise to each other;
the spaces between each strand defining channels (52) which allow fluid to flow through the bundle (30) in a path parallel to each filter screen, and the spaces also defining openings (53) which allow flushing fluid to flow through the bundle in a path crosswise to each screen;
a filter disk (34) positioned inside the filter chamber (33) and having a front face (34*a*) and a rear face (34*b*), the front face (34*a*) including a holder means (35) for the filter bundle (36), and the disk (34) including several flush ports (38) that extend from the holder means (35) to the rear face (34*b*) of the disk (34);
a port closure plate (39) having a front face (39*a*) and a rear face (39*b*), and an actuator stem (41) fastened into the rear face (39*b*) of the plate (39) and into an actuator means (42);
the actuator means (42) being designed to move the port closure plate (39) to a first position in which the plate (39) closes the flush ports (38), and to a second position in which the plate (39) uncovers the flush ports (38);
a filter inlet fitting (45), and filter outlet fitting (46), said fittings being positioned in the filter housing, and in communication with the filter chamber (33);
the filter inlet fitting (45) being designed for directing a fluid containing solid particles (54) into the filter bundle (36) when the port closure plate (39) is in its first position, the filter bundle (36) being designed to trap said particles (54) within the openings (53) in the filter screens as the fluid moves through said filter bundle (36), and the filter outlet fitting (46) being designed to carry said fluid out of the filter chamber (33) after it passes through the filter bundle (36);
a flushing fluid inlet fitting (47, 48) positioned in the filter housing, and designed for directing a flushing fluid into the filter bundle (36) when the port closure plate (39) is in its second position; and
wherein the movement of the flushing fluid through the the filter bundle (36) dislodges the solid particles (54) from the filter screens, and the fluid containing said particles (54) is carried out of the filter chamber (33) through a flushing fluid outlet fitting (49) positioned in the filter housing.

5,006,266
MANIPULATING MEANS UTILIZING ULTRASONIC WAVE ENERGY FOR USE WITH PARTICULATE MATERIAL

Cornelius J. Schram, Paveaham, England, assignor to National Research Development Corporation, London, England

PCT No. PCT/GB88/00849, § 371 Date Aug. 2, 1989, § 102(e) Date Aug. 2, 1989, PCT Pub. No. WO89/03243, PCT Pub. Date Apr. 20, 1989
PCT Filed Oct. 13, 1988, Ser. No. 375,010
Claims priority, application United Kingdom, Oct. 14, 1987, 8724067
Int. Cl.[5] B01D *43/00*
U.S. Cl. 210—748 19 Claims

9. A method of controlling movement of particulate material in a liquid column utilizing a standing wave system produced by ultrasonic energy generating means, said method comprising the steps of:
establishing at least two ultrasonic standing waves, each standing wave having a series of nodes with at least some of the nodes of the respective standing waves intersecting in the column, the column having a longitudinal axis and said standing waves having axes of propagation extending transversely across the column at different orientations relative to the column longitudinal axis, at least one of the standing waves having its axis of propagation extending obliquely to the column longitudinal axis, whereby said nodes of the standing waves have intersections that are angled relative to said longitudinal axis; and
performing a relative movement in the direction of said longitudinal axis between said intersections at the nodes and the particle-containing liquid in the column, and retaining at least some of the particles in the regions of said intersections while said relative motion is performed.

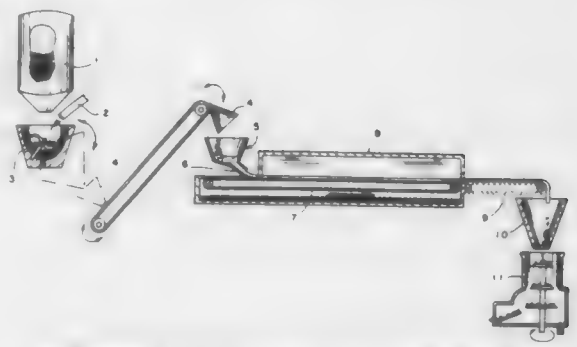
DEVICE FOR LASER WELDING INSIDE A TUBULAR ELEMENT

Jacques Griffaton, Chalon S/Saone, France, assignor to Framatome, Bevoie, France

Filed Jun. 28, 1990, Ser. No. 544,898
Claims priority, application France, Jun. 28, 1989, 89 08634
Int. Cl.[5] B23K *26/00*
U.S. Cl. 219—121.63 7 Claims



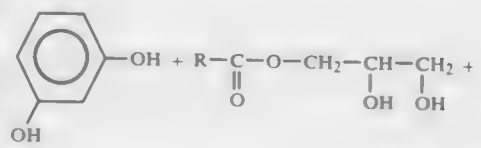
1. Device for laser welding inside a tubular element, of the type comprising a welding laser (104), a welding head (3 to 6) equipped with means (21, 54) for centring in the tubular element and comprising an optical cell (5) which itself comprises means (L1, L2, 37) for focusing and optical reflection for receiving a light beam along the axis of the head and for reflecting this beam focused on a point of impact of the wall of the tubular element (M), and means (F) for conveying the laser beam of the laser to the optical cell, characterized in that it comprises means (40) for detecting the form of the tubular element (M) near to the said point of impact, said detecting means being independent from said centring means, and in that the focusing and reflecting means comprise an inclined mirror (37) which is movably mounted in the welding head (3 to 6) and whose position is controlled by the said detection means.

5,006,269
CONTINUOUS PROCESS FOR PREPARING POWDER LUBRICANTS TO USE IN DRY WIREDRAWING AND/OR IN COLD METAL ROLLING

Angela N. Corso; Angelo Corso, both of Lecco; Carlo Corso, and Antonio Corso, both of Malgrate, all of Italy, assignors to Lubrimetal S.p.A., Como, Italy

Filed Nov. 7, 1988, Ser. No. 268,176
Claims priority, application Italy, May 12, 1988, 20554 A/88
Int. Cl.[5] C10M *105/80*
U.S. Cl. 252—39 7 Claims

1. A process for continuously preparing powder lubricants for use in dry wiredrawings and in cold metal rolling comprising the steps of:
a. mixing lubricant fat and calcium hydroxide until a homogenous product is obtained;
b. continuously distributing said homogenous product as a thin layer on a conveyor belt;
c. continuously baking the homogenous product on the conveyor belt while the belt conveyor is moving;
d. after the baking, continuously cooling the homogenous product; and



e. continuously pulverizing said cooled homogenous product.

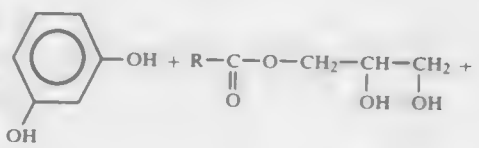
MIXED RESORCINOL-HYDROXYESTER BORATES AS ANTIOXIDANTS

Liehpao O. Farng, Lawrenceville, and Andrew G. Horodysky, Cherry Hill, both of N.J., assignors to Mobil Oil Corporation, New York, N.Y.



Filed May 1, 1989, Ser. No. 346,033
Int. Cl.[5] C10M *105/16*
U.S. Cl. 252—42.7 17 Claims

1. A composition comprising a major proportion of an oil of lubricating viscosity or grease or other solid lubricant prepared therefrom and a minor amount of a multifunctional friction reducing, antirust and antioxidant additive selected from mixed hydroxyaryl-hydroxyester borates and wherein said additive is prepared in reactions as generally described below:

at temperatures varying from 80° to 280° C. in molar ratios of hydroxyester to hydroxyaryl to boronating agent of from about 1–20:1.0–10:0.1–5 and where R is C_8 to about C_{20} hydrocarbyl and Y is said boronating agent and is selected from the group consisting of boric acid, metaborates and trialkyl borates.

12. An additive product prepared by reacting mixed resorcinol hydroxyester with a boronating agent in less than, more than or molar amounts of hydroxyester and boronating agent under temperatures varying from 80° to about 280° C. in the reaction generally described below:

where R is C_8–C_{20} hydrocarbyl and Y is said boronating agent selected from the group consisting of boric acid, metaborates, and trialkyl borates.

5,006,271

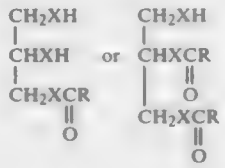
ORGANOSULFUR ADDUCTS AS MULTIFUNCTIONAL ADDITIVES FOR LUBRICATING OILS AND FUELS AND AS MULTIFUNCTIONAL LUBRICANTS

Noyes L. Avery, Bryn Mawr; Linda A. Benjamin, Horsham, both of Pa.; Andrew G. Horodysky, Cherry Hill, N.J., and Derek A. Law, Yardley, Pa., assignors to Mobil Oil Corporation, Fairfax, Va.

Filed Dec. 30, 1988, Ser. No. 292,039
Int. Cl.[5] C10M *105/72, 135/04*
U.S. Cl. 252—45 47 Claims

1. An improved lubricant composition comprising a major amount of an oil of lubricating viscosity or grease or other solid lubricant prepared therefrom and a minor EP/antiwear and antioxidant additive amount of from about 0.001 to about 10% by weight of a reaction product of a propylene based oligomerized olefin lube oil prepared in the following manner: propylene is first oligomerized over 2,4,6-collidine modified HZSM-23 zeolite catalyst; the oligomerized product is distilled and the ≧to C_{12}+ fraction oligomerized over HZSM-5 zeolite catalyst to provide a propylene lube olefin having a MW of from about 300 to about 6,000 and thereafter reacting said lube olefin and elemental sulfur and optionally with an organosulfur compound wherein said reaction product is obtained under the following reaction conditions: temperatures which vary from about 80° to about 225° C., pressures which vary from about ambient to slightly higher and times which vary from 0.5 to about 12 hours or more, and wherein said organosulfur compound is selected from mercaptothiadiazoles, dimercaptothiadiazoles, mercaptobenzimidazoles, mercaptobenzoates and mercaptobenzothiadiazoles.

5,006,272



FRICTION REDUCING ADDITIVES AND COMPOSITIONS THEREOF

Harry J. Andress, Wenonah; Andrew G. Horodysky, Cherry Hill, and Joan M. Kaminski, Clementon, all of N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Continuation of Ser. No. 249,245, Sep. 22, 1988, abandoned, which is a continuation of Ser. No. 763,778, Aug. 9, 1985, abandoned, which is a continuation of Ser. No. 133,034, Mar. 24, 1980, abandoned. This application Sep. 29, 1989, Ser. No. 415,418
Int. Cl.[5] C10M *105/78*
U.S. Cl. 252—49.6 19 Claims

1. A method for reducing friction in an internal combustion engine, using a friction reducing borated additive in a lubricant composition, comprising:

lubricating moving surfaces of the engine with a lubricating composition which includes a lubricant oil and a friction reducing borated additive in a concentration of at least 1% by weight of the lubricating composition, said friction reducing borated additive includes a borated glycerol mono- and/or dihydroxyester or borated thioglycerol mono and/or dihydroxyester produced by borating a glycerol mono and/or dihydroxyester or thioglycerol mono-and/or dihyroxyester of the formula:

5,006,273

CONCENTRATED AQUEOUS LIQUID DETERGENTS CONTAINING VISCOSITY REDUCING POLYMERS

David Machin, Merseyside, England, and Johannes C. van de Pas, Vlaardingen, Netherlands, assignors to Lever Brothers Company, Division of CONOPCO, Inc., New York, N.Y.

Filed Jul. 26, 1988, Ser. No. 224,518
Claims priority, application United Kingdom, Jul. 31, 1987, 8718217
Int. Cl.[5] C11D *337, 1/83, 3/395*
U.S. Cl. 252—174.23 14 Claims

1. An aqueous surfactant structured liquid detergent concentrate comprising from 0–10% by volume suspended solid material and further comprising:

(a) at least 15% by weight of detergent active material, said material comprising:

(A) a nonionic surfactant or a polyalkoxylated anionic surfactant or mixture thereof; and

(B) a non-polyalkoxylated anionic surfactant;

wherein the weight ratio of component (A) to component (B) is from 2.8:1 to 1:4;

(b) from 1 to 30% of a salting out electrolyte;

(c) from 0.1 to 20% by weight of a viscosity reducing water soluble polymer, selected from the group consisting of Dextran, Dexran sulphonate, polyacrylate and polyacrylate/maleic acid copolymers, said polymer being present in an amount sufficient to reduce the viscosity by more than 5% when measured at a shear rate of 21 S^{-1} and in comparison with a composition identical except that all such polymer is omitted, said polymer having an electrolyte resistance (as hereinbefore defined) of more than 5 grams sodium nitrilotriacetate in 100 of a 5% by weight aqueous solution thereof, with the system adjusted to neutral pH, and said polymer having a vapour pressure in 20% aqueous solution equal to or less than the vapour pressure of a reference 2% by weight or greater aqueous solution of a polyethylene glycol having an average molecular weight of 6000;

said viscosity reducing polymer having a molecular weight of at least 1,000;

and the composition comprising no, or less than 5% by weight of a swelling clay and yielding no more than 2% phase separation upon storage at 25° C. for 21 days and having a viscosity of no greater than 1000 mPaS at a shear rate of 21 s^{-1}.

5,006,274

ADDITIVE FOR CLARIFYING AQUEOUS SYSTEMS WITHOUT PRODUCTION OF UNCONTROLLABLE FLOC

Daniel K. Durham, Spring; Urban C. Conkle, Houston, and Hartley H. Downs, Kingwood, all of Tex., assignors to Baker Hughes Incorporated, Houston, Tex.

Division of Ser. No. 194,435, May 13, 1988, Pat. No. 4,855,060. This application May 18, 1989, Ser. No. 321,727
Int. Cl.[5] C02F *1/54*
U.S. Cl. 252—180 8 Claims

1. An additive for clarifying an aqueous system containing an oil-in-water emulsion or a dispersion of a non-aqueous discontinuous phase with production of only a controllable floc in the system, comprising a composition having present therein a dithiocarbamate of bishexamethylenetriamine, said dithiocarbamate being formed from an approximately stoichiometric ratio of carbon disulfide to primary amine in said bishexamethylenetriamine.

SOLUTION PROCESSIBLE FORMS OF ELECTRICALLY CONDUCTIVE POLYANILINE AND THE METHOD OF MANUFACTURE OF ELECTROCONDUCTIVE ARTICLES THEREFROM

Ronald L. Elsenbaumer, Morristown, N.J., assignor to Allied-Signal, Morris Township, Morris County, N.J.

Division of Ser. No. 2,528, Jan. 12, 1987, Pat. No. 4,983,322. This application Jan. 29, 1990, Ser. No. 471,463
Int. Cl.[5] H01B *1/00*
U.S. Cl. 427—385.5 40 Claims

1. A method of forming a conductive article which comprises the steps of:

(a) forming a conductive material selected from the group consisting of solutions and plasticized compositions comprising one or more solvents selected from the group consisting of solvents having a dielectric constant equal to or greater than about 25 and a dipole moment equal to or greater than about 3.25; one or more dopant solutes selected from the group consisting of oxidizing dopants which form a charge transfer complex with the polyaniline having a conductivity equal to or greater than about $10^{-3}ohm^{-1}$ cm^{-1}; and a substituted or unsubstituted polyaniline having a molecular weight of greater than about 15,000 prepared by polymerizing an aniline of the Formula I:

wherein:

n is an integer from 0 to 4;

m is an integer from 0 to 5 with proviso that the sum of n and m is 5;

R is the same or different at each occurrence and is alkyl, alkenyl, alkoxy, cycloalkyl, cycloalkenyl, alkanoyl, alkylthio, aryloxy, alkylthioalkyl, alkylaryl, arylalkyl, alkylsulfinyl, alkoxyalkyl, alksulfonyl, aryl, arylthio, arylsulfinyl, alkoxycarbonyl, arylsulfonyl, carboxylic acid, halogen, cyano, or alkyl substituted with one or more sulfonic acid, carboxylic acid, halogen, nitro, cyano or epoxy moieties; or and two R substituents taken together are an alkylene or alkenylene group completing a 3, 4, 5, 6 or 7 membered aromatic or alicyclic carbon ring, which ring may include one or more divalent heteroatoms of nitrogen, sulfur, sulfinyl, sulfonyl or oxygen; and

(b) removing the solvent from said material to form said article.

5,006,279

WATER-BASED COATING REMOVERS

William J. Grobbel, 70717 Romeo Plank, Romeo, Mich. 48065, and Bruce R. Berry, 670 Hawksmoore, Clarkston, Mich. 48016

Filed Aug. 24, 1988, Ser. No. 235,591
Int. Cl.[5] C11D *1/18, 3/44*
U.S. Cl. 252—542 18 Claims

1. A substantially stable homogenous water-based coating remover composition comprising:

(a) from about 7.2 to about 19.6 percent by weight of N-methyl-2-pyrrolidone; and

(b) from about 12.15 to about 47.6 percent by weight of at least one mononuclear aromatic hydrocarbon; and

(c) from about 7 to about 15 percent by weight of a glycol ether selected from tripropylene glycol mono (C_1–C_4) alkyl ether and diethylene glycol monobutyl ether; and

(d) from about 0.225 to about 2.8 percent by weight of an alkanolamine; and

(e) from about 0.297 to about 0.616 percent by weight of a hydroxypropyl cellulose thickener; and

(f) from about 30 to about 55 percent by weight water.

PROCESS FOR THE PRODUCTION OF A MARINE ANIMAL OIL

David Rubin, Jerusalem, Israel, and Elyiahu J. Rubin, San Diego, Calif., assignors to Century Laboratories, Inc., Port Washington, N.Y.

Continuation of Ser. No. 716,502, Mar. 26, 1985, abandoned. This application Jan. 28, 1987, Ser. No. 9,028
Int. Cl.[5] C11B *31/04*
U.S. Cl. 260—424 27 Claims

1. A process for the production of storage-stable marine animal oil free of undesirable odor or taste wherein the marine animal is one in which substantially no peroxidation of the oil thereof occurs naturally in the living animal comprising:

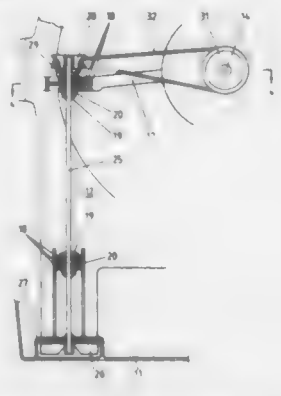
treating that portion of a freshly killed marine animal from which the oil is to be obtained with a first antioxidant having peroxidase inhibiting capacity;

dissagregating said antioxidant treated portion to obtain an oil phase, an aqueous phase and a solid phase;

removing the oil phase from the aqueous phase and the solid phase;

mixing said oil phase with an aqueous acidic solution which is sufficiently dilute to avoid hydrolysis of triglycerides in the oil, in a manner effective to cause methylamines to dissolve in the aqueous phase which forms upon such mixing;

removing the oil phase from the aqueous phase which forms during said mixing step; and



adding a further antioxidant to the obtained oil phase.

AIR COOLER PUMP MEANS

Richard H. Butcher, Hendon, Australia, assignor to F. F. Seeley Nominees Pty., Ltd., South Australia, Australia

Filed Oct. 23, 1989, Ser. No. 425,420
Claims priority, application Australia, Oct. 24, 1988, PJ1111
Int. Cl.[5] B01F *3/04*
U.S. Cl. 261—29 6 Claims

1. A pump arrangement for an evaporative air cooler of the type having a fan on a shaft rotatable about a horizontal axis and contained in a fan housing surmounting a water tank, and arranged to impel a flow of air through a wet pad to thereby cause evaporation and consequential cooling of the air, comprising,

a pump within the water tank,

a driving pulley on the fan shaft,

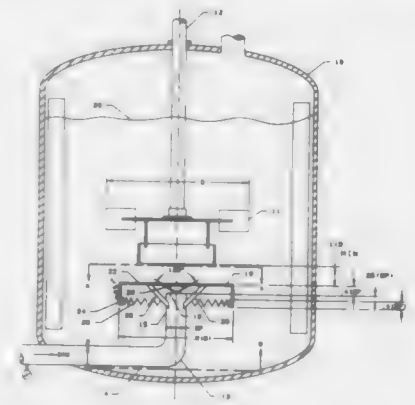
a pair of vertically spaced bearings supported by bearing support means provided on the fan housing,

a spindle journalled for rotation in the bearings,

a pump impeller on the lower end of the spindle within the pump housing, a driven pulley on the upper end of the spindle, and

a band type drive coupling the driven and driving pulleys.

5,006,283



MIXING SYSTEM FOR DISPERSING A COMPRESSIBLE FLUID SUCH AS GAS INTO LIQUID IN A VESSEL

Marlin D. Schutte, Rochester; Craig B. Bahr, Brockport; Ronald J. Weetman, and Richard A. Howk, both of Rochester, all of N.Y., assignors to General Signal Corporation, Rochester, N.Y.

Filed Oct. 6, 1988, Ser. No. 254,507
Int. Cl.[5] B91F *3/04*
U.S. Cl. 261—93 8 Claims

1. In a mixing system for dispersing a compressible fluid into liquid or slurry in a vessel and having an impeller for circulating said liquid, the improvement comprising a conduit for supplying said fluid into said vessel, said conduit having an outlet for said fluid, a cover below said impeller and around said outlet and having a side wall with upper and lower ends, said outlet and said side wall being spaced from each other such that the area defined by said side wall is significantly greater than the area defined by said outlet, the upper end of said cover being closed by a top wall, said top wall being

disposed between said outlet and the surface of the liquid in said vessel, the lower end having a rim, said outlet being disposed at a distance above said rim so as to confine a sufficient body of said fluid in said cover around said outlet to damp pulsating flow of said fluid when the hydrostatic pressure of

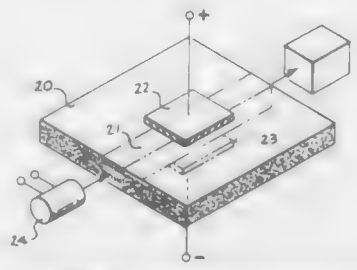
the liquid at said outlet is not substantially less than the pressure of said fluid at said outlet, said side wall being provided by an annular wall and, said top wall having an inverted conical surface with its apex end extending downward and facing said outlet.

5,006,284

GRANULES OF ALKYL ESTERS CONTAINING HYDROXYPHENYL GROUPS

Michael Gahan, Mobile, Ala., assignor to Ciba-Geigy Corporation, Ardsley, N.Y.

Filed Jun. 14, 1989, Ser. No. 366,819
Int. Cl.[5] B29B *9/10*
U.S. Cl. 264—9 13 Claims



1. A process for the manufacture of granules of low-melting alkyl ester containing hindered hydroxyphenyl groups, which comprises introducing a melt of said ester into aqueous methanol containing between 8 and 12% water maintained under a turbulent state at a temperature below 15° C. and then isolating the resulting granules.

5,006,285

ELECTRO-OPTIC CHANNEL WAVEGUIDE

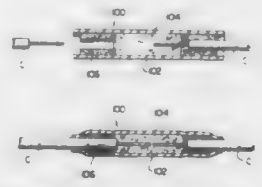
John I. Thackara, Sunnyvale; George F. Lipscomb, Palo Alto, both of Calif.; Hyun-Nam Yoon, New Providence, and Ronald N. De Martino, Wayne, both of N.J., assignors to Lockheed Missiles & Space Company, Inc., Sunnyvale, Calif.

Filed Jul. 28, 1988, Ser. No. 225,450
Int. Cl.[5] G02F *1/00;* B29C *71/04*
U.S. Cl. 264—1.3 9 Claims

1. A method of forming an electro-optic channel waveguide in a polymer structure that is initially substantially homogeneous, said polymer structure substantially consisting of a nonlinear optical polymer, said method comprising the steps of:

(a) maintaining an electric field as a poling field in a selected portion of said initially homogeneous polymer structure, said poling field being patterned to define a configuration for said channel waveguide in said selected portion of said polymer structure;

(b) maintaining said polymer structure in a temperature range above glass-transition temperature for said polymer while said electric field is being maintained as said poling field in said selected portion of said polymer structure, said polymer structure being maintained above said glass-transition temperature for a time that is sufficient to cause dipolar moieties of said polymer in said selected portion of said polymer structure to become sufficiently aligned by said poling field so as to produce a higher index of refraction in said selected portion than in a portion of said polymer structure adjacent said selected portion, said higher index of refraction being sufficient to support a guided mode of optical radiation of at least one polarization in said selected portion of said polymer structure so that said selected portion of said polymer structure acquires a transitory capability of functioning as a channel waveguide; and



(c) cooling said polymer structure below said glass-transition temperature while said poling field continues to be maintained in said selected portion of said polymer structure, said poling field being maintained in said selected portion of said polymer structure for a sufficient time as said polymer structure is being cooled below said glass-transition temperature so that said capability of said selected portion of said polymer structure of functioning as a channel waveguide ceases to be merely transitory and becomes relatively permanent because, when said polymer structure has been cooled below said glass-transition temperature, the aligned dipolar moieties of said polymer in said selected portion of said polymer structure achieve thermal relaxation only after a time that is long relative to a useful lifetime of said polymer structure in an application utilizing said selected portion of said polymer structure as said channel waveguide.

POLYMERIC ELECTRICAL INTERCONNECTION APPARATUS AND METHOD OF USE

Ronald A. Dery, Winston-Salem; Frederick R. Deak, and Richard H. Zimmerman, both of Kernersville, all of N.C., assignors to AMP Incorporated, Harrisburg, Pa.

Filed Mar. 31, 1986, Ser. No. 845,914
Int. Cl.[5] H01R *3/00;* B29C *63/18, 65/48*
U.S. Cl. 264—40.2 24 Claims

1. Apparatus for forming an electrically bonded interconnection between electrical conductors, comprising: an envelope containing a polymeric electrically conductive material disposed therein, the conductive material within the envelope being at least initially in a deformable, electrically conductive state such that an electrical conductor can be inserted therein and removed therefrom, and means for structurally affixing an electrical conductor to the envelope after insertion of the conductors into the polymeric electrically conductive material, the conductive material establishing electrical continuity with the electrical conductors prior to structural affixation of the conductor to the envelope, whereby electrical continuity can be verified prior to permanent attachment of the conductor to the apparatus.

20. A method of assembling an electrical harness having a plurality of separate conductors extending between and among a plurality of electrical components in the harness, the harness

including a plurality of electrical interconnections, the method comprising the steps of:

interconnecting the conductors by positioning the conductors in a polymeric electrically conductive material disposed within an envelope, the polymeric electrically conductive material being at least initially in a viscous, electrically conductive state such that the electrical conductor can be inserted therein and removed therefrom.,

verifying that the prescribed interconnections within the electrical harness have been made after insertion of conductors into the polymeric electrically conductive material, and rewiring the harness while the electrically conductive material is in the viscous electrically conductive state to correct any harness wiring errors; and

subsequently structurally affixing the conductors to the envelope after the electrical interconnections in the harness are verified.

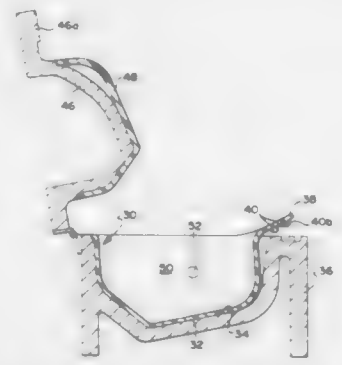
Int. Cl.[5] **B29C** *67/22*



U.S. Cl. 264—46.6 **6 Claims**

1. A process for molding a composite part by -lacing a shell insert on a mold cavity part and thereafter directing form precursors against the shell insert and reacting the precursors to form a layer of form bonded to the back of the shell insert, the process comprising the steps of:

precasting a shell from thermoformable plastic material to form a first surface portion thereon adapted to be smoothly supported across the surface of the mold cavity part and to form a plurality of connection features in a second surface portion of the shell external to the mold cavity at the periphery thereof;

providing a mold cavity part with a surface thereon for smoothly supporting the first surface portion of the shell,

preshaping the mold cavity part to have recesses external to the mold cavity at the periphery of the mold cavity part adapted to engage the connection features on the second surface portion;

engaging the connection features with the recesses to provide a stabilized peripheral connection between the mold cavity part and the shell; and smoothly supporting the first surface portion of the shell on the mold at points inboard of the stabilized peripheral connection for positioning he shell within the mold cavity part so as to prevent it from being wrinkled with respect to the mold cavity part during the molding process.

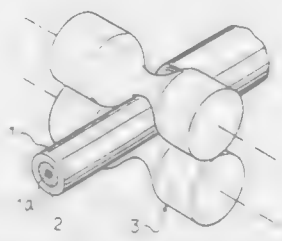
METHOD FOR PRODUCING AN ELONGATED SINTERED ARTICLE



Susumu Yamamoto; Teruyuki Murai; Nozomu Kawabe, and Masaaki Tobioka, all of Hyogo, Japan, assignors to Sumitomo Electric Industries, Ltd., Osaka, Japan

Filed Jun. 17, 1987, Ser. No. 63,228

Claims priority, application Japan, Jun. 17, 1986, 61-141566; Aug. 13, 1986, 61-190891; Sep. 10, 1986, 61-214487; Oct. 17, 1986, 61-246937; Dec. 5, 1986, 61-291216; Dec. 26, 1986, 61-312958; Jan. 9, 1987, 62-3060

Int. Cl.[5] **C04B** *33/34*

U.S. Cl. 264—61 **30 Claims**

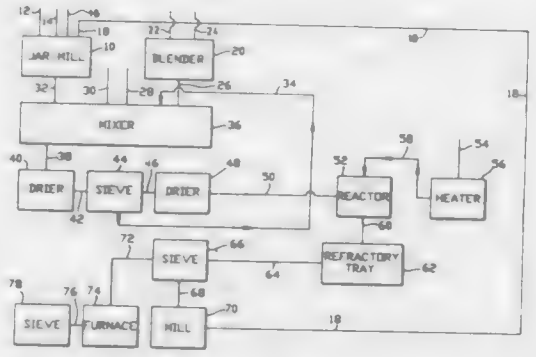
1. Method for producing an elongated sintered ceramic article, characterized by the steps of filling powder material in a pipe, said powder material being ceramic, elongating said pipe filled with said powder material by wire-drawing or rolling, heating said elongated pipe filled with the powder material to burn and/or sinter the powder material, and removing said elongated pipe after said elongating step or said heating step, so as to form an uncovered elongated sintered ceramic article composed of said powder material.

28. Method for producing an elongated sintered ceramic article, characterized by including the steps of filling powdered material in a pipe, said powdered material being ceramic, deforming said pipe filled with said powdered material by wire-drawing or rolling to form a thin elongated wire filled with said powdered material and having at least a longitudinal length as long as 100 times its cross sectional diameter, and

heating said elongated wire filled with the powdered material to burn and/or sinter the powdered material.

5,006,290

PROCESS FOR MAKING A SILICON CARBIDE WHISKER REINFORCED ALUMINA CERAMIC COMPOSITE PRECURSOR



George T. Hida, North Tonawanda, N.Y., assignor to Benchmark Structural Ceramics Corporation, Amherst, N.Y.

Filed Oct. 6, 1988, Ser. No. 254,175

The portion of the term of this patent subsequent to Feb. 5, 2008, has been disclaimed.

Int. Cl.[5] **C04B** *35/10, 35/56*

U.S. Cl. 264—65 **10 Claims**

1. A process for preparing a ceramic composite which is comprised of alpha silicon carbide whiskers and alpha aluminum oxide powder, comprising the steps of sequentially:

(a) providing a slurry comprised of from about 80 to about 92 volume percent of solid material and from about 20 to about 8 volume percent of non-aqueous liquid, wherein:

1. said solid material comprises from about 17 to about 22 weight percent of aluminum material, from about 19 to about 24 weight percent of amorphous carbon, and from about 56 to about 65 weight percent of silica;

2. said aluminum material has a specific surface area of from about 0.2 to about 1.1 square meters per gram, has a particle size distribution which ranges from about 4 to about 28 microns, and has at least 80 weight percent of its particles being in the range of from about 6 to about 12 microns;

3. said amorphous carbon has a specific surface area of at least 4 square meters per gram:

4. said silica has a specific surface area of from about 1.2 to about 400 square meters per gram;

5. said non-aqueous liquid is volatile at a temperature of 80 degrees centigrade;

6. said slurry is comprised of from about 1 to about 5 weight percent of a source of carbon monoxide which, when it is subjected to a temperature of from about 700 to about 1,600 degrees centigrade, generates carbon monoxide;

7. said slurry is comprised of from about 1 to about 5 weight percent of a source of hydrogen fluoride which, when subjected to a temperature of from about 200 to about 400 degrees centigrade, generates hydrogen fluoride;

(b) pelletizing said slurry to provide a multiplicity of pellets comprised of from about 80 to about 92 volume percent of solids;

(c) drying said pellets to a moisture content of from about 0.1 to about 2.0 weight percent;

(d) preheating said dried pellets to a temperature of from about 200 to about 300 degrees centigrade, and

(f) igniting said pellets.

5,006,291

METHOD FOR MAKING FIBER REINFORCED PLASTIC TUBING

Elson B. Fish, Lakeville, Ind., assignor to Plas/Steel Products, Inc., Walkerton, Ind.

Continuation of Ser. No. 726,506, Apr. 24, 1985, abandoned. This application Oct. 22, 1986, Ser. No. 945,212

Int. Cl.[5] **B29C** *67/00, 71/02*

U.S. Cl. 264—103 **5 Claims**

1. A method of fabricating multi-layer fiber reinforced plastic tubing on a continuous basis comprising the steps of:

braiding a first layer of strands about a stationary mandrel by weaving together first, second, and third sets of strands, said second and third sets being wound oppositely about said mandrel while said first set is pulled longitudinally and interwoven therewith, whereby said first set inhibits said braided first layer from gripping said mandrel to an extend as will prevent movement of the resulting tubular layer with respect to said mandrel;

simultaneously radially gripping and axially pulling said first layer relative to said stationary mandrel;

prewetting said first layer by applying a liquid plastic matrix material to said second and third strands prior to engagement about said mandrel;

drawing said braided layer through a die orifice that defines with said mandrel a decreasing annular clearance through which said layer moves to gradually fully compact said strands onto said mandrel;

applying a liquid plastic matrix material under pressure to said first braided layer of stands while said layer is being gradually compacted and confined between said die orifice and said mandrel and before said braided layer is fully compacted;

applying a liquid plastic matrix material to said first braided layer of strands at the exit end of said orifice by surrounding said mandrel and said braided layer with said liquid plastic to inhibit air from being drawn into said layer as it expands following compaction; and

curing the liquid plastic matrix material while said tubular braid is moved along and is supported by said mandrel and while the liquid plastic matrix material is radially confined between the mandrel and a surrounding outer die to form self-supporting tubing.

5,006,292

MANUFACTURING UNIAXIALLY DRAWN ORIENTED POLYOLEFIN FILM FOR ELECTRIC INSULATION

Hikaru Shii, and Fumio Sugimoto, both of Tokyo, Japan, assignors to The Furukawa Electric Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 286,029, Jul. 22, 1981, abandoned. This application Aug. 16, 1984, Ser. No. 641,411

Claims priority, application Japan, Jul. 25, 1980, 55-101983

Int. Cl.[5] **B29C** *47/40*

U.S. Cl. 264—127 **11 Claims**

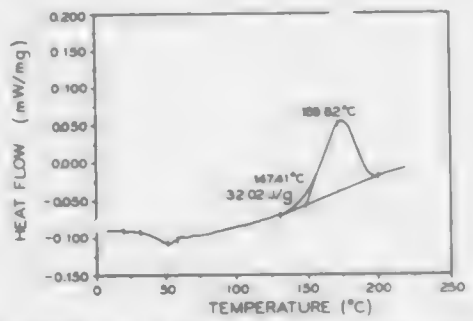
1. A method of manufacturing a uniaxially drawn oriented polyolefin film for cable insulation which has the tensile Young's modulus in the direction of the orientation axis of at least 2×10^4 kg/cm^2, and the change in the thickness in dodecylbenzene at 100° C. of not more than 10%, said method comprising

forming an extruding mixture by dispersing in a finely-divided powdered crystalline polyolefin having a melt index of at least 10, 0.5 to 20 parts per hundred parts of said crystalline polyolefin of finely-divided unsintered

polytetrafluoroethylene so that the particles do not substantially stick together to form a coherent mass;

extruding the mixture with an extruder capable of exerting high shearing stress at a temperature not higher than the heat distortion temperature of said unsintered polytetrafluoroethylene and not lower than the melting point of said crystalline polyolefin to thereby form an extrudate and forming the extrudate into a sheet by a sheet forming device having a forming die on a twin-screw type extruder with an L/D of at least 15;

solidifying the extruded sheet by cooling; and



reducing the thickness of the solidified cooled sheet to ½ to 1/10 of the thickness of the solidified cooled sheet by drawing or rolling at a temperature of from 50° to 20° C. lower than the melting point of the crystalline polyolefin thereby to provide said uniaxially drawn oriented film having a thickness of 80 to 250 microns.

5,006,293

PROCESS FOR FORMING FLAT PLATE BALLISTIC RESISTANT MATERIALS

David R. Hartman, Newark; Ralph B. Jutte, Hebron; Terry R. Beaver, Nashport, and Homer G. Hill, Newark, all of Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio

Filed Feb. 2, 1989, Ser. No. 305,143
Int. Cl.[5] B29C *43/18, 43/20, 43/58*
U.S. Cl. 264—137 **15 Claims**

1. A process for a forming ballistic resistant composite which comprises:

(a) impregnating a low-alkali magnesia-aluminum-silicate glass fiber woven roving with an impregnating composition in an amount sufficient to produce a composite containing about 75 to 85%, by weight, of glass which impregnating composition is comprised of (i) a resin solution comprising a polyester resin in a polymerizable monomeric solvent and (ii) a free radical catalyst and,

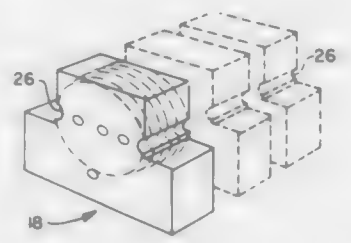
(b) curing the impregnated woven roving in a sheet compression molding unit at a temperature of about 225°-255° F. for about 15-30 minutes to allow the impregnated woven roving to substantially conform to the mold unit, at a pressure of about 100-600 psi sufficient to maintain the exothermic temperature at about 300° F. or below and to catalytically crosslink the polyester resin and monomeric solvent.

5,006,294

PROCESS FOR MAKING COMPOSITES OF STRETCH BROKEN ALIGNED FIBERS

Archie R. Bice, Landenberg, Pa.; David H. Edison, Hockessin; Floyd H. Fish, Jr., Centreville, both of Del.; Mark W. Hopkins, Newark, and Richard K. Okine, Wilmington, both of Del., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Apr. 26, 1989, Ser. No. 344,973
Int. Cl.[5] B29C *55/00, 67/14*
U.S. Cl. 264—138 **5 Claims**



1. A process for making a resin matrix tow reinforced with stretch-broken fibers comprising: feeding a thermoplastic resin matrix tow reinforced with continuous filament fibers into a tensioning zone; heating said tow in said tensioning zone to melt said thermoplastic resin while tensioning said tow sufficiently to break all of said continuous filament fibers in a random manner, and immediately cooling said tow to solidify said resin.

5,006,295

METHOD FOR MAKING A PLURALITY OF LIKE PRINTED CIRCUIT BOARD TEST PIECES AND ARRANGING THEM RELATIVE TO ONE ANOTHER CUTTING ALONG A HOLE ROW CENTER PLANE

Tore Hesselgren, Ringvägen 63, S-130 35 Ingarö, Sweden

PCT No. PCT/SE88/00402, § 371 Date Apr. 10, 1989, § 102(e) Date Apr. 10, 1989, PCT Pub. No. WO89/01389, PCT Pub. Date Feb. 23, 1989
PCT Filed Aug. 9, 1988, Ser. No. 346,178
Claims priority, application Sweden, Aug. 10, 1987, 8703100
Int. Cl.[5] B29C *39/12*
U.S. Cl. 264—139 **6 Claims**

1. A method for preparing a plurality of printed circuit board test pieces for quality control examination of metal plating in holes provided through said test pieces, comprising:

providing a fixture having a mold cavity having an internal wall including at least two longitudinally extending, generally opposed bars;

cutting from at least one circuit board a plurality of test pieces, each including wholly surrounded by the perimeter thereof, at least one metal plated hole and each including in the perimeter thereof at least two generally radially outwardly opening grooves, so that the grooves on each test piece have a peselected uniform spatial relationship to each hole on the respective test piece;

inserting a plurality of test pieces into the mold cavity of the fixture so that the test pieces extend generally transversally of the fixture, in a longitudinally extending series, with each test piece groove receiving a respective bar of the fixture, so that all of said holes through the test pieces are disposed so as to be centered at substantially a common level;

introducing casting plastic material into the mold cavity into interstitial spaces among the test pieces, and allowing the plastic material to harden, thereby forming a composite in which the spatial dispositions of the test pieces are fixed relative to one another; and

cutting longitudinally through said composite at said common level, thereby substantially bisecting all of said holes,

and thereby exposing remaining-half portions thereof for examination.

5,006,296

PROCESS FOR THE PREPARATION OF FIBERS OF STEREOREGULAR POLYSTYRENE

David R. Pedersen, Clayton, Calif., assignor to The Dow Chemical Company, Midland, Mich.

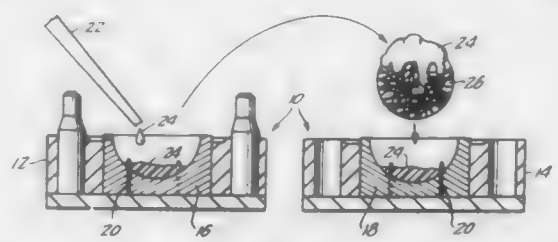
Filed Sep. 1, 1988, Ser. No. 239,490
Int. Cl.[5] D01F *6/22*
U.S. Cl. 264—210.7 **10 Claims**

1. A process for the preparation of fibers of syndiotactic polystyrene, or a mixture of syndiotactic polystyrene and isotactic polystyrene which comprises:

A. heating syndiotactic polystyrene, or a mixture of syndiotactic polystyrene and isotactic polystyrene, to a temperature between its crystal melting point and the temperature at which the polystyrene undergoes degradation, wherein the polystyrene has sufficient viscosity to be extruded;

B. extruding the polystyrene through an orifice to form a fiber at elevated temperatures:

C. quenching the fiber by passing the fiber through one or more zones under conditions such that the fiber solidifies; and



D. cooling the fiber to ambient temperature.

5,006,297

METHOD OF MOLDING POLYURETHANE COVERED GOLF BALLS

Robert A. Brown, Mattapoisett, and Shenshen Wu, No. Dartmouth, both of Mass., assignors to Acushnet Company, New Bedford, Mass.

Filed Feb. 22, 1989, Ser. No. 314,466
Int. Cl.[5] B29C *35/02, 39/10, 43/18*
U.S. Cl. 264—234 **21 Claims**

1. A method for making a polyurethane covered golf ball comprising the steps of:

(a) initially curing polyurethane cover stock in both a top mold half and a bottom mold half of an open, smooth-walled mold for a sufficient period of time so that a core positioned in the top mold half does not fall out of said mold during closing of the mold;

(b) initially molding, in the smooth-walled mold, the polyurethane cover stock about the core for a sufficient period of time to form a smooth-surfaced golf ball product that can be removed from the smooth-walled mold without being deformed;

(c) intermediately curing the smooth-surfaced golf ball product for a sufficient period of time so that the polyurethane cover stock molded about the core is able to retain a dimple pattern of a compression mold; and

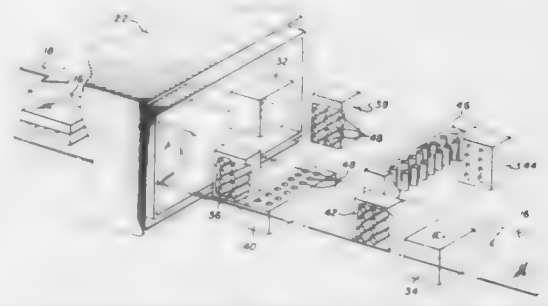
(d) compression molding said intermediately cured, smooth-surfaced golf ball product for a sufficient period of time to form a dimpled golf ball.

5,006,298

METHOD OF PRODUCING A BADMINTON RACKET FRAME

Ko-Jan C. Tsai, No. 30, Sec. 2, Ya Tan Rd., Tan Tzu Hsiang, Taichung Hsien, Taiwan

Filed Jun. 28, 1990, Ser. No. 545,207
Int. Cl.[5] B29C *49/20, 49/22, 49/46;* **A63B** *49/10*
U.S. Cl. 264—512 **3 Claims**



1. A method of producing a badminton racket frame comprising preparing a mold cavity shaped in the form of said badminton racket frame having generally a head section and a handle shaft, wrapping a plurality of layers of unidirectional oriented resin-impregnated graphite fibers so as to form a first tubular shell shaped in the form of said handle shaft and a second tubular shell shaped in the form of said head section, inserting solvent material into said first shell and second shell, closing both ends of said first shell and said second shell, wrapping said ends of said second shell and an upper end of said first shell together by a plurality of layers of unidirectionally oriented resin-impregnated graphite fibers, arranging said wrapped first shell and said second shell within said mold cavity, heating said solvent material to cause expansion from the liquid state to the gaseous state and to generate pressure within said mold cavity so as to press against said layers of graphite fibers and thereby provide intimate bonding of said layers, and thereafter removing from said mold cavity said first shell and said second shell as an integral composite badminton racket frame.

5,006,299

EXPLOSIVE DETECTION SYSTEM

Tsahi Gozani, Palo Alto, and Patrick M. Shea, Sunnyvale, both of Calif., assignors to Science Applications International Corporation, San Diego, Calif.

Continuation of Ser. No. 53,950, May 26, 1987, abandoned. This application Mar. 9, 1989, Ser. No. 321,511
Int. Cl.[5] G21G *1/06*
U.S. Cl. 376—159 **46 Claims**

1. A system for detecting the presence of explosive in an object under observation by detection of a particular element,

and the concentration of such particular, element, at the different positions in the object, including,

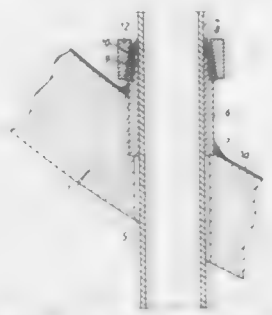
a cavity structure for receiving the object under observation,

means stationary in the cavity structure for providing thermal neutrons to the object under observation for interaction with the object under observation to obtain the production from the object of gamma rays representative of the presence and concentration of the particular element in the object,

means for moving the object through the cavity structure,

a plurality of inorganic detectors disposed in the cavity structure and operative independently of one another and positioned relative to the thermal neutron means and the object for detecting the gamma rays to produce output signals indicative at each instant of such gamma rays,

the thermal neutron means and the inorganic detectors being disposed in a common planar relationship enclosing the object to obtain the detection by the inorganic detectors at each instant of the gamma rays in such common plane, the common planar relationship being transverse to the direction of movement of the object through the cavity structure, the inorganic detectors in the plurality being operative independently of one another, and



means responsive to the output signals from the inorganic detectors at progressive instants of time in the common planar relationship during the movement of the object through the cavity structure for processing such signals to indicate the presence, and the concentration of the particular element, at the different positions in the object on a three-dimensional basis.

5,006,300

SEALING DEVICE FOR NUCLEAR POWER REACTOR

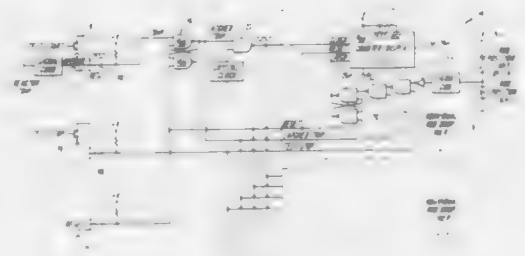
Erik Jönsson, and Lars Törnblom, both of Västerås, Sweden, assignors to AB Asea-Atom, Västerås, Sweden

Filed Mar. 28, 1988, Ser. No. 174,171
Claims priority, application Sweden, Mar. 30, 1987, 8701310
Int. Cl.[5] G21C *13/028*
U.S. Cl. 376—203 **8 Claims**

1. A sealing device for sealing a possible leak inside a nuclear reactor pressure vessel, in which an operating rod for controlling a control rod of the reactor is arranged in an elongated tube, extending through an associated opening in the wall of the vessel, a CRD stub tube surrounding the tube on the inside of the wall of the pressure vessel and communicating with said opening, one end of said CRD stub tube being joined to the tube by means of a first weld, and the stub tube being joined to the wall around said opening by means of a second weld,

characterized in that

the sealing device comprises at least one inner sealing sleeve of a softer metallic material, which may be fitted over the tube and the CRD stub tube and has an outer frusto-conical surface, and an outer sealing sleeve of a harder metallic material, which is arranged over said inner sealing sleeve and has an inner frusto-conical surface,



on each side of said possible leak there being formed contact surfaces between the inner sealing sleeve and at least one of the tube and the CRD stub tube, the outer sealing sleeve being adapted to be fitted over the inner sealing sleeve, thus achieving a sealing deformation of said contact surfaces of the inner sealing sleeve.

5,006,301

METHOD AND APPARATUS FOR CONTROL ROD DROP MONITORING

Anthony F. Lexa, Forest, Va., assignor to Joyner Engineers and Trainers, Inc., Forest, Va.

Filed Mar. 22, 1989, Ser. No. 327,251
Int. Cl.[5] G21C *17/00*
U.S. Cl. 376—259 **32 Claims**

1. A system for continuously monitoring a plurality of control rod drop times in a reactor, comprising:

means for receiving a reactor trip signal and for generating an initiation signal;

a plurality of timer circuits, each timer circuit being associated with one of a plurality of control rods, including

means for receiving a control rod position signal indicative of each associated control rod at a predetermined insert position and for generating a deactivation signal,

first latching means for retaining said initiation signal generated by said receiving means,

second latching means for retaining said deactivation signal received by said receiving means,

a timer actuated by said initiation signal and said timer being deactivated by said deactivation signal, and

means for displaying the output of said timer to represent the individual rod drop time.

5,006,302

NOZZLE DAM REMOTE INSTALLATION SYSTEM AND TECHNIQUE

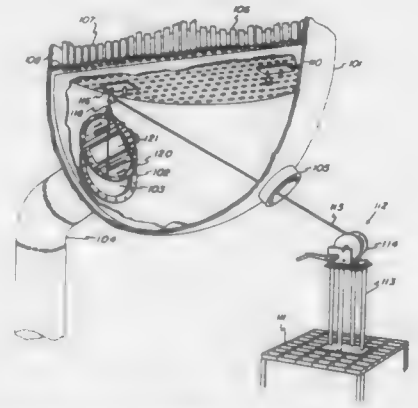
Mark H. Trundle, Signal Mountain, Tenn., and William C. Jones, Tunnel Hill, Ga., assignors to Tennessee Valley Authority, Muscle Shoals, Ala.

Division of Ser. No. 365,641, Jun. 13, 1989. This application Apr. 19, 1990, Ser. No. 511,118
Int. Cl.[5] G21C *19/00*
U.S. Cl. 376—260 **18 Claims**

1. An improved method for remotely translocating nozzle dam means from outside a nuclear reactor steam generator channel head to coupled association with nozzle holddown ring means within said channel head to thereby eliminate, or at least substantially minimize personnel exposure to radiation and/or radioactive contamination environment within said channel head, which improved method comprises the steps of:

(a) predetermining a first situs on the tubesheet associated with a nuclear reactor steam generator channel head;

(b) introducing into said nuclear reactor steam generator channel head, through a manway provided in the wall thereof, tubesheet tackle means, said tubesheet tackle means predisposed for operative association with first lifting means and said first lifting means in turn operatively associated with second lifting means, said second lifting means located juxtaposed a second situs, said second situs located outside of said channel head;



(c) remotely attaching said tubesheet tackle means to said first predetermined situs on said tubesheet;

(d) operatively associating nozzle dam strapping means with nozzle dam means and introducing the resulting assembly, with said nozzle dam means in folded mode, through said manway and into said channel head;

(e) operatively associating said nozzle dam strapping means with said first lifting means;

(f) actuating said second lifting means in a manner so as to apply at least an upwardly directed vertical force vector on that portion of said first lifting means juxtaposed said nozzle dam strapping means to elevate said folded nozzle dam means and effect the unfolding thereof to the full open position and continuing the actuating of said second lifting means in a manner so as to effect movement of said fully opened nozzle dam until the center point thereof is substantially vertically above the center point of said nozzle holddown ring and in juxtaposition therewith;

(g) remotely disengaging said nozzle dam strapping means from operative association with said nozzle dam;

(h) remotely effecting a determination of the proper orientation of said nozzle dam in relation to said nozzle holddown ring;

(i) remotely securing, at least temporarily, said nozzle dam means to said nozzle holddown ring;

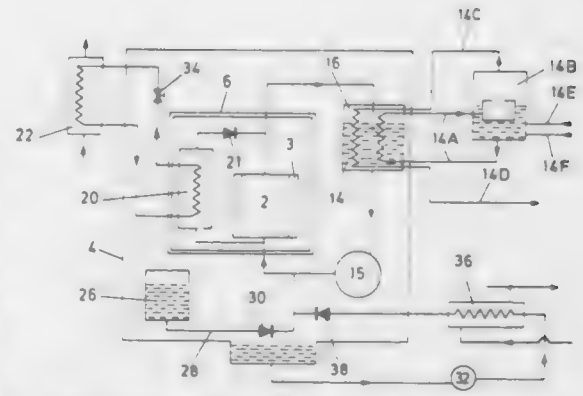
(j) introducing into said nuclear reactor steam generator channel head, through said open manway, nozzle dam center section means and remotely operatively associating same with both said first lifting means and at least a portion of said nozzle dam strapping means for effecting subsequent positioning and engagement of said center section means with said at least temporarily secured nozzle dam means;

(k) remotely securing, at least temporarily, said nozzle dam center section means to said nozzle holddown ring; and

(l) introducing into said channel head suitable torquing means for securing said nozzle dam means to said nozzle holddown ring.

5,006,303

NUCLEAR POWER PLANT



Ivor T. Rowlands, Eversley House, Kingsley Road, Frodsham, Cheshire, England (WA6 6EY)

Continuation-in-part of Ser. No. 695,262, Jan. 28, 1985, abandoned. This application Nov. 27, 1989, Ser. No. 441,171
Claims priority, application United Kingdom, Jun. 9, 1981, 8117616
Int. Cl.[5] G21C *15/18*
U.S. Cl. 376—282 **11 Claims**

1. In a power plant including a containment building which houses a nuclear reactor core containing an enriched uranium fuel in a primary cooling vessel means that partially contains a closed primary cooling circuit for cooling said core, and means for generating in said primary cooling circuit a single pass flow, upwardly through said core, of an organic liquid as primary coolant and moderator with said organic liquid being supplied to the primary cooling circuit initially as feed coolant having a first chemical composition and physical characteristics, and means for maintaining in the primary cooling circuit an operating primary coolant and moderator having a second chemical composition and physical characteristics, an improved passively operating emergency cooling system that is operable to respond automatically to a postulated fault condition comprising a breach of said primary cooling circuit, said emergency cooling system comprising:

means for flooding said core with emergency coolant on a breach of said primary cooling circuit and heat rejection means for cooling said emergency coolant,

said flooding means including an accumulator means having a liquid capacity several times greater than the inventory of said primary cooling circuit, organic emergency coolant maintained in said accumulator means at a pressure head above the saturated vapour pressure, at normal operating temperature, of the primary organic coolant and moderator, said organic emergency coolant in said accumulator means being mutually compatible with the said operating primary organic coolant and moderator but having a different chemical composition and physical

characteristics including a higher boiling point at atmospheric pressure from either the feed coolant or the operating primary organic coolant and moderator, and pressure responsive means for delivery of said organic emergency coolant from said accumulator means to said core under said pressure head in said accumulator means in response to such a postulated fault condition which include loss of pressure in said primary cooling circuit;

and said heat rejection means being operable to cool said organic emergency coolant in said core on such a breach of the primary cooling circuit in a manner to maintain cooling of said core without boiling of said organic emergency coolant, and comprising means for establishing, on occurrence of such a postulated fault condition, a first natural convection circuit within said primary cooling vessel means, to maintain a natural convention flow of the said organic emergency coolant through said core sustained by heat rejection to a first heat exchanger and a second natural convection circuit, for establishing a natural convention flow of an intermediate organic coolant through said first heat exchanger sustained by heat rejection to a second heat exchanger, said second heat exchanger being a high-level heat exchanger cooled by atmospheric air externally of the containment building.

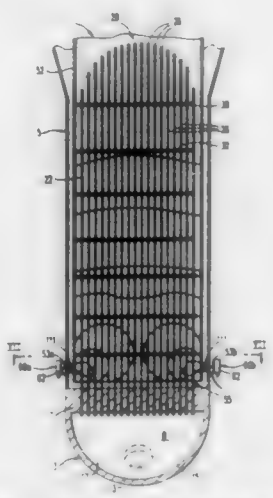
PRESSURE PULSE CLEANING METHOD



Richard D. Franklin, Jeannette; Gregg D. Auld, Trafford; David E. Murray, Greensburg; John J. Lescisin, Pittsburgh; Albert R. Vais, Export, and Thomas E. Dunn, Pittsburgh, all of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Continuation of Ser. No. 183,874, Apr. 19, 1988, Pat. No. 4,921,662. This application Oct. 20, 1989, Ser. No. 424,879

The portion of the term of this patent subsequent to May 1, 2007, has been disclaimed.

Int. Cl.[5] F22B *37/48*

U.S. Cl. 376—316 45 Claims

21. A method for loosening and removing sludge, debris and dissolved matter from the secondary side of a steam generator of the type containing a plurality of heat exchanger tubes mounted in a tubesheet at one end and supported along their length by a plurality of vertically spaced support plates, comprising the steps of:

a. introducing a flow of water into the secondary side of the steam generator;

b. commencing the generation of a plurality of pressure pulses in the water in the secondary side of the steam generator when said water submerges said tubesheet, wherein each of said pulses is generated by introducing between 60 and 100 cubic inches of an inert gas into said water that is pressurized to between about 350 and 450 pounds per square inch, wherein said pressure pulses are generated at uniform time intervals of between about 5 and 12 seconds,

c. continuing the flow of water into the secondary side of the steam generator until the level of the water within the secondary side thereof is sufficiently high to immerse all of the support plates therein;

d. continuing the generation of pressure pulses at uniform intervals at a time between 5 and 12 seconds while the level of the water in the secondary side is raised to immerse all of the support plates, wherein the pressure of the pressurized gas used to generate the pressure pulses is increased from between about 350 to 450 psi to between about 750 to 850 psi;

e. draining water out of the secondary side of the steam generator while continuing to generate pulses at uniform intervals anywhere between about 5 and 12 seconds by lowering the level of the water in the secondary side from the upper support plates down to a level which immerses only the tubesheet, wherein the pressure of the gas used to generate the pressure pulses is lowered as the level of the water is lowered from between about 750 to 850 psi to between about 350 to 450 psi,

wherein the succession of pressure pulses lasts from between 24 and 52 hours.

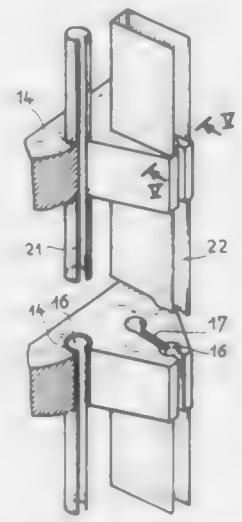
DEVICE FOR GUIDING THE CONTROL CLUSTERS OF NUCLEAR REACTORS



Jean-Pierre Denizou, Craponne, France, assignor to Framatome & CIE., Courbevoie, France

Filed Jun. 4, 1984, Ser. No. 617,230

Claims priority, application France, Jun. 3, 1983, 83 09275

Int. Cl.[5] G21C *7/08, 15/00*

U.S. Cl. 376—353 1 Claim

1. A nuclear reactor having:

a reactor vessel,

a reactor core comprising fuel assemblies located side by side in upright position,

an upper core plate located above said core and formed with coolant openings for upward circulation of coolant out of said core,

an upper support plate spaced above said upper core plate and carried by said vessel,

a plurality of control clusters each having a plurality of vertical neutron absorbing rods joined together at their upper ends by a spider and each movable from a position where said rods are in said core and a position where said rods are above said core, the rods in any one of said clusters including pairs of two said rods with the rods in a pair being aligned along a direction radial to an axis of the cluster,

and a plurality of guiding devices each associated with one of said control clusters,

wherein each said guiding device includes

(a) a vertical housing mounted between said upper support plate and said upper core plate in vertical alignment with one of said fuel assemblies and having a cross-section greater than that of the associated one of said control clusters,

(b) a plurality of horizontal guide plates securely connected to said housing and distributed at intervals along and within said casing, each of said plates being formed with guiding holes and radially directed openings of a shape corresponding to the cross-section of said rods and spider for slidably guiding said rods at discontinuous intervals only, and

(c) a plurality of U-shaped, folded sheet metal, coolant guiding casings each located between two adjacent ones of said guide plates in a lower portion of said housing and each surrounding one of said pairs and opening radially inwardly, each said casing having a section defining a gap with the associated pair of rods substantially devoid of radial coolant flow.

PROCESS FOR ALLOYING URANIUM AND NIOBIUM

Cressie E. Holcombe, Farragut; Walter G. Northcutt, Jr., Oak Ridge; David R. Masters, and Lloyd R. Chapman, both of Knoxville, all of Tenn., assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Filed Sep. 6, 1990, Ser. No. 578,154

Int. Cl.[5] C22C *45/00*

U.S. Cl. 420—3 9 Claims

1. A process for preparing uranium-base alloys containing a small amount of niobium which comprises:

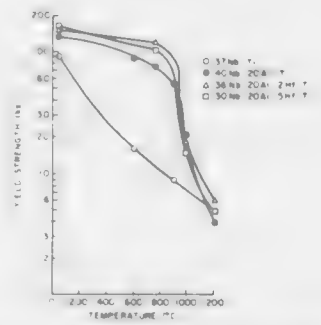
forming a stacked array of uranium plates or sheets having niobium powder disposed in layers between said sheets, the relative amounts of uranium and niobium being selected to provide a stoichiometric amount for a desired alloy composition;

heating said array in a crucible under a vacuum or inert atmosphere to a temperature such as to melt the uranium;

holding the resulting molten uranium-niobium powder mixture at a temperature such as to maintain the uranium in molten state until the niobium powder dissolves therein; and

casting the resulting uranium-niobium solution.

5,006,307



HAFNIUM CONTAINING NIOBIUM, TITANIUM, ALUMINUM HIGH TEMPERATURE ALLOY

Melvin R. Jackson, Schenectady, N.Y., assignor to General Electric Company, Schenectady, N.Y.

Filed Dec. 5, 1988, Ser. No. 279,639

Int. Cl.[5] C22C *14/00*; C21D *1/00*

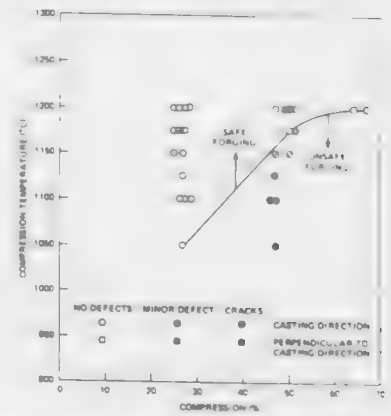
U.S. Cl. 420—426 4 Claims

1. As a composition of matter an alloy consisting essentially of the following composition in atom percent:

Ingredient	Concentration Range	
	From About	To About
niobium	balance essentially	
titanium	40	48
aluminum	12	22
hafnium	0.4	6

5,006,308

NICKEL ALUMINIDE ALLOY FOR HIGH TEMPERATURE STRUCTURAL USE



Chain T. Liu, Oak Ridge, and Vinod K. Sikka, Clinton, both of Tenn., assignors to Martin Marietta Energy Systems, Inc., Oak Ridge, Tenn.

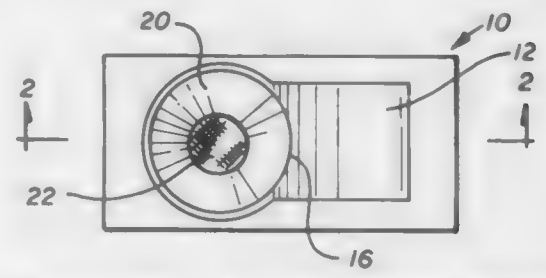
Filed Jun. 9, 1989, Ser. No. 364,774

Int. Cl.[5] C22C *19/05*

U.S. Cl. 420—445 17 Claims

1. A nickel aluminide alloy composition suitable for fabrication at high temperature in the range of about 1050° to about 1200° C. consisting essentially of: a Ni_3Al base; a sufficient concentration of chromium to increase ductility at elevated temperatures in oxidizing environments; a sufficient concentration of boron to increase ductility; about 0.2 to about 0.5% titanium to improve the creep resistance; and a sufficient concentration of zirconium to provide high strength and good alloy fabricability at a temperature in the range of about 1050° C. to about 1200° C.

5,006,309



IMMUNOASSAY DEVICE WITH LIQUID TRANSFER BETWEEN WELLS BY WASHING

Omar S. Khalil; Charles F. Hanna, both of Libertyville; Thomas F. Zurek, River Forest, and Denise A. Grigalauski, Wildwood, all of Ill., assignors to Abbott Laboratories, Abbott Park, Ill.

Filed Apr. 22, 1988, Ser. No. 184,726

Int. Cl.[5] G01N *1/28, 33/543*

U.S. Cl. 422—56 6 Claims

1. A device suitable for performing a solid-phase diagnostic assay comprising:

a shallow sample well for receiving a sample and reagents for forming a reaction mixture which produces a detectable component corresponding to an analyte in the sample:

a read well positioned adjacent to said sample well comprising:

(a) an entrance port and wash receiving means for receiving a quantity of said sample and assay reagents from said sample well;

(b) a fibrous matrix for retaining and immobilizing said detectable components, said fibrous matrix positioned below and in fluid communication with said wash receiving means: and

(c) means positioned below said fibrous matrix for assisting the flow of sample and assay reagents through said fibrous matrix: and

said sample well and said wash receiving means are separated by a wall which is constructed and arranged such that when wash fluids is injected into said sample well, sample and reaction mixtures are washed from said shallow sample well over said wall and into said read well.

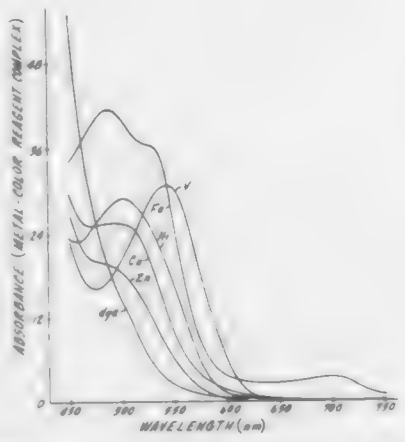
SCHIRMER TEAR TEST

Jerry Gin, Sunnyvale, Calif., and Vernon G. Wong, Rockville, Md., assignors to Visionex, Sunnyvale, Calif.

Filed Nov. 3, 1989, Ser. No. 431,522
Int. Cl.[5] G01N *31/22*
U.S. Cl. 422—56 5 Claims

1. In a Schirmer Tear Test strip, the improvement comprising a graduated scale index printed on said strip for measuring the migration distance of the tear migration front, wherein said scale index is printed in essentially water insoluble ink, and



a water soluble dye that essentially co-migrates with the tear migration front positioned proximal to the end of said strip for insertion into the conjunctival sac of the eye.

5,006,311

MONITORING PERFORMANCE OF A TREATING AGENT ADDED TO A BODY OF WATER

John E. Hoots, St. Charles, and Rodney H. Banks, Naperville, both of Ill., assignors to Nalco Chemical Company, Naperville, Ill.

Filed Mar. 23, 1990, Ser. No. 497,681
Int. Cl.[5] G01N *21/00, 31/00, 33/00*
U.S. Cl. 422—62 8 Claims

1. Method of analyzing the concentration of a treating agent injected by a pump into a body of system water in an amount estimated as optimum for improving the quality of the water, the inject agent being deemed sufficient for optimum performance of the treating agent, consumed as it improves the quality of the water, and also analyzing for the concentration of uncompensated metals constituting chemical stress, which body of water is also injected with an inconsumable vanadate transition metal tracer proportioned to the treating agent concentration as the equivalent of the treating agent concentration, comprising the steps of:

(1) withdrawing a specimen of the body of water and treating it successively with predetermined proportioned amounts of H_2O_2 and a dye reactive with both vanadate and stress metal ions, and then measuring the absorbance of the specimen, the H_2O_2 preventing the vanadate from reacting with the dye so that the absorbance value (I) of the specimen represents the concentration of stress metals as a blank for comparison; storing the absorbance value of the blank;

(2) withdrawing a second specimen of the body of water as a sample, adding only the predetermined proportioned amount of dye to the sample, without H_2O_2; measuring the absorbance (II) of the sample, resolving the difference between absorbance (I) and absorbance (II) to obtain the absorbance value of the vanadate as a measure of the prevailing concentration of the treating agent, and adjusting either the amount of treating agent or volume of water if the resolved absorbance value establishes non-optimum performance of the treating agent;

(3) comparing the absorbance value (III) of the proportioned amount of dye in distilled water to absorbance value (I) and resolving their difference to obtain the absorbance value of any stress metals present.

5,006,312

GRAVIMETRIC TITRATION APPARATUS FOR THE DETERMINATION OF THE IODINE NUMBER OF CARBON BLACK

Lawrence J. Murphy, Jr., 15 Lutheran Dr., Nashua, N.H. 03063

Division of Ser. No. 401,347, Aug. 31, 1989. This application Jun. 18, 1990, Ser. No. 539,646
Int. Cl.[5] G01N *31/16*
U.S. Cl. 422—62 9 Claims

1. An apparatus for gravimetrically determining the iodine adsorption number of carbon black, comprising

preparation means for preparing iodine solution, carbon black, an appropriate primary standard, and a solution comprising said primary standard for titration against an appropriate titrant, said preparation means including a first balance for weighing said iodine solution, said carbon black, said primary standard, and said solution comprising said primary standard, and equilibration means for equilibrating a mixture of accurately weighed carbon black and accurately weighed iodine solution,

titration means for titrating said primary standard solution, said iodine solution, and supernatant obtained from an equilibrated mixture of said carbon black and said iodine solution against said titrant, said titration means comprising a second balance, a titrant reservoir resting on said second balance, an indicating and reference electrode, a magnetic stirrer, and a titration cup for containing the solution to be titrated, said second balance accurately weighing the amount of titrant added to said primary standard solution, said iodine solution, and said supernatant, and

control means connected to said first and second balances, said control means receiving weight determinations from said first and second balances and using said weight determinations to gravimetrically determine the concentrations of said primary standard solution, said titrant, said iodine solution, and said supernatant, said control means calculating the iodine adsorption number of said carbon black based on said concentration determinations.

5,006,313

HALOGENATED SURFACE WITH REDUCED PROTEIN INTERACTION

Sally A. Swedberg, Santa Cruz, Calif., assignor to Hewlett-Packard Company, Palo Alto, Calif.

PCT No. PCT/US88/01877, § 371 Date Apr. 2, 1990, § 102(e) Date Apr. 2, 1990, PCT Pub. No. WO89/12225, PCT Pub. Date Dec. 14, 1989
PCT Filed Jun. 2, 1988, Ser. No. 474,716
Int. Cl.[5] G01N *30/00*
U.S. Cl. 422—70 4 Claims

1. A device for electrophoretic separations of protein solutes, comprising:

a small bore capillary tube having a reduced interaction phase coated along the bore and effective to reduce interaction between protein solute and the bore, the reduced interaction phase including a terminal moiety covalently bound in the reduced interaction phase through at least one heteroatom, the at least one heteroatom forming a linkage intermediate the bore and the terminal moiety, the terminal moiety including a plurality of halogen atoms.

5,006,314

SENSOR AND METHOD FOR SENSING THE CONCENTRATION OF A COMPONENT IN A MEDIUM

Ted H. Gourley; Thomas P. Maxwell, both of Santa Ana; Thomas G. Hacker, Anaheim; William W. Miller, Santa Ana, and Masao Yafuso, El Toro, all of Calif., assignors to Minnesota Mining and Manufacturing Company, St. Paul, Minn.

Continuation-in-part of Ser. No. 91,433, Aug. 31, 1987, abandoned, which is a continuation-in-part of Ser. No. 853,460, Apr. 18, 1986, abandoned, and a continuation-in-part of Ser. No. 917,913, Oct. 10, 1986, Pat. No. 4,798,738, and a continuation-in-part of Ser. No. 917,912, Oct. 10, 1986, Pat. No. 4,824,789, and a continuation-in-part of Ser. No. 49,844, May 15, 1987, Pat. No. 4,919,891. This application Jun. 13, 1988, Ser. No. 206,189
Int. Cl.[5] G01N *21/64*
U.S. Cl. 422—82.07 41 Claims

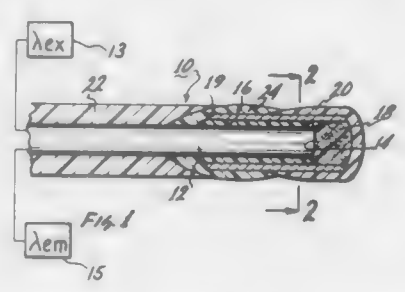


Fig. 1

29. An apparatus for sensing the concentration of a component in a medium comprising:

an optical fiber having a distal end;

a sleeve member more rigid than said optical fiber, said sleeve member being secured to said optical fiber and extending distally of said distal end whereby said distal end and said sleeve member at least partially define a pocket;

an optical indicator in said pocket for providing a signal which varies in response to the concentration of the component in the medium, said sleeve member extending around the entire circumference of at least a portion of said optical indicator, and said sleeve member acting to reduce the possibility of relative movement between said distal end of said optical fiber and said optical indicator; and

overcoating means acting to at least partially cover said optical indicator.

37. An apparatus for sensing the concentration of a component in a medium comprising:

elongated signal means having a distal end;

sleeve means secured to said elongated signal means and extending distally of said distal end whereby said distal end and said sleeve means at least partially define a pocket which is substantially filled with component permeable material;

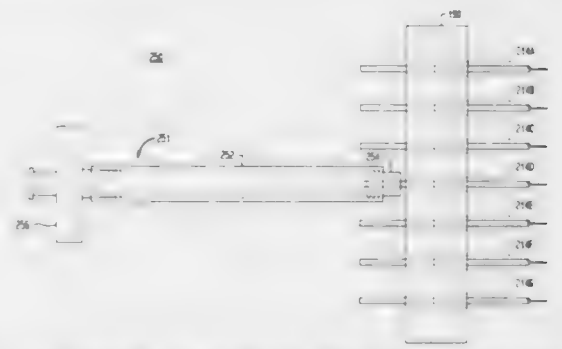
sensor means in said pocket for providing a signal which varies in response to the concentration of the component in the medium, said sleeve means extending around the entire circumference of at least a portion of said sensor means, and said sleeve means acting to reduce the possibility of relative movement between said distal end of said elongated signal means and said sensor means; and

overcoating means acting to at least partially cover said sensor means.

41. A method for producing an apparatus for sensing the concentration of a component in a medium, comprising the steps of:

securing a sleeve member to an optical fiber having a distal end so that said sleeve member extends distally of said distal end and so that said sleeve member and said distal end at least partially define a pocket;

placing an optical indicator in said pocket, said sleeve member extending around the entire circumference of at least a portion of said optical indicator; and



placing an overcoating adjacent at least a portion of said optical indicator in said pocket.

AUTOMATED PREPARATIVE GAS CHROMATOGRAPH

Peter J. Maroulis, Allentown; Patrick J. Clark, Palmerton; Victoria J. Morris, Macungie; Robert A. Byerley, Lehighton, all of Pa., and John Booker, Austin, Tex., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Division of Ser. No. 160,541, Feb. 25, 1988. This application Apr. 27, 1990, Ser. No. 515,295
Int. Cl.[5] G01N *30/02*
U.S. Cl. 422—89 3 Claims

1. A collection and separation system of a gas chromatograph having flow of system effluent, including at least one effluent trap having an inlet for receiving the system effluent comprising:

condensing means coupled to the at least one inlet for condensing system effluent;

backpressure means coupled to the condensing means for providing backpressure within the condensing means, the backpressure means is a filter plug formed of a solid material having a smooth surface for facilitating removal of effluent condensate from the backpressure means.

REACTORS FOR HETEROGENEOUS SYNTHESIS

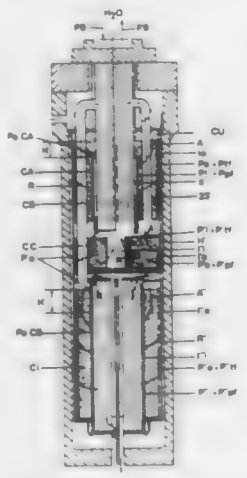
Umberto Zardi, Breganzona, and Giorgio Pagani, Lugano, both of Switzerland, assignors to Ammonia Casale S.A., Switzerland

Filed May 16, 1988, Ser. No. 194,402
Claims priority, application Switzerland, May 14, 1987, 01846/87
Int. Cl.[5] B01J *8/04*
U.S. Cl. 422—148 5 Claims

1. A system to increase reactor yield of a reactor for heterogeneous synthesis which includes an internal boiler and an internal heat exchanger inserted at least partially into a catalytic layer comprising:

a first catalytic layer, the first catalytic layer being partly connected to a boiler;

a second catalytic layer, the second catalytic layer being party connected to a heat exchanger;



at least one intermediate catalytic layer disposed between the first catalytic layer and the second catalytic layer;

each catalytic layer having an internal annular wall and an external annular wall for defining a first airspace and a second airspace for each catalytic layer, the internal annular wall and external annular wall of each catalyst layer being at least partially perforated;

the external annular wall of the first catalytic layer being perforated along an entire length thereof, the first airspace of the first catalytic layer being defined by the perforated external annular wall of the first catalytic layer and a cartridge wall of the reactor;

the internal annular wall of the first catalytic layer being perforated along a length less than the length of the external annular wall of the first catalytic layer, the second airspace of the first catalytic layer being defined by the perforated internal annular wall of the first catalytic layer and a wall of the boiler;

the external annular wall of the second catalytic layer being perforated along an entire length thereof, the first airspace

of the second catalytic layer being defined by the perforated external annular wall of the second catalytic layer and the cartridge wall of the reactor;

the internal annular wall of the second catalytic layer being perforated along a length less than the length of the external annular wall of the second catalytic layer, the second airspace of the second catalytic layer being defined by the perforated internal annular wall of the second catalyst layer and a wall of the heat exchanger.

PROCESS FOR PRODUCING CRYSTALLINE SILICON INGOT IN A FLUIDIZED BED REACTOR

Angel Sanjurjo, San Jose, Calif., assignor to CommTech Development Partners II, Menlo Park, Calif.

Filed May 18, 1990, Ser. No. 525,900
Int. Cl.[5] B01J *8/42*
U.S. Cl. 422—245 **20 Claims**

1. A device for preparing highly-pure, crystalline silicon, comprising:

a reactor vessel suitable for containing a plurality of Si particles;

agitating means for agitating said plurality of Si particles;

positioning means, for positioning a seed crystal within said reactor; and

first heating means, capable of melting a portion of a seed crystal positioned by said positioning means.

5,006,318

PARTICULATE COMPOSITIONS OF RARE EARTH OXIDE AND METHOD OF MAKING SAME

Gérard Demazeau, Gradignan; Olivier Martel, Grande-Synthe; Michel Devalette, Gradignan, and Eric Verdon, St. Jean d'Angely, all of France, assignors to Rhone-Poulenc Chimie, Courbevoie, France

PCT No. PCT/FR87/00024, § 371 Date Nov. 13, 1987, § 102(e) Date Nov. 13, 1987, PCT Pub. No. WO87/04420, PCT Pub. Date Jul. 30, 1987
PCT Filed Jan. 22, 1987, Ser. No. 108,903
Claims priority, application France, Jan. 22, 1986, 86 00855
Int. Cl.[5] C01F *17/00*
U.S. Cl. 423—21.1 **40 Claims**

1. Particulate compositions of rare earth oxides comprising particles present in the form of single crystals of homogeneous size and morphology, the dimensions of the single crystals being less than or equal to 10 μm and greater than approximately 0.05 μm and at least 80% of the particles having dimensions varying within a range of x±0.2 x, x being the mean dimension of the particles of the composition under consideration, with the understanding that the variation of the range of ±0.2 x is not less than ±0.1 μm.

5,006,319

PROCESS FOR REMOVING IRON, CHROMIUM AND VANADIUM FROM PHOSPHORIC ACID

Richard E. Hall, and Denise D. Goyden, both of Trenton, N.J., assignors to FMC Corporation, Philadelphia, Pa.

Filed Mar. 4, 1988, Ser. No. 164,289
Int. Cl.[5] B01D *11/00;* **C01B** *25/16*
U.S. Cl. 423—54 **12 Claims**

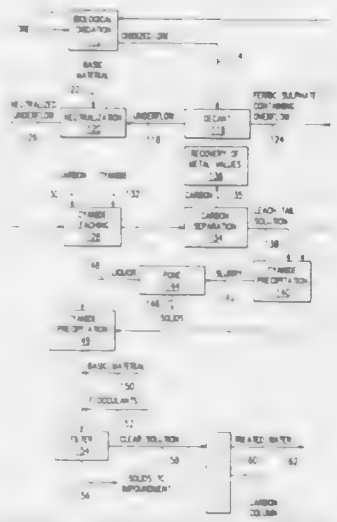
1. In a process for purifying phosphoric acid by the process comprising extracting an impure aqueous solution of phosphoric acid with an organic solvent, thereby forming an aqueous raffinate, and a nonaqueous solution of phosphoric acid in said solvent, and stripping phosphoric acid from said solvent with an aqueous solution, the improvement comprising contacting said nonaqueous solution of phosphoric acid with a strongly basic anion exchange polymer thereby removing therefrom a metal selected from the group consisting of iron, chromium and vanadium.

5,006,320

MICROBIOLOGICAL OXIDATION PROCESS FOR RECOVERING MINERAL VALUES

William W. Reid, 11 Sunrise Dr., Englewood, Colo. 80110, and Joseph L. Young, 1450 Joshua Dr., Reno, Nev. 89509, assignors to William W. Reid; Joseph L. Young and U.S. Gold Corporation

Filed Mar. 5, 1990, Ser. No. 488,866
Int. Cl.[5] C22B *3/02*
U.S. Cl. 423—150 **52 Claims**



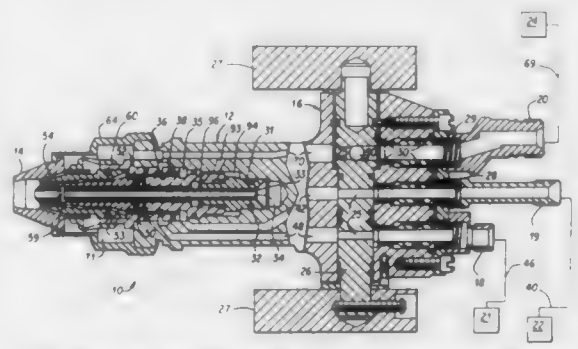
1. A process for recovering metal values from iron- and sulfide-containing ore comprising:

(a) inoculating a slurry of said ore with microorganisms capable of oxidizing the sulfide contained in the ore;

(b) allowing said microorganisms to oxidize at least a portion of the sulfide, thereby transforming the ore into a form which is more susceptible to cyanide leaching;

(c) leaching metal values from the ore using cyanide as a lixiviant;

(d) recovering the metal values; and



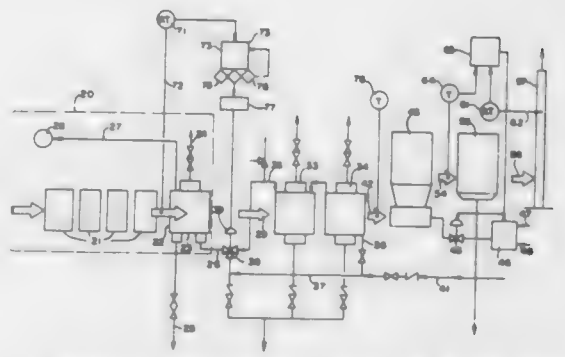
(e) precipitating cyanide from a leach tail solution by contacting said leach tail solution with ferric sulfate generated during the oxidation of the sulfide in the ore.

5,006,321

THERMAL SPRAY METHOD FOR PRODUCING GLASS MOLD PLUNGERS

Mitchell R. Dorfman, Smithtown; Roger W. Kaufold, Huntington; Burton Kushner, Old Bethpage; Anthony J. Rotolico, Hauppauge, and Roopnarine Tilkaran, S. Ozone Park, all of N.Y., assignors to The Perkin-Elmer Corporation, Norwalk, Conn.

Filed Jan. 4, 1989, Ser. No. 293,268
Int. Cl.[5] B05D *3/02, 3/12*
U.S. Cl. 427—192 **13 Claims**



1. A method for manufacturing a glass mold plunger utilizing a thermal spray gun having combustion chamber means therein with a combustion chamber and an open channel for propelling combustion products into the ambient atmosphere at supersonic velocity, the method comprising the steps of preparing a glass mold plunger substrate for receiving a thermal sprayed coating, feeding through the open channel a powder comprising self-fluxing alloy particles, injecting into the chamber and combusting therein a combustible mixture of combustion gas and oxygen at a pressure in the chamber sufficient to produce a supersonic spray stream containing the powder issuing through the open channel, directing the spray stream toward the glass mold plunger substrate such as to produce a coating thereon, fusing the coating and grind finishing the fused coating to a polished finish.

5,006,322

CONTROLLING POLLUTANTS FROM BOILERS

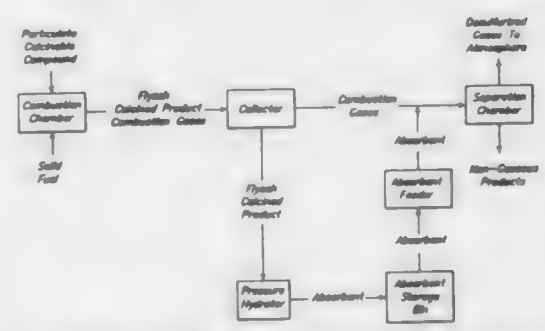
Wolfram G. Schuetzenduebel, Pike Road, and James T. Honan, Montgomery, both of Ala., assignors to Blount Energy Resource Corp., Montgomery, Ala.

Filed Dec. 12, 1988, Ser. No. 283,258
Int. Cl.[5] B01D *53/30, 53/34*
U.S. Cl. 423—210 **15 Claims**

1. A method of controlling the emissions in the flue gas of the boiler in a municipal solid waste burning system having first and second economizers for both heating feed water for the boiler and cooling the flue gas from said boiler, a reactor through which said cooled flue gas flows, said reactor having means to introduce a basic reactant at a selected quantity flow rate in slurry form to reduce the acid content of the cooled flue gas, and a separator to separate particulates form said flue gas prior to discharging the flue gas, comprising the steps of:

determining the acid content of the flue gas in advance of said reactor,

changing the quantity flow rate of reactant in response to a change in the determined acid content to provide a quantity of reactant sufficient to reduce the acid content of the discharged flue gas below a given concentration; and



concurrently with changing the quantity flow rate of said reactant, changing the operations of said first and second economizers to effect an inverse change in the cooling of the flue as whereby the temperature of the flue gas entering the reactor is changed directly with the change in quantity flow rate of reactant introduced into said reactor.

5,006,323

METHOD OF DESULFURIZING COMBUSTION GASES

Neil H. Johnson, Grosse Ile, Mich., assignor to Detroit Stoker Company, Monroe, Mich.

Continuation-in-part of Ser. No. 212,000, Jun. 27, 1988, Pat. No. 4,867,955. This application Jun. 30, 1989, Ser. No. 374,181
The portion of the term of this patent subsequent to Sep. 19, 2006, has been disclaimed.
Int. Cl.[5] B01J *8/00;* **C01B** *17/00*
U.S. Cl. 423—244 **15 Claims**

1. A method of desulfurizing gaseous products of combustion comprising the steps of:

(a) burning a sulfur-containing solid fuel within a combustion chamber to produce flyash and combustion gases comprising sulfur dioxide;
(b) heating a particulate calcinable compound comprising a compound selected from the group consisting of the carbonates of magnesium, calcium, sodium, and mixtures thereof, in a selected temperature zone within the combustion chamber for a residence time sufficient for calcination of the calcinable compound to its respective oxide, wherein the particle size of the calcinable compound, the selected temperature zone and the residence time are selected to effect calcination of a substantial amount of the calcinable compound to its respective oxide;
(c) removing the oxide of the calcinable compound from the combustion chamber;
(d) removing the combustion gases from the combustion chamber;
(e) forming a slurry comprised of the oxide of the calcinable compound; and
(f) treating the removed combustion gases with the slurry to remove a substantial amount of the sulfur dioxide from the combustion gases.

5,006,324

POLYMERIZATION OF PHOSPHONITRILIC CHLORIDE

Charles H. Kolich, Baton Rouge, La.; Bernard R. Meltsner, Royal Oak, Mich., and Henry G. Braxton, Jr., Baton Rouge, La., assignors to Ethyl Corporation, Richmond, Va.

Continuation-in-part of Ser. No. 126,336, Mar. 3, 1980, abandoned, which is a continuation-in-part of Ser. No. 695,791, Jun. 14, 1976, abandoned, which is a continuation-in-part of Ser. No. 512,613, Oct. 7, 1974, abandoned. This application Jan. 10, 1984, Ser. No. 569,611

Int. Cl.[5] C01B *25/10*

U.S. Cl. 423—300 **23 Claims**

1. A process for making a non-oil, substantially linear, high molecular weight phosphonitrilic chloride polymer, said polymer being soluble in benzene, toluene and tetrahydrofuran, said process comprising heating a purified phosphonitrilic chloride of the formula:

$(PNCl_2)_x$

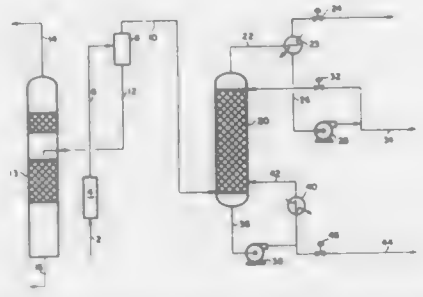
wherein x is an integer from 3–7 inclusive and mixtures thereof, at a temperature of about 200°–300° C. in the presence of a catalytic amount of an aprotic Lewis Acid catalyst selected from the group consisting of cobalt, nickel, boron, copper, gallium, silicon, arsenic and mercury halides and mixtures thereof, said catalytic amount being less than the amount which yields endcapped oily polymers as the major product and being within the range of 5–1000 parts per million parts of said phosphonitrilic chloride and separating a substantially linear high molecular weight non-oil phosphonitrilic chloride polymer, said polymer being further characterized by being soluble in benzene, toluene and tetrahydrofuran.

5,006,325

PROCESS FOR THE RECOVERY OF NITRIC ACID

David L. Parks, Jr., and Carl J. Martin, both of Houston, Tex., assignors to Air Products and Chemical, Inc., Allentown, Pa.

Filed Aug. 28, 1989, Ser. No. 399,654



Int. Cl.[5] C01B *21/46;* **C07C** *79/10*

U.S. Cl. 423—390 **7 Claims**

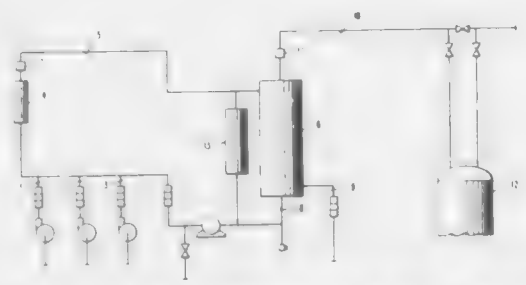
1. In a process for the recovery and regeneration of nitric acid from a spent acid obtained from the mixed acid nitration of aromatic compounds, wherein a mixed acid of sulfuric acid and nitric acid is contacted with an aromatic composition at a temperature and pressure sufficient for producing a nitroaromatic composition and a spent acid containing unreacted nitric acid, sulfuric acid and solublized nitroaromatic compounds in said spent acid, the improvement which comprises:

heating the spent acid to a temperature of from about 120° to 200° C. for a time sufficient to convert nitroaromatics in said spent acid to a nitroaromatic composition having a boiling point greater than 300° C. at atmospheric pressure;

flash distilling the resultant hot spent acid containing nitroaromatics compositions having a boiling point greater than 300° C., and

removing nitric acid as an overhead vapor fraction in preselected concentration and a bottom liquid stream containing sulfuric acid and nitroaromatics.

5,006,326



GASEOUS GENERATOR SYSTEM FOR PREPARING CHLORINE DIOXIDE

George Mayurnik, Franklin Lakes, N.J., and Donald C. Kucher, Quakertown, Pa., assignors to International Dioxcide, Inc., Clark, N.J.

Filed May 2, 1989, Ser. No. 346,451

Int. Cl.[5] C01B *11/02*

U.S. Cl. 423—477 **9 Claims**

1. A process for producing a gaseous stream of chlorine dioxide useful in the treatment of water comprising
(a) providing an aqueous stream of chlorine dioxide, wherein the aqueous stream of chlorine dioxide is obtained by reacting an alkali metal chloride with chlorine, and
(b) contacting the aqueous stream of chlorine dioxide in countercurrent fashion with a stream consisting essentially of an inert gas or air to strip chlorine dioxide from the aqueous stream and thereby produce a gaseous stream of chlorine dioxide.

5,006,327

ALKALI METAL HYDROSULFITE SOLUTIONS

Roger E. Bolick, II, Chattanooga, and Jimmy M. French, Charleston, both of Tenn., assignors to Olin Corporation, Cheshire, Conn.

Filed Jul. 18, 1989, Ser. No. 380,923

Int. Cl.[5] C01B *17/66;* **B01D** *19/00;* **C09K** *3/00*

U.S. Cl. 423—515 **8 Claims**

1. An aqueous solution comprising sodium hydrosulfite or potassium hydrosulfite, hydroxide ions in an amount to provide a residual alkalinity of at least 0.25 moles per liter and containing from about 0.02 to about 0.5 moles per liter of lithium ions.

5,006,328

METHOD FOR PREPARING MATERIALS FOR HYDROGEN STORAGE AND FOR HYDRIDE ELECTRODE APPLICATIONS

Kuochih Hong, 4853 Gambier, Troy, Mich. 48098

Continuation-in-part of Ser. No. 253,112, Oct. 4, 1988, abandoned, which is a division of Ser. No. 122,042, Nov. 17, 1987, Pat. No. 4,849,205. This application Sep. 25, 1989, Ser. No. 412,098

Int. Cl.[5] C01B *6/00;* **H01N** *4/00*

U.S. Cl. 423—644 **8 Claims**

5. A multicomponent alloy for hydrogen storage and a hydride electrode for electrochemical application, prepared by a method comprising the steps of:

providing a quality of elements A, B, C, . . . , where said elements are selected from the group consisting of Mg, Ti, V, Cr, Mn, Fe, Co, Ni, Al, Y, Zr, nb, Pd, Mo, Ca, Si, C, Cu, Ta, and rare earth elements, said quantity of said elements including nickel and at least two other elements from said group;

apportioning said quantity of said elements in order to form a composition $A_aB_bC_c$ . . . such that said composition $A_aB_bC_c$ . . . contains 24 to 65 mole percent of nickel and further such that said composition AaBbCc . . . has; melting said composition to form said multicomponent alloy, said multicomponent alloy having a heat of hydride formation that is in a range of between −3.5 and −9.0 Kcal/-mole H, wherein said heat of hydride formation is defined by:

$H_h=(aH_h(A)+bH_h(B)+cH_h(C)=\ldots)/(a+b+c\ldots)+K$

where $H_h(A)$, $H_h(B)$, $H_h(C)$, . . . are the heat of hydride formation of said elements A, B, C, . . . , in units of Kcal/-mole H, respectively, where said heat of hydride formation in said units for each of said elements is given as: $H_h(Mg)=-9.0$, $H_h(Ti)=-15.0$, $H_h(V)=-7.0$, $H_h(Cr)=-1.81$, $H_h(Mn)=-2.0$, $H_h(Fe)=4.0$, $H_h(Co)=4.0$, $H_h(Ni)=2.0$, $H_h(Al)=-1.38$, $H_h(Y)=-27.0$, $H_h(Zr)=-19.5$, $H_h(Nb)=-9.0$, $H_h(pb)=-4.0$, $H_h(Mo)=-1.0$, $H_h(Ca)=-21.0$, $H_h(Si)=-1.0$, $H_h(C)=-1.0$, $H_h(Cu)=2.0$, $H_h(Ta)=-10.0$, and H_h(rare earth elements)$=-25.0$, where K is a constant having the value of 0.5, −0.2, and −1.5 Kcal/mole H for a+b+c+. . . equal to 2, 3, 6, respectively, and having the value zero Kcal/mole H for a+b+c+ . . . not equal to 2, 3, 6.

wherein said method is performed so as to provide a multicomponent alloy having the formula:

$Ti_aCr_bV_cNi_dM_{3-a-b-c-d}$

where M is at least one of the elements selected from the group consisting of Mg, Ti, V, Cr, Mn, Fe, Co, Ni, Al, Y, Zr, Nb, Pd, Mo, Ca, Si, C, Cu, Ta and rare earth elements having a discharge capacity between a range of 250 to 315 mAh/g—has been inserted.

5,006,329

RADIOACTIVE TAGGED COMPOUNDS AND METHOD FOR THE TREATMENT OF METASTATIC BONE CANCER

Ephraim Lieberman, Suffern; Maurice Bordoni, Westtown, and Alfred Thornton, New Hampton, all of N.Y., assignors to Cadema Medical Products, Inc., Middleton, N.Y.

Continuation-in-part of Ser. No. 147,608, Jan. 22, 1988, abandoned. This application Jan. 26, 1989, Ser. No. 301,546

Int. Cl.[5] A61K *43/00;* **C07F** *9/00*

U.S. Cl. 424—1.1 **30 Claims**

1. A radioactive compound comprising a bone-seeking moiety and a chromium-51 moiety.

5,006,330

EVALUATIVE MEANS FOR DETECTING INFLAMMATORY REACTIVITY

Esther M. Sternberg, Chevy Chase; Ronald L. Wilder, Rockville; George P. Chrousos, Bethesda, all of Md., and Philip W. Gold, Washington, D.C., assignors to The United States of America as represented by the of the Department of Health and Human Services, Washington, D.C.

Filed Nov. 30, 1988, Ser. No. 277,708

Int. Cl.[5] A61K *49/00;* **G01N** *31/00, 33/48*

U.S. Cl. 424—9 **11 Claims**

1. A method for testing the susceptibility of a mammal to inflammatory diseases which comprises the steps of:

administering to a mammal an amount of interleukin-1 which is effective in stimulating the hypothalamicpituitary-adrenal axis; and

measuring the level of a hormone or hormones secreted by the pituitary or adrenal glands in the blood plasma of said mammal.

5,006,331

COMPOSITIONS AND METHOD OF STRENGTHENING HAIR

Frances C. Gaskin, 298 State St., Albany, N.Y. 12210

Continuation-in-part of Ser. No. 635, Jan. 5, 1987, Pat. No. 4,806,344. This application Oct. 26, 1988, Ser. No. 263,039

Int. Cl.[5] A61K *7/06, 7/08, 7/11*

U.S. Cl. 424—70 **5 Claims**

1. A composition for strengthening hair comprising:

an effective amount of melanin;

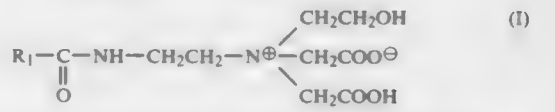
a substance selected from the group consisting of trypsin and triethanolamine for solubilizing the melanin, the substance present in an amount sufficient to solubilize the melanin, thereby producing melanin solubilized by the substance; and

a vehicle for topical application to hair in which the melanin solubilized by the substance is distributed.

5,006,332

COMPOSITION FOR INDUCING AND STIMULATING THE GROWTH OF HAIR AND/OR RETARDING ITS LOSS, BASED ON AN AMPHOTERIC SURFACE-ACTIVE AGENT AND ON A PYRIMIDINE DERIVATIVE

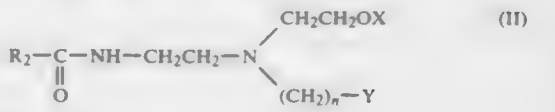
Jean F. Grollier, Paris, France, assignor to L'Oreal, Paris, France



Filed Jun. 14, 1989, Ser. No. 365,803

Claims priority, application Luxembourg, Jun. 17, 1988, 87249

Int. Cl.[5] A61K *7/075, 7/06*

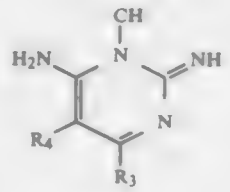


U.S. Cl. 424—70 **19 Claims**

1. Washing and foaming composition for inducing and stimulating the growth of hair and/or retarding its loss, characterized in that it contains, in a physiologically acceptable medium, at least one amphoteric surface-active agent chosen from the amphocarboxyglycinates of formula:

(I)

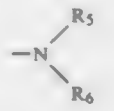
in which R_1 may denote an alkyl radical derived from copra, or a heptyl, nonyl or undecyl radical; and the amphocarboxypropionates corresponding to the formula:



(II)

in which

n=1 or 2,
X denotes —CH_2CH_2COOH, or hydrogen;
Y denotes —COOH or the radical



$$CH(OH)-CH_2SO_3H,$$

R_2 denotes an alkyl radical derived from copra, a saturated C_7, C_9, C_{11}, or C_{13} alkyl radical, a C_{17} alkyl radical and its iso form, a C_{17} unsaturated radical, or an alkyl radical derived from linseed oil; as well as the physiologically acceptable salts of these compounds; and a pyrimidine derivative corresponding to the formula:

(III)

in which R_3 denotes a group

in which:

R_5 and R_6 are chosen from hydrogen, an alkyl group having 1 to 4 carbon atoms or an alkenyl, alkylaryl or lower cycloalkyl group;

R_5 and R_6 may also be from a heterocyclic ring with the nitrogen atom to which they are bonded, this heterocyclic ring being chosen from aziridinyl, azetidinyl, pyrrolidinyl, piperidyl, hexahydroazepinyl, heptamethyleneimine, octamethyleneimine, morpholine and 4-(lower alkyl)-piperazidinyl groups, it being possible for the heterocyclic groups to be substituted on the carbon atoms by one to three lower alkyl, hydroxyl or alkoxy groups;

the group R_4 is chosen from hydrogen, an alkyl, alkenyl, alkylalkoxy, cycloalkyl, aryl, alkylaryl, arylalkyl, alkylarylalkyl, alkoxyarylalkyl and lower haloarylalkyl group, as well as the salts of addition to physiologically acceptable acids, wherein the pyrimidine derivative of formula (III) is present in proportions of between 0.05 and 6% by weight relative to the total weight of the composition, and wherein the amphoteric surface-active agent of formula (I) or (II) is present in proportions of between 1 and 30% by weight relative to the total weight of the composition.

5,006,333

CONJUGATES OF SUPEROXIDE DISMUTASE COUPLED TO HIGH MOLECULAR WEIGHT POLYALKYLENE GLYCOLS

Mark Saifer, Berkeley; Ralph Somack, Oakland, and L. David Williams, Fremont, all of Calif., assignors to DDI Pharmaceuticals, Inc., Mountain View, Calif.

Continuation-in-part of Ser. No. 81,009, Aug. 3, 1987, abandoned. This application Jul. 13, 1989, Ser. No. 380,205

Int. Cl.[5] A61K *31/74, 37/48*

U.S. Cl. 424—78 **13 Claims**

1. A an anti-imflammatory water-soluble substantially non-immunogenic conjugate of a superoxide dismutase coupled with a coupling agent to 1 to 5 strands of a polyalkylene glycol which is a polyethylene glycol or polyethylene-polypropylene glycol copolymer residue, wherein all of polyalkylene glycol so coupled has an average molecular weight as determined by HPLC using PEG as standard of about 35,000–200,000 and is unsubstituted or substituted at one terminal by a C_{1-4}-alkyl group.

5,006,334

ANTIGENIC MODIFICATION OF POLYPEPTIDES

Vernon C. Stevens, Dublin, Ohio, assignor to The Ohio State University, Columbus, Ohio

Continuation-in-part of Ser. No. 667,863, Nov. 2, 1984, Pat. No. 4,691,006, which is a continuation-in-part of Ser. No. 472,190, Mar. 4, 1983, Pat. No. 4,526,716, which is a continuation-in-part of Ser. No. 323,690, Nov. 20, 1981, Pat. No. 4,384,995, which is a continuation-in-part of Ser. No. 112,628, Jan. 16, 1981, Pat. No. 4,302,386, which is a division of Ser. No. 936,876, Aug. 25, 1978, Pat. No. 4,201,770, which is a continuation-in-part of Ser. No. 622,031, Oct. 14, 1975, abandoned, which is a continuation-in-part of Ser. No. 462,955, Apr. 22, 1974, abandoned, which is a continuation-in-part of Ser. No. 406,821, Oct. 16, 1973, abandoned, which is a continuation-in-part of Ser. No. 357,892, May 7, 1973, abandoned. This application Jul. 15, 1987, Ser. No. 73,748

The portion of the term of this patent subsequent to Nov. 24, 1998, has been disclaimed.

Int. Cl.[5] A61K *37/24*

U.S. Cl. 424—88 **3 Claims**

1. An immunogen vaccine which induces in a mammal production of antibodies against a natural protein reproductive hormone, which vaccine comprises a conjugate between a protein and a biologically effective amount of a female reproductive hormone, or fragment thereof, or a peptide immunologically equivalent to such a hormone or fragment.

5,006,335

LIVE VACCINE AGAINST MUMPS AND PROCESS FOR OBTAINING THEREOF

Reinhard Glück, Köniz, and René Germanier, Bern, both of, Switzerland, assignors to Swiss Serum & Vaccine Institute and Institute for the Research of Infectious Diseases, both of Berne, Switzerland

Filed Sep. 10, 1986, Ser. No. 905,925

Claims priority, application Switzerland, Nov. 26, 1985, 05062/85; Jan. 15, 1986, 00133/86

Int. Cl.[5] A61K *39/12;* **C12N** *7/00*

U.S. Cl. 424—89 **6 Claims**

1. A method of preparing a live-attenuated mumps virus comprising the steps of:

(i) isolating wild-type virus from a mumps-infected individual;

(ii) adapting the isolated virus to grow on human diploid cells;

(iii) concentrating and purifying said adapted virus;

(iv) passaging said adapted virus on embryonated poultry eggs under conditions sufficient for enrichment of the virus;

(v) attenuating the virus resulting from step (iv) on embryonated poultry eggs;

(vi) further attenuating the virus resulting from step (v) on human diploid cells at 30° C.; and

(vii) further attenuating the virus resulting from step (vi) on human diploid cells at a temperature higher than that used in step (vi) but under conditions to maintain the viability of said human diploid cells.

5,006,336

NOVEL COLEOPTERAN-ACTIVE BACILLUS THURINGIENSIS ISOLATE

Jewel Payne, San Diego, Calif., assignor to Mycogen Corporation, San Diego, Calif.

CURABLE COMPOSITIONS FOR DENTAL DRUGS HAVING SUSTAINED RELEASE PROPERTY

Mitsuru Atsuta, Nagasaki; Takeshi Sakashita, Yamaguchi; Ryoichi Miyamoto, Kyoto; Yukinori Tanimura, Yamaguchi, and Saburo Fuji, Hiroshima, all of Japan, assignors to Mitsui Petrochemical Industries, Ltd., Tokyo, Japan

Division of Ser. No. 189,528, Apr. 7, 1988, Pat. No. 4,925,660, which is a continuation-in-part of Ser. No. 933,241, Nov. 21, 1986, abandoned. This application Feb. 12, 1990, Ser. No. 478,362

Claims priority, application Japan, Nov. 21, 1985, 60-259900; Jul. 18, 1986, 61-168096; Nov. 4, 1986, 61-260766

Int. Cl.[5] A01N *25/00*

U.S. Cl. 424—405 **22 Claims**

1. A curable composition for dental drugs having sustained release property, which comprises

(a) a (meth)acrylate monomer,

(b) a polymerization initiator, and

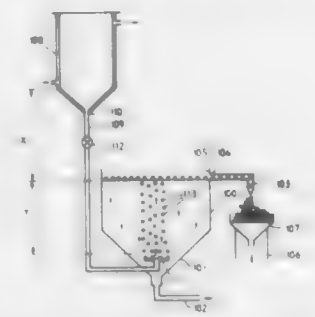
(c) a crude drug ingredient having bactericidal activity, wherein said composition is polymerized by heat.

5,006,341

PROTECTION

Paul J. Davis, Bedfordshire; Simon C. Quarmby, Irchester, both of England, and Albert W. Schoenmakers, Dendermonde, Belgium, assignors to Unilever Patent Holdings B.V., Rotterdam, Netherlands

Filed May 13, 1988, Ser. No. 193,624



Claims priority, application United Kingdom, May 13, 1987, 8711256

Int. Cl.[5] A23K *1/165*

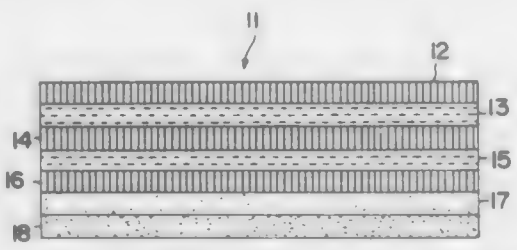
U.S. Cl. 424—442 **19 Claims**

1. A composition comprising dry free-flowing particles each consisting of a solid beadlet of lipid-continuous emulsion containing from about 25% to about 50% by weight water in a hardened palm kernel oil having a slip point in the range 35° to 45° C., each beadlet having an average diameter of about 2 to 3 millimeters and containing at least 1 viable sporulated oocyst

of a species of coccidium infective to poultry, each beadlet having a protective coating of cement and/or gypsum, the

protective coating having an average thickness of about 0.2 to 0.5 mm.

5,006,342



RESILIENT TRANSDERMAL DRUG DELIVERY DEVICE

Gary W. Cleary, San Mateo, and Samir Roy, Redwood City, both of Calif., assignors to Cygnus Corporation, Redwood City, Calif.

Division of Ser. No. 179,423, Apr. 8, 1988, Pat. No. 4,906,463, which is a continuation-in-part of Ser. No. 79,801, Jul. 30, 1987, abandoned, which is a continuation-in-part of Ser. No. 41,793, Apr. 23, 1987, abandoned, and Ser. No. 945,356, Dec. 22, 1986, abandoned. This application Feb. 10, 1989, Ser. No. 309,287

Int. Cl.[5] A61F *13/00*

U.S. Cl. 424—445 **21 Claims**

1. A transdermal drug-delivery device in the form of a solid state laminated composite adapted to be adhered to an area of unbroken skin and having mechanical properties that enable it to expand and contract in concert with the normal expansion and contraction of said area of skin comprising:

(a) at least two spaced structural laminas of a resilient elastomeric polymer, one of which forms the upper face surface of the composite, said laminas providing the composite with said mechanical properties;

(b) at least one lamina of a viscoelastic hydrophobic polymer in which (i) a drug and/or (ii) an agent that enhances the solubility of the drug in the viscoelastic hydrophobic polymer and/or is a percutaneous absorption enhancer that increases the permeability of the skin to the drug is dispersed and at least partly dissolved, the viscoelastic hydrophobic polymer lamina being positioned between the structural laminas with the structural lamina(s) underlying the viscoelastic hydrophobic polymer lamina(s) providing no rate-controlling barrier to diffusion of drug and/or agent from the viscoelastic hydrophobic polymer lamina(s) to the skin; and

(c) a lamina of a pharmaceutically acceptable pressure-sensitive adhesive in which (i) said drug and/or (ii) said agent is dispersed and at least partly dissolved, one face of the pressure-sensitive adhesive lamina defining the basal surface of the composite and contacting and adhering to the area of unbroken skin when the device is in use, said pressure-sensitive adhesive lamina providing no rate-controlling barrier to diffusion of the drug and/or agent from the device to the skin, with the proviso that at least one of said viscoelastic hydrophobic polymer lamina(s) and said pressure-sensitive adhesive lamina contains the drug.

PULMONARY ADMINISTRATION OF PHARMACEUTICALLY ACTIVE SUBSTANCES

Bradley J. Benson, and JoRae Wright, both of 170 Cresta Vista Dr., San Francisco, Calif. 94127

Filed Dec. 29, 1988, Ser. No. 295,926

Int. Cl.[4] A61K *37/22*

U.S. Cl. 424—450 **9 Claims**

1. A composition for pulmonary administration of a pharmaceutically active substance, said composition comprising 60–90% by weight liposome forming compound, 5–20% by weight pharmacentically active substance, and 5–20% by weight surfactant protein, based on the total weight of liposome-forming substance, pharmacentically active substance and alveolar surfactant protein, wherein said composition comprises liposomes.

5,006,344

FOSINOPRIL TABLET FORMULATIONS

Robert L. Jerzewski, East Millstone; Thomas M. Wong; Lewis J. Gryziewicz, both of North Brunswick; Nemichand B. Jain, Monmouth Junction, and Ajit B. Thakur, East Brunswick, all of N.J., assignors to E. R. Squibb & Sons, Inc., Princeton, N.J.

Continuation-in-part of Ser. No. 377,683, Jul. 10, 1989, abandoned. This application Jun. 26, 1990, Ser. No. 543,639

Int. Cl.[5] A61K *9/20*

U.S. Cl. 424—465 **24 Claims**

1. A stable tablet comprising on a weight percentage basis from about 1% to about 25% fosinopril sodium, up to about 25% of a diuretic, from about 30% to about 90% of a filler, from about 2% to about 10% of a disintegrant, from about 1% to about 5% of a binder, or from about 5% to about 15% of a single agent which is both binder and disintegrant, and from about 0.3% to about 4% of a lubricant selected from the group consisting of sodium stearyl fumarate and hydrogenated vegetable oil.

5,006,345

DIRECT TABLETING AUXILIARY

Siegfried Lang, Ludwigshafen, Fed. Rep. of Germany, assignor to BASF Aktiengesellschaft, Fed. Rep. of Germany

Continuation of Ser. No. 826,094, Feb. 6, 1986, abandoned. This application Dec. 12, 1988, Ser. No. 284,765

Claims priority, application Fed. Rep. of Germany, Feb. 16, 1985, 3505433

Int. Cl.[5] A61K *9/26*

U.S. Cl. 424—467 **16 Claims**

1. A direct tableting auxiliary consisting essentially of an intimate mixture of

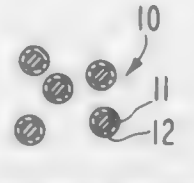
(A) from 88 to 96% by weight of a pulverulent carrier pharmaceutically acceptable for use in the preparation of tablets, said carrier consisting of lactose, or an amount of lactose together with not more than the same amount of mannitol or calcium phosphate as another carrier,

(B) from 2 to 6% by weight of a binder selected from the group consisting of polyvinylpyrrolidone having a K value of from 20 to 40, hydroxypropylmethylcellulose, hydroxypropylcellulose and gelatine and

(C) from 2 to 10% by weight of tablet disintegrating agent selected from the group consisting of crosslinked, insoluble polyvinylpyrrolidone, crosslinked carboxymethylcellulose, crosslinked carboxylmethyl starch and formaldehyde casein, all percentages being based on the direct tableting auxiliary,

said auxiliary having a particle size distribution of from about 50 to 500 μm.

5,006,346



DELIVERY SYSTEM

David E. Edgren, El Granada, and Felix Theeuwes, Los Altos, both of Calif., assignors to Alza Corporation, Palo Alto, Calif.

Division of Ser. No. 187,621, Apr. 28, 1988, Pat. No. 4,931,285. This application May 11, 1989, Ser. No. 350,482

Int. Cl.[5] A61K *9/24*

U.S. Cl. 424—473 **1 Claim**

1. A therapeutic composition comprising:

(a) a drug;

(b) an oil-in-water subcoat comprising from 15% to 75% of a member selected from the group consisting of a cellulose ether, a cellulose ester and a cellulose ester-ether, an optical plasticizer and comprising from 0.1% to 20% of an emulsifying agent comprising a member selected from the group consisting of nonionic, anionic and cationic agents; and

(c) an overcoat comprising a member selected from the group consisting of a hydroxypropylcellulose, hydroxypropylmethylcellulose, methylcellulose and carboxymethylcellulose, and an optional plasticizer, and wherein the subcoat and the overcoat are annealed at a temperature up to 65° C. for up to 72 hours to provide the therapeutic annealed composition comprising the drug.

5,006,347

PROCESS FOR RETARDING BACTERIAL GROWTH IN CHEESE

Carol A. Day, and Brian W. Holton, both of Worcestershire, Great Britain, assignors to Microbial Developments Ltd., England

Division of Ser. No. 189,967, May 4, 1988, Pat. No. 4,851,240. This application May 11, 1989, Ser. No. 350,215

Claims priority, application United Kingdom, May 7, 1987, 8710795

Int. Cl.[5] A23C *19/00, 19/097*

U.S. Cl. 426—36 **11 Claims**

1. A method of retarding undesirable bacterial growth in cheese comprising the administration thereto of a non-toxic amount of at least one type of bacteriophage effective to retard bacterial growth.

5,006,348

METHOD FOR MANUFACTURE OF SWISS CHEESE

Brent K. Pope, Wildwood; Susan P. Monckton, Glen Ellyn, and Kaser R. Nath, Glenview, all of Ill., assignors to Kraft General Foods, Inc., Glenview, Ill.

Filed May 4, 1990, Ser. No. 518,812

Int. Cl.[5] A23C *19/068, 19/02*

U.S. Cl. 426—40 **14 Claims**

1. A method for manufacture of Swiss cheese from milk comprising the steps of:

(a) removing moisture, ash and lactose from milk to provide a retentate,

(b) adding a mixture of a propionic acid producing culture, a coccus culture and a rod culture, to said retentate, the level of said rod culture being from about 0.1 to about 6 times the level of said coccus culture,

(c) fermenting said retentate to a pH of from between about 4.8 and about 5.6, said fermentation being effected at a temperature of from about 92° F. to about 118° F.,

(d) evaporating moisture from said retentate to provide a cheese product having from about 35% to about 41% moisture, and

(e) curing said cheese product for a time sufficient to provide a Swiss cheese.

5,006,349

PROCESS FOR PRODUCING A PROTEIN PRODUCT

Donald Dahlstrom, Fairbault; Stephen Dybing, Fridley, and Barney J. Gaffney, Stillwater, all of Minn., assignors to Land O'Lakes, Inc., Arden Hills, Minn.

Continuation of Ser. No. 823,304, Jan. 28, 1986, abandoned. This application Jun. 17, 1988, Ser. No. 210,214

The portion of the term of this patent subsequent to Jun. 23, 2004, has been disclaimed.

Int. Cl.[5] A23C *9/13, 19/02;* **A23J** *1/00*

U.S. Cl. 426—39 **36 Claims**

1. A process for producing a protein-containing food product, the process comprising:

introducing a protein-containing stream having a coaguable protein and a reactant stream containing a component for coagulating the protein, the two streams having concentrations and proportions effective for coagulation of the protein under uniform dispersion conditions, through a resonating chamber, resonating at an ultrasonic frequency causing instantaneous mixing of both streams such that a coagulum suitable as a food product is subsequently formed.

5,006,350

SOYBEAN PROTEIN FOOD PRODUCT

Tatuo Emura, Sapporo, and Kiyoshi Ohba, Chitose, both of Japan, assignors to Kabushiki Kaisha Hokkaido Nissin, Hokkaido, Japan

Division of Ser. No. 167,508, Mar. 14, 1988, Pat. No. 4,885,178. This application Jun. 8, 1989, Ser. No. 363,033

Int. Cl.[5] A23J *3/00, 1/14;* **A23L** *1/20*

U.S. Cl. 426—46 **8 Claims**

1. A cheese-like soybean protein food product consisting essentially of clotted soybean protein which has been clotted with an enzyme released from a microorganism designated FERM BP-1778.

5,006,351

CYCLOHEXYL DIOL DIESTERS AS LOW CALORIE FAT MIMETICS

Lawrence P. Klemann, Somerville; John W. Finley, Whippany, and Anthony Scimone, Cedar Grove, all of N.J., assignors to Nabisco Brands, Inc., East Hanover, N.J.

Filed Jun. 27, 1989, Ser. No. 372,288
Int. Cl.[5] A23D *7/00*
U.S. Cl. 426—611 54 Claims

1. An edible composition comprising at least one food ingredient and an edible fat mimetic compound of the formula

X—Q—X,

where

Q is a cyclohexane, cyclohexene or cyclohexdiene ring,

X is a —O—(CO)—R, —CH_2—O—(CO)—R, or —(CH_2.)$_2$—O—(CO)—R, and each R is, independently, an aliphatic group having 1 to 29 carbons.

5,006,352

PROCESS FOR THE PRODUCTION OF AN OXYGENATED RESTORATIVE DRINK

Mária Zelenák née Zoltai, and Lá/ zló Berzsenyi, both of Budapest, Hungary, assignors to Mester-Coop Élelmiszeripari és Ker. Leányvállalat, Budapest, Hungary

PCT No. PCT/HU88/00008, § 371 Date Dec. 23, 1988, § 102(e) Date Dec. 23, 1988, PCT Pub. No. WO88/06411, PCT Pub. Date Sep. 7, 1988
PCT Filed Feb. 26, 1988, Ser. No. 279,052
Claims priority, application Hungary, Feb. 27, 1987, 803/87
Int. Cl.[5] A23L *2/26*
U.S. Cl. 426—67 6 Claims

1. A process for producing a restorative drink having a good shelf life and which does not need to be stored under refrigeration, which consists essentially of saturating under pressure plain water, or mineral water having a temperature of from about 0° C. to about 5° C., with molecular oxygen, filling said water into a bottle, and then sealing said bottle under pressure to obtain an oxygenated restorative drink.

5,006,353

PROCESS FOR THE PRODUCTION OF SURIMI

Norihisa Nishi; Makoto Nakamura, and Satoshi Noguchi, all of Tokyo, Japan, assignors to Taiyo Fishery Co., Ltd., Tokyo, Japan

Filed Oct. 25, 1989, Ser. No. 426,969
Claims priority, application Japan, Jan. 12, 1989, 64-5264
Int. Cl.[5] G01N *33/00*
U.S. Cl. 426—231 6 Claims

1. In a process for the production of a surimi, which comprises distinguishing fish highly contaminated with sporozoans from less contaminated ones; removing said highly contaminated fish; collecting fish meat from the residual fish; and processing the residual fish into surimi, the improvement comprising

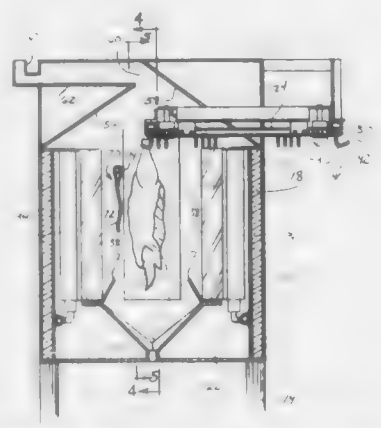
determining the presence of cysts in the fish meat as a basis for identifying highly contaminated fish for removal before collecting the fish meat from the residual fish, and thereafter leaching and dehydrating said fish meat.

5,006,354

DEAERATION PROCESS FOR THE MANUFACTURE OF FRUIT JUICES

Ghobad Rahrooh, The Procter & Gamble Company - I.T.C., 5229 Spring Grove Ave., Cincinnati, Ohio 45217, and Rüdiger A. Engel, Procter & Tamble GmbH, Sulzbacherstrasse 40, 6231 Schwalbach-am-Taunus, Fed. Rep. of Germany

Filed Apr. 23, 1990, Ser. No. 512,708
Claims priority, application United Kingdom, Apr. 28, 1989, 8909780
Int. Cl.[5] A23L *2/00;* G01N *33/00*
U.S. Cl. 426—231 15 Claims



1. A process for deaerating fruit juices during their manufacture, the process comprising: (a) conducting vacuum deaeration on a concentrated source of the fruit juice, at a temperature such as to avoid damaging the volatile components and vitamins of the concentrated fruit juice, wherein the dissolved oxygen level in the deaerated concentrated fruit juice is reduced to not more than 3 ppm, and then (b) subsequently adding separately deaerated water to the deaerated concentrated source, wherein the added deaerated water has a dissolved oxygen level of from 0 to 0.4 ppm.

5,006,355

APPARATUS AND METHOD FOR COOKING FOOD PRODUCTS, SPECIALLY FOR BROILING WHOLE CHICKENS AND OTHER MEATS

Robert M. Stuck, 1 Thornwood Rd., Clover, S.C. 29710, and Samuel H. Maw, Jr., 1824 Santiago Dr., Newport Beach, Calif. 92660

Filed Aug. 1, 1990, Ser. No. 561,096
Int. Cl.[5] A23L *1/00;* A47J *37/00*
U.S. Cl. 426—243 20 Claims

14. A method for cooking food products comprising the steps of conveying food products along a cooking path through a cooking area defined between a pair of cooking energy-emitting faces spaced from one another in generally upright laterally opposed facing relation and selectively modifying the cooking energy emitted from a predetermined region of at least one of said energy-emitting faces corresponding to a predetermined portion of said cooking path wherein the food products are to be subjected to a modified amount of cooking.

5,006,356

TREATMENT OF FRUIT-BASED OR VEGETABLE-BASED BEVERAGES WITH PRECIPITATED MAGNESIUM SILICATE

James R. Munson, Somerville, N.J., assignor to The Dallas Group of America, Inc., Liberty Corner, N.J.

Filed Apr. 19, 1990, Ser. No. 523,707
Int. Cl.[5] C12H *1/02*
U.S. Cl. 426—330.4 9 Claims

1. A method of treating a fruit-based or vegetable-based beverage to remove chill haze components therefrom, comprising:

contacting said beverage with an effective amount of an amorphous hydrous precipitated synthetic magnesium silicate, said magnesium silicate having been treated to reduce the pH thereof to less than about 9.0;

maintaining contact of said magnesium silicate with said beverage for a time sufficient to remove said chill haze components from said beverage; and

separating said magnesium silicate from said beverage.

5,006,357

PACKAGING OF ROUGHAGE MATERIAL

Carlton R. Bert, P.O. Box 130, Larned, Kans. 67550

Continuation of Ser. No. 155,557, Feb. 12, 1988, abandoned. This application Jun. 2, 1989, Ser. No. 360,359
Int. Cl.[5] A23K *1/00*
U.S. Cl. 426—413 11 Claims

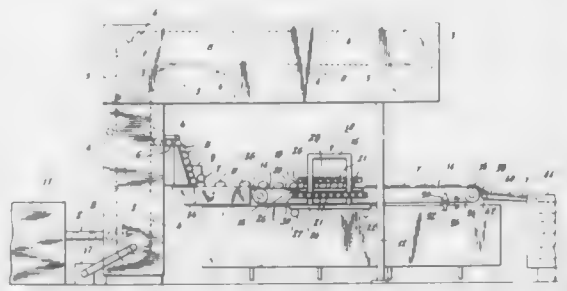
1. A process for packaging alfalfa hay consisting essentially of the steps of:

(a) cutting said hay at a moisture content in the range of about 25–50% to produce a particle size of a length less than six inches;

(b) drying said hay particles to a moisture content less than 12%;

(c) cooling said hay particles to approximately room temperature;

(d) placing said hay particles into a container impervious to air in a manner such that said particles in said container have a bulk density of at least about 15 pounds per cubic foot; and



(e) closing said container; wherein said hay particles retain their natural roughage characteristics, nutritional value, and palatability.

5,006,358

METHOD OF MAKING TORTILLAS

Manuel J. Ribio, 1621 Collins Ave., Miami, Fla. 33139; Alberto de la Vega, Amazonas 101, Garza Garcia, Nueva Leon, Mexico, and Eberhard Mueller-Lobeck, 71 Aiken Ave., Norwalk, Conn. 06851

Division of Ser. No. 191,977, May 9, 1988, Pat. No. 4,938,126. This application Jan. 3, 1990, Ser. No. 460,389
Int. Cl.[5] A21D *6/00*
U.S. Cl. 426—496 2 Claims

1. A method of producing tortillas comprising the steps of

positioning groups of dough units on the upper surface of a conveyer belt that is traveling at a steady, pre-determined speed between the platens of a press which can be moved to and fro along the path of travel of said belt and the platens of which are moveable into and out of pressing relationship on dough units being carried by said conveyer belt,

moving said press in the direction of travel of said conveyer belt at the speed of said belt,

pressing said dough units into the form of tortillas between said platens while the speed of said press is maintained at the speed of the belt, and

terminating the pressing action of said platens on said dough units.

5,006,359

PREMIX PREPARATION FOR ICE FOODS

Akira Senda, Kanazawa, Japan, assignor to Daiei Food Industrial Co. Ltd., Ishikawa, Japan

Filed Dec. 17, 1987, Ser. No. 134,049
Claims priority, application Japan, Dec. 27, 1986, 61-313505
Int. Cl.[5] A23L *2/00;* A23G *9/00*
U.S. Cl. 426—565 22 Claims

1. A storage stable aqueous emulsion comprising:

(a) 2–10% by total weight of said emulsion of an edible oil consisting essentially of saturated fatty acids comprising medium chain triglycerides;

(b) an emulsifying agent comprising fatty acids selected from the group consisting of fatty acid esters of glycerin, fatty acid esters of sorbitan, fatty acid esters of sucrose, lecithin and hexaglycerin monostearate;

(c) a stabilizer comprising a stabilizer mixture of pectin and pregelatinizede starch

(d) a sweetener; and

(e) water.

5,006,360

LOW CALORIE FAT SUBSTITUTE COMPOSITIONS RESISTANT TO LAXATIVE SIDE EFFECT

Norman B. Howard, Hilton Head Island, S.C., and David C. Kleinschmidt, Fairfield, Ohio, assignors to The Procter & Gamble Company, Cincinnati, Ohio

Filed Jun. 27, 1988, Ser. No. 211,802
Int. Cl.[5] A23L *1/307*
U.S. Cl. 426—601 23 Claims

1. A low calorie fat substitute composition resistant to laxative side effect comprising: (i) a liquid polyol fatty acid polyester, (ii) at least about 10% solid low calorie fat substitute by weight of the liquid polyol fatty acid polyester, and (iii) at least about 1% of a cohesive network of polysaccharide fibrils and microfibrils by weight of the liquid polyol fatty acid polyester.

5,006,361

LIPID PELLETIZATION METHODS, APPARATUS AND PRODUCTS

James P. Cox, 246 E. Bartlett Rd., Lynden, Wash. 98264

Continuation of Ser. No. 609,541, Nov. 29, 1983, abandoned, which is a continuation-in-part of Ser. No. 447,622, Dec. 7, 1982, abandoned, and Ser. No. 447,130, Dec. 6, 1982, abandoned, which is a division of Ser. No. 193,434, Oct. 3, 1980, Pat. No. 4,362,748, said Ser. No. 447,622, is a continuation-in-part of Ser. No. 193,434,. This application Dec. 8, 1987, Ser. No. 131,298
Claims priority, application PCT Int'l Appl., Jan. 29, 1983, PCT/US83/01869
Int. Cl.[5] A23K *1/00*
U.S. Cl. 426—601 8 Claims

1. A dry, firm, solid lipid pellet consisting essentially of at least about 95 percent by weight lipid, a water-insoluble alginate salt in an amount effective to form said pellet, and no more than about 5 percent water.

5,006,362

BRANDING PHARMACEUTICAL DOSAGE FORMS, FOOD AND CONFECTIONERY PRODUCTS WITH AQUEOUS INGESTIBLE INKS

G. Roland Hilborn, Royersford, Pa., assignor to Berwind Pharmaceutical Services, Inc., West Point, Pa.

Continuation of Ser. No. 191,704, May 9, 1988, abandoned. This application Feb. 2, 1990, Ser. No. 473,897
Int. Cl.[5] A61K *9/00*
U.S. Cl. 427—3 20 Claims

1. A method of marking forms such as pharmaceutical tab-

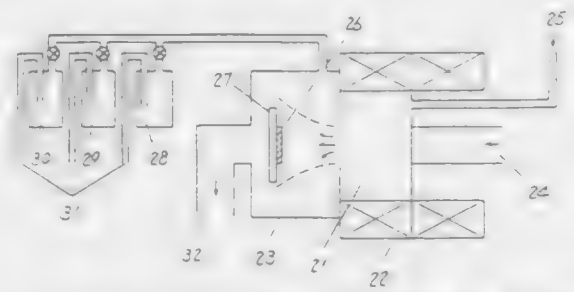
lets, capsules, confectionery or food with a water-based ingestible ink, comprising

mixing pigments, and a polymer into water to form a water-based ink dispersion having a closed cup flash point equal to or above 100° F., and

printing the ink dispersion onto said forms to form a trademark, logo, or the like using an offset gravure printing machine.

5,006,363

PLASMA ASSITED MO-CVD OF PEROOSKITE DALECTRIC FILMS



Eiji Fujii, Osaka; Hideo Torii, Higashiosaka, and Masaki Aoki, Minoo, all of Japan, assignors to Matsushita Electric Industries Co., Ltd., Osaka, Japan

Filed Dec. 6, 1989, Ser. No. 446,767

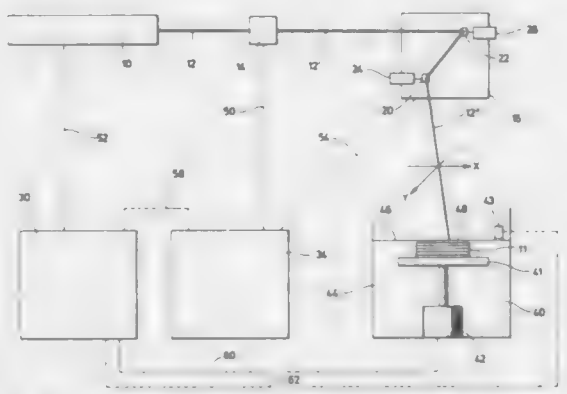
Claims priority, application Japan, Dec. 8, 1988, 63-311071; Mar. 30, 1989, 1-80339

Int. Cl.[5] B05D *3/06, 3/14*

U.S. Cl. 427—39 **18 Claims**

1. A method of manufacturing a dielectric film, in which vapor of an organometallic compound composed of a β-diketone metal complex containing barium, vapor of an organometallic compound composed of either a β-diketone metal complex containing titanium or a metal alkoxide containing titanium, and oxygen are decomposed and reacted in plasma which is generated by means of high-frequency discharge of electron cyclotron resonance under a reduced pressure of 10 through 10^{-4} Torr, thereby forming a perovskite-type film of barium titanate of the formula $BaTiO_3$ on a substrate heated to 400° C. or lower.

5,006,364



SOLID IMAGING METHOD UTILIZING COMPOSITIONS COMPRISING THERMALLY COALESCIBLE MATERIALS

Roxy N. Fan, East Brunswick, N.J., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Aug. 24, 1989, Ser. No. 398,194

Int. Cl.[5] B05D *3/06*

U.S. Cl. 427—44 **18 Claims**

1. A method for accurately fabricating an integral three dimensional object from a multiplicity of contiguous layers of a thermally coalescible photoformable liquid composition comprising the steps of:

(a) forming a layer of a thermally coalescible photoformable liquid on a substrate;

(b) imagewise exposing areas of at least a portion of the layer to actinic radiation;

(c) introducing a new layer of liquid onto the layer previously exposed imagewise to actinic radiation according to step (b);

(d) imagewise exposing areas of at least a portion of the new liquid layer to actinic radiation, with the requirement that the photoformable composition comprises a thermally coalescible polymeric cohesive material, a photohardenable monomer, and a photoinitiator, wherein after the exposure to the acthnic radiation, the photoformed areas of the composition remain thermally coalescible;

(e) successively repeating steps (c) and (d) until all layers of the three dimensional object have been photoformed and connected through joining surfaces; and

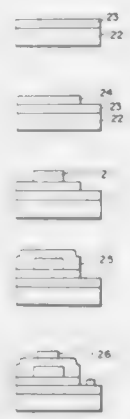
(f) in sequence

(i) removing the unexposed portion of the photoformable composition from the exposed portion of the three dimensional object, and

(ii) thermally coalescing the three dimensional object in order to promote cohesion both within the contiguous layers and at the joining surfaces between the contiguous layers, thus producing a single coalesced three dimensional object.

5,006,365

METHOD OF MANUFACTURING A THIN FILM EL DEVICE BY MULTISOURCE DEPOSITION METHOD



Takashi Nire, Hiratsuka, and Takehito Watanabe, Isehara, both of Japan, assignors to Kabushiki Kaisha Komatsu Seisakusho, Tokyo, Japan

Division of Ser. No. 947,782, Dec. 30, 1986, Pat. No. 4,794,302. This application Oct. 28, 1988, Ser. No. 269,930

Claims priority, application Japan, Jan. 8, 1986, 61-1883; Jan. 24, 1986, 61-13472

Int., Cl.[5] B05D *5/12;* **H01J** *1/62, 63/04*

U.S. Cl. 427—66 **4 Claims**

1. A method of manufacturing a thin film EL device on a substrate comprising the steps of:

forming a transparent electrode on said substrate;

forming a first insulating layer on said transparent electrode;

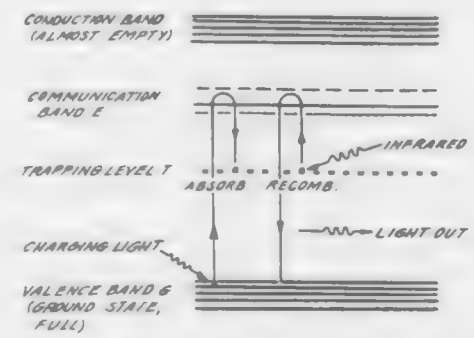
forming a luminescent layer having column polycrystals by a multi-source deposition method comprising steps of providing first elements constituting a host material of said luminescent layer evaporated from respectively separated evaporating sources, and a second element constituting an activator of said luminescent layer, and deposition said first and second elements in such a manner that said first elements are combined with each other and said second element is doped into said combined first elements on said first insulating layer;

forming a second insulating layer on said luminescent layer; and

forming a back electrode on said second insulating layer.

5,006,366

PHOTOLUMINESCENT MATERIAL FOR OUTPUTTING ORANGE LIGHT WITH REDUCED PHOSPHORESCENCE AFTER CHARGING AND A PROCESS FOR MAKING SAME



Joseph Lindmayer, Potomac, Md., assignor to Quantex Corporation, Rockville, Md.

Continuation-in-part of Ser. No. 34,332, Apr. 3, 1987, Pat. No. 4,839,092, which is a continuation of Ser. No. 870,809, Jun. 6, 1986, Pat. No. 4,830,875, which is a continuation-in-part of Ser. No. 786,095, Oct. 10, 1985, Pat. No. 4,705,952, which is a continuation-in-part of Ser. No. 313,171, Feb. 21, 1989. This application Jun. 8, 1989, Ser. No. 363,060

The portion of the term of this patent subsequent to Jun. 13, 2002, has been disclaimed.

Int. Cl.[5] B05D *5/06;* **C09K** *11/08*

U.S. Cl. 427—71 **16 Claims**

9. A process for preparing a photoluminescent material which emits orange light when subjected to infrared radiation, comprising the steps of:

(a) mixing,

a base material of substantially strontium sulfide,

a fusible salt, there being up to 10 parts fusible salt for every 100 parts of base material,

a first dopant of samarium or a samarium compound,

a second dopant selected from the group of europium oxide, europium fluoride, europium chloride, and europium sulfide, and

strontium carbonate provided in a quantity of from 1 to 10 parts per 100 parts of base material by weight, said strontium carbonate being provided to reduce phosphorescence;

(b) thoroughly drying the mixture at a temperature of about 150° C. for about one hour by placing it in a graphite crucible within a furnace flushed with a dry inert atmosphere;

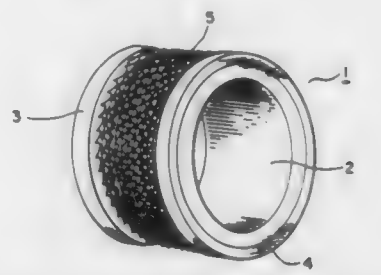
(c) heating the resultant mixture in the graphite crucible within the furnace flushed with a dry inert atmosphere;

(d) grinding the resultant crystalline form into a powder; and

(e) reheating the resultant powder to a temperature below said heating of step (c) but sufficiently high to repair crystal edges of the powder to yield of electron trapping optical material without fusing the powder into a mass.

5,006,367

ELECTROLESS COATING METHOD



Thomas S. Lancsek, Morrisville, Pa., assignor to Surface Technology, Inc., Trenton, N.J.

Division of Ser. No. 249,227, Sep. 26, 1988, which is a continuation of Ser. No. 41,998, Apr. 24, 1987, abandoned. This application Feb. 13, 1990, Ser. No. 479,515

The portion of the term of this patent subsequent to Aug. 22, 2006, has been disclaimed.

Int. Cl.[5] H01F *10/02*

U.S. Cl. 427—129 **5 Claims**

1. A process for the metallization of a ferromagnetic member, said metallization comprising contacting said member with an electroless plating composition with finely divided particulate matter dispersed therein, and further comprising the step of demagnetization of said member prior to the metallization of said member, thereby resulting in a metallized member substantially free of microspheres.

5,006,368

PLASTIC PARTICLE COATED WITH PROCESSING AID AND METHOD OF COATING

Paul T. Louks, Saginaw, Mich., assignor to The Dow Chemical Company, Midland, Mich.

Continuation-in-part of Ser. No. 259,937, Oct. 19, 1988. This application Apr. 18, 1990, Ser. No. 511,479

Int. Cl.[5] B05D *3/02, 7/00*

U.S. Cl. 427—189 **17 Claims**

1. A process for preparing a particle having improved extrudability, which process comprises the steps of:

(A) providing a plastic in particle form, and a processing aid having a softening point between ambient temperatures and below the processing temperature of the plastic in particle form:

(B) charging the particle into a high intensity blender, said blender having an impeller:

(C) rotating the blender impeller at a speed and for a period of time effective to raise the temperature of the particle surface to between about 5° C. and 10° C. below the softening point of the processing aid;

(D) charging the processing aid into the blender such that the processing aid contacts the heated particle surface: and (E) rotating the blender impeller at a speed and for a period of time effective to raise the temperature of the particle surface to a temperature above the softening point of the processing aid, and to coat a portion of the particle surface by fusing the processing aid thereto.

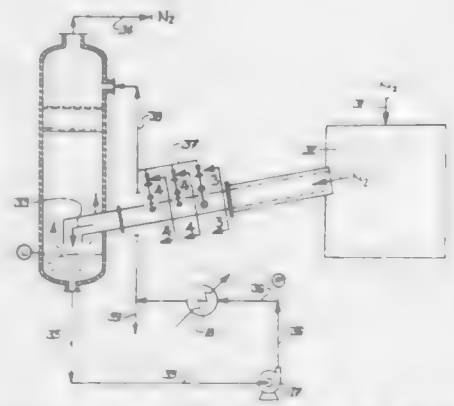
5,006,369

REMOVING CONTAMINANTS FROM A GAS STREAM

Robert P. Shirtum, Freeport, Tex., assignor to The Dow Chemical Company, Midland, Mich.

Filed Aug. 5, 1988, Ser. No. 229,080

Int. Cl.[5] B05D *7/00*



U.S. Cl. 427—212 **13 Claims**

1. A process for producing granulated material comprising:

(a) feeding a seed material to a rotary granulation drum;

(b) spraying molten material onto the seed material falling in a curtain-like pattern inside the drum to form granules;

(c) substantially simultaneously with steps (a) and (b) feeding an inert gaseous stream into the drum to cool the granules; and

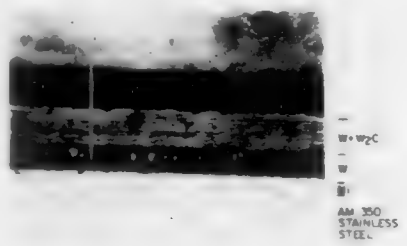
(d) contacting the gaseous stream with an aqueous alkali metal hydroxide solution to reduce the amount of organic dust and mist contaminants present in the gaseous stream.

5,006,370

COMPOSITIONS FOR PRODUCTION OF ELECTRONIC COATINGS

Allan A. Eisenbraun, and Wesley C. Blocker, both of Baton Rouge, La., assignors to Ethyl Corporation, Richmond, Va.

Division of Ser. No. 255,610, Oct. 11, 1988, Pat. No. 4,950,734.
This application Jun. 22, 1990, Ser. No. 542,015
Int. Cl.[5] B05D *5/12*; H01L *21/469*
U.S. Cl. 427—240 7 Claims



1. A method of forming a coating upon a planar substrate which comprises (a) applying to the central region of the planar surface a partially fluorinated polyamic acid composition, (b) rotating the substrate at a speed sufficient through centrifugal effect to cause the composition to flow outwardly toward the perimeter of the surface and form a substantially uniform liquid coating thereon, and (c) drying and curing the coating by heating the same to suitable elevated temperatures; said composition comprising a solution of (i) a 2,2-bis(3,4-dicarboxyphenyl)-hexafluoropropane dianhydride/2,2-bis[4-(aminophenoxy)phenyl]hexafluoropropane polyamic acid polymer having an inherent viscosity in the range of about 0.2 to about 1.5 dL/g (as measured in N-methylpyrrolidone at 25° C. at a concentration of 0.5 g/dL) in (ii) a solvent containing at least 40% by weight of one or more liquid aromatic hydrocarbons having a boiling point of at least about 110° C. and at least 5% by weight of one or more dipolar aprotic solvents having a boiling point of at least about 150° C., such that the solution (a) contains on a weight basis from about 5% to about 40% of such polyamic acid and (b) does not undergo precipitate formation during spin coating in an atmosphere of up to at least about 55% relative humidity; said method being further characterized in that it is conducted in an atmosphere having a relative humidity that does not result in such precipitate formation during the rotation in (b).

5,006,371

LOW TEMPERATURE CHEMICAL VAPOR DEPOSITION METHOD FOR FORMING TUNGSTEN AND TUNGSTEN CARBIDE

Diwakar Garg, Macungie; Ernest L. Wrecsics, Bethlehem; Leslie E. Schaffer, Macungie; Carl F. Mueller, Easton; Paul N. Dyer, Allentown, and Keith R. Fabregas, Easton, all of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Division of Ser. No. 389,206, Aug. 2, 1989, Pat. No. 4,927,713, which is a continuation-in-part of Ser. No. 153,738, Feb. 8, 1988, Pat. No. 4,855,188. This application Mar. 8, 1990, Ser. No. 490,184
Int. Cl.[5] C23C *16/08*, *16/32*
U.S. Cl. 427—249 13 Claims

1. A low temperature chemical vapor deposition method for increasing the erosion and abrasion wear life, providing protection against impact of large particles and improving high cycle fatigue strength of substrates, said method comprising chemical vapor depositing a first layer of substantially pure columnar tungsten onto a substrate selected from the group consisting of ferrous metals and alloys, non-ferrous metals and alloys, graphite, carbides and ceramics at a temperature in the range of about 300° to about 550° C.; chemical vapor depositing onto said first layer a second layer of a mixture of tungsten and tungsten carbide wherein said tungsten carbide is selected from the group consisting of W_2C, W_3C, and mixtures of W_2C and W_3C at a temperature in the range of about 300+ to about 550° C., said second layer being fine grained, non-columnar, having a substantially layered microstructure and a thickness sufficient to confer a desired degree of erosive and abrasive wear resistance and protection against impact of large particles on said substrate; repeating the chemical vapor deposition steps to result in a composite coating system comprising at least two sets of alternating first and second layers such that the overall thickness of said composite coating system is at least about 20 μm.

5,006,372

ADHESIVE ORGANOPOLYSILOXANE COMPOSITION WHICH CAN BE CURED TO FORM AN ELASTOMER

Dietrich Wolfer, Oberndorf, Austria, and Wilhelm Marsch, Haiming, Fed. Rep. of Germany, assignors to Wacker-Chemie GmbH, Munich, Fed. Rep. of Germany

Filed Jul. 3, 1989, Ser. No. 375,073
Claims priority, application Fed. Rep. of Germany, Jul. 28, 1988, 3825676
Int. Cl.[5] B05D *3/02*
U.S. Cl. 427—387 13 Claims

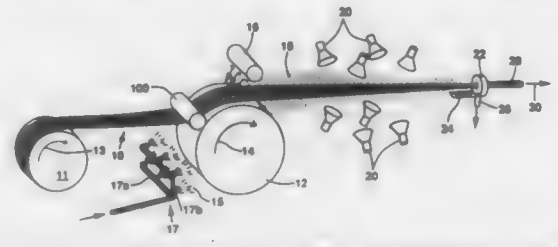
1. An adhesive composition for organopolysiloxane elastomers, which comprises:

(a) An organopolysiloxane containing Si-bonded vinyl groups;

(b) an organopolysiloxane containing Si-bonded hydrogen;

(c) a platinum catalyst which promotes the addition of Si-bonded hydrogen to vinyl groups;

(d) an inhibitor which delays the addition reaction of Si-bonded hydrogen with vinyl groups at room temperature, with the proviso that an inhibitor containing a hydroperoxy radical is excluded, and



(e) an organic peroxide, with the proviso that an acyl peroxide is excluded.

5,006,373

METHOD AND APPARATUS FOR COATING FIBERS WITH THERMOPLASTICS

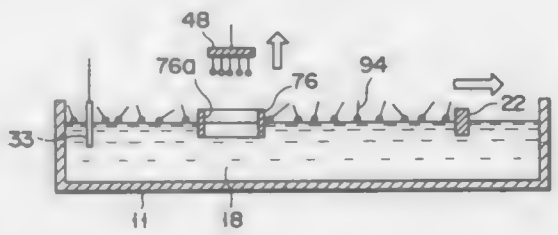
Donald E. Woodmansee, and Bang M. Kim, both of Schenectady, N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Jun. 19, 1989, Ser. No. 367,913
Int. Cl.[5] B05D *1/02*
U.S. Cl. 427—422 12 Claims

1. A process for coating glass fibers with a thermoplastic, said process comprising:

heating a thermoplastic powder until molten;

spraying said heated thermoplastic powder to the fibers to coat the fibers; and



cooling the coated fibers to below the glass transition temperature of the thermoplastic.

METHOD OF FORMING THIN ORGANIC FILMS

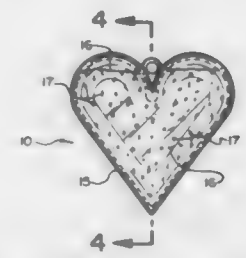
Shigeru Wakayama, Yokohama, and Akira Miura, Toride, both of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Continuation-in-part of Ser. No. 126,929, Nov. 30, 1987, Pat. No. 4,848,270. This application May 19, 1989, Ser. No. 354,354
Claims priority, application Japan, Dec. 2, 1986, 61-287124; Dec. 26, 1986, 61-308274
Int. Cl.[5] B05D *1/20*
U.S. Cl. 427—430.1 17 Claims

1. A method of forming thin organic films, comprising the steps of:

preparing at least one organic molecule developing region holding a liquid;

developing a monomolecular film of organic molecules on the surface of the liquid in the developing region; and



dipping into or drawing up a work from the liquid through the developed monomolecular film, in a predetermined direction with respect to the molecular film, so that the monomolecular film is adhered to a surface of the work in only one of steps of dipping and drawing up the work, said step including a process of dividing that region of the developed monomolecular film through which the work is passed from the remaining region before dipping or drawing up the work, so that the adhesion of the monomolecular film to the work surface is regulated by moving the work through the divided region.

JOINT BOOT MOLDED OF A THERMOPLASTIC POLYESTER ELASTOMER

Yoshihiro Arima, Ibaraki; Soiti Otuka, Sakai, and Nishida Kazushige, Suita, all of Japan, assignors to Toyo Tire and Rubber Co., Ltd., Osaka, Japan

Continuation of Ser. No. 710,907, Mar. 12, 1985, abandoned.
This application Feb. 1, 1990, Ser. No. 474,214
Claims priority, application Japan, Mar. 15, 1984, 59-50328
Int. Cl.[5] B29D *22/00*
U.S. Cl. 428—34.1 1 Claim

1. An injection molded joint boot, molded of a thermoplastic polyester elastomer shaped into a conical bellows having a major-diameter portion connected to a minor-diameter portion by a tapered wave-like portion in turn having a plurality of crests and troughs, this boot characterized in that:

along the direction from the major-diameter side to the minor-diameter side, the ratio of the outside diameter of the crest portion on the minor-diameter side of a given wave to the outside diameter of the immediately preceding trough portion of the same wave is confined within the range of 1.08 to about 1.40 when mold-forming said boot as a molding product;

a tensile yield strength of the thermoplatsic polyester elastomer is about 70 kg/cm^2;

a tensile yield strength of the thermoplastic polyester elastomer is above about 30%;

a tensile elastacity modulus of the thermoplastic polyester elastomer is in the range of about 430 kg/cm^2 to about 1700 kg/cm^2; and

a wall thickness of said boot is from 0.7 to 1.8 mm.

5,006,377

IMPERMEABLE MEMBRANE RESISTANT TO CHEMICAL AGENTS AND IMPERMEABLE ENCLOSURE PRODUCED USING SUCH MEMBRANES

Michel Delcorps, Brussels, and Hans Tanghe, Oudenaarde, both of Belgium, assignors to Plavina & Cie (Société en Nom Collectif), Belgium

Filed Apr. 11, 1989, Ser. No. 336,323
Claims priority, application France, Apr. 14, 1988, 88 05064
Int. Cl.[5] B65D *1/00*; B32B *27/08*
U.S. Cl. 428—34.7 10 Claims

1. An impermeable membrane which is resistant to chemical agents, the impermeable membrane comprising, in succession:
at least one flexible support layer comprised of a polymer containing chlorine;
at least one adhesive layer consisting essentially of a copolyamide having a degree of crystallinity which is less than 20% and which is produced by reacting (a) one of piperazine or caprolactam, (b) laurolactam, (c) hexamethylenediamine adipate, and (d) at least one other polyamide-forming substance selected from the group consisting of 1,1-aminoundecanoic acid and salts of hexamethylenediamine with at least one acid selected from the group consisting of adipic, azelaic, sebacic, dodecanedicarboxylic or undecanedicarboxylic acids; and
at least one film comprised of a polymer containing fluorine.

7. The impermeable membrane according to claim 1, comprising, in succession:
one said at least one flexible support layer comprised of a polymer containing chlorine and having a free face, edges, and a zone proximate the edges thereof;
one said at least one adhesive layer; and
one said at least one film comprised of a polymer containing fluorine,
wherein the free face of said one said at least one flexible support layer is coated with said layer of adhesive at least on the zone proximate the edges thereof.

8. An impermeable enclosure produced by a process comprising:
overlapping at least partially opposing faces of the impermeable membrane according to claim 7 to provide an overlapped zone, the opposing faces being overlapped including the free face of the one flexible support layer comprised of a polymer containing chlorine which is coated with a layer of adhesive at least on the zone proximate the edges thereof; and
heat sealing the opposing faces of the overlapped zone to one another.

5,006,378

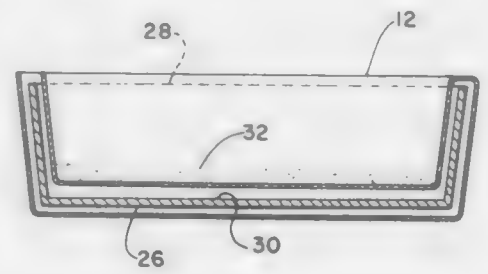
POLYETHYLENE COMPOSITE FILM

Yasushi Itaba, Tokyo; Yutaka Yoshifuji, Saitama; Takayoshi Kondo, Tokyo; Minoru Izawa, Saitama; Ichiro Sakamoto, Kanagawa, and Tadao Yoshino, Saitama, all of Japan, assignors to Toa Neryo Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 8, 1988, Ser. No. 268,498
Claims priority, application Japan, Nov. 13, 1987, 62-285433; Nov. 20, 1987, 62-291952
Int. Cl.[5] B32B *7/02, 7/08*; B65B *53/00*
U.S. Cl. 428—34.9 18 Claims

1. A polyethylene composite film comprising an oriented polyethylene film such that the degree of crosslinking inwardly decreases across the thickness of the film and at least one lamination layer, provided on one side of the oriented polyethylene film, consisting of a lamination material having a heat shrinkage of less than 5% at 120° C., said oriented polyethylene film being crosslinked to form a structure of a crosslinked layer/uncrosslinked layer/crosslinked layer across the thickness of the film, wherein the crosslinked layer has a gel fraction of 20 to 70% and the uncrosslinked layer has a gel fraction of 0%; the ratio of the uncrosslinked layer: crosslinked layer being 1:0.1 to 10, said oriented polyethylene film further having a water vapor transmission rate (Y) of lower than a numerical value obtained from the following formula:

$$Y = 17X^{-1}$$



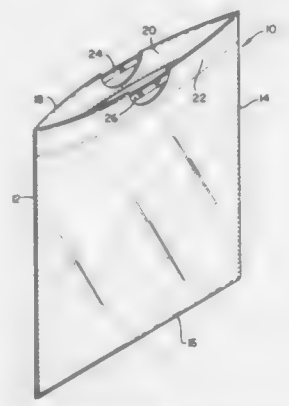
in which Y represents the water vapor transmission rate ($g/m^2/24$ hours) and X represents the thickness (μm) of the oriented film, and a haze of at most 5%, wherein said lamination material is selected from the group consisting of papers, aluminum foils, cellophanes and heat resisting resins selected from the group consisting of polyesters, polyamides, polyimides, polyparabanic acids and ethylene-vinyl alcohol copolymers.

5,006,379

LITTER BOX LINER

Francis P. Paciullo, Middlesex, N.J., assignor to Colgate-Palmolive Company, Piscataway, N.J.

Filed Aug. 14, 1989, Ser. No. 393,188
Int. Cl.[5] B65D *25/16, 30/04*
U.S. Cl. 428—35.2 6 Claims



1. In combination with a litter box, a litter box liner comprising a bag having a lower portion and an upper portion, a sheet of claw resistant spun bonded non-woven nylon bonded to said upper portion, said bag having an open mouth for receiving in said bag said litter box.

5,006,380

DRAW TAPE BAG WITH MULTILAYER DRAW TAPE

Robert W. Fraser, Evergreen Park, Ill., assignor to First Brands Corporation, Danbury, Conn.

Continuation-in-part of Ser. No. 212,453, Jun. 28, 1988, abandoned. This application Aug. 16, 1989, Ser. No. 395,139
Int. Cl.[5] B65D *33/28*
U.S. Cl. 428—35.2 39 Claims

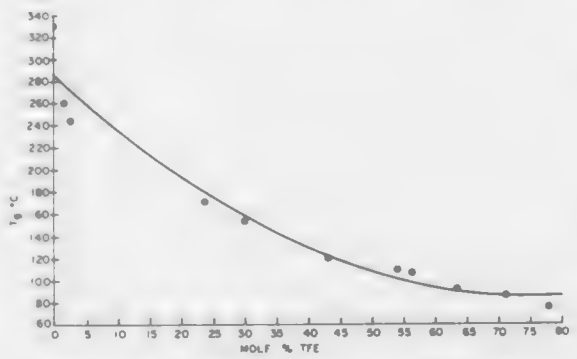
1. A draw tape bag comprising:
(a) two panels formed from a thermoplastic material, the sides of said panels being joined on three sides and open on the fourth side to form a top in said bag;
(b) a hem portion of each panel being folded over adjacent said top to form a tubular hem;
(c) draw tapes in each tubular hem secured at said sides of said panels by heat sealing, said draw tapes being characterized as having a multilayer structure having at least two layers wherein a first layer is characterized as having heat sealability to said thermoplastic panel and itself greater than to the second layer of the draw tape, said first layer also being characterized as having strength less than said second layer of the draw tape;
(d) a seal between each hem portion and the adjacent panel across the width of said bag below said draw tape; and
(e) an opening in said hem portion for accessing said draw tape.

5,006,381

UNGELLED POLYAMINE-POLYEPOXIDE RESINS

Richard M. Nugent, Jr.; Ken W. Niederst, both of Allison Park, and Jerome A. Seiner, Pittsburgh, all of Pa., assignors to PPG Industries, Inc., Pittsburgh, Pa.

Continuation of Ser. No. 152,177, Feb. 4, 1988, abandoned. This application Jun. 30, 1989, Ser. No. 375,659
Int. Cl.[5] B65D *25/00*; B32B *27/08*
U.S. Cl. 428—35.4 14 Claims



1. A container comprising at least one layer of a gas permeable polymer selected from the group consisting of polyesters, polycarbonates or polyolefins, and at least one layer of an ungelled thermoplastic resin comprising a reaction product of a polyamine essentially devoid of oxyalkylene moieties and containing up to about two primary amino nitrogen groups per molecule and a polyepoxide, the polyamine and the polyepoxide present in the reaction mixture at a ratio of from about 1.4:1 to about 0.83:1 based upon moles of polyamine to moles of polyepoxide; the ungelled resin is further characterized as containing at least about seven percent by weight amine nitrogen.

5,006,382

AMORPHOUS COPOLYMERS OF PERFLUORO-2,2-DIMETHYL-1,3-DIOXOLE

Edward N. Squire, Spring Hill, Fla., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Division of Ser. No. 458,012, Dec. 28, 1989, which is a division of Ser. No. 148,579, Jan. 26, 1988, which is a division of Ser. No. 904,095, Sep. 4, 1986, Pat. No. 4,754,009, which is a continuation-in-part of Ser. No. 723,649, Apr. 16, 1985, abandoned, which is a division of Ser. No. 591,486, Mar. 20, 1984, Pat. No. 4,530,569, which is a continuation-in-part of Ser. No. 294,789, Aug. 20, 1981, abandoned. This application Apr. 9, 1990, Ser. No. 509,411
Int. Cl.[5] B29D *22/00, 23/00*
U.S. Cl. 428—35.7 2 Claims

1. An article for handling or processing of fluids selected from the group consisting of pipes, tubings, fittings, pump housings, pump impellers, valve bodies, valve stems, valve seals, diaphragms, tanks, trays, pipettes, and laboratory vessels, wherein at least one of the surfaces coming in contact with fluids is made of an amorphous dipolymer of 65–99 mole % of perfluoro-2,2-dimethyl-1,3-dioxide with a complementary amount of tetrafluoroethylene, the glass transition temperature of the dipolymer beings at least 140° C.

5,006,383

POLYMERIC BLEND AND LAMINATED STRUCTURES PREPARED THEREFROM

Felix Achille, Reynoldsburg; Brad Stevens, Frazeyburg, and George Clingerman, Newark, all of Ohio, assignors to The Dow Chemical Company, Midland, Mich.

Filed Jun. 28, 1989, Ser. No. 372,583
Int. Cl.[5] B65D *25/38, 43/06, 25/00*; B32B *15/08*
U.S. Cl. 428—35.9 26 Claims

1. A polymeric film structure comprising a first layer comprising a blend of from 40 to 60 weight percent polypropylene resin and 60 to 40 weight percent very low density polyethylene having a density from 0.88 to 0.92, and a rubber and polar comonomer modified α-olefin polymer layer comprising an adhesive resin, said first layer and adhesive layer being adhered to one another by means of surface contact between major surfaces of the respective layers with an adhesive strength of from 1 to 24 lbs/lineal in.

5,006,384

FILMS USING BLENDS OF POLYPROPYLENE AND POLYISOBUTYLENE

Roger P. Genske, Neenah, Wis., assignor to American National Can, Chicago, Ill.

Division of Ser. No. 144,652, Jan. 11, 1988, Pat. No. 4,892,911, which is a continuation of Ser. No. 803,029, Nov. 29, 1985, abandoned. This application Jun. 13, 1988, Ser. No. 207,369
Int. Cl.[5] B29D *22/00*
U.S. Cl. 428—36.7 19 Claims

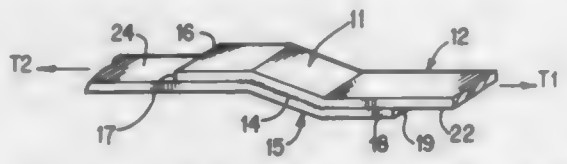
1. A multiple layer sheet material, comprising:
(a) a first polypropylene-based layer having two opposing surfaces, said first layer consisting essentially of greater than 60%, to 75% by weight polypropylene copolymer and conversely 25% to less than 40% by weight polyisobutylene, said polypropylene copolymer comprising 70 to 98 mole percent propylene moieties and conversely 30 to 2 mole percent ethylene moieties;
(b) a second layer of polyamide having two opposing surfaces, said second layer being adhered, on one of its said surfaces to one of said surfaces of said first layer;
(c) a third barrier layer having two opposing surfaces adhered on one of its said surfaces to the other said surface of said second layer of polyamide, the composition of said third layer comprising an ethylene vinyl alcohol copolymer; and
(d) a fourth layer of a polyamide, having two opposing surfaces, adhered on one of its said surfaces to the other said surface of said third layer.

5,006,385

STRAPPING JOINT AND METHOD FOR FORMING SAME

Nelson Cheung, Hoffman Estates; Robert J. Nix, Algonquin, and Janusz Figiel, Mt. Prospect, all of Ill., assignors to Signode Corporation, Glenview, Ill.

Continuation-in-part of Ser. No. 223,482, Jul. 22, 1988, abandoned. This application May 5, 1989, Ser. No. 347,569
Int. Cl.[5] B29C *65/06, 65/54*; B65B *13/32*
U.S. Cl. 428—57 26 Claims



11. A method of forming a joint between overlapping portions of a thermoplastic strap surrounding an article, the steps comprising:
surrounding the article with the thermoplastic strap with an

inner surface of the strap facing the article and an outer surface of the strap facing away from the article;

tensioning at least a non-overlapping portion of the strap around the article with a length of the inner surface and a length of the outer surface overlapping thereby defining said overlapping portions;

joining said overlapping portions by providing a weldment between said overlapping portions along at least a portion of the lengths of the overlapping inner and outer surfaces; and

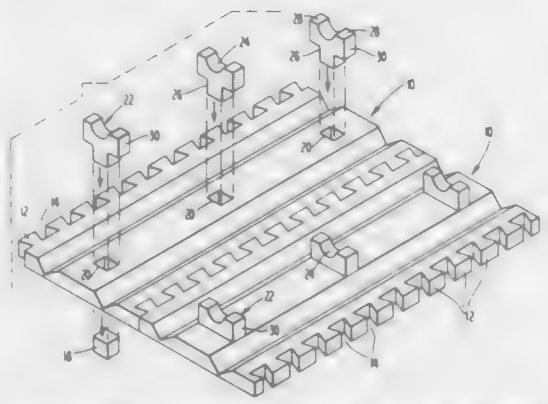
providing means for increasing resistance of said overlapping portions to peel separate above a peel separation resistance provided solely by said weldment when said overlapping portions at said weldment are in tension including deforming the strap such that said weldment lies

in a plane angularly oriented relative to planes of said inner and outer surfaces of said strap extending beyond opposite ends of said weldment.

25. A joint between overlapping portions of a thermoplastic strap surrounding an article comprising:

a weldment between at least a portion of an outer surface of an inner one of said overlapping portions disposed against said article and an inner surface of an outer one of said overlapping portions disposed outermost from said article, said overlapping portions at least along said weldment lying in a plane angularly disposed relative to a first plane of an interface between said inner and outer surfaces on one end of said weldment and a second plane of an interface between said inner and outer surfaces on an opposite end of said weldment.

5,006,386



RESILIENT POLE-GUARD

Frank A. Menichini, Bryn Mawr, Pa., assignor to Custom Pack, Inc., Malvern, Pa.

Filed Jun. 12, 1989, Ser. No. 365,174

Int. Cl.[5] B32B *3/00; E04C 3/34;* **F16L** *9/00*

U.S. Cl. 428—58 **3 Claims**

1. A pole guard which is adaptable for poles having either a rectangular or a circular cross-section, said pole guard comprising at least two interlocking sections, wherein each of said sections comprises:

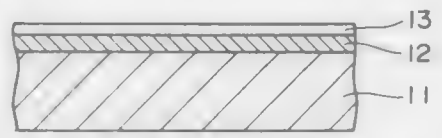
(a) a substantially rectangular sheet of resilient sheathing material, having along each of its two longer sides a means for interlocking the section with another identical section, and having on one rectangular face a pair of hinge channels which are inset from and parallel to said longer sides, said hinge channels being spaced apart from each other a distance which is twice as great as the distance which each channel is inset from its closest longer side;

(b) said hinge channels being adapted to allow the section to be folded at each channel such that the portion between the channel and its closest longer side extends at substantially a right angle to the portion between the two channels, whereby the section can be folded at the channels and locked to one or more identical sections to form a resilient pole guard having a rectangular hollow interior; and

(c) a plurality of plugs evenly spaced along the longitudinal centerline of the section, adapted to be removed and replaced by inserts which form semi-circular channels in the hollow interior to receive poles having a circular cross section.

5,006,387

INFORMATION RECORDING MEDIUM



Toshiyuki Takao, and Toshiaki Igata, both of Fujinomiya, Japan, assignors to Fujii Photo Film Co., Ltd., Kanagawa, Japan

Filed Oct. 4, 1989, Ser. No. 417,056

Claims priority, application Japan, Oct. 5, 1988, 63-251355

Int. Cl.[5] B32B *3/00*

U.S. Cl. 428—64 **7 Claims**

1. An information recording medium comprising a substrate and a recording layer provided thereon which is capable of writing and/or reading information with a laser beam, in which the recording layer comprises a layer composed of metals containing Se and Te and a layer provided thereon which is composed of TeO_x, wherein x is a value in the range of $1 \leqq x \leqq 2$, and which has a thickness in the range of 50 to 500 Å.

5,006,388

MAGNETIC DISC

Ryuichi Kuzuo; Atsushi Kawamoto; Junya Tada; Kenji Ohmori, and Hiroko Sekiya, all of Ichikawa, Japan, assignors to Sumitomo Metal Mining Company Limited, Tokyo, Japan

Filed Aug. 3, 1988, Ser. No. 227,800

Claims priority, application Japan, Aug. 6, 1987, 62-195338; Aug. 6, 1987, 62-195339; Aug. 19, 1987, 62-204177; Jul. 20, 1988, 63-179141

Int. Cl.[5] G11B *23/00*

U.S. Cl. 428—64 **4 Claims**

1. A magnetic disc having (a) a lower layer and (b) a magnetic recording medium film as an upper layer, as formed on a non-magnetic substrate, wherein;

(a) the lower layer consists essentially of Cr and 0.6 to 10% by weight of at least one element selected from the group consisting of Cu, Nb, Ti, V, Zr, Mo, Zn, W and Ta; and

(b) the upper layer comprises Co.

5,006,389

ERASABLE XEROGRAPHIC VELLUM

Joseph C. D'Annunzio, Barrington, Ill., assignor to Teledyne Industries, Inc., Los Angeles, Calif.

Filed Jul. 30, 1990, Ser. No. 559,363

Int. Cl.[5] B32B *9/00*

U.S. Cl. 428—76 **10 Claims**

1. An oil and organic solvent free erasable vellum comprising, a fibrous cellulosic substrate transparentized in the absence of oil and organic solvent by incorporation of a polybutene

emulsion, a dried barrier coating of an aqueous emulsion of styrene-butadiene, and a dried top coat of vinyl acetate copolymer emulsion.

5,006,390

RIGID POLYETHYLENE REINFORCED COMPOSITES HAVING IMPROVED SHORT BEAM SHEAR STRENGTH

Sheldon Kavesh, Whippany, N.J.; Kwang Kim, Seoul, Rep. of Korea; Young D. Kwon, and Dusan C. Prevorsek, both of Morristown, N.J., assignors to Allied-Signal, Morris Township, Morris County, N.J.

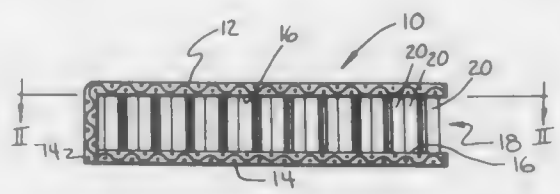
Filed Jun. 19, 1989, Ser. No. 367,642

Int. Cl.[5] B32B *5/08,12, 27/02*

U.S. Cl. 428—105 **34 Claims**

1. A composition comprised of one or more layers, at least one of which comprises a network of filaments formed from polyethylene having a molecular weight of at least about 150,000 dispersed in a matrix said filaments having a tensile modulus of a least about 500 grams/denier, an energy-to-break of at least about 20 j/d, a tenacity equal to or greater than about 20 grams/denier, a weight average filament diameter equal to or less than about 37 micrometers, and an average filament aspect ratio equal to or less than about 2.9:1.

5,006,391



HONEYCOMB STRUCTURE AND METHOD OF MAKING SAME

James R. Biersach, 511 Kimberlee Drive N., Baxter, Minn. 56401

Filed Oct. 23, 1989, Ser. No. 424,947

Int. Cl.[5] B32B *3/12*

U.S. Cl. 428—116 **12 Claims**

1. An improved honeycomb core comprising

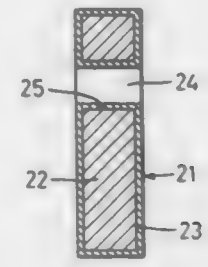
(a) a plurality of corrugated ribbons of preformed rigid corrugated resin panels, said ribbons having mechanically abraided exterior apexes; and

(b) adhesive permanently bonding facing pairs of said abraided apexes together.

5,006,392

CERAMIC MOLDED BODY

Yukio Sakamoto, and Hanato Yoshio, both of Nagaokakyo, Japan, assignors to Murata Manufacturing Co., Ltd., Kyoto, Japan



Continuation-in-part of Ser. No. 303,744, Jan. 25, 1989, abandoned. This application Sep. 14, 1989, Ser. No. 407,706

Int. Cl.[5] B32B *3/02*

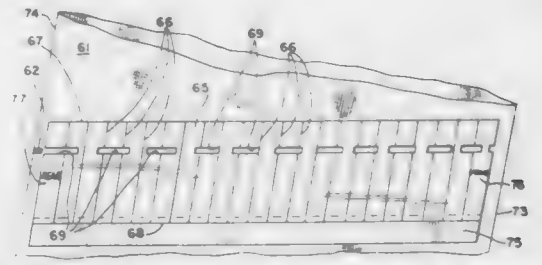
U.S. Cl. 428—137 **3 Claims**

1. A ceramic molded body, comprising:

a ceramic sintered body, said ceramic sintered body having a plurality of outer surfaces and a plurality of through-holes extending through said ceramic sintered body; and

a resin coating covering the inner circumferential surface of said through-holes of said ceramic sintered body.

5,006,393



MATERIAL AND METHOD FOR HEMMING A GARMENT

Mark R. Isoe, Northbrook, Ill., assignor to QST Industries, Inc., Chicago, Ill.

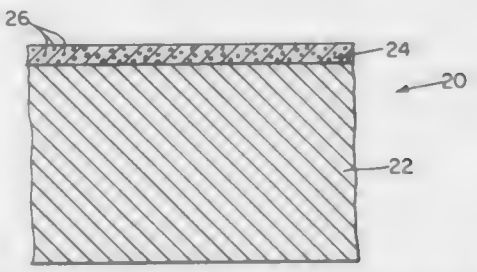
Filed May 2, 1988, Ser. No. 189,296

Int. Cl.[5] B32B *3/02*

U.S. Cl. 428—137 **54 Claims**

1. A material for aiding the construction and alteration of clothing comprising a web of fabric having (1) adhered on at least a portion of one side thereof and exposed to contact a temporary adhesive and (2) adhered to said one side of said web and exposed to contact a substantially permanent adhesive.

5,006,394



MULTILAYER POLYMERIC FILM

James C. Baird, Cincinnati, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio

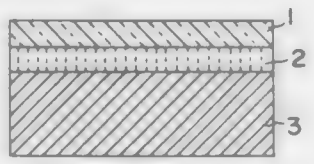
Filed Jun. 23, 1988, Ser. No. 211,518

Int. Cl.[5] B32B *3/10*

U.S. Cl. 428—138 **19 Claims**

1. A substantially void-free polymeric multilayer film which exhibits an opaque appearance without being stretched, said polymeric multilayer film comprising:

(a) at least one relatively thick base layer comprised substantially of a polymer, said base layer having a thickness comprising at least about 80 percent of the total thickness of said multilayer film; and



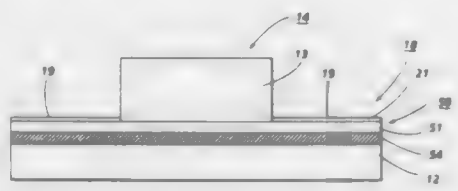
(b) at least one relatively thin filler containing polymeric layer substantially continuously joined to said base layer, said filler containing polymeric layer having about 15 to about 60 weight percent fillers substantially uniformly dispersed therein, said filler containing layer having a thickness not exceeding about 20 percent of the total thickness of said multilayer film, whereby said fillers in said relatively thin filler containing polymeric layer scatter the light rays incident upon said multilayer film to produce said opaque appearance in said multilayer polymeric film without significantly detracting from the material properties of said base layer.

5,006,395

IRON CARBIDE THIN FILM MAGNETIC RECORDING MEDIUM

Tohru Hori, Ikoma; Tomi Sato, Neyagawa; Hideaki Komoda, and Kenichi Fujii, both of Hirakata, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Osaka, Japan

Filed May 11, 1988, Ser. No. 193,278
Int. Cl.[5] G11B *23/00*
U.S. Cl. 428—141 **5 Claims**



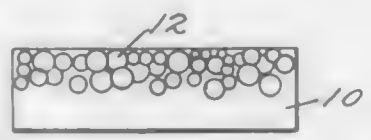
3. A magnetic recording medium comprising:
a substrate;
a base layer formed on said substrate, said base layer being composed mainly of at least one of an element in the IVA group through the VIIA group of the Periodic Table, an element of the platinum group, nickel (Ni) and copper (Cu); and
a ferromagnetic thin film deposited on said base layer, said ferromagnetic thin film being composed mainly of an iron carbide and having a preferentially oriented easy magnetization axis and wherein said ferromagnetic thin film comprises at least one member selected from the group consisting of Fe_3C_2, Fe_5C_2 and Fe_2C and wherein said ferromagnetic thin film has a columnar structure with a minimum of 2000 Å of columnar diameter or a lumpy structure.

5,006,396

MOISTURE PROOF THERMALLY ACTUATED BINDING TAPE FOR BOOKS

David P. VanBortel, Walworth; John A. McNamee, Webster, and Luke C. Lin, Rochester, all of N.Y., assignors to Xerox Corporation, Stamford, Conn.

Filed Jul. 25, 1988, Ser. No. 223,852
Int. Cl.[5] B42D *1/00;* **B32B** *3/00*
U.S. Cl. 428—189 **15 Claims**



1. A binding tape for application to the spine of a book to bind the pages of said book together, comprising the combination of:
a backing strip composed of a hygroscopic material;
at least one stripe of hot melt adhesive on said backing strip, said at least one stripe of hot melt adhesive being narrower than said backing strip; and
moisture transfer preventing means to prevent transfer of moisture in the form of steam from said backing strip to said stripe of hot melt adhesive on application of heat to said tape,
said moisture preventing means comprising a layer of non-permeable temperature resistant barrier material between said backing strip and said stripe of hot melt adhesive.

5,006,397

PRINTED CIRCUIT BOARD

David Durand, Providence, R.I., assignor to Key-Tech, Inc., Cranston, R.I.

Division of Ser. No. 365,712, Jun. 14, 1989, Pat. No. 4,960,614, which is a continuation-in-part of Ser. No. 11,975, Feb. 6, 1987, Pat. No. 4,863,757. This application Jan. 30, 1990, Ser. No. 472,310
Int. Cl.[5] B32B *9/00*
U.S. Cl. 428—209 **6 Claims**

1. A printed circuit board comprising a substrate and at least one conductive line printed on said substrate, said line comprising a U.V. cured ink comprising from about 33 to 38 weight percent of a thermosetting resin binder and 67 to 62 weight percent of spherical or spheroidal conductive particles having a particle size distribution ranging from 1 to 30 microns, said line having been cured by exposure to U.V. radiation emanating from an electrodeless source having an output in the region between 360 nm and 420 nm in a pulsed manner comprising 5 to 8 one-half second exposure periods, each exposure period followed by a non-exposure period of about 2 to 3 seconds.

5,006,398

FOOD WRAP FILM

Roth Banerji, Aartselaar, Belgium, assignor to Exxon Chemical Patents Inc., Linden, N.J.

Filed Mar. 17, 1989, Ser. No. 324,833
Claims priority, application United Kingdom, Mar. 18, 1988, 8806504; Aug. 5, 1988, 8818692
Int. Cl.[5] C08L *33/04;* **B32B** *27/32*
U.S. Cl. 428—220 **14 Claims**

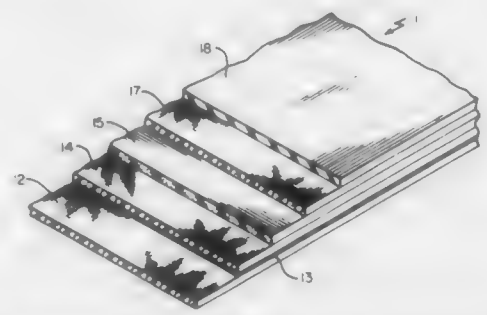
1. A transparent food wrap cling film comprising a layer of a composition containing:
from 20 to 50 wt % of LLDPE;
from 1 to 10 wt % of an elastomeric polymer;
from 40 to 79 wt % of a copolymer of ethylene and a vinyl acetate comprising 5 to 15 percent of VA;
the weight percentages being calculated in the total polymer weight;
and said film containing a minor amount of additives to provide, in combination with polymer components, an antifogging and antiblocking effect such that the film is transparent and has a controlled amount of residual cling.

5,006,399

PLANAR TEXTILE STRUCTURE

Ari Salminen, Suorama, and Aimo Rautanen, Tampere, both of Finland, assignors to Tamfelt OY AB, Tampere, Finland

Continuation of Ser. No. 134,571, Dec. 14, 1987, abandoned. This application Apr. 28, 1989, Ser. No. 346,354
Claims priority, application Finland, Dec. 15, 1986, 865094
Int. Cl.[5] D03D *3/00*
U.S. Cl. 428—224 **16 Claims**



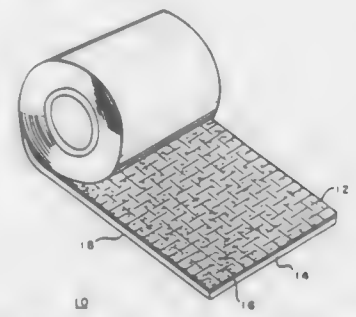
1. A planar textile material comprising a load-bearing basic structure and staple fibres adhered to and dispersed within a binder dispersion foam applied to the surface of and/or within the basic structure without flocking, said staple fibers including at least one of
a. very short fibres of approximately 0.5 mm length,
b. flock fibres applied to the surface of or within said basic structure without mechanical fastening, and
c. fibres fastenable to surface portions of said basic structure without needling or silver formation,
said staple fibres being arbitrarily bound to each other and to said basic structure so that said staple fibres form at least one continuous-three dimensional porous structure.

5,006,400

PRINTING BLANKET CONSTRUCTION HAVING NONTEXTURED SURFACE

Melvin D. Pinkston, Waynesville; Andrew J. Gaworowski, Asheville, and Stephen B. Edwards, Hazelwood, all of N.C., assignors to Day International, Dayton, Ohio

Filed Dec. 9, 1988, Ser. No. 282,387
Int. Cl.[5] B32B *7/00;* **D03D** *15/00*
U.S. Cl. 428—229 **1 Claim**



1. A laminated printing blanket construction comprising at least one base ply and a surface layer of polymeric material laminated to one surface thereof, and wherein said base ply is a woven fabric and the opposite surface of said base ply has been ground to remove weft threads where they cross over warp threads so that said opposite surface of said base ply is substantially nontextured such that, when mounted on a blanket cylinder, the pressures to which said blanket is subjected are spread substantially over the entire surface of said blanket in contact with said cylinder.

5,006,401

COMPOSITE COMPRESSION AND SUPPORT DRESSING

Margaret A. Frank, Lawrenceville, N.J., assignor to E. R. Squibb & Sons, Inc., Princeton, N.J.

Filed Nov. 23, 1988, Ser. No. 275,298
Int. Cl.[5] D03D *3/00*
U.S. Cl. 428—231 **12 Claims**

1. An extensible compression and support dressing comprising:
an extensible bandage of suitable size and shape to facilitate wrapping said bandage spirally around an affected body part; and,
a thin, fluid interactive extensible hydrocolloid adhesive composition laminated to one side of said bandage.

5,006,402

WHOLLY AROMATIC POLYESTER FIBER-REINFORCED HIGH PERFORMANCE THERMOPLASTIC AND PROCESS FOR PREPARING SAME

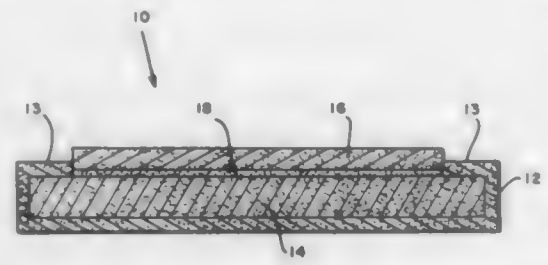
Avraam Isayev, Akron, Ohio, assignor to The University of Akron, Akron, Ohio

Filed Apr. 28, 1989, Ser. No. 344,703
Int. Cl.[5] B32B *27/02, 27/04, 27/12, 27/18*
U.S. Cl. 428—294 **12 Claims**

1. A self-reinforced polymer composite comprising:
(a) from about 60 to about 5 percent by weight, based on a total polymer weight, of an at least partially crystalline high performance thermoplastic polymer, and
(b) from about 40 to about 95 percent by weight, based on total polymer weight, of a melt processable wholly aromatic polyester;
said high performance thermoplastic polymer having a melting point of at least about 200° C.;
said polyester being essentially in the form of continuous, predominantly unidirectionally oriented fibers which are formed in situ in a matrix of said thermoplastic polymer.

5,006,403

WHOLLY AROMATIC POLYESTER FIBER-REINFORCED POLY(PHENYLENE OXIDE) AND PROCESS FOR PREPARING SAME



Avraam Isayev, Akron, Ohio, assignor to The University of Akron, Akron, Ohio

Continuation-in-part of Ser. No. 344,703, Apr. 28, 1989. This application Jun. 5, 1990, Ser. No. 533,381
Int. Cl.[5] B32B *27/02, 27/04, 27/12, 27/18*
U.S. Cl. 428—294 **8 Claims**

1. A self-reinforced polymer composite comprising:
(a) from about 97.5% to about 5% by weight, based on a total polymer weight, of thermoplastic poly(phenylene oxide), and
(b) from about 2.5% to about 95% by weight, based on total polymer weight, of a melt processable wholly aromatic polyester;
said polyester being essentially in the form of continuous,

predominantly unidirectionally oriented fibers which are formed in situ in a matrix of said thermoplastic poly(phenylene oxide) polymer.

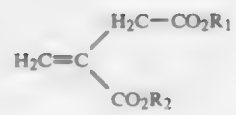
5,006,404
REPLACEABLE INK PAD
Betty A. Terry, Weston, Conn., assignor to Pitney Bowes, Inc., Stamford, Conn.
Filed Oct. 1, 1990, Ser. No. 591,531
Int. Cl.[5] B32B 3/26
U.S. Cl. 428—316.6 7 Claims

1. A replaceable ink pad comprising:
a first layer of foam having a pore size of 10–20μ,
a second layer of foam, said second layer having one major surface addressing a major surface of said first layer and being made of a foam having a pore size 140–180 microns,
and a fusible web adhesive intermediate and in contact with said first layer major surface and said second layer major surface.

5,006,405
COATED MICROWAVE HEATING SHEET FOR PACKAGING
James D. Watkins, Prior Lake; David W. Andreas, and David H. Cox, both of Minneapolis, all of Minn., assignors to Golden Valley Microwave Foods, Inc., Eden Prairie, Minn.
Filed Jan. 27, 1988, Ser. No. 212,235
Int. Cl.[5] B32B 5/16; B65D 30/02, 85/00
U.S. Cl. 428—323 22 Claims

1. A coated microwave heating sheet for wrapping, packaging or shipping food products that are to be hated thereby in a microwave oven comprising,
a base sheet formed from a microwave transparent fibrous cellulose sheet that is thermally, dielectrically and dimensionally stable when exposed to microwave energy in a microwave oven,
preconditioning means for the base sheet selected from (a) a supercalendared surface to render the base sheet glossy or (b) a filler coating to fill voids between said fibers in the cellulosic base sheet form rendering one surface of the base sheet sufficiently smooth and free of discontinuities to allow microwave heating of the coated sheet material without arcing or sparking,
a microwave interactive heating layer composed of a microwave coupling material applied from a fluid or vapor state as a coating upon said one surface of the base sheet over the preconditioning means,
said microwave interactive heating layer comprising a microwave interactive composition that becomes hot when exposed to microwave energy to thereby transmit the heat by conduction from the interactive layer to the food product.

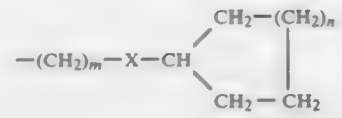
5,006,406
MAGNETIC RECORDING MEDIA
Jenoe Kovacs, Heasheim; Milena Melzer, Ludwigshafen; Werner Balz, Limburgerhof; Werner Lenz, Bad Duerkheim; Werner Loch, Erpolzheim, and Helmut Jakusch, Frankenthal, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Fed. Rep. of Germany
Filed Sep. 12, 1988, Ser. No. 243,094
Int. Cl.[5] G11B 23/00
U.S. Cl. 428—323 1 Claim



1. A magnetic recording medium comprising a non-magnetic base and, applied thereon, at least one magnetizable layer containing a magnetic material finely dispersed in an organic binder, a dispersant and a lubricant, wherein the magnetizable layer comprises
(1) at least one finely divided magnetic material having a BET specific surface area of not less than 25 m^2/g,
(2) at least one finely divided nonmagnetic metal oxide having a Mohs hardness greater than 5 and a BET specific surface area of not less than 2 m^2/g, in an amount of from 1 to 20% by weight, based on the amount of magnetic material,
(3) at least one lubricant from the group consisting of silicone resins, polyethylene waxes, paraffins and metal salts of stearic, oleic and myristic acid, in an amount of from 1 to 10% by weight, based on the amount of magnetic material, and
(4) a comb block copolymer based on a polyethyleneimine chain having a molecular weight of not less than 2,000 and having side chains selected from the groups consisting of polyamide side chains, polyester side chains and mixtures of polyamide and polyester side chains, said side chains having a molecular weight of not less than 500, as a dispersant, in an amount of from 1 to 20% by weight, based on the amount of magnetic material.

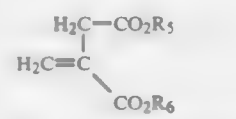
5,006,407
INK JET TRANSPARENCIES AND PAPERS
Shadi L. Malhotra, Mississauga, Canada, assignor to Xerox Corporation, Stamford, Conn.
Filed Feb. 8, 1989, Ser. No. 307,451
The portion of the term of this patent subsequent to Sep. 12, 2006, has been disclaimed.
Int. Cl.[5] B41M 5/00
U.S. Cl. 428—336 16 Claims

1. A transparency comprised of a supporting substrate and a hydrophilic coating comprising a plasticizer and a member selected from the group consisting of cellulose ester, alkyl cellulose, cyanoalkyl cellulose, carboxyalkyl cellulose, carboxyalkyl hydroxyalkyl cellulose, hydroxyalkyl cellulose, hydroxyalkyl methyl cellulose, acrylamide, a poly(alkylene oxide), and mixtures thereof.



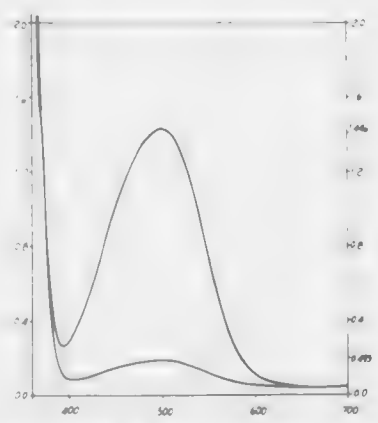
5,006,408
STAIN-RESISTANT POLYMERS DERIVED FROM ITACONIC ACID USEFUL AS COATINGS FOR FIBERS
George D. Green, Park Ridge, Ill.; Stephen A. Munk, West Lafayette, Ind., and Darryl K. Barnes, Bellwood, Ill., assignors to Allied-Signal Inc., Morris Township, Morris County, N.J.
Division of Ser. No. 292,862, Jan. 3, 1989, Pat. No. 4,925,906.
This application Apr. 19, 1990, Ser. No. 512,227
Int. Cl.[5] B32B 27/34
U.S. Cl. 428—395 2 Claims

1. A stain resistant fiber whose coating comprises copolymers of (1) at least one monomer having the formula (A)



(A)

where R_1 is H, C_5–C_{22} alkyl,



cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl;
m=o–12
n=o, 1, 2, 3;
X=CH_2, o when m>1,
R_2 is chosen from the list above and may or may not be the same as R_1, R_1 and R_2 cannot both be H (2) at least one monomer having the formula $(D)CF_3CF_2(CF_2)XCH_2YOC(O)C(R_3)=CH_2$
wherein
X is an integer from 2–18
Y is an inter from 1–15, R_3 is H or CH_3, (3) and may contain a monomer having the formula

(E)

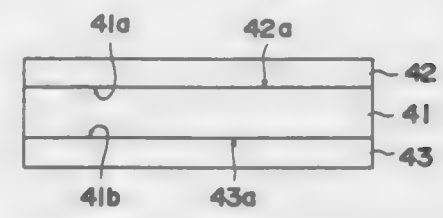
where R_5 and R_6 may be H, $CF_3CF_2(CF_2)X(CH_2)Y$, but R_5 and R_6 cannot be H wherein
X is an inter from 2–18
Y is an integer from 1–15.

5,006,409
OPTICAL ELEMENT USED TO REDUCE THE IMAGE PERCEPTION TIME
Paolo Baiocchi, and Giuseppe Iori, both of Via Natta, 10/A, 43100 Parma, Italy
Filed Feb. 1, 1990, Ser. No. 473,339
Claims priority, application Italy, Feb. 9, 1989, 19365 A/89
Int. Cl.[5] B32B 9/04
U.S. Cl. 428—411.1 6 Claims

1. An optical element for use in eyeglasses, visors, masks and screens to reduce an image perception time and improve a contour definition thereof, wherein said optical element comprises a transparent plastic supporting member including 4-nitro-2-methyl-4-diethanolamino-azobenzene from 50 ppm to 350 ppm.

5,006,410
FILM COMPRISING AT LEAST ONE UNIMOLECULAR LAYER
Vogel Viola, Göttingen, and Dietmar Möbius, Waake, both of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany
Filed Jul. 20, 1988, Ser. No. 221,898
Claims priority, application Fed. Rep. of Germany, Jul. 23, 1987, 3724364
Int. Cl.[5] B32B 9/04, 27/00
U.S. Cl. 428—411.1 7 Claims

1. A film comprising at least one unimolecular layer which has been transferred onto a base material and comprises at least one amphiphilic compound having a hydrophilic and a hydrophobic region, wherein the amphiphilic compound has the formula (II)



$$X—(CH_2)_n—(CF_2)_m—CF_3 \quad (II)$$

in which X is a hydrophilic group, n is an integer from 6 to 24, m is an integer from 0 to 18 and the sum of n+M is an integer from 6 to 24 and the amphiphilic compound formula (II) is present in a mixture with an amphiphilic compound of the formula (III)

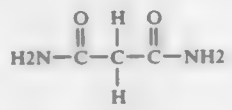
$$X^1—(CH_2)_p—CH_3 \quad (III)$$

in which X^1 is a hydrophilic group and p is an integer from 12 to 14.

5,006,411
POLYIMIDE FILM HAVING FLUOROCARBON RESIN LAYER
Kazunori Motonari; Kazuo Kumamoto, both of Ube; Shigeto Turuda, Matsuura; Yutaka Ito, Matsuura, and Taiichiro Mitsutake, Matsuura, all of Japan, assignors to Ube Industries, Ltd., Ube and Chukoh Chemical Industries, Ltd., Tokyo, both of, Japan
Division of Ser. No. 2,874, Jan. 13, 1987, Pat. No. 4,801,506.
This application Jul. 11, 1988, Ser. No. 217,460
Claims priority, application Japan, Jan. 13, 1986, 61-5513; Jan. 13, 1986, 61-5514
The portion of the term of this patent subsequent to Jan. 31, 2006, has been disclaimed.
Int. Cl.[5] B32B 27/08; B05D 3/06
U.S. Cl. 428—421 10 Claims

1. A polyimide film having a fluorocarbon resin layer coated on a surface of an aromatic polyimide, wherein both surfaces of said film have been treated with corona discharge or plasma discharge for increasing adhesiveness and activity to the fluorocarbon resin layer and the fluorocarbon resin layer is coated on at least one of said treated surfaces.

5,006,412



SUBSTRATE OF METAL-COMPLEXED BETA-DIKETONE/THERMOSETTING POLYMER REACTION PRODUCT

Susan A. Hodgson, Ossining; Jae M. Park, Binghamton, and Richard R. Thomas, Fishkill, all of N.Y., assignors to International Business Machines Corporation, Armonk, N.Y.

Division of Ser. No. 183,101, Apr. 19, 1988, Pat. No. 4,868,253.
This application Jul. 27, 1989, Ser. No. 385,505
Int. Cl.[5] B32B *15/04, 15/08*
U.S. Cl. 428—458 8 Claims

1. A substrate suitable for plating of an active metal thereon from an electroless plating bath that comprises:

a reaction product of a malonamide having the structural formula

and a thermosetting polymer having groups reactive with said β-diketone and a metal complexed with said reaction product.

5,006,413

WATERBASED METHYLOL (METH)ACRYLAMIDE ACRYLIC POLYMER AND POLYURETHANE CONTAINING COATING COMPOSITION

Herman C. Den Hartog, Rochester, Mich.; Eileen E. Konsza, Swedesboro, N.J.; James F. Matthews, and Ervin R. Werner, Jr., both of Levittown, Pa., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del.

Division of Ser. No. 402,293, Sep. 5, 1989, Pat. No. 4,954,559.
This application Apr. 17, 1990, Ser. No. 511,179
Int. Cl.[5] B32B *15/08;* C08F *20/58;* C08L *75/06, 75/08*
U.S. Cl. 428—463 8 Claims

1. A substrate coated with a dried and cured layer of a waterbased coating composition comprising about 10–30% by weight of film forming binder dispersed in an aqueous carrier; wherein the binder consist essentially of abut

a. 60–90% by weight, based on the weight of the binder, of an methylol (meth)acrylamide acrylic polymer consisting essentially of polymerized monomers of alkyl methacrylate, alkyl acylkate or mixtures thereof, 1–10% by weight, based on the weight of the acrylic polymer, of methylol methacrylamide, methylol acrylamide or mixtures thereof, 0.5–10% by weight, based on the weight of the acrylic polymer of an ethylenically unsaturated carboxylic acid, 0.5–10% by weight, based on the weight of the acrylic polymer, of an ethylenically unsaturated hydroxyl containing monomer, said the acrylic polymer having a glass transition temperature of −40 to +40 C. and a weight average molecular weight of 500,000 to 3,000,000; and the carboxyl groups of the carboxylic acid are reacted with ammonia to provide a pH of about 7.0–10;

b. 10–40% by weight, based on the weight of the binder, of a polyurethane selected from the group consisting of polyester urethane, polyether urethane or polyacryloure-thane.

2. The substrate of claim 1 in which the substrate is a metal.

5,006,414

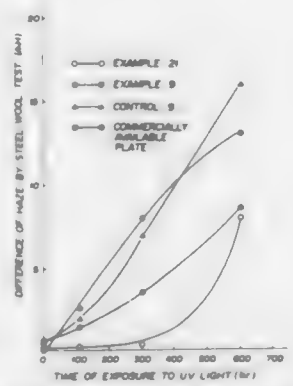
PROCESS FOR MODIFYING THE SURFACE OF METAL OR METAL ALLOY SUBSTRATES AND SURFACE MODIFIED PRODUCTS PRODUCED THEREBY

Robert B. Pond, Sr., Westminster, Md., assignor to Marvaland, Incorporated, Westminster, Md.

Division of Ser. No. 243,608, Sep. 13, 1988, Pat. No. 4,881,681.
This application Dec. 15, 1988, Ser. No. 284,940
Int. Cl.[5] B05D *5/02*
U.S. Cl. 428—469 3 Claims

1. A process for producing a substrate having a tightly bonded grinding surface layer, said process comprising:

disposing a powdered mixture of fly ash and reactive metal or reactive metal alloy powder on at least one outer surface of said substrate; and



heating and maintaining the substrate and the powdered mixture at a temperature lower than a melting point or solidus temperature of the reactive metal or reactive metal alloy, until a tightly bonded grinding surface layer is formed on said substrate.

5,006,415

MOLDED ARTICLE OF METHACRYLIC RESIN

Shigeo Matsumaru, Kawaguchi; Akihiro Mochizuki, Oomiya, and Syuzi Isoi, Saitama, all of Japan, assignors to Kyowa Gas Chemical Industry Co., Ltd., Tokyo, Japan

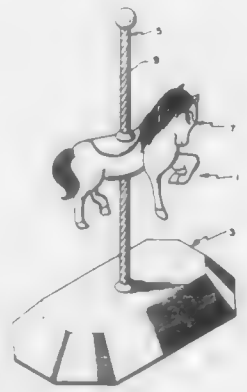
Division of Ser. No. 4,667, Jan. 20, 1987, Pat. No. 4,830,803.
This application Nov. 17, 1988, Ser. No. 272,522
Int. Cl.[5] B32B *27/30*
U.S. Cl. 428—522 7 Claims

1. A molded article of methacrylic resin formed of a cross-linked polymer having at least part of the surface thereof coated with an abrasion resistant layer, produced by placing (A) an abrasion resistant layer-forming material selected from the group consisting of (a) cross-linked polymerizing compounds having a molecular weight of not less than 150 and containing at least two (meth) acryloyloxy groups per molecule, (b) mixtures of at least 30% by weight of said cross-linked polymerizing compounds with other copolymerizable monomers, and (c) partial polymerization products thereof, and possessed of a composition such that the number, x, of said (meth)acryloyloxy groups of said cross-linked polymerizing compound and the ratio of polymerization, y (%), of said scratchproofing layer-forming material satisfy the following formula I or II:

$$y \leqq 70 \ (2 \leqq x \leqq 3.5) \quad (I)$$

$$y \leqq -7.5x^2 + 52x - 18 \ (3.5 < x \leqq 6) \quad (II)$$

in contact with (B) a basic molding material made of an. acrylic partially cross-linked gel obtained by partially polymerizing a mixture of (i) a resin material selected from the group consisting of alkyl methacrylate monomers, mixtures of alkyl methacrylates as main components with α, β -ethylenically unsaturated monomers, and syrups containing polymers thereof with



(ii) 10 to 25 parts by weight, based on 100 parts by weight of said resin material, of a cross-linking agent and stopping said partial polymerization when the gel content of the basic molding material reaches a level in the range of 15 to 95% thereby allowing said gelled polymer consequently produced to possess the property of retaining the polymerization in a stopped state, and simultaneously polymerizing said two materials held in mutual contact under a condition capable of imparting a desired shape to the combined materials.

STATIONARY DISPLAY UNIT

Jack Hou, 3 Fl, No. 8, Lane 7, Wu Hsing Street, Taipei, Taiwan

Filed Jan. 17, 1990, Ser. No. 466,642
Int. Cl.[5] B44C *3/06*
U.S. Cl. 428—542.2 7 Claims

1. A display unit comprising:

(a) a base assembly including a top portion and a bottom portion, the top portion being provided with a first aperture through a wall thereof;

(b) a spacer member disposable between opposed surfaces of the top and bottom portions for maintaining the surfaces at a predetermined distance from each other, the spacer member including a longitudinal passageway therethrough;

(c) the first aperture and longitudinal passageway being disposable in coaxial alignment;

(d) a support rod including a first end insertable through the first aperture and longitudinal passageway;

(e) cooperating means for attaching the first end of the rod to the bottom portion and positioning the rod to extend outwardly of the base assembly; and

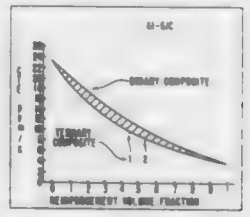
(f) means for mounting an ornament on the rod.

5,006,417

TERNARY METAL MATRIX COMPOSITE

Michael B. Jackson, Greer, and Peter A. Roth, Greenville, both of S.C., assignors to Advanced Composite Materials Corporation, Greer, S.C.

Filed Jun. 9, 1988, Ser. No. 204,233
Int. Cl.[5] C22C *21/02, 32/00*
U.S. Cl. 428—614 14 Claims



1. A ternary metal matrix composite comprising:

a consolidated powder blend of a metallic binding matrix material comprising 40–60 vol. % of the composite; and

a reinforcement material consisting essentially of 10–50 vol. % of an insoluble ceramic and 10–40 vol. % of a semi-metal.

11. A ternary metal matrix composite comprising:

a metallic binding matrix material comprising 40–60 vol. % of the composite, and

a reinforcement material consisting essentially of 10–50 vol. % of an insoluble ceramic and 10–40 vol. % of a semi-metal of the same element as said insoluble ceramic.

5,006,418

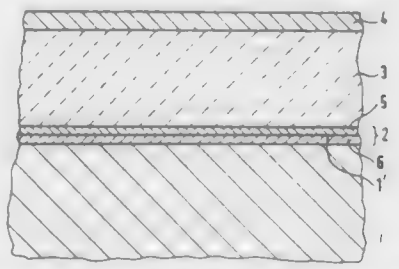
DECORATIVE MIRROR

Albert Servais, Gerpinnes, and Bernard Somerhausen, Nivelles, both of Belgium, assignors to Glaverbel, Brussels, Belgium

Division of Ser. No. 210,011, Jun. 22, 1988, Pat. No. 4,894,278.
This application Aug. 28, 1989, Ser. No. 398,891
Claims priority, application United Kingdom, Jun. 23, 1987, 8714667
Int. Cl.[5] B32B *15/04*
U.S. Cl. 428—621 9 Claims

1. A decorative mirror, comprising:

a transparent sheet; and



at least one reflective silver coating including a first silver layer and a second silver layer, the first silver layer being comprised of silver, being deposited on one face of the transparent sheet, and having a plurality of randomly distributed areas therein containing reaction products including at least one silver-containing substance formed by reacting at least a part of the silver of said first silver layer with a substance which reacts with silver to provide reaction products including the at least one silver-containing substance so that visible light reflectance of the decorative mirror is modified or interrupted; and the first silver layer being overcoated by the second silver layer.

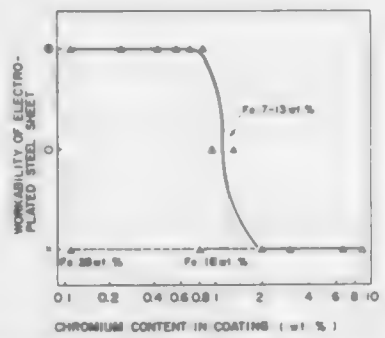
STRUCTURAL COMPONENT MADE OF A TITANIUM ALLOY AND COVERED BY A PROTECTIVE COATING AND METHOD FOR PRODUCING THE COATING

Richard Grunke, Munich; Lothar Peichl, Dachau; Franz Puchinger, Niederscheyern, and Gerhard Wydra, Oberschleisheim, all of Fed. Rep. of Germany, assignors to MTU Motoren-und Turbinen-Union Muenchen GmbH, Munich, Fed. Rep. of Germany

Filed Feb. 26, 1990, Ser. No. 485,044
Claims priority, application Fed. Rep. of Germany, Feb. 28, 1989, 3906187; Aug. 8, 1989, 3926151
Int. Cl.[5] B32B *15/04*
U.S. Cl. 428—623 8 Claims

1. A structural component of a titanium or titanium alloy comprising a protective surface coating, said coating compris-



ing a first diffusion inhibiting and oxidation resisting base layer (2) made of a material selected from the group consisting of metals and salts, an intermediate layer (3) for inhibiting a titanium fire, said intermediate layer comprising a high temperature lacquer including aluminum and a binder, and a cover layer (4) forming a passivating seal on said intermediate layer.

5,006,420

ELECTROPLATED STEEL SHEET HAVING A PLURALITY OF COATINGS, EXCELLENT IN WORKABILITY, CORROSION RESISTANCE AND WATER-RESISTANT PAINT ADHESIVITY

Tsutomu Watanabe; Masaru Sagiyama; Masaki Kawabe, and Masaya Morita, all of Tokyo, Japan, assignors to NKK Corporation, Tokyo, Japan

Filed May 31, 1990, Ser. No. 531,503
Claims priority, application Japan, Jun. 21, 1989, 1-159002
Int. Cl.[5] C25D *15/02, 5/10*
U.S. Cl. 428—629 **2 Claims**

1. An electroplated steel sheet having a plurality of coatings, excellent in workability, corrosion resistance and water-resistant paint adhesivity, which comprises:

an iron-chromium-zinc alloy coating as a lower layer, formed on at least one surface of a steel sheet, consisting essentially of:

iron: from 3 to under 15 wt. %,

chromium: from 0.1 to 1 wt. %, and

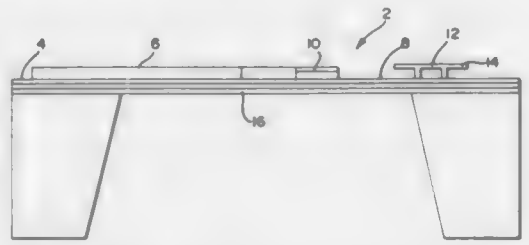
the balance being zinc and incidental impurities, said iron-chromium-zinc alloy coating as the lower layer having a coating weight of at least 0.1 g/m^2 per one surface of said steel sheet;

another iron-chromium-zinc alloy coating as an intermediate layer, formed on said iron-chromium-zinc alloy coating as the lower layer, consisting essentially of:

iron: from 10 to 40 wt. %,

chromium: from over 1 to under 30 wt. %, and

the balance being zinc and incidental impurities, said another iron-chromium-zinc alloy coating as the intermediate layer having a coating weight of at least 20 g/m^2 per one surface of said steel sheet, and the sum of said coating weight of said iron-chromium-zinc alloy coating as the lower layer and said coating weight of said another iron-chromium-zinc alloy coating as the intermediate layer being up to 60 g/m^2 per one surface of said steel sheet; and



a chromating coating as an upper layer, formed on said another iron-chromium-zinc alloy coating as the intermediate layer, said chromating coating as the upper layer comprising a metallic chromium film formed on said another iron-chromium-zinc alloy coating as the intermediate layer, and a hydrated chromium oxide film formed on said metallic chromium film, and each of said metallic chromium film and said hydrated chromium oxide film having a coating weight of at least 5 mg/m^2 per one surface of said steel sheet.

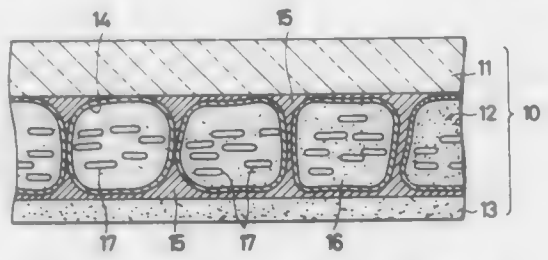
5,006,421

METALIZATION SYSTEMS FOR HEATER/SENSOR ELEMENTS

Kuang L. Yang; David Gutierrez, both of Newport News, and George E. Gimpelson, Williamsburg, all of Va., assignors to Siemens-Bendix Automotive Electronics, L.P., Troy, Mich.

Filed Sep. 30, 1988, Ser. No. 257,074
Int. Cl.[5] H01C *7/02*
U.S. Cl. 428—641 **9 Claims**

1. A metallized heater/sensor element for flow sensors comprising a platinum silicide layer having a substantially linear temperature coefficient of resistance of at least 2000 parts per million, a substrate supporting said platinum silicide layer and conductor leads attached thereto.



2. A metallized heater/sensor element for flow sensors having a substantially linear temperature coefficient of resistance of at least 2000 parts per million, the element comprising a first metal layer of a refractory metal, a second metal layer of a noble metal, a substrate supporting said first metal layer and conductor leads attached thereto.

VISUAL MAGNETIC RECORDING MEDIUM AND METHOD OF MAKING THE SAME

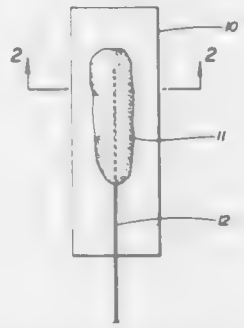
Masaaki Sakurai, Utsunomiya, and Mitsuru Yoda, Tokyo, both of Japan, assignors to The Nippon Signal Co., Ltd., Japan

Filed Aug. 5, 1988, Ser. No. 229,333
Claims priority, application Japan, Aug. 6, 1987, 62-196659; Aug. 26, 1987, 62-211629
Int. Cl.[5] G11B *23/00*
U.S. Cl. 428—694 **16 Claims**

1. A visual magnetic recording medium comprising:

(a) a transparent substrate;

(b) a magnetic field sensitive display web layer united with one surface of said transparent substrate and having a multiplicity of microcapsules held on said substrate by a transparent binder, each of said microcapsules containing a multitude of fine particles in suspension in a fluid, said fine particles being responsive to a magnetic field established across a magnetic recording layer overlying said display web layer to produce an image on said display web layer being which is visible though said transparent substrate; and



(c) said magnetic recording layer being united with said display web layer remote from said transparent substrate.

ATTACHMENT OF INSTRUMENTATION TO CERAMIC COMPONENTS

Barry S. Draskovich, Mesa, Ariz., assignor to Allied-Signal Inc., Phoenix, Ariz.

Filed Apr. 26, 1988, Ser. No. 186,275
Int. Cl.[5] B05D *3/02;* **C03B** *29/00;* **C04B** *35/56, 37/02*
U.S. Cl. 428—698 **8 Claims**

1. A method of bonding metallic instrumentation to a silicon-containing ceramic, structural component composed of either silicon carbide, silicon dioxide, silicon nitride, silicon carbide composites, or silicon carbide coated carbon composites used in a gas turbine engine for high temperature testing comprising the steps of:

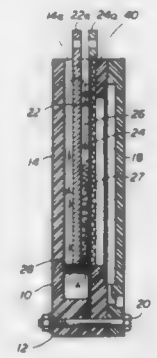
cleaning the instrumentation and the component in the area to be bonded,

mixing a fine ceramic powder having a composition similar to that of said component with about an equal height of sodium silicate solution,

applying a base coating of the mixture to the instrumentation and the component, and curing the base coating,

positioning the instrumentation onto the component,

covering the instrumentation with at least one layer of the mixture, and



curing the mixture with heat to transform the sodium silicate solution into glass to bond the instrumentation to the ceramic component.

METHOD AND APPARATUS FOR CONTROLLING THE TEMPERATURE OF A REFORMING REACTION CATALYST

Yasuhiro Takabayashi, Kawasaki, Japan, assignor to Fuji Electric Co., Ltd., Kawasaki, Japan

Filed Sep. 29, 1989, Ser. No. 414,518
Claims priority, application Japan, Oct. 7, 1988, 63-251983; Sep. 7, 1989, 1-230359
Int. Cl.[5] H01M *8/04*
U.S. Cl. 429—23 **22 Claims**

1. A reforming reaction catalyst temperature control method in which a reforming gas to be supplied to a fuel cell is produced by allowing said reforming gas to react against a reforming reaction catalyst, so that the fuel cell can provide output power to be supplied to a load, said method comprising the steps of:

detecting the temperature of said reforming reaction catalyst during said catalytic reaction process;

detecting any current flow from said fuel cell to said load;

setting a value for said catalyst temperature that may vary depending upon the load condition, as well as setting a range of temperatures determined from the set value for said catalyst temperature on the basis of a relationship between variations in the load condition and the corresponding variations in said catalyst temperature;

determining any deviation that occurs between the set value for said catalyst temperature and the detected catalyst temperature by calculating said deviation; and

controlling the temperature for said catalyst when said deviation has fallen within said range of temperatures.

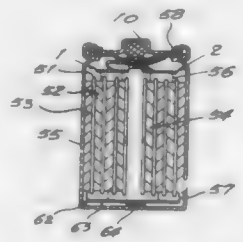
ALKALINE STORAGE BATTERY

Norio Suzuki; Seanosuke Oda; Hiromi Maruyama, and Kenichi Hoshino, all of Chigasaki, Japan, assignors to Matsushita Electric Industrial Co., Ltd., Japan

Filed Oct. 26, 1989, Ser. No. 426,640
Claims priority, application Japan, Aug. 23, 1989, 1-216349
Int. Cl.[5] H01M *6/10*
U.S. Cl. 429—94 **8 Claims**



1. An alkaline storage battery, comprising

a case serving as one of positive and negative terminals, the case having an opening;

an electrode assembly housed in the case, the electrode assembly comprising a positive electrode and a negative electrode which are wound as spiral coils with a separator interposed therebetween, the positive and negative electrodes having opposite terminal edges;

a sealing cover mounted in the opening with an insulating seal ring therebetween, the sealing cover serving as the other terminal; and

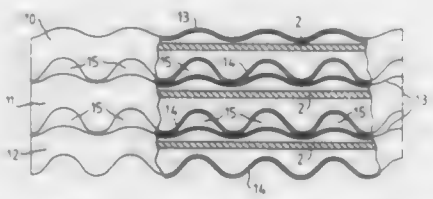
a pair of current collector tab means for collecting an electric current, one of the current collector tab means electrically connecting the terminal edge of one of the positive

and negative electrodes to the case, the other current collector tab means electrically connecting the terminal edge of the other of the positive and negative electrodes to the sealing cover;

the one current collector tab means comprising a first collector tab comprising a first current collecting tab welded to the terminal edge of one of the electrodes and a first lead tab integral with the first current collecting tab and welded to the sealing cover, and a second current collector tab consisting of a second lead tab welded and electrically connected to the first lead tab of the first current collector tab.

5,006,427

STORAGE BATTERY



Harald Böhm, Glashütten; Wolfgang Jütting, Ulm, and Jork Bretting, Thalfingen, all of Fed. Rep. of Germany, assignors to AEG Aktiengesellschaft, Frankfurt, Fed. Rep. of Germany

Filed Jan. 9, 1990, Ser. No. 462,406

Claims priority, application Fed. Rep. of Germany, Jan. 9, 1989, 3900381

Int. Cl.[5] H01M *10/50*

U.S. Cl. 429—101 **21 Claims**

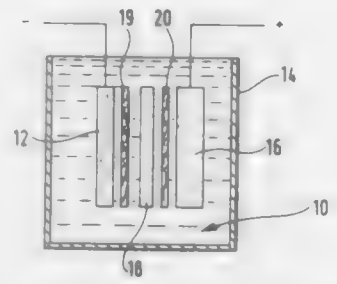
1. In a storage battery having first and second individual plate-shaped cells, each cell having (1) a positive pole and a negative pole, (2) positive and negative electrodes disposed between the poles and respectively contacting the positive pole and the negative pole, and (3) an electrolyte between the electrodes, the improvement wherein:

said first cell overlies said second cell;

one of the positive pole and the negative pole of each of said first and second cells is a first electrically conductive wall having a first polarity and the other of the positive pole and the negative pole of each of said first and second cells is a second electrically conductive wall having a second polarity; and

said first wall of said first cell has first electrically conductive projections which contact said second wall of said second cell, so that said first projections electrically connect said first wall of said first cell to said second wall of said second cell and define means, in the form of cooling channels between said first wall of said first cell and said second wall of said second cell, for carrying a cooling medium between said first and second cells.

5,006,428



GETTER ELECTRODE AND IMPROVED ELECTROCHEMICAL CELL CONTAINING THE SAME

Franz Goebel, Sudbury, and Sohrab Hossain, Marlboro, both of Mass., assignors to Yardney Technical Products, Inc., Pawcatuck, Conn.

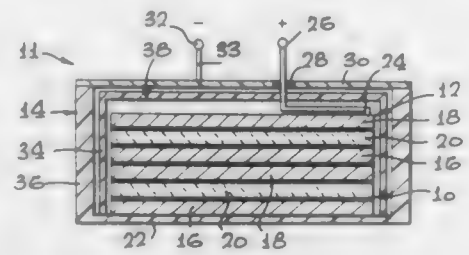
Filed Nov. 28, 1989, Ser. No. 442,033

Int. Cl.[5] H01M *2/16*

U.S. Cl. 429—101 **9 Claims**

5. An improved dendrite formation-resistant electrochemical cell employing an alkali metal anode, said cell also including a cathode spaced from said anode and electrolyte communicating with said anode and cathode, said cell including a getter electrode disposed between said anode and cathode and shielded by separators between said getter electrode and said anode and cathode, said getter electrode comprising active material selected from the group consisting of carbon, graphite and mixtures thereof disposed as a thin low rate capability layer on an inert substrate.

5,006,429



EXTERNALLY HEATED THERMAL BATTERY

Louis Pracchia; Ronald F. Vetter, and Darwin Rosenlof, all of Ridgecrest, Calif., assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Aug. 24, 1989, Ser. No. 401,200

Int. Cl.[5] H01M *6/36, 4/36*

U.S. Cl. 429—112 **1 Claim**

1. A thermal battery adapted to be activated only by external heating, which comprises at least one cell having

an anode selected from the group consisting of a lithium-aluminum alloy, a lithium-boron alloy, a lithium-silicon alloy, calcium and magnesium,

a cathode selected from the group consisting of iron disulfide, calcium chromate and silver chromate, and

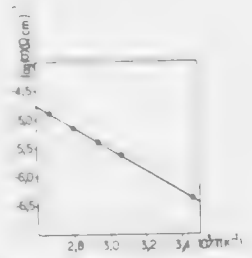
an electrolyte comprising a mixture of 31.8% lithium nitrate and 58.4% sodium nitrite containing some 9.8% lithium chloride.

said electrolyte positioned between said anode and said cathode, said electrolyte being inactive at ambient temperature but, being activated by melting at a predetermined temperature by external heating.

5,006,430

ELECTROCHEMICAL GENERATORS COMPRISING A POSITIVE ELECTRODE AND AN ELECTROLYTE BASED ON VITREOUS MATERIALS

Michel J. Duclot, Theys, and Thierry Pagnier, Grenoble, both of France, assignors to Centre National De La Recherche Scientifique, Paris, France



PCT No. PCT/FR84/00105, § 371 Date Dec. 10, 1984, § 102(e) Date Dec. 10, 1984, PCT Pub. No. WO84/04206, PCT Pub. Date Oct. 25, 1984

PCT Filed Apr. 13, 1984, Ser. No. 691,188

Claims priority, application France, Apr. 15, 1983, 83 06237

Int. Cl.[5] H01M *6/18*

U.S. Cl. 429—191 **16 Claims**

1. Electrochemical generators, characterized in that they comprise

a positive electrode based on a vitreous material of general formula I

$$A_x(1-y)\ F_aX_b\ y\ M_cX_c \qquad (I)$$

in which:

F_aX_b represents a network forming system and

M_cX_d a so-called active system, that is to say capable of capturing or providing electrons, in which:

F is an element selected from among Si, Ge, B, P, Al, Nb, As or Sb;

M represents a transition metal which can exist in several degrees of oxidation from 0 to +7 and existing in the vitreous material of the positive electrode in at least two of the degrees of oxidation that it may present;

X represents oxygen, sulfur or selenium;

a, b, c and d are indices corresponding to the stoichiometry of the elements in the forming system or in the active system concerned;

y is a number comprised between 0 and 1 (these two values being excluded);

A represents a monovalent element;

x is nil or represents a number not nil of which the value depends on the number of electrons and/or electron sites available in the materials;

a negative electrode based on a material selected from the group comprising the element A or a material capable of separating it,

an electrolyte formed from a vitreous material, which can transport the A^+ ions and possessing a former common with the vitreous material of the positive electrode.

5,006,431

SOLID STATE POLYMER ELECTROLYTE FOR BATTERIES

Henry F. Hope, and Stephen F. Hope, both of c/o Hope Industries 5701 Morland Rd., Willow Grove, Pa. 19090

Filed Feb. 23, 1989, Ser. No. 313,993

Int. Cl.[5] H01M *6/18*

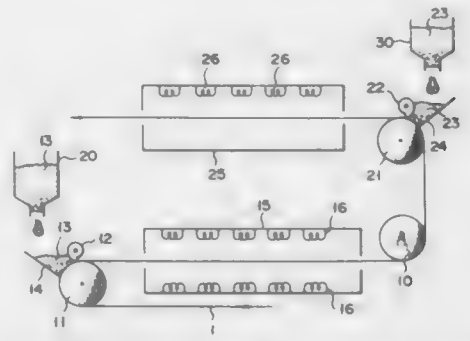
U.S. Cl. 429—192 **8 Claims**

1. A solid state polymeric electrolyte composition for batteries wherein the electrolyte contains an epoxide based polymer component, and

said epoxide component is cycloaliphatic epoxide.

5,006,432

METHOD FOR MANUFACTURING A SHADOW MASK



Seiji Sagou, and Yasuhisa Ohtake, both of Fukaya, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Oct. 24, 1988, Ser. No. 261,617

Claims priority, application Japan, Oct. 28, 1987, 62-272118

Int. Cl.[5] G03F *7/16*

U.S. Cl. 430—23 **7 Claims**

1. A method for manufacturing a shadow mask composed of a thin metal mask sheet having a plurality of apertures to allow three electron beams to be landed on corresponding phosphor layers on a phosphor screen, comprising the steps of:

(a) providing a band-like continuous thin metal sheet having first and second major surfaces;

(b) forming a first photosensitive resin layer on said first major surface by coating a first photosensitive resin solution on said fist major surface with said first major surface directed upward, and drying the coated first resin solution, said coating and drying being carried out while maintaining the metal sheet substantially horizontal;

(c) turning the coated, dried metal sheet so as to direct said second major surface upward;

(d) forming a second photosensitive resin layer on said second major surface by coating a second photosensitive resin solution on said second major surface with said second major surface directed upward, and drying the coated second resin solution, said coating and drying being carried out while maintaining the metal sheet substantially horizontal;

(e) forming opening patterns, corresponding to said apertures, in said first and second resin layers by subjecting the layers to an exposure and development process; and

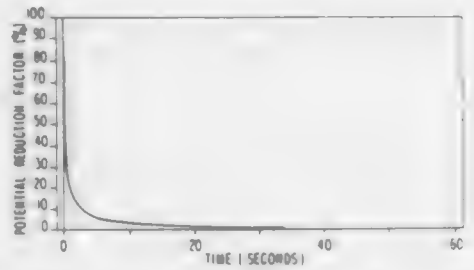
(f) forming said apertures in said metal sheet by subjecting the metal sheet with said resin layer having the openings to an etching treatment.

5,006,433

PRINTING PLATE PRECURSORS FOR ELECTROPHOTOGRAPHIC PLATE-MAKING PURPOSES

Hiroaki Yokoya, and Hiromichi Tachikawa, both of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Jun. 26, 1989, Ser. No. 370,973



Claims priority, application Japan, Jun. 27, 1988, 63-158365

Int. Cl.[5] G03G *13/28, 5/00;* **G03C** *1/725, 1/73*

U.S. Cl. 430—49 **16 Claims**

1. A printing plate precursor for electrophotographic printing plate making purposes in which the printing plate is made by imagewise exposure, forming a toner image, and then removing a photoconductive layer in the non-image-forming parts other than the toner image parts, said printing plate precursor comprising at least a photoconductive layer which

comprises an organic photoconductive compound and a binder resin on a support wherein the binder resin for the photoconductive layer is a copolymer comprising at least one vinyl ester

compound or allyl ester compound, each of which has an aromatic ring, as a monomer component, and at least one vinyl polymerizable monomer which has at least one acidic functional group as a component monomer.

5,006,434

PHOTOHARDENABLE ELECTROSTATIC ELEMENT WITH IMPROVED ENVIRONMENTAL LATITUDE

Graciela B. Blanchet-Fincher; Catherine T. Chang, and Curtis R. Fincher, Jr., all of Wilmington, Del., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed May 12, 1989, Ser. No. 351,361

Int. Cl.[5] G03G *13/28; G03C 1/725, 1/73, 1/735*

U.S. Cl. 430—49 **30 Claims**

1. An improved photohardenable electrostatic master having reduced temperature and humidity sensitivity comprising

(1) an electrically conductive substrate, and

(2) a layer of photohardenable composition consisting essentially of

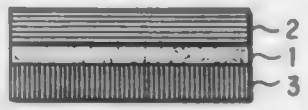
(a) at least two organic polymeric binders,

(b) at least one monomeric compound having at least one ethylenically unsaturated group, and

(c) a photoinitiator or photoinitiator system that activates polymerization of the ethylenically unsaturated monomer upon exposure to actinic radiation, the improvement wherein the photohardenable composition contains at least one binder having a Tg greater than 80° C. and at least one binder having a Tg less than 70° C. such that the shift in transit time (a_T) of the photohardenable layer in the range 30% ≦ relative humidity ≦ 60% and 60° F. (15.6° C.) ≦ temperature ≦ 80° F. (26.7° C.) is 15 or less.

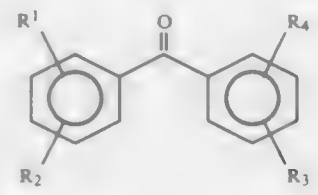
5,006,435

ELECTROPHOTOGRAPHIC PHOTOSENSITIVE MEMBER WITH ADDITIVE IN CHARGE GENERATING LAYER



Yutaka Akasaki; Hidekazu Aonuma; Kazuya Hongo; Katsuhiro Sato; Katsumi Nukada, and Terunmi Marumo, all of Ashigara, Japan, assignors to Fuji Xerox Co., Ltd., Tokyo, Japan

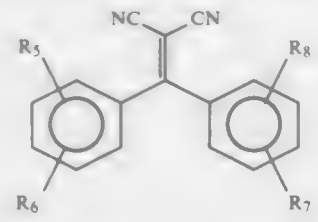
Filed Oct. 4, 1989, Ser. No. 416,778



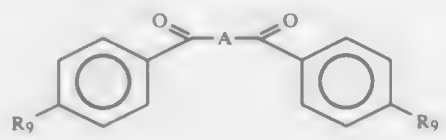
Claims priority, application Japan, Oct. 5, 1988, 63-249736; Oct. 5, 1988, 63-249737; Oct. 5, 1988, 63-249740; Oct. 5, 1988, 63-249741

Int. Cl.[5] G03G *5/047, 5/09*

U.S. Cl. 430—58 **4 Claims**

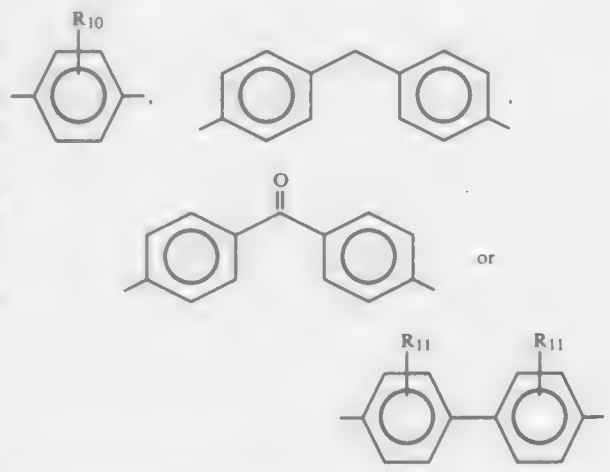


1. An electrophotographic photosensitive member having a charge generating layer and a charge transporting layer successively formed on a support, wherein the charge generating layer contains a charge generating pigment having a hole transporting property and at least one of the compounds represented by following formulae (Ia), (Ib), (Ic) and (Id) in a binder resin;



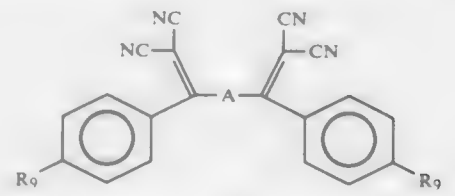
(Ia)

wherein R_1, R_2, R_3, and R_4 each represents a hydrogen atom, an alkyl group, a halogen atom, a nitro group, a cyano group, a benzyl group, a substituted or unsubstituted aryl group, an alkoxycarbonyl group, an acyl group, an aryl-substituted boronyl group, an aralkyl group, a substituted amino group, an aryloxy group, an aralkyloxy group, an aryloxycarbonyl group or an aralkyloxycarbonyl group, or wherein R_1 and R_2 or R_3 and R_4, when combined together, may form a ring:



(Ib)

wherein R_5, R_6, R_7, and R_8 each represents a hydrogen atom, an alkyl group, a halogen atom, a nitro group, a cyano group, a substituted or unsubstituted aryl group, an alkoxycarbonyl group, an acyl group, an aryl-substituted boronyl group, an aralkyl group, a substituted amino group, an aryloxy group, an aralkyloxy group, an aryloxcarbonyl group or an aralkyloxycarbonyl group, or wherein R_5 and R_6 or R_7 and R_8, when combined together, may form a ring;



(Ic)

wherein A represents

wherein R_{10} represents a hydrogen atom or an alkyl group, and R_{11} represents a hydrogen atom, a nitro group or an alkyl group, and R_9 represents a hydrogen atom, a nitro group, an alkyl group, an alkoxycarbonyl group, a halogen atom, an aryl group, an aryloxy group or a cyano group; and

(Id)

wherein A and R_9 are as defined above for the compounds of formula (Ic), wherein at least one of the compounds shown by formulae (Ia), (Ib), (Ic), and (Id) is incorporated in an amount of from 0.01 to 2 equivalents to the charge generating pigment having the positive hole transporting property.

5,006,436

UV CURABLE COMPOSITIONS FOR MAKING TENTABLE SOLDER MASK COATING

Paul L. K. Hung, and Kenneth K. S. Tseng, both of Edison, N.J., assignors to Atochem North America, Inc., Philadelphia, Pa.

Filed Sep. 20, 1988, Ser. No. 247,052

Int. Cl.[5] G03F *7/029;* **G03C** *1/68, 1/71*

U.S. Cl. 430—284 **13 Claims**

1. A UV curable, aqueous alkaline developable, solder-mask composition comprising:

(a)

(i) 10–50% by wt. of a urethane acrylate compound which is obtained by reacting substantially equal molar quantities of an aliphatic or cycloaliphatic diisocyanate, and a hydroxyalkyl acrylate, with an alkylene polyol having 3–6 hydroxyl groups, and 3–6 carbon atoms, with at least one mole of a dicarboxylic acid anhydride per mole of said alkylene polyol,

(ii) 5–40% by wt. of an aromatic urethane diacrylate,

(iii) 2–30% by wt. of an aliphatic or cycloaliphatic urethane diacrylate,

(b) 5–30% by wt of a thermally cross-linkable polyunsaturated compound;

(c) 4–60% by wt. of at least one reactive monomer diluent;

(d) 0.5–10% by wt. of a photoinitiator; and

(e) 0.2–5% by wt. of a free radical thermal initiator wherein the urethane acrylate compound has terminal ethylenic unsaturation.

5,006,437

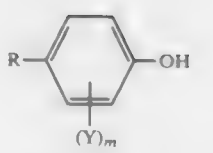
METHOD OF IMAGE FORMATION USING A SILVER AHLIDE COLOR PHOTOGRAPHIC MATERIAL

Tomomi Yoshizawa, and Nariko Kimura, both of Hino, Japan, assignors to Konica Corporation, Tokyo, Japan

Filed Aug. 30, 1989, Ser. No. 400,494

Claims priority, application Japan, Sep. 2, 1988, 63-220757

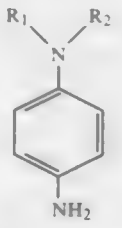
Int. Cl.[5] G03C *7/00*



U.S. Cl. 430—359 **9 Claims**

1. A process for forming a color image comprising;

imagewise exposure of a photographic material which comprises a light-sensitive silver halide emulsion layer containing a 2,5-diacylaminophenol-based cyan coupler at a ratio of over 50 mol % of the total cyan coupler in the photographic material and compound selected from a group consisting of Formula V and Formula VI:



$$R_{16}—NHSO_2—R_{17} \qquad V$$

wherein R_{16} and R_{17} independently represent an alkyl or aryl group which may be substituted;

VI

wherein R represents an alkyl, alkoxycarbonyl, arylsulfonylamino or alkylsulfonylamino group, Y represents a substituent; and color developing the exposed photographic material with a color developer containing a color developing agent represented by Formula I at a ratio of over 55 mol % of total developing agent in the color developer.

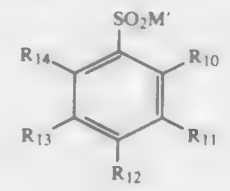
I

wherein R_1 and R_2 independently represent a substituted or unsubstituted alkyl group, and R_1 and R_2 may link together to form a ring.

5,006,438

PROCESS FOR PROCESSING SILVER HALIDE COLOR PHOTOGRAPHIC MATERIALS

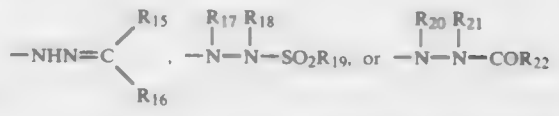
Takatoshi Ishikawa; Makoto Umemoto; Nobuo Sakai, and Genichi Furusawa, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan



Continuation of Ser. No. 308,595, Feb. 10, 1989, abandoned. This application May 3, 1990, Ser. No. 518,266

Claims priority, application Japan, Feb. 10, 1988, 63-29621

Int. Cl.[5] G03C *7/00*



U.S. Cl. 430—372 **12 Claims**

1. A process for processing a silver halide color photographic material, which comprises processing an image-wise exposed silver halide color photographic material containing at least one compound represented by formula (IV):

(IV)

wherein M' represents an atom or an atomic group which forms an inorganic salt or an organic salt,

wherein R_{15} and R_{16}, which may be the same or different, each represents a hydrogen atom or an aliphatic group, aromatic group or heterocyclic group, and R_{15} and R_{16} may combine with each other to form a 5-membered to 7-membered ring; R_{17}, R_{18}, R_{20}, and R_{21}, which may be the same or different, each represent a hydrogen atom, aliphatic group, aromatic group or heterocyclic group; R_{17}, R_{18}, R_{20}, and R_{21} further represent an acyl group, an alkoxycarbonyl group, a sulfonyl

group, a ureido group, or a urethane group; at least one of R_{17} and R_{18} and at least one of R_{20} and R_{21} is a hydrogen atom;

R_{19} and R_{22} each represents a hydrogen atom or an aliphatic group, aromatic group or heterocyclic group; R_{22} further represents an alkylamino group, an arylamino group, an alkoxy group, an aryloxy group, an acyl group, an alkoxycarbonyl group, or an aryloxycarbonyl group;

at least two of R_{17}, R_{18}, and R_{19} may combine with each other to form a 5-membered to 7-membered ring, and at least two of R_{20}, R_{21}, and R_{22} may combine with each other to form a 5-membered to 7-membered ring;

R_{10}, R_{11}, R_{12}, R_{13}, and R_{14}, which may be the same or different, each represents a hydrogen atom, an aliphatic group, an aromatic group, a heterocyclic group, a halogen atom, $-SR_8$, $-OR_8$,

$$-\underset{\displaystyle R_9}{\overset{}{\underset{|}{N}}}-R_3,$$

an acyl group, an alkoxycarbonyl group, an aryloxycarbonyl group, a sulfonyl group, a sulfonamide group, a sulfamoyl group, a ureido group, a urethane group, a carbamoyl group, a sulfo group, a carboxy group, a nitro group, a cyano group, an alkoxalyl group, an allyoxalyl group, a sulfonyloxy group, $-P(R_8)_3$,

$$-\overset{O}{\overset{\|}{P}}(R_8)_2, \quad -\overset{S}{\overset{\|}{P}}(R_8)_2,$$

$-P(OR_8)_3$, or a formyl group; wherein R_8 and R_9 each represents a hydrogen atom, an aliphatic group, an alkoxy group, or an aromatic group, with a color developer prepared by diluting a concentrated color developer composition containing from 90 ml/liter to 600 ml/liter of benzyl alcohol and from 0.07 mol/liter to 0.5 mol/liter of an aromatic primary amine color developing agent, said concentrated color developer composition after storage contains a compound formed by the reaction of benzyl alcohol and the color developing agent which adversely affects the storage stability of the processed photographic material, and the compound of formula (IV) prevents staining of the processed photographic material due the presence of the compound formed by the reaction of benzyl alcohol and the color developing agent.

PHOTOGRAPHIC REVERSAL PROCESS USING A COLOR DEVELOPING AGENT IN THE BLACK-AND-WHITE DEVELOPER

Ubbo Wernicke, Cologne, and Herbert Mitzinger, Lindlar-Remshagen, both of Fed. Rep. of Germany, assignors to Agfa-Gevaert Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Nov. 13, 1989, Ser. No. 434,414

Claims priority, application Fed. Rep. of Germany, Nov. 24, 1988, 3839573

Int. Cl.[5] G03C *5/50, 7/30*

U.S. Cl. 430—379 **8 Claims**

1. A photographic reversal process for the production of positive photographic images by imagewise exposure of a photosensitive material containing at least one silver halide emulsion layer and color couplers comprising the steps of

black-and-white first development of said imagewise exposed photosensitive material in a first development bath comprised of

(a) a developer consisting of one or more N,N-dialkyl-p-phenylene derivatives,

(b) at least one tin (II) complex compound, and

(c) at least one compound which prevents the color couplers from reacting with a developer oxidation product in the first development step,

said first development bath having a pH value of less than 8,

transferring said black-and-white developed material from said first development bath to a color development bath without any intermediate steps,

color development of the black-and-white developed material in the absence of any intermediate steps in said color development bath containing a developer consisting of one or more N,N dialkyl-p-phenylenediamine derivatives at a pH value of greater than 10, and

chemically fogging the material in said color development step in the presence of said tin (II) complex compound,

and bleaching, fixing, washing or stabilizing and drying the developed photosensitive material.

5,006,440

PROCESS FOR STABILIZING PHOTOGRAPHIC SILVER IMAGES

Werner Berthold, Leverkusen, and Hans Öhlschläger, Bergisch Gladbach, both of Fed. Rep. of Germany, assignors to Agfa Gevaert Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Sep. 21, 1990, Ser. No. 586,515

Int. Cl.[5] G03C *5/24*

U.S. Cl. 430—429 **2 Claims**

1. A process for stabilizing a silver image produced by imagewise exposure, development and fixing of a photographic material containing at least one silver halide emulsion layer, characterized in that, after fixing, the photographic material is subjected to the treatment by a stabilizing bath which contains a compound corresponding to general formula I

$$R_1-(NHCO-R_2-R_3)_m \qquad (I)$$

in which

R_1 represents a nitrogen-containing 5- or 6-membered heterocycle,

R_2 represents a straight or branched C_{1-8} alkylene radical,

R_3 represents Cl or Br and

m=1 or 2.

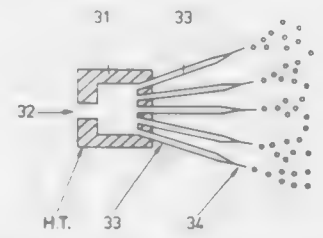
METHOD OF FORMING A DISCONTINUOUS COVERING LAYER ON RADIATION SENSITIVE DEVICES



Graham P. Cooper, Bramley, and Reginald T. Jones, Chandlers Ford, both of United Kingdom, assignors to Vickers PLC, London, United Kingdom

Filed May 31, 1989, Ser. No. 359,373

Claims priority, application United Kingdom, Jun. 3, 1988, 8813154

Int. Cl.[5] G03C *1/495, 1/76, 1/52*

U.S. Cl. 430—168 **8 Claims**

1. A method of producing a radiation sensitive device which comprises

(i) providing a substrate carrying a radiation sensitive layer and

(ii) applying to the surface of the radiation sensitive layer a discontinuous covering layer of material by dissolving the material in a solvent to produce a liquid having a conductivity of from 10^3 to 10^9 pSm^1 and directing said liquid towards the radiation sensitive layer whilst applying or inducing in said liquid a potential of at least 5 kV relative to the substrate so that the liquid forms one or more ligaments which disrupt into drops which are deposited on the radiation sensitive layer, said potential being the sole disruptive force acting on said liquid.

5,006,443

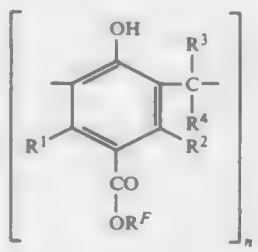
RADIATION SENSITIVE REPRODUCTION COMPOSITION AND ELEMENT WITH PERFLUOROALKYL GROUP CONTAINING POLYMER

Werner H. Müller, E. Greenwich, R.I., assignor to Hoechst Aktiengesellschaft, Frankfurt/Main, Fed. Rep. of Germany

Continuation of Ser. No. 742,393, Jun. 7, 1985, abandoned. This application Jan. 7, 1988, Ser. No. 141,531

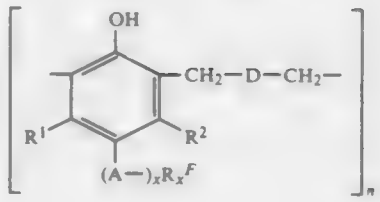
Claims priority, application Fed. Rep. of Germany, Jun. 8, 1984, 3421448

Int. Cl.[5] G03C *7/023, 7/032, 7/033*



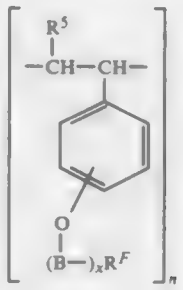
U.S. Cl. 430—192 **9 Claims**

1. A radiation-sensitive reproduction composition, which, after image-wise irradiation, is capable of being developed by washing out with an aqueous developing solution comprising an admixture of:

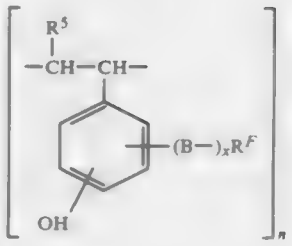


from 5 to 80% of at least one radiation-sensitive compound present in an amount sufficient to alter the solubility of the composition in an aqueous developer solution after irradiation; and

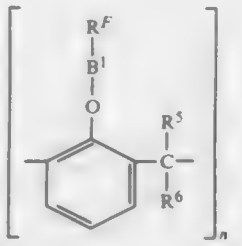
from 20 to 95% of at least one binder comprising a perfluoroalkyl group-containing polymer comprising repeating units selected from the group consisting of Formulae Ia, IIa, IIIa, IVa and VIa:



(Ia)



(IIa)



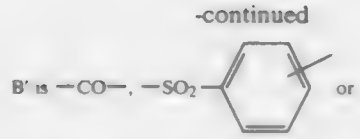
(IIIa)

(IVa)

(VIa)

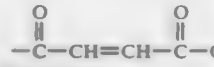
wherein

R^1 and R^3 are H, C_1 to C_6 alkyl, R^F, OH or C_1 to C_6 alkoxy,



R^3 and R^4 are C_1 to C_6 alkyl, H, phenyl or R^F,

R^5 and R^6 are H, C_1 to C_6 alkyl, phenyl or naphthyl,



A is $-\overset{O}{\overset{\|}{C}}-O-$ or $-\overset{O}{\overset{\|}{C}}-R^F$

B is $-\overset{O}{\overset{\|}{C}}-$ or $-\overset{O}{\overset{\|}{C}}-CH=CH-\overset{O}{\overset{\|}{C}}-O-$.

-continued

B' is —CO—, —SO_2— or

-$CH(CH_3)COO$-,

D is phenylene, biphenylene or biphenylene bridged by an ether, thioether or carbonyl group,

R^F is $F(C_wF_{2w})(-CH_2)_z$ or $F(C_{w-1}F_{2w-2})$-CF=CH selected from the group consisting of (1) there being no linking bridging groups and (2) there being linking ether bridging groups between difluoromethylene groups,

n is 5 to 10,000,

w is 5 to 15,

x is 0 to 1 and

z is 0 to 5

each unit comprising at least one R^F group,

said polymer present in an amount sufficient to obtain a film forming coating and to permit aqueous development of the image-wise exposed composition.

3. A reproduction composition as claimed in claim 1 wherein said one radiation-sensitive compound is a polymerizable, perfluoroalkyl group-containing compound having at least two ethylenically unsaturated end groups, and said layer further comprises at least one photoinitiator.

4. A reproduction composition as claimed in claim 1 wherein said one radiation-sensitive compound is a 1,2-naphthoquinone diazide compound containing at least one perfluoroalkyl group as a substituent.

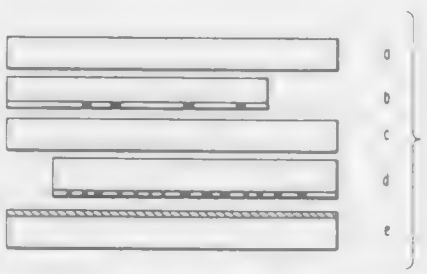
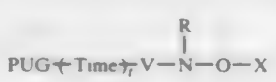
SILVER HALIDE PHOTOGRAPHIC MATERIAL



Hisashi Okada, and Morio Yagihara, both of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Aug. 9, 1990, Ser. No. 564,822

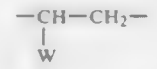


Claims priority, application Japan, Aug. 9, 1989, 1-205885

Int. Cl.[5] G03C *1/06*

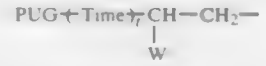
U.S. Cl. 430—264 **18 Claims**

1. A silver halide photographic material comprising at least one compound represented by formula (I):

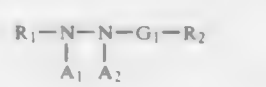


(I)

wherein X represents a hydrogen atom or a group which can become a hydrogen atom by hydrolytic action, Time represents a divalent connecting group, t represents 0 or 1, PUG represents a development inhibitor, V represents a carbonyl group,

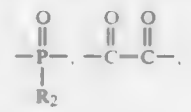


a sulfonyl group, a sulfoxy group,



(R_0 represents an alkoxy group or an aryloxy group), an iminomethylene group, a thiocarbonyl group or

represents an electron attractive group), R represents a hydrogen atom, a substituted or unsubstituted aliphatic group, a substituted or unsubstituted aromatic group, or



PUG, Time, t and W are as defined above); and at least one compound represented by formula (II):

(II)

wherein R_1 represents a substituted or unsubstituted aliphatic group or a substituted or unsubstituted (aromatic group, R_2 represents a hydrogen atom, an alkyl group, an aryl group, an alkoxy group, an aryloxy group, an amino group, a hydrazino group, a carbamoyl group or an oxycarbonyl group, each of which may be substituted, G_1 represents a carbonyl group, a sulfonyl group, a sulfoxy group,

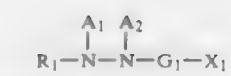
a thiocarbonyl group, or an iminomethylene group, A_1 and A_2 each represents a hydrogen atom, or one of A_1 and A_2 represents a hydrogen atom while the other represents a substituted or unsubstituted alkylsulfonyl group, a substituted or unsubstituted arylsulfonyl group, or a substituted or unsubstituted acyl group, said at least one compound of formula (I) and said at least one compound of formula (II) being present in the same layer or in different layers selected from a photographic emulsion layer and a hydrophilic colloid layer.

5,006,445

SILVER HALIDE PHOTOGRAPHIC MATERIAL

Morio Yagihara; Hisashi Okada, and Kazunobu Katoh, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

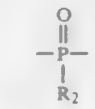
Filed Apr. 26, 1989, Ser. No. 343,441



Claims priority, application Japan, Apr. 28, 1988, 63-105682

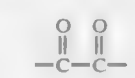
The portion of the term of this patent subsequent to Nov. 20, 2007, has been disclaimed.

Int. Cl.[5] G03C *1/08, 1/34*

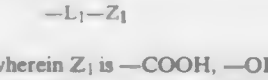


U.S. Cl. 430—264 **12 Claims**

1. A silver halide photographic material comprising a support having thereon at least one hydrophilic colloid layer, at least one of which is a silver halide photographic emulsion layer, wherein at least one of said silver halide emulsion layers or other hydrophilic colloid layers contains a compound represented by formula (I):



(I)



wherein, A_1 and A_2 both represent hydrogen atoms or one represents a hydrogen atom and the other a sulfonyl group or an acyl group, R_1 represents an aliphatic group, an aromatic group or a heterocyclic group, G_1 represents a carbonyl group, a sulfonyl group, a sulfoxy group, a

group wherein R_2 represents an alkoxyl group or an aryloxy group, a

group or an iminomethylene group, X_1 is represented by formula (a):

(a)

wherein Z_1 is —COOH, —OH, —SH or —NHR_3 (wherein R_3 is a hydrogen atom, an alkyl group, an aryl group, a heterocyclic group, a —COR_4 group or a —SO_2R_4 group wherein R_4 is a hydrogen atom, an alkyl group, an aryl group or a heterocyclic group) and L_1 is a divalent organic group whereby G_1, L_1 and Z_1 are able to form a ring structure when Z_1 attacks G_1 nucleophilically; and at least one of R_1 and X_1 has a silver halide adsorption accelerating group represented by Y_1—$(L_2)_l$—(wherein Y_1 is a ring-like thioamido group or a nitrogen-containing heterocyclic group, L_2 is a divalent linking group, and l is 0 or 1).

5,006,446

MEDIUM AND PROCESS FOR IMAGE FORMATION

Masahiro Haruta, Funabashi; Hiroshi Matsuda; Hirohide Munakata, both of Yokohama, and Yukuo Nishimura, Sagamihara, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 27,050, Mar. 23, 1987, Pat. No. 4,818,665, which is a continuation of Ser. No. 710,686, Mar. 12, 1985, abandoned. This application Jul. 20, 1988, Ser. No. 221,638

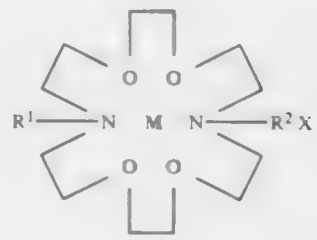
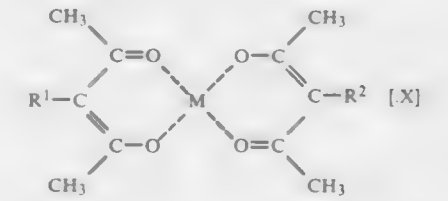
U.S. Cl. 430—270 **7 Claims**



1. A medium for image formation which comprises a monomolecular film or a monomolecular built-up film of a metal chelate compound having a metal ion reducibly by the action of active energy to the metal on a substrate, said film being capable of image formation by reduction of said reducible metal ion by signals of said active energy, wherein the metal ion by signals of said active energy, wherein the metal chelate is selected from the group consisting of:

(2-a)



wherein M is Ag^+, Cu^{++}, or Pd^{++}; R is alkyl of 10 to 30 carbon atoms; and X is NO_3, Cl^- or $SO_4^=$;

(2-b)

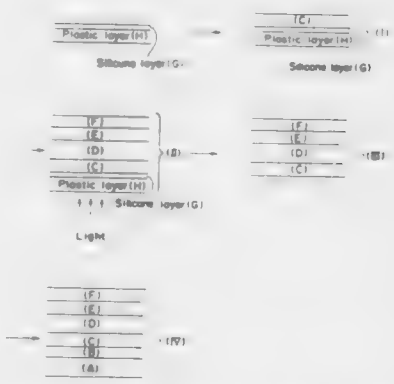
wherein M is Ag^+, Cu^{++} or Pd^{++}; R^1 is hydrogen, methyl, or ethyl; R^2 is alkyl or acyl each having 10 to 30 carbon atoms; and X is NO_3, Cl or $SO_4^=$; and

(2-c)

wherein M is divalent Cu, Co, Fe, Mn, Ni, Zn, Pb, or Pd; R^1 is hydrogen, methyl or ethyl; R^2 is alkyl or an alkylcarboxylic acid group, each alkyl having 10 to 30 atoms.

5,006,447

PHOTOSENSITIVE RESIN PLATE FOR FLEXOGRAPHY



Yasushi Umeda, Kusatsu, and Hisao Satoh, Ibaragi, both of Japan, assignors to Nippon Paint Co., Ltd., Osaka, Japan

Filed Apr. 13, 1989, Ser. No. 337,403

Claims priority, application Japan, Apr. 13, 1988, 63-90739

Int. Cl.[5] G03F *7/028, 7/11*

U.S. Cl. 430—272 **12 Claims**

1. A photosensitive resin plate for flexographic printing, comprising;

(A) a substrate comprising a polyester film and a polyure-

thane or polyolefin foam layer on one side of said polyester film;
(B) an adhesive layer on the foam layer of said substrate;
(C) a polyurethane dried film on said adhesive layer;
(D) a photosensitive sheet which is provided on the polyurethane layer and is chemically bonded to the polyurethane layer, comprising a polymer having rubber elasticity, an addition polymerizable unsaturated monomer and a polymerization initiator;
(E) a slip layer on the photosensitive layer which is dissolvable in a developing solution used to develop the photosensitive layer; and
(F) a protective layer on the slip layer.

7. A process for preparing the photosensitive resin plate for flexographic printing of claim 1 comprising;
forming a polyurethane layer on a plastic layer on which a silicone releasing agent is coated,
placing thereon a three layers structure comprising of a photosensitive layer, then a slip layer and finally a protective layer,
exposing to light from the direction of the plastic layer,
releasing the plastic layer, and
adhering a substrate comprising a polyester film and a polyurethane or polyolefin foam layer on one side of the polyester through an adhesive layer.

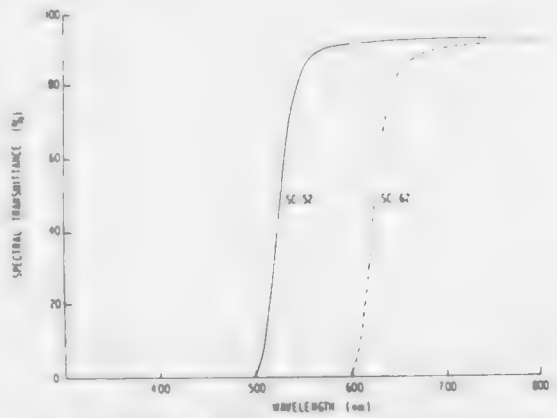
PHOTOGRAPHIC MATERIAL AND PROCESS

Richard P. Szajewski; Paul A. Burns; Jerrold N. Poslusny, all of Rochester; Norma B. Platt, Ontario, and Timothy D. Norden, Rochester, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Jun. 15, 1989, Ser. No. 366,730
Int. Cl.[5] G03C *1/08, 1/46*
U.S. Cl. 430—505 **15 Claims**

1. A photographic recording material comprising a support having thereon at least two light sensitive silver halide emulsion layers and a compound capable of releasing a development inhibitor upon exposure and process, wherein the compound has the structural formula:

CAR—(TIME)$_n$—INH—Q



wherein:
CAR is a carrier moiety from which (TIME)$_n$—INH—Q is released during development;
TIME is a timing group;
INH—Q together constitute a development inhibitor moiety which is an oxazole, thiazole, diazole, oxadiazole, oxathiazole, thiatriazole, benzotriazole, tetrazole, benzimidazole, indazole, isoindazole, mercaptotetrazole, selenotetrazole, mercaptothiazole, selenobenzothiazole, mercaptobenzoxazole, selenobenzoxazole, mercaptobenzimidazole, selenobenzimidazole, benzodiazole, mercaptooxadiazole, or benzisodiazole with the proviso that INH does not comprise a monocyclic triazole moiety;
Q comprises from 1 to 4 thioether moieties, in each of which the sulfur atom is directly bonded to a saturated carbon atom but is not directly bonded to an INH heterocyclic ring; and
n is 0, 1, or 2.

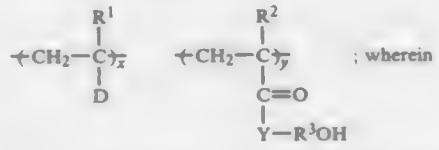
SILVER HALIDE BLACK AND WHITE PHOTOGRAPHIC MATERIAL

Ichizo Toya, Kanagawa; Kunioki Ohmura, Tokyo, and Masaki Okazaki, Kanagawa, all of Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Continuation-in-part of Ser. No. 128,304, Dec. 3, 1987, abandoned. This application Jun. 13, 1989, Ser. No. 368,944
Claims priority, application Japan, Dec. 3, 1986, 61-288099
Int. Cl.[5] G03C *1/12, 5/02, 5/08*
U.S. Cl. 430—506 **18 Claims**

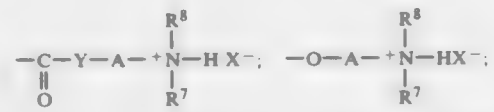
1. A silver halide black and white photographic material for printing a developed transparent color photographic material, comprising a support having thereon at least one light-sensitive silver halide emulsion layer, wherein each of said at least one emulsion layer is composed of a silver halide emulsion which maintains a spectral sensitivity substantially only between 520 nm and 620 nm and contains substantially no iodine, and wherein the spectral sensitivities of the emulsion layers of the silver halide black and white photographic material are substantially only between 520 nm and 620 nm.



5,006,450

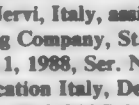
MORDANT POLYMER PHOTOGRAPHIC ELEMENT CONTAINING

Ronda E. Factor, Rochester, and Ignazio S. Ponticello, Pittsford, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.



Filed Nov. 15, 1989, Ser. No. 437,003
Int. Cl.[5] G03C *1/06*
U.S. Cl. 430—518 **6 Claims**

1. A photographic element comprising a support, a silver halide emulsion layer, and a layer comprising a water-soluble dye and a polymer comprising polymerized recurring units according to the structures:



; wherein

D represents a substituted or unsubstituted heterocyclic group containing an amine acid addition salt component or

;

R^7 and R^8, each independently, represents H, alkyl of 1 to 20 carbons, cycloalkyl of 3 to 8 carbons, aryl, of 6 to 20 carbons or aralkyl of 6 to 20 carbon atoms; or R^8 or R^7 taken together with A represent the elements needed to complete a five or six membered ring;
Y represents NH;
A represents a divalent radical of 1 to 20 carbon atoms; R^1 and R^2, each independently represents —H or —CH_3;
R^3 represents alkylene of 2 to 6 carbon atoms;
x represents 10 to 100 weight percent; and
y represents 0 to 90 weight percent;
X represents Cl^-, Br^-,

NO_3^-, HSO_4^-, or ClO_4^-

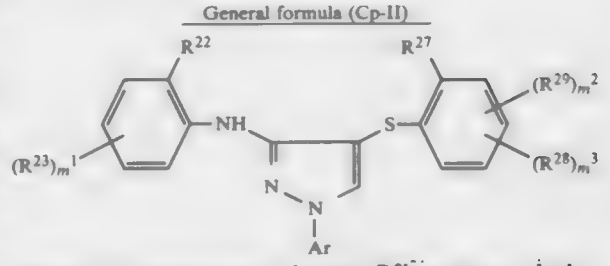
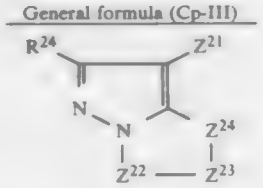
The portion of the term of this patent subsequent to Aug. 15, 2006, has been disclaimed.
Int. Cl.[5] G03C *1/08, 7/32*
U.S. Cl. 430—546 **5 Claims**



1. A silver halide color photographic material comprising a support having thereon at least one silver halide photographic emulsion layer containing a dispersion of oleophilic fine particles containing at least one diffusion resistant oil-soluble coupler which forms a substantially nondiffusible dye upon coupling with an oxidation product of an aromatic primary amine developing agent and at least one water-immiscible coupler solvent having a melting point of not more than 100° C. and a boiling point of not less than 140° C., wherein said oil-soluble coupler is represented by formula (Cp-I), (Cp-II), or (Cp-III), defined below, and the dispersion of oleophilic fine particles is a dispersion obtained by emulsifying or dispersing a solution containing at least one of said couplers, at least one of said coupler solvents, and at least one water-insoluble and an organic solvent-soluble polymer, which is a homopolymer or copolymer composed of at least one repeating unit in an amount of not less than 35 mol% which does not have an acid group in the main chain or side chain thereof, wherein the repeating unit is a repeating unit which, when the polymer is a homopolymer having a molecular weight of at least 20,000 formed exclusively by the repeating unit, provides a polymer having a glass transition temperature (Tg) of 50° C. or higher;

General formula (Cp-I)

wherein R^{31} represents an alkyl group, a cycloalkyl group, an aryl group or a heterocyclic group; R^{32} represents an acylamino group, or an alkyl group having 2 or more carbon atoms; R^{33} represents a hydrogen atom, a halogen atom, an alkyl group or an alkoxy group; with proviso R^{31} represents an aryl group when R^{32} is an acylamino group; Z^{31} represents a hydrogen atom, or a releasable group when Z^{31} reacts with an oxidation products of an aromatic primary amine color developing agent



General formula (Cp-II)

wherein Ar represents an aryl group; R^{21} represents a hydrogen atom; an acyl group, or an aliphatic or aromatic sulfonyl group; R^{22} represents a halogen atom, or an alkoxy group; R^{23} represents an alkyl group, an aryl group, a halogen atom, an alkoxy group, an aryloxy group, an acylamino group, an imido

group, a sulfonamido group, an alkoxycarbonyl group, a carbamoyl group, a sulfamoyl group, an alkylthio group, or a sulfonyl group; R^{27} represents an alkyl group, an alkoxy group, or an aryloxy group; R^{28} represents a hydrogen atom, a halogen atom, a hydroxyl group, an alkyl group, an alkoxy group, or an aryl group; R^{29} represents an amino group, acylamino group, an ureido group, an alkoxy carbonylamino group, an imido group, a sulfonamido group, a sulfamoylamino group, an alkoxycarbonyl group, a carbamoyl group, an acyl group, a cyano group, or an alkylthio group; provided that at least one of R^{27} and R^{29} represents an alkoxy group; m^1 and m^2 each represents an integer of 1 to 4; and m^3 represent 0 or an integer of 1 to 3

General formula (Cp-III)

wherein R^{24} represents a hydrogen atom or a substituent group; Z^{21} represents a hydrogen atom or a releasable group when Z^{21} reacts with an oxidation product of an aromatic primary amine color developing agent; Z^{22}, Z^{23} and Z^{24} each represents

—N′ or —NH—, including that at least one of bondings Z^{24}–Z^{23} and Z^{23}–Z^{22} is double-bond and the rest thereof is a single-bond, and a bonding Z^{23}–Z^{22} is a part of an aromatic ring when Z^{23}–Z^{22} is a carbon to carbon double-bond.

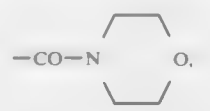
U.S. Cl. 430—613 **2 Claims**



1. A photographic recording material comprising a layer support and at least one photosensitive silver halide emulsion layer arranged thereon, characterized in that the at least one silver halide emulsion layer contains an antifogging agent corresponding to formula (I)

(I)

in which

A represents H, the cation of a metal atom or non-metal group, a group attached by a covalent bond to the nitrogen atom of the triazole which is only eliminated during processing of the material with release of the triazole, selected from the group consisting of

—CO—N(CH₃)₂, —COCH₃, —SO₂N(CH₃)₂ and —SO₂CH₃

R_1 represents C_1–C_9 alkyl, C_2–C_8 alkenyl, C_6–C_{10} aryl, SR_3,

R_2 represents H, C_1–C_9 alkyl, C_2–C_8 alkenyl, C_6–C_{10} aryl, C_5–C_{10} heteroaryl, Cl, Br, —$COOR_3$, —COR_3, —O-COR_3,

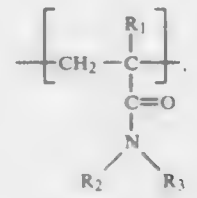
R_3 represents C_1–C_9 alkyl, C_2–C_8 alkenyl, C_6–C_{10} aryl, C_5–C_{10} heteroaryl, the sum of the carbon atoms in the substituents R_1, R_2 and R_3 being equal to or greater than 5 where R_2 is a carboxylic ester group in a quantity of from 10^{-5} to 10^{-2} mol per mol silver halide.

5,006,458

ANALYTICAL ELEMENT HAVING A POLYACRYLAMIDE OR DERIVATIVE TO MINIMIZE BACKGROUND FOR ASSAYING ENZYME ACTIVITY

Keiko Kato; Shigeki Kageyama; Yoshikazu Amano; Fuminori Arai, and Harumi Katsuyama, all of Saitama, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Dec. 21, 1987, Ser. No. 135,670



Claims priority, application Japan, Dec. 22, 1986, 61-305886

The portion of the term of this patent subsequent to Dec. 26, 2006, has been disclaimed.

Int. Cl.[5] C12Q *1/00, 1/26*

U.S. Cl. 435—4 **16 Claims**

1. In an analytical element for measuring enzyme activity of a liquid sample which has one or more water-permeable layers, and wherein at least one of the water-permeable layers is a porous spreading layer, the improvement which comprises said porous layer containing NAD^+ and at least one of the water-permeable layers containing a water-soluble hydrophilic polymer having a molecular weight from about 5,000 to 500,000 selected from the group consisting of homopolymers formed from a monomer component having the formula I and copolymers of this monomer component and another monomer component(s):

[I]

wherein R_1 represents a hydrogen atom or lower alkyl group, R_2 and R_3 represent a hydrogen atom, aliphatic hydrocarbon group, or aromatic hydrocarbon group, and R_2 may be identical with or different from R_3 and R_2 may be joined to R_3 to form a ring.

5,006,459

THERAPEUTIC AND DIAGNOSTIC METHODS USING SOLUBLE T CELL SURFACE MOLECULES

Patrick C. Kung, Cambridge; Stephen Ip, Framingham; Michael Brown, Wayland, all of Mass., and Linda A. McKeen, Point Pleasant, Pa., assignors to T Cell Sciences, Inc., Cambridge, Mass.

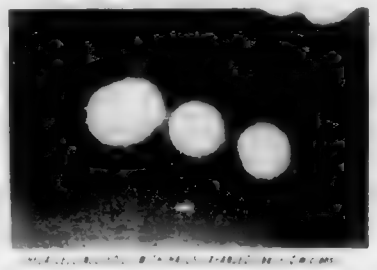
Continuation-in-part of Ser. No. 846,230, Mar. 31, 1986, abandoned. This application Mar. 2, 1987, Ser. No. 20,819

Int. Cl.[5] G01N *33/566, 33/569, 33/574, 33/577*

U.S. Cl. 435—5 **31 Claims**

1. A method for detecting an advanced stage of a lymphatic malignancy, comprising measuring the concentration of soluble interleukin-2 receptor in a body fluid obtained from a patient with the lymphatic malignancy, in which the concentrated of soluble interleukin-2 receptor is indicative of the stage of malignancy.

5,006,460



METHOD FOR MEASURING DNA DAMAGE IN SINGLE CELLS

Charles A. Thomas, Jr., La Jolla, and Eric A. Thomas, Solana Beach, both of Calif., assignors to Pantox Corporation, San Diego, Calif.

Filed May 26, 1988, Ser. No. 198,995

Int. Cl.[5] C12Q *1/68;* **G01N** *33/533*

U.S. Cl. 435—6 **37 Claims**

1. A method of measuring chain breakage in the DNA of a eucaryotic cell comprising the steps of:

(a) contacting said cell with a stripping solution that lyses and solubilizes said cell without denaturing the DNA of said cell, thereby forming a nucleoid having a halo,

said halo including undenatured DNA, and having a width related to the number of DNA chain breaks in said loop, and

(b) measuring said width of said halo, said width being indicative of said number of chain breaks.

5,006,461

TMB FORMULATION FOR SOLUBLE AND PRECIPITABLE HRP-ELISA

James E. Woiszwillo, Milford, Mass., assignor to Transgenic Sciences, Inc., Worcester, Mass.

Filed Nov. 3, 1989, Ser. No. 431,485
Int. Cl.[5] C12G *1/00;* G01N *33/53;* C12Q *1/68, 1/28*
U.S. Cl. 435—7.92 15 Claims

1. A reagent for forming a colored precipitate in an array using a chromogen producing a colored product in the presence of oxidizing agents comprising

an aqueous buffer containing a chromogen producing a colored product in the presence of oxidizing agents, substrate for perioxidase, and a peroxidase-conjugated molecule, including a polymeric compound selected from the group consisting of alginic acid, methyl vinyl ether-maleic anhydride copolymer, dextran sulfate, carrageenan and combinations thereof, wherein the colored product forms a stable precipitate with the polymeric compound.

5,006,462

METHOD FOR THE DETECTION OF SCHIZOPHRENIA

Wagner F. Gattaz, Heidelberg, Fed. Rep. of Germany, assignor to Abbott Laboratories, Abbott Park, Ill.

Filed Mar. 16, 1988, Ser. No. 168,709
Int. Cl.[5] G01N *33/53;* C12Q *1/44*
U.S. Cl. 435—7.4 28 Claims

1. A method for the diagnosis of schizophrenia, comprising:

(a) combining a test sample with a substrate capable of detecting phospholipase-A2 in the test sample;

(b) obtaining a measurement of the amount of said phospholipase-A2 in the test sample;

(c) comparing the measured amount to phospholipase-A2 values found in nonschizophrenic controls; and

(d) diagnosing schizophrenia if said test sample measurement is increased relative to phospholipase-A2 values found in nonschizophrenic controls.

5,006,463

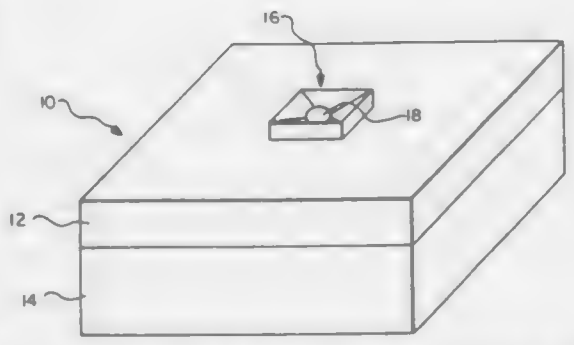
IMMUNOASSAYS FOR DISCRIMINATING BETWEEN BRUCELLOSIS INFECTIONS AND VACCINATIONS

John W. Cherwonogrodzky, Kanata; J. Robert Duncan, Nepean; Klaus Nielsen; Peter F. Wright, both of Richmond; David R. Bundle, and Malcolm B. Perry, both of Ottawa, all of Canada, assignors to National Research Council of Canada, Ottawa, Canada

Filed Sep. 25, 1987, Ser. No. 100,873
Claims priority, application Canada, Sep. 26, 1986, 519243
Int. Cl.[5] G01N *33/53, 33/543, 33/531;* C12Q *1/04*
U.S. Cl. 435—7.32 13 Claims

1. A method for discriminating between (i) normal animals or animals vaccinated or immunized against smooth Brucella sp. or *Y. enterocolitica* 0:9, and (ii) animals infected with smooth *Brucella sp.* or *Y. enterocolitica* 0:9, comprising the steps of:

(a) subjecting serum samples from the animals to immunoassay to detect serological activity against an O-chain polysaccharide containing 4,6-dideoxy-4-acylamido-D-mannopyranose repeating units; and



(b) differentiating the sera of the normal animals or vaccinated or immunized animals from those of infected animals based on a negative or positive result, respectively, of said assay, wherein the sera from infected animals is differentiated from the sera of normal animals or vaccinated or immunized animals based on the differences in specificity or affinity between antibodies of infected animals and antibodies of normal animals or vaccinated or immunized animals to said O-chain polysaccharide.

5,006,464

DIRECTED FLOW DIAGNOSTIC DEVICE AND METHOD

Albert E. Chu, Hillsborough; Peter K. Chun, South San Francisco, and Siu C. C. Yeung, San Mateo, all of Calif., assignors to E-Y Laboratories, Inc., San Mateo, Calif.

Filed Oct. 1, 1987, Ser. No. 103,845
Int. Cl.[5] G01N *33/53, 31/22, 33/553*
U.S. Cl. 435—7.1 23 Claims

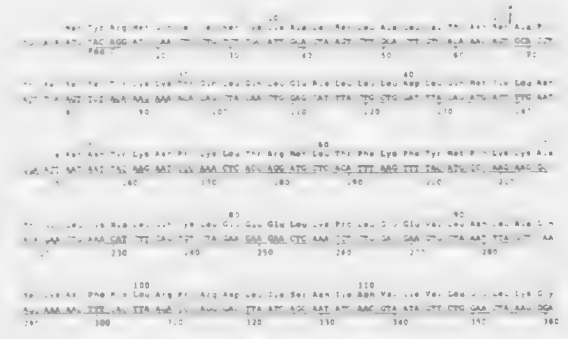
17. An assay method for the detection of a bindable target substance in a liquid sample suspected of containing such substance, employing as an assay device an analytical apparatus comprising:

(a) a reaction membrane which is liquid-permeable and porous and having an upper and lower surface, an exposed area of said upper surface having immobilized thereon a receptor capable of directly or indirectly binding to the bindable target substance said immobilized receptor being concentrated in a limited region of said upper surface of said reaction membrane;

(b) a body of absorbent material capable of absorbing a liquid, said body having a surface located adjacent to the lower surface of the reaction membrane;

(c) separating means for substantially preventing liquid flow from the lower surface of the porous reaction membrane to the upper surface of the absorbent material body; and

(d) port means through said separating means for substantially directing the flow of liquid from the lower surface of said porous reaction membrane through said separating means into said absorbent material body, said port means comprising at least one port containing liquid permeable material contacting said reaction membrane said port means being of a substantially smaller cross-sectional area than said reaction membrane upper surface exposed area;



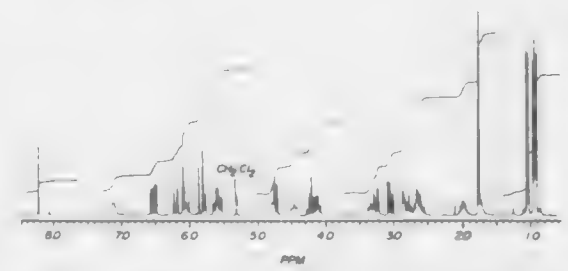
the method comprising applying the liquid sample, visibly labelled substance capable of specific binding to said receptor or target substance, and any additional reagents to the upper surface of said permeable reaction membrane whereby the applied liquid sample will permeate through said port means to the membrane lower surface and be substantially directed to at least one selected portion of the adjacent surface of said absorbent material body, said liquid flowing downwardly through said reaction membrane with a radial flow component in a substantially horizontal plane directed either (1) radially away from the center of said immobilized receptor outwardly towards the periphery of said reaction membrane or (2) radially inwardly toward the center of said immobilized receptor and thereafter detecting said visible labelled substance bound to said upper surface in order to detect the presence or absence of target substance in the liquid sample.

5,006,465

PROCESS FOR PREPARING BOVINE INTERLEUKIN-2

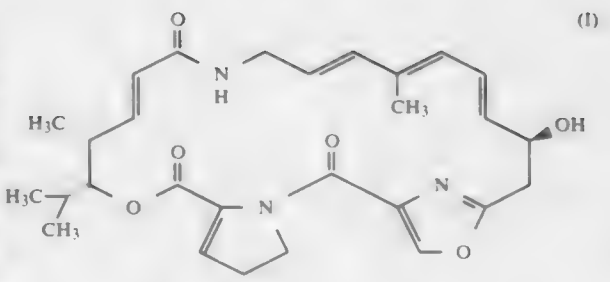
Dirk M. Anderson, 1757 N.W. 58th St., Seattle, Wash. 98107; Paul E. Baker, 16710 Agate Pass Rd., Bainbridge Island, Wash. 98110; Michael A. Cantrell, 4035 Midvale Ave. N., Seattle, Wash. 98103; Douglas P. Cerretti, 2415 W. Bertona, Seattle, Wash. 98199; David J. Cosman, 310 - 12th Ave. E., Seattle, Wash. 98102; Steven D. Gimpel, 3602 N.E. 73rd, #5, Seattle, Wash. 98115; Kenneth H. Grabstein, 5829 N.E. 75th St., No. 443, Seattle, Wash. 98115; Alf D. Larsen, 320 Summit Ave. E., No. 15, Seattle, Wash. 98102, and Kate N. McKereghan, 1140 N. 76th, Seattle, Wash. 98103

Division of Ser. No. 888,994, Jul. 31, 1986, Pat. No. 4,882,282, which is a continuation-in-part of Ser. No. 766,643, Aug. 16, 1985, abandoned. This application Aug. 11, 1989, Ser. No. 392,811
The portion of the term of this patent subsequent to Nov. 21, 2006, has been disclaimed.
Int. Cl.[5] C12P *21/06, 19/34;* C12N *15/00, 1/20, 1/14, 1/18, 15/00;* C07H *15/12;* C07K *3/00*
U.S. Cl. 435—69.52 27 Claims



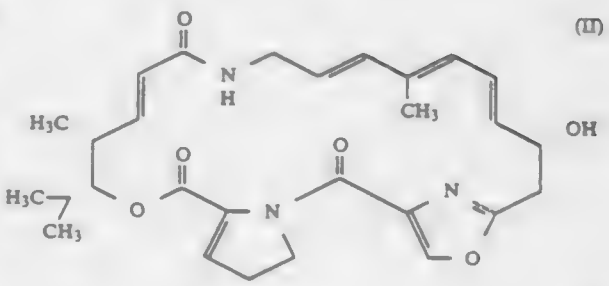
1. A process for preparing bovine interleukin-2(bIL-2) comprising the steps of culturing a microbial host transformed by a vector containing a DNA sequence encoding bIL-2 under conditions suitable for the expression of bIL-2 and recovering bIL-2.

5,006,466



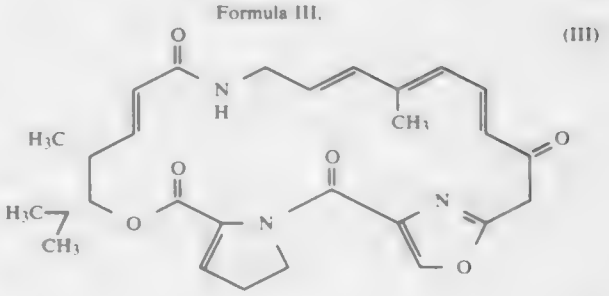
FERMENTATION ANALOGS OF VIRGINIAMYCIN M_1

Yiu-kuen T. Lam, Plainsboro; Otto D. Hensens, Red Bank, both of N.J.; Raymond S. Chang, Lansdale, Pa.; Cheryl D. Schwartz, Westfield, and Deborah L. Zink, Manalapan, both of N.J., assignors to Merck & Co., Inc., Rahway, N.J.

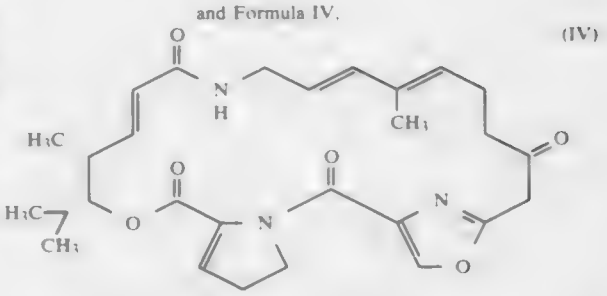


Division of Ser. No. 173,342, Mar. 25, 1988, Pat. No. 4,894,370, which is a division of Ser. No. 934,231, Nov. 21, 1986, Pat. No. 4,762,923. This application Oct. 26, 1989, Ser. No. 426,836
Int. Cl.[5] C12P *17/18, 17/14;* C12N *1/00, 1/20*
U.S. Cl. 435—120 2 Claims

1 A process for preparing the compounds of Formula I,



(I)



(II)

Formula III,

(III)

and Formula IV.

(IV)

which comprises the controlled aerobic fermentation of a strain of *Streptomyces olivaceous*, ATCC 53527, in an assimilable aqueous nutrient medium.

5,006,467

CELL CULTURE MICROCARRIERS

Hiroshi Kusano, Yokohama; Tsuyoshi Ito, Machida, and Hirohisa Kubota, Yokohama, all of Japan, assignors to Mitsubishi Kasei Corporation, Tokyo, Japan

Filed Jun. 29, 1988, Ser. No. 213,251
Claims priority, application Japan, Jul. 3, 1987, 62-166712
Int. Cl.[5] C12N *11/08;* C08F *16/26, 24/00*
U.S. Cl. 435—180 3 Claims

1. Mammalian anchorage-dependent cell culture microcarriers consisting of water-insoluble polymer particles, charcterized in that the particles are constituted by polyethyleneglycol (meth)acrylate, glycidyl (meth)acrylate and a cross linking agent, and have an average diameter of 100–1,000 μm and a density of 1.00–1.20 g/ml in a culture medium as well as positively chargeable chemical moieties distributed at least on their surfaces, the moieties being introduced into the particles by a reaction between glycidyl (meth)acrylate and ammonia or an amine having 5 or less carbon atoms and being bonded thereto directly through a nitrogen atom.

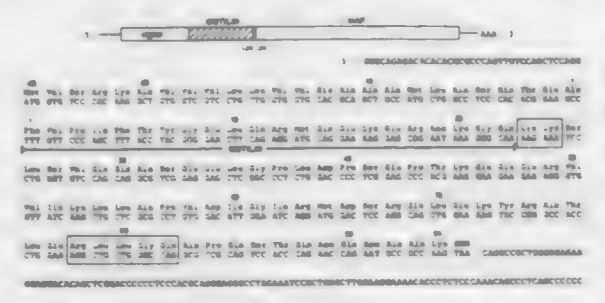
5,006,468

NOVEL UREASE AND METHOD OF PRODUCING THE SAME

Toru Nakayama; Hajime Yoshizumi, both of Osaka; Hiroshi Yamamoto, Kyoto, and Kiyoshi Yoshizawa, Saitama, all of Japan, assignors to Suntory Limited, Osaka and National Tax Administration, Tokyo, both of, Japan

Filed Nov. 16, 1988, Ser. No. 271,966
Claims priority, application Japan, Nov. 17, 1987, 62-289994
Int. Cl.[5] C12N *9/80*
U.S. Cl. 435—228 2 Claims

1. A substantially pure urease capable of being produced by a microorganism of the strain Arthrobacter mobilis SAM0752 having the following pyhsical and chemical properties:



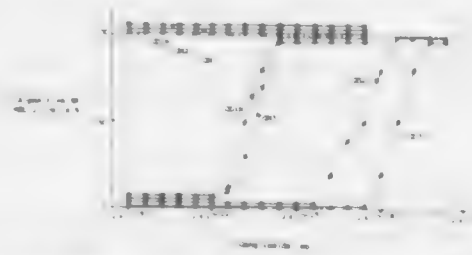
(1) function:
catalyzing hydrolysis of 1 mole of urea to produce 2 moles of ammonia and 1 mole of carbon dioxide at an optimum pH in the range of 4.2 to 5.0 and an optimum temperature in the range of 50°-60° C.;
(2) pH stability:
stable between pH 4.5 and 8.5 in treatment at 4° C. for 16 hours;
(3) temperature stability:
stable up to 50° C. in treatment at pH 4.5 for 15 minutes;
(4) substrate specificity:
having an extremely high degree of specificity to urea;
(5) inhibitor:
Hg^{++}, Ag^{+} or Cu^{++} ions;
(6) Km value:
in the range of 3.6 to 3.7 mM (pH 4.5, 0.1M acetic acid buffer);
(7) molecular weight:
about 240,000 (measured by a gel filtration method; and
(8) isoelectric point:
at a pI value of between 6.5 and 7.0

5,006,469

VECTORS AND HOST CELLS EXPRESSING PREPROMOTILIN AND MOTILIN-ASSOCIATED PEPTIDE (MAP)

John P. Adelman; Chris T. Bond; Gajanan Nilaver, and Earl A. Zimmerman, all of Portland, Oreg., assignors to Oregon Health Sciences University, Portland, Oreg.

Filed Feb. 9, 1988, Ser. No. 154,156
Int. Cl.[5] C12N *15/70, 15/74, 15/79, 15/85*
U.S. Cl. 435—240.1 4 Claims



1. A recombinant expression vector comprising control sequences operably linked to a DNA encoding a protein functionally equivalent to motilin precursor or preprotein forms thereof, said DNA including a nucleotide sequence substantially equivalent to the sequence depicted in FIG. 1 encoding for amino acid residues 1-94.

5,006,470

HUMAN MONOCLONAL ANTIBODIES TO CELL SURFACE ANTIGENS OF MELANOMA

Hiroshi Yamaguchi, Bronx; Koichi Furukawa; Philip O. Livingston, both of New York; Kenneth O. Lloyd, Bronx, all of N.Y.; Herbert F. Oettgen, New Canon, Conn.; Lloyd J. Old, New York, N.Y., and Sheila R. Fortunato, Hollis, N.Y., assignors to Sloan-Kettering Institute for Cancer Research, New York, N.Y.

Filed Apr. 16, 1987, Ser. No. 39,479
Int. Cl.[5] C12N *5/12;* C07K *15/28;* A61K *39/00;* G01N *33/53*
U.S. Cl. 424—85.8 14 Claims

1. The human monoclonal antibody produced by the hybridoma cell line designated GXM1.

5,006,471

FUNGAL RESISTANCE MARKERS

Florentina S. Sanchez; Victor R. Susan; Laura Carramolino-Fitera, and Agustin P. A. Ortega, all of Madrid, Spain, assignors to Antibioticos S.A. of Bravo Murillo 38, Madrid, Spain

Continuation of Ser. No. 9,713, Feb. 2, 1987. This application Mar. 26, 1987, Ser. No. 32,065
Claims priority, application United Kingdom, Mar. 26, 1986, 8607502
Int. Cl.[5] C12N *1/15, 15/11, 15/80;* C12Q *1/04*
U.S. Cl. 435—254 12 Claims

1. A drug resistant strain of *Penicillium chrysogenum* where drug resistance is conferred by a vector for *P. chrysogenum* carrying a sulfonamide, trimethoprim or methotrexate resistance gene operably linked to the promoter region of the trpC gene isolated from *P. chrysogenum*.

5,006,472

ENZYMATIC PURIFICATION PROCESS

George B. Dove, Hercules, and Gautam Mitra, Kensington, both of Calif., assignors to Miles Inc., Elkhart, Ind.

Filed Jun. 3, 1988, Ser. No. 202,726
Int. Cl.[5] C12N *1/08*
U.S. Cl. 435—270 11 Claims

1. A method of enhancing the removal of nucleic acids from cell culture fluid containing a desirable, biologically active therapeutic substance to be purified and undesirable nucleic acids having an average molecular size similar to the molecular size of the therapeutic substance, the method comprising the steps of contacting the fluid with nuclease enzymes in the presence of a detergent under conditions sufficient to assure the degradation of the nucleic acids to a molecular size range significantly different from the molecular size of the desirable substance, and then subjecting the fluid to at least one separation step sufficient to remove nucleic acids from the fluid.

4. A method of removing DNA from a cell culture fluid containing a biologically active, therapeutic substance expressed by the cells, the method comprising the steps of

(a) incubating the fluid in the presence of a DNA-ase and a detergent in quantities sufficient to enhance the DNA-ase activity under conditions sufficient to degrade at least some of the DNA in the fluid; and
(b) subjecting the fluid to a separation step capable of removing at least some of the degradation products formed in step (a).

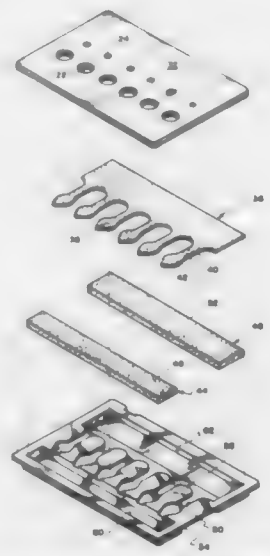
5,006,473

ELECTROPHORESIS METHOD USING VESICLES

Stanley R. Bouma, Mundelein; Lawrence J. Blecka, Palatine, both of Ill., and Philip Miller, Tucson, Ariz., assignors to Abbott Laboratories, Abbott Park, Ill.

Filed Aug. 9, 1988, Ser. No. 230,217
Int. Cl.[5] G01N *33/561*
U.S. Cl. 436—516 33 Claims

1. A method for detecting an analyte of interest in a sample comprising:



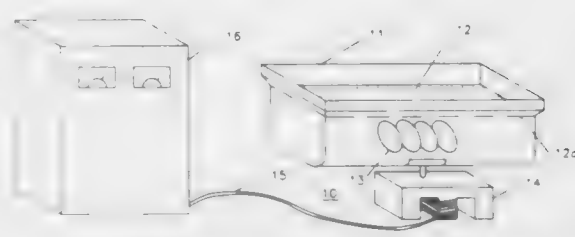
(a) providing an electrophoresis support medium through which said sample can migrate, said support medium including
(i) vesicles in which an indicator reagent is encapsulated, wherein said vesicles are embedded in said support medium and are of sufficient size so as to be immobile in said support medium, and
(ii) first binding members immobilized in said support medium, wherein said first binding members are capable of binding said analyte, and wherein said first binding members are immobilized directly within said support medium or indirectly by immobilization upon said vesicles;
(b) passing said sample through said support medium by electrophoresis so analyte is bound by said first binding members;
(c) passing a reactive species through said support medium, wherein said reactive species is a label, and wherein said label is capable of reacting with said indicator reagent in the presence of analyte to produce a detectable signal;
(d) lysing said vesicles; and
(e) detecting said signal.

5,006,474

BI-DIRECTIONAL LATERAL CHROMATOGRAPHIC TEST DEVICE

Frederick C. Horstman, Laguna Niguel, and Julie Whiteside, Orange, both of Calif., assignors to Disease Detection International Inc., Irvine, Calif.

Filed Dec. 16, 1987, Ser. No. 133,804
Int. Cl.[5] G01N *33/543;* C12Q *1/24*
U.S. Cl. 436—524 27 Claims



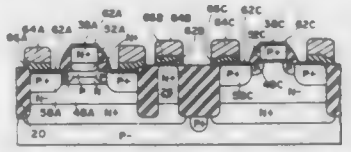
1. In a test device for performing solid phase immunoassays of a test sample having a liquid component, the combination of:
a planar fiber filter matrix which absorbs and conducts fluid, said matrix including a test sample application zone, a separation zone and a reaction zone, said separation zone separating said application zone from said reaction zone and being sufficiently long to inhibit migration of particulates in said sample into said reaction zone; first absorbent material in communication with said sample application zone; and second absorbent material in communication with said reaction zone so as to cause bilateral flow of the liquid component of said test sample; said filter matrix at the location of communication between said sample application zone and said first absorbent material being constricted for causing said bilateral flow to be primarily from said application zone to said reaction zone, and secondarily from said application zone to said first absorbent material.

5,006,475

METHOD FOR BACKSIDE DAMAGE OF SILICON WAFERS

John Robbins, Sherman, and Ricky L. Boston, Denison, both of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Jul. 12, 1989, Ser. No. 378,632
Int. Cl.[5] H01L *21/306*
U.S. Cl. 437—10 11 Claims



1. A method for backside damaging of semiconductor wafers comprising the steps of:
at least partially submerging the semiconductor wafers in an abrasive powder; and
vibrating the abrasive powder to create backside damage to the semiconductor wafers.

5,006,476

TRANSISTOR MANUFACTURING PROCESS USING THREE-STEP BASE DOPING

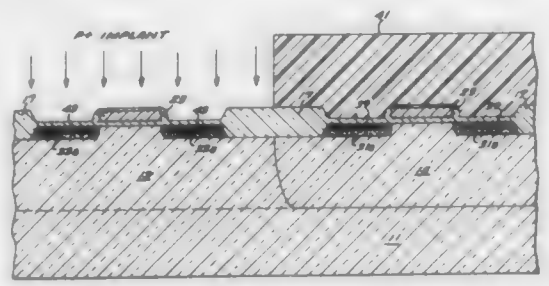
Jan L. De Jong, San Jose, Calif., and Jacob G. DeGroot, TA Malden, Netherlands, assignors to North American Philips Corp., Signetics Division, Sunnyvale, Calif.

Continuation of Ser. No. 241,526, Sep. 7, 1988, abandoned. This application Nov. 20, 1989, Ser. No. 440,456
Int. Cl.[5] H01L *21/265*
U.S. Cl. 437—31 20 Claims

1. A method of fabricating a bipolar transistor from a monocrystalline semiconductor body that comprises a major region of a first conductivity type located along an upper surface of the body, the method comprising the steps of:
introducing an initial dopant of a second conductivity type opposite to the first conductivity type into the major region to convert a surface-adjoining portion into a primary zone of the second conductivity type;
creating a patterned electrically conductive layer above the primary zone so as to contact part of its upper surface;
introducing a main impurity of the first conductivity type into the primary zone through part of its upper surface to convert a surface-adjoining portion into an emitter of the first conductivity type;
introducing an intermediate dopant of the second conductivity type into the major region through part of its upper

surface to establish a surface-adjoining portion as an intermediate zone of the second conductivity type using the patterned layer and any electrically insulating material along its sides as a shield for blocking the intermediate dopant from passing through the directly underlying section of the upper surface of the major region;

forming electrically insulating spacers along the sides of the patterned layer to a mean lateral width greater than that of any electrically insulating material located along the sides of the patterned layer during the previous step; and



introducing a further dopant of the second conductivity type into the major region through part of its upper surface to establish a surface-adjoining portion as a base contact zone of the second conductivity type laterally separated from the emitter using the patterned layer and spacers as a shield for blocking the further dopant from passing through the directly underlying section of the upper surface of the major region, the intermediate zone being continuous with the primary zone and the base contact zone to form a base of the second conductivity type.

5,006,477

METHOD OF MAKING A LATCH UP FREE, HIGH VOLTAGE, CMOS BULK PROCESS FOR SUB-HALF MICRON DEVICES

Joseph E. Farb, Riverside, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

Filed Nov. 25, 1988, Ser. No. 275,833
Int. Cl.[5] H01L *21/265*
U.S. Cl. 437—34 **14 Claims**

1. In an integrated circuit wafer having a substrate with gate regions and field oxide regions formed thereon, a method for doping source and drain regions for sub-half-micron devices in the substrate adjacent the top surface thereof on opposing sides of each gate region, comprising the steps of:

forming oxide spacers surrounding said gate regions;

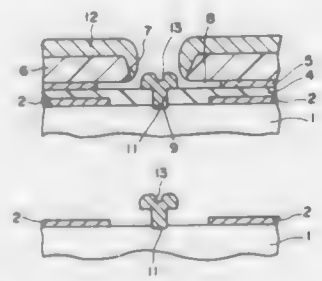
forming lightly doped graded regions in the source and drain regions having a doping concentration that decreases linearly with distance from the top surface of the source and drain regions; and

forming respective heavily doped regions in each of the lightly doped graded regions adjacent the surface of the source and drain regions.

5,006,478

METHOD FOR MANUFACTURE OF SEMICONDUCTOR DEVICE

Junichiro Kobayashi; Shigeru Hiramatsu, and Hidemi Takakuwa, all of Kanagawa, Japan, assignors to Sony Corporation, Tokyo, Japan



Filed Jul. 24, 1990, Ser. No. 556,480
Claims priority, application Japan, Jul. 25, 1989, 64-192854
Int. Cl.[5] H01L *21/265*
U.S. Cl. 437—41 **10 Claims**

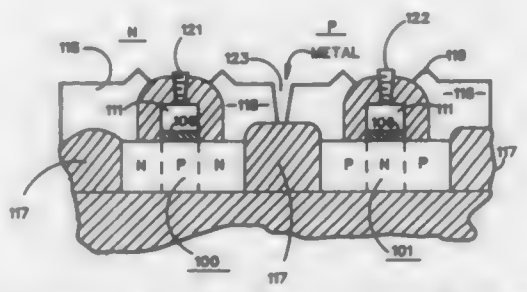
1. A method for manufacturing a semiconductor device, comprising the steps of:

sequentially forming a first resist layer, an intermediate layer and a second resist layer on a substrate;

forming an aperture by removing a portion of said second resist layer where a T-shaped gate is to be later formed;

over-etching a portion of said intermediate layer which is opposed to said aperture thereby forming in said interme-

diate layer an aperture larger than the first-mentioned aperture; and



forming in said first resist layer an aperture which is smaller than the aperture in said second resist layer and which is positioned inside thereof.

5,006,479

METHODS FOR IMPROVING RADIATION TOLERANCE OF SILICON GATE CMOS/SILICON ON SAPPHIRE DEVICES

Jerry V. Brandewie, Mission Viejo, Calif., assignor to Rockwell International Corporation, El Segundo, Calif.

Filed Feb. 27, 1990, Ser. No. 485,687
Int. Cl.[5] H01L *21/266, 21/223, 21/336*
U.S. Cl. 437—45 **6 Claims**

1. A method for forming an edge hardened N type field effect transistor, comprising the steps of:

delineating an active region in an epitaxial layer of silicon on sapphire including a relatively thin thermal oxide layer on the silicon layer, a low temperature oxide layer over the thermal oxide, a silicon nitride layer over the thermal oxide, and a photoresist layer over the silicon nitride layer; said delineating including using reactive ion etching to verticalize the edges of the photoresist, thermal oxide, silicon nitride, and low temperature oxide layers;

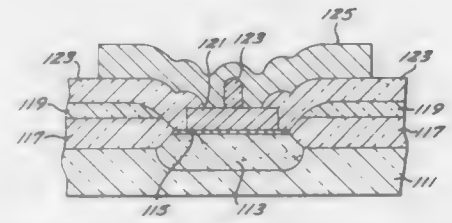
multiple implanting boron ions into exposed portions of the silicon layer directly adjacent the active region at different energy levels between approximately 20 kilo electron volts and 50 kilo electron volts using doses of 10^{14}–10^{17} ions/cm^2 to provide a substantially uniform penetration of the silicon layer;

removing the photoresist layer;

driving in the boron ions to a depth of about 0.1 to 0.2 microns by heating in a nitrogen environment to approximately 850° C. for up to 2 hours;

using reactive ion etching to delineate the active region in the epitaxial layer and expose the edges being hardened;

conventionally finishing the forming of said transistor; and,



using boro phospho silicate glass directly in contact with said edges for isolation purposes.

5,006,480

METAL GATE CAPACITOR FABRICATED WITH A SILICON GATE MOS PROCESS

C. P. Chang, Newport Beach, and Joseph Farb, Riverside, both of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Continuation-in-part of Ser. No. 229,540, Aug. 8, 1988, abandoned, which is a division of Ser. No. 918,185, Oct. 14, 1986, abandoned. This application Feb. 13, 1990, Ser. No. 479,557
Int. Cl.[5] H01L *21/70*
U.S. Cl. 437—47 **1 Claim**

1. A process for making MOS metal gate capacitors with a silicon gate process, comprising the steps of:

providing a semiconductor substrate and defining active areas and capacitor areas on the surface thereof;

forming field oxide regions that generally surround the active areas and the capacitor areas;

forming a gate oxide layer over the active areas and the capacitor areas;

forming polysilicon polysilicon gates over the active areas;

forming highly doped source and drain regions in the active areas and highly doped bottom capacitor plate regions in the capacitor areas;

depositing an oxide layer over the semiconductor structure;

opening the capacitor areas to expose the highly doped bottom capacitor plate regions; and

heating the semiconductor structure to reflow the deposited oxide layer and to grow a capacitor oxide layer over the exposed capacitor areas.

METHOD OF MAKING A STACKED CAPACITOR DRAM CELL

Tsiu C. Chan, Carrollton, and Frank R. Bryant, Denton, both of Tex., assignors to SGS-Thomson Microelectronics, Inc., Carrollton, Tex.

Continuation-in-part of Ser. No. 443,897, Nov. 30, 1989. This application Apr. 30, 1990, Ser. No. 516,271
Int. Cl.[5] H01L *21/70*
U.S. Cl. 437—52 **5 Claims**

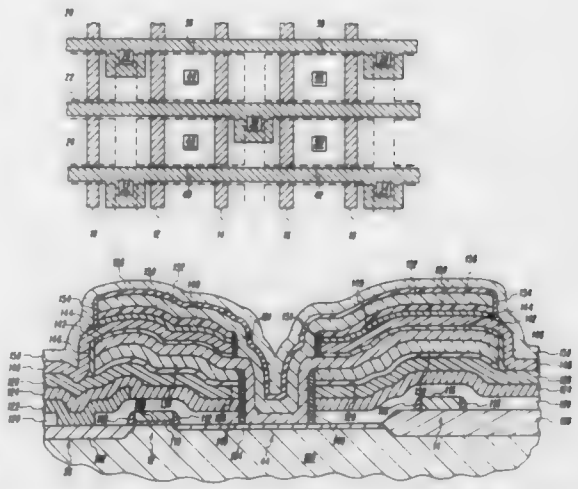
1. A method for forming a capacitor for an integrated circuit device, comprising the steps of:

forming a first ground plate of polycrystalline silicon;

forming a first insulating layer over the first ground plate;

forming an opening to a substrate;

forming a first charge storage plate of polycrystalline silicon over the first insulating layer, wherein the first charge storage plate contacts the substrate through the opening;



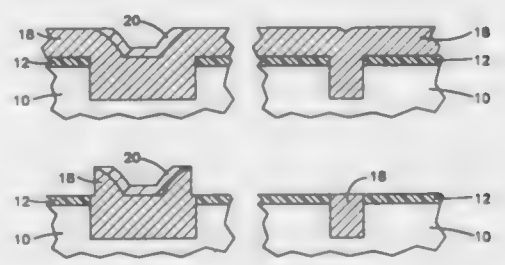
forming a second insulating layer over the first charge storage plate;

forming a second ground plate of polycrystalline silicon over the second insulating layer, wherein the second ground plate makes electrical contact with the first ground plate;

forming a third insulating layer over the second ground plate;

forming a second charge storage plate of polycrystalline silicon over the third insulating layer, wherein the second charge storage plate makes electrical contact with the first charge storage plate;

forming a fourth insulating layer over the second charge storage plate;and



forming a third ground plate of polycrystalline silicon over the fourth insulating layer, wherein the third ground plate makes electrical contact with the second ground plate.

FORMING WIDE DIELECTRIC-FILLED PLANARIZED ISOLATION TRENCHES IN SEMICONDUCTORS

Michael L. Kerbaugh, Burlington; Charles W. Koburger, III, Essex, and Brian J. Machesney, Burlington, all of Vt., assignors to International Business Machines Corporation, Armonk, N.Y.

Filed Oct. 25, 1989, Ser. No. 427,153
Int. Cl.[5] H01L *21/82*
U.S. Cl. 437—67 **14 Claims**

12. A process for forming a filled wide trench in the surface of a substrate comprising the steps of:

forming a wide trench in the surface of the substrate;

conformally forming a layer of filling material on the surface of the substrate including in said trench the top surface of which filling material extends above the plane of the surface of the substrate;

conformally forming a layer of etch-resistant material on said layer of filling material which etch resistant material will mask said filling material from reactive ion etching;

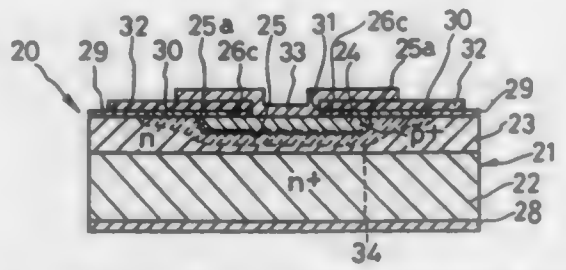
selectively removing only those portions of said etch resistant material that extend above the surface of the filling material by physical polishing and not removing any etch resistant material disposed below the surface of said filling material, such that the only remaining portion of the etch resistant material resides within the width of said trench;

forming a plug above said trench by anisotropically etching

said layer of filling material which is not masked by said etch resisting material down to the top of said trench; and removing said plug to obtain a filled trench having an upper surface in substantial planarity with the upper surface of said substrate.

5,006,483

FABRICATION OF P-N JUNCTION SEMICONDUCTOR DEVICE



Koji Ohtsuka, Shiki, and Hirokazu Goto, Hanno, both of Japan, assignors to Sanken Electric Co., Ltd., Saitama, Japan

Division of Ser. No. 319,951, Mar. 7, 1989. This application Jun. 26, 1990, Ser. No. 544,202

Claims priority, application Japan, Mar. 31, 1988, 63-80173

Int. Cl.[5] M01L *21/443*

U.S. Cl. 437—179 4 Claims

1. A method of making a p-n junction semiconductor device which comprises:

(a) providing a semiconductor substrate comprising first and second regions of opposite conductivity types providing a p-n junction therebetween, the first semiconductor region being of higher resistivity than the second semiconductor region, the first and second semiconductor regions being both exposed through a predetermined surface of the substrate;

(b) forming a layer of a first metal on the predetermined surface of the substrate;

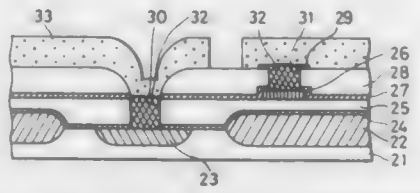
(c) forming a layer of second metal on the first metal layer;

(d) removing a peripheral part of the second metal layer so as to leave the remainder of the second metal layer on the second semiconductor region of the substrate via the first metal layer, with the consequent exposure of a peripheral part of the first metal layer; and

(e) oxidizing the exposed peripheral part of the first metal layer through a mask of the remaining part of the second metal layer in order to form a resistive layer of the oxide of the first metal capable of forming a Schottky barrier at its interface with the first semiconductor region of the substrate.

5,006,484

MAKING A SEMICONDUCTOR DEVICE WITH CONTACT HOLES HAVING DIFFERENT DEPTHS



Yusuke Harada, Tokyo, Japan, assignor to Oki Electric Industry Inc, Co., Japan

Filed Jan. 31, 1990, Ser. No. 472,765

Claims priority, application Japan, Feb. 1, 1989, 1-20741

Int. Cl.[5] H01L *21/441*

U.S. Cl. 437—192 13 Claims

1. A process for fabrication a semiconductor device having a relatively deep contact hole and a relatively shallow contact hole, comprising the steps of:

(a) forming a lower interlayer insulating film having a flowing property on a semiconductor substrate:

(b) performing a heat treatment to cause said lower interlayer insulating film to flow:

(c) forming an upper interlayer insulating film having a flowing property on said lower interlayer insulating film;

(d) performing a heat treatment to cause said upper interlayer insulating film to flow; (e) forming a non-flowing film which does not have a flowing property in the area within which said shallow contact hole will be formed;

(f) forming said deep contact hole through said upper interlayer insulating film and said lower interlayer insulating film and forming said shallow contact hole through said upper interlayer insulating film and said non-flowing film;

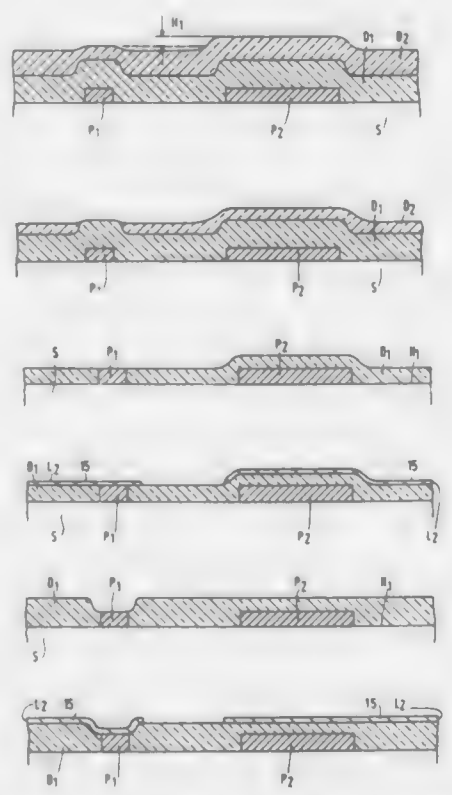
(g) performing a heat treatment to cause said upper interlayer insulating film to flow, whereby said upper interlayer insulating layer flows except at the area covered by said non-flowing film;

(h) filling said deep contact hole and said shallow contact hole with metal by selective CVD; and

(i) forming an interconnect in contact with said metal filling said contact holes.

5,006,485

METHOD OF MANUFACTURING AN INTERGRATED CIRCUIT INCLUDING STEPS FOR FORMING INTERCONNECTIONS BETWEEN PATTERNS FORMED AT DIFFERENT LEVELS



Claudine Villalon, Chennevieres, France, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Dec. 4, 1989, Ser. No. 446,506

Claims priority, application France, Dec. 9, 1988, 88 16230; Sep. 19, 1989, 89 12263

Int. Cl.[5] H01L *21/312, 21/47*

U.S. Cl. 437—195 14 Claims

1. A method of manufacturing integrated circuits having

improved electrical and mechanical properties comprising the steps of

(a) forming first conducting patterns on a substrate, said first conducting patterns including at least one first conducting portion having a dimension W_1 and at least one second conducting portion having a dimension W_2 substantially larger than W_1, said first conducting portion and second conducting portion having substantially coplanar upper surfaces;

(b) at least some of said second conducting portions being formed with appendices of reduced width, said appendices having a dimension substantially equal to W_1, and said appendices having an upper surface substantially coplanar with the upper surfaces of said first conducting portions;

(c) depositing a first dielectric layer over said conducting patterns and said substrate, said first dielectric layer being a passivating material, and said first dielectric layer having a uniform thickness, said uniform thickness being at least equal to a thickness of said at least one first conducting portion;

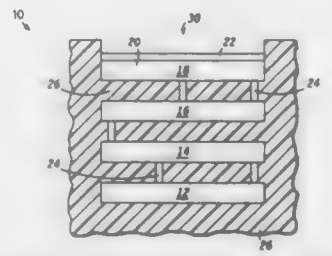
(d) thereafter depositing a second dielectric layer over said first dielectric layer, said second dielectric layer also being passivating and having a smaller thickness over said at least one first conducting portion than over said at least one second conducting portion;

(e) etching said second dielectric layer until said first dielectric layer over said at least one first conducting portion appears;

(f) thereafter etching said first dielectric layer at an etch rate greater than the etch rate of said second dielectric layer to form openings to said first conducting portions while said second conducting portions remain covered by a thickness of said first dielectric layer; and

(g) thereafter depositing metallic conduction layers in contact with said first conduction portions through said openings, said metallic conduction layers being separated from said second conducting portions.

5,006,486



DIRECT CONTACT TAB METHOD

Douglas W. Schucker, Mesa, Ariz., assignor to Motorola, Inc., Schaumburg, Ill.

Filed Jan. 29, 1990, Ser. No. 471,763

Int. Cl.[5] H01L *21/603*

U.S. Cl. 437—220 10 Claims

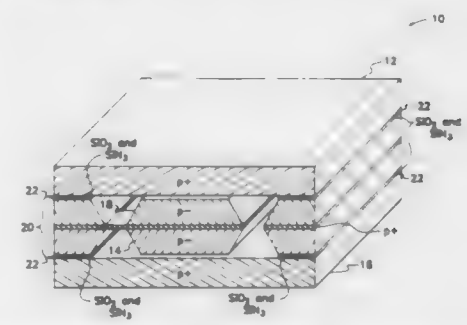
1. A method of connecting a TAB leadframe to the internal metallization of a semiconductor die comprising the steps of:

providing a semiconductor die having at least one metallization layer;

exposing at least a portion of said at least one metallization layer; and

directly contacting said exposed portion of said at least one metallization layer with a TAB leadframe.

5,006,487



METHOD OF MAKING AN ELECTROSTATIC SILICON ACCELEROMETER

John F. Stokes, Wyoming, Minn., assignor to Honeywell Inc., Minneapolis, Minn.

Division of Ser. No. 386,338, Jul. 27, 1989. This application Mar. 27, 1990, Ser. No. 499,756

Int. Cl.[5] H01L *21/302*

U.S. Cl. 437—228 5 Claims

1. A method for making a solid state accelerometer, comprising:

depositing a p+ doped layer of epitaxial silicon on a double-sided polished first p− doped silicon wafer;

dry etching a first pattern on the epitaxial silicon to define flexures and a proof mass;

fusion bonding a second p− doped silicon wafer to the p+ doped layer of epitaxial silicon;

thermally oxidizing the exposed surfaces of said first and second p− doped silicon wafers to grow dielectric interlayers to set widths of gaps for the proof mass;

applying an etch resistant material of a second pattern the dielectric interlayers;

anisotropically etching the first and second p− doped wafers to make individual flexures and the proof mass;

removing inner portions of the dielectric interlayers to make the gaps; and

fusion bonding first and second p+ doped silicon stop wafers to the dielectric interlayers of the first and second p− doped silicon wafers, thereby constituting the gaps between the proof mass and the first and second p+doped silicon stop wafers, and sealing the proof mass from volume external to the proof mass.

5,006,488

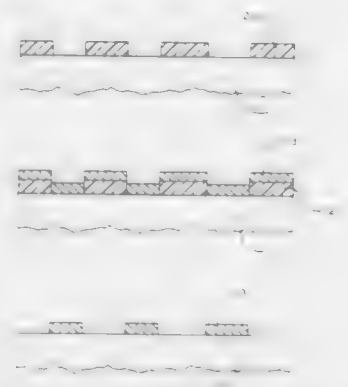
HIGH TEMPERATURE LIFT-OFF PROCESS

Rosemary A. Previti-Kelly, Richmond, Vt., assignor to International Business Machines Corporation, Armonk, N.Y.

Filed Oct. 6, 1989, Ser. No. 417,935

Int. Cl.[5] H01L *21/312, 21/47*

U.S. Cl. 437—229 10 Claims



1. A process for forming a pattern of conductive material on a processed semiconductor substrate, comprising the steps of:

applying a layer of photosensitive polyimide precursor to said substrate, wherein said precursor is a material which fully imidizes at a temperature in excess of the temperature at which said conductive material is to be applied, said layer having a thickness greater than about 15μ and at least about 25% greater than that of said film to be formed;

imagewise exposing and then developing said layer so as to uncover portions of said substrate;

applying a conductive material to form a film on the portions of said layer remaining on said substrate and the uncov-

ered portions of said substrate at a temperature in the range from about 150° C. to about 250° C.; and

lifting-off said remaining portions of said layer and the portions of said film which overlie said remaining portions of said layer.

5,006,489

SOLDERING ENAMEL FOR PREPARING AN END SEAL OF A CERAMIC DISCHARGE ENVELOPE OF A DISCHARGE LAMP

Ferenc Nágel, and Mária J. Farkasné, both of Budapest, Hungary, assignors to Tungsram Reszvenytarsasag, Budapest, Hungary

Filed Jul. 6, 1989, Ser. No. 375,889

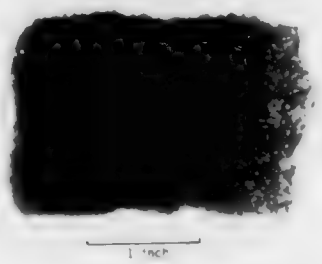
Claims priority, application Hungary, Sep. 7, 1988, 4614/88

Int. Cl.[5] C03C *8/24*

U.S. Cl. 501—15 **2 Claims**

1. A soldering enamel composition for preparing an end seal of a ceramic discharge envelope of a high-pressure discharge lamp, comprising a basic enamel including aluminum oxide and at least one oxide selected from the group consisting of rare earth metal oxides, alkaline earth metal oxides, and mixtures thereof and containing a ceramic filling material, being a zirconium-rare earth oxide of perovskite crystal structure, wherein the amount of said ceramic filling material referred to the overall mass of said basic enamel is from 0.1 to 0.9 mass % of yttrium-zirconium oxide for facilitating the nucleation process and forming a mixture of low thixotropy during soldering.

5,006,490



METHOD FOR THE FORMATION OF REFRACTORY PRODUCTS FROM AND DISPOSAL OF ASBESTOS

Kathryn V. Logan, Roswell, and Jesse D. Walton, Jr., Atlanta, both of Ga., assignors to Georgia Tech Research Corporation, Atlanta, Ga.

Continuation-in-part of Ser. No. 901,766, Aug. 28, 1986, Pat. No. 4,891,337. This application Dec. 19, 1989, Ser. No. 452,818

Int. Cl.[5] C04B *35/04, 35/10, 35/20*

U.S. Cl. 501—155 **20 Claims**

1 inch

1. A method of altering asbestos allowing for its disposal comprising:

mixing asbestos and a metal selected from the group consisting of aluminum and magnesium in a ratio to form an exothermic reaction mixture; and

reacting the exothermic reaction mixture heating to a temperature sufficient to ignite the mixture to form an end product in which the asbestos has been altered.

5,006,491

PROCESS FOR PRODUCTION OF NITRIDE CERAMIC SHAPES

Syuusaku Ueda, Harunamachi, and Masayuki Fujimoto, Takasaki, both of Japan, assignors to Taiyo Yuden CO., Ltd., Tokyo, Japan

Filed Mar. 21, 1989, Ser. No. 326,365

Claims priority, application Japan, Mar. 31, 1988, 63-80174

Int. Cl.[5] C04B *35/58*

U.S. Cl. 501—96 **9 Claims**

1. A process for the fabrication of nitride ceramic products which comprises:

(a) preparing a mixture of a nitride material and a sintering aid, both in finely divided form;

(b) forming the mixture into moldings of desired shape;

(c) sintering the moldings to maturity in a nitrogenous atmosphere, the sintered moldings having undesirable intergranular substances; and

(d) aftertreating the sintered moldings by exposing the sintered moldings to an atmosphere containing at least either of fluorine and a fluoride at an elevated temperature so as to remove the undesirable intergranular substances.

5,006,492

PRECERAMIC COMPOSITIONS AND CERAMIC PRODUCTS

John Semen, and John J. Rogers, both of Baton Rouge, La., assignors to Ethyl Corporation, Richmond, Va.

Division of Ser. No. 193,105, May 12, 1988. This application Sep. 18, 1989, Ser. No. 409,036

The portion of the term of this patent subsequent to Jan. 2, 2007, has been disclaimed.

Int. Cl.[5] C04B *35/56, 35/58*

U.S. Cl. 501—97 **6 Claims**

1. A process for preparing a ceramic which comprises (A) molding a sintering aid-free preceramic composition having a particle size not larger than about 105 micrometers and comprising an intimate mixture of (1) about 50–85% by weight of silicon nitride powder and (2) about 15–50% by weight of a preceramic polysilazane binder at a temperature of about 60°–225° C., said binder consisting essentially of at least one polysilazane prepared by reacting an organodihalosilane with ammonia, treating the ammonolysis product with a basic catalyst which is capable of deprotonating an NH group that is adjacent to an SiH group, and quenching the resultant product with an electrophilic quenching reagent, and (B) pyrolyzing the molded composition in an inert atmosphere to a temperature of about 1200°–1450° C.

5,006,493

NOVEL CERAMIC BINDER COMPRISING POLY(ETHYLOXAZOLINE)

James E. Schuetz, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich.

Filed Mar. 31, 1986, Ser. No. 846,407

The portion of the term of this patent subsequent to May 16, 2006, has been disclaimed.

Int. Cl.[5] C04B *35/00*

U.S. Cl. 501—127 **14 Claims**

1. A method comprising forming a slurry containing a ceramic material and poly(ethyloxazoline), converting said slurry into a substantially dry powder, converting the powder into a body of a desired shape, and heating the body to substantially burn out the poly(ethyloxazoline).

5,006,494

STABILIZED BISMUTH OXIDE

Anil V. Virkar, Salt Lake City, Utah, assignor to Gas Research Institute, Chicago, Ill.

Filed Apr. 24, 1989, Ser. No. 342,291

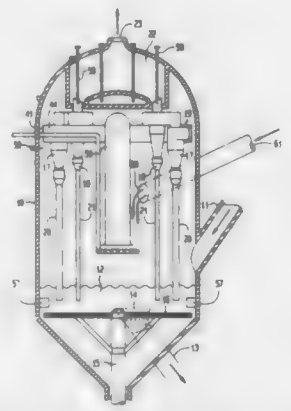
Int. Cl.[5] C04B *35/48, 35/50*

U.S. Cl. 501—152 **10 Claims**

1. A stable Bi_2O_3 ceramic composition having excellent oxygen ion conductivity consisting essentially of: Bi_2O_3 in amounts from about 50 to about 90 mole %; Y_2O_3 in amounts from about 10 to about 40 mole %; and a dopant selected from the group consisting of ZrO_2, thoria or HfO_2 in amounts from about 0.1 to about 10 mole %.

5,006,495

FLUID CATALYTIC CRACKING REGENERATION



David A. Pappal, and Michael S. Sarli, both of Haddonfield, N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Continuation of Ser. No. 177,250, Apr. 4, 1988, abandoned, which is a continuation-in-part of Ser. No. 71,247, Jul. 8, 1987, Pat. No. 4,843,051. This application Feb. 26, 1990, Ser. No. 488,471

The portion of the term of this patent subsequent to Jun. 27, 2006, has been disclaimed.

Int. Cl.[5] B01J *29/38, 21/20;* C10G *11/18;* F27B *1/20*

U.S. Cl. 502—42 **2 Claims**

1. A method of reducing the emissions of nitrogen oxides from the regeneration of a fluid catalytic cracking catalyst, which comprises:

(i) contacting spend fluid catalytic cracking catalyst from an FCC reactor, the catalyst having coke deposited on it from cracking with an oxygen-containing regeneration gas, in a dense, fluidized bed in a regeneration vessel to effect oxidative removal of the coke deposited on the catalyst, the spent fluid catalytic cracking catalyst being admitted to the regenerator vessel from the FCC reactor through at least two inlets into the regenerator vessel located at different levels in the regenerator vessel, one inlet for the spent catalyst admitting the catalyst into the dense bed and the other into the region above the dense bed.

(ii) maintaining an oxygen/coke ratio in the dense bed to produce regeneration effluent gases containing carbon monoxide by combustion of the coke.

(iii) contacting the spent fluid catalytic cracking catalyst introduced into the regenerator into the region above the dense bed with the regeneration effluent gases in the region above the dense, fluidized bed in the regeneration vessel,

(iv) adding additional oxygen-containing regeneration gas in the region above the dense bed,

(v) oxidizing carbon monoxide to carbon dioxide in the presence of entrained catalyst particles in the regeneration effluent gases passing upwards through a substantially vertical, elongated duct within the regeneration vessel, the duct having an inlet above the dense bed to receive the carbon monoxide-containing regeneration effluent gases and entrained catalyst particles from the region above the dense bed to form effluent gases containing carbon dioxide and

(vi) separating the catalyst particles from the regeneration effluent gas in a plurality of cyclone separators within the regeneration vessel which receive the effluent gases and entrained catalyst particles from said elongated duct and returning the separated particles to the dense bed.

5,006,496

PROCESS FOR THE PREPARATION OF ZEOLITIC CATALYSTS

Tom Huizinga; Arend Hoek; Hennie Schaper, and Aan H. Klazinga, all of Amsterdam, Netherlands, assignors to Shell Oil Company, Houston, Tex.

Filed Jun. 16, 1989, Ser. No. 376,277

Claims priority, application United Kingdom, Jun. 20, 1988, 8814601

Int. Cl.[5] B01J *29/10*

U.S. Cl. 502—61 **6 Claims**

1. A process for the preparation of a zeolitic catalyst which comprises treating at a temperature between 10° and 95° C. a zeolite of the Y-type having an alkali metal/aluminum oxide molar ratio of at most 0.13 with a solution of a gallium or nickel nitrate or chloride having a molarity between 0.005 and 2, subjecting the ion-exchanged zeolite to a drying treatment at a temperature up to 200° C. and combining the dried ion-exchanged zeolite without a calcination step with a hydrogenation component selected from the group consisting of nickel, cobalt, tungsten, molybdenum, platinum, palladium and mixtures thereof.

4. A catalyst comprising a zeolite of the Y type having an alkali oxide/aluminum oxide molar ratio of a most 0.13 and a mutivalent cation(s) with a cationic radius between 0.6 and 1.0 Å at ion-exchangeable positions, and at least one hydrogenation component of a Group VIII and/or Group VI(b) metal, obtainable by the process according to claim 1.

5,006,497

MULTI COMPONENT CATALYST AND A PROCESS FOR CATALYTIC CRACKING OF HEAVY HYDROCARBON FEED TO LIGHTER PRODUCTS

Joseph A. Herbst, Turnersville; Hartley Owen, Belle Mead, both of N.J., and Paul H. Schipper, Wilmington, Del., assignors to Mobil Oil Corporation, Fairfax, Va.

Filed Dec. 30, 1988, Ser. No. 292,287

Int. Cl.[5] B01J *29/04*

U.S. Cl. 502—67 **17 Claims**

1. A catalytic cracking catalyst comprising catalytically effective amounts of:

(i) at least one large pore molecular sieve;

(ii) a shape selective zeolite having a constraint index of 1–12, being substantially free of hydrogenation/dehydrogenation components, and having paraffin cracking-/isomerization activity;

(iii) a shape selective zeolite having a constraint index of 1–12 and paraffin aromatization activity; and

(iv) a matrix.

4. The catalyst of claim 1 wherein the large pore molecular sieve comprises at least one member selected from the group of VPI-5, pillared clays, SAPO-37 and zeolite Beta.

14. The catalyst of claim 1 wherein the matrix, exclusive of zeolites, contains about 0.5 to 10 wt % of at least one of calcium, magnesium, barium, lanthanum, cerium and compounds thereof.

5,006,498

ARTIFICIAL STONE WICK FOR A BURNER AND PROCESSES FOR THE PREPARATION THEREOF

Kwang-Shick Kim, #551, Dockpoong-7 Ri, Dongbu-Up, Kwangju-Gun, Kyungki-Do, Rep. of Korea

Filed Apr. 21, 1989, Ser. No. 341,643

Claims priority, application Rep. of Korea, Apr. 23, 1988, 4673/1988

Int. Cl.[5] B01J *20/12, 20/18*

U.S. Cl. 502—68 3 Claims

1. An artificial stone wick for a burner comprising the heat treated composition which comprises a mixture of portland cement powder, dried clay, zeolite and water, and whose final composition is in the range of SiO_2 7–21 weight percent, Al_2O_3 2–5 weight percent, Fe_2O_3 1–3 weight percent, CaO 50–27 weight percent, MgO 0.5–3 weight percent, K_2O 0.5–3 weight percent, Na_2O 0–2 weight percent, and TiO_2 0–2 weight percent.

5,006,499

ZIEGLER-NATTA CATALYST AND A PROCESS FOR ITS PREPARATION

Eric Daire, Lavera, France, assignor to BP Chemicals Limited, London, England

Filed Nov. 21, 1988, Ser. No. 274,386

Claims priority, application France, Nov. 30, 1987, 87 16754

Int. Cl.[5] C08F *4/654, 4/68*

U.S. Cl. 502—104 15 Claims

1. A process for the preparation of a solid catalyst of the Ziegler-Natta type comprising reacting a soluble magnesium dialkoxide solubilised in a liquid hydrocarbon with a transition metal halide characterised in that the solid catalyst is precipitated in a liquid hydrocarbon medium by reacting the solution of magnesium dialkoxide and transition metal halide in the presence of at least one alkoxide of a transition metal belonging to sub-groups IVb, Vb or VIb of the Periodic Classification of Elements, which transition metal alkoxide is free from halogen and soluble in liquid hydrocarbon and in that the transition metal halide is selected from the group consisting of halides of titanium (IV), halides of vanadium (IV) and halides of VO (III).

5,006,500

OLEFIN POLYMERIZATION CATALYST FROM TRIALKYLALUMINUM MIXTURE, SILICA GEL AND A METALLOCENE

Main Chang, Houston, Tex., assignor to Exxon Chemical Patents Inc., Linden, N.J.

Continuation-in-part of Ser. No. 263,572, Oct. 27, 1988, Pat. No. 4,937,217, which is a continuation-in-part of Ser. No. 134,413, Dec. 17, 1987, Pat. No. 4,912,075. This application Oct. 16, 1989, Ser. No. 422,357

Int. Cl.[5] C08F *4/656*

U.S. Cl. 502—107 9 Claims

5. A method of preparing a catalyst active for the polymerization of 1-olefins, comprising:

(i) reacting a mixture of triisobutyl aluminum and trimethyl aluminum wherein the mole ratio of TMA to TIBA is from about 2:1 to 1000:1 with an undehydrated silica gel to form a reaction product;

(ii) contacting the reaction product with a metallocene component selected from the group consisting of Group IVB metallocenes, Group VB metallocenes and mixtures thereof to produce a catalytic composition.

5,006,501

AMINE CATALYST FOR FORMING FINE-CELL RIGID POLYURETHANE FOAM

Yutaka Tamano, Tokuyama, and Shoji Arai, Shinnanyo, both of Japan, assignors to Tosoh Corporation, Japan

Division of Ser. No. 288,238, Dec. 22, 1988, Pat. No. 4,910,230.

This application Dec. 28, 1989, Ser. No. 458,504

Claims priority, application Japan, Dec. 25, 1987, 62-327382; Jan. 26, 1988, 63-13520

Int. Cl.[5] B01J *31/04*

U.S. Cl. 502—167 2 Claims

1. An amine catalyst for the formation of a fine-cell rigid polyurethane foam, which has a retarding effect, said amine catalyst comprising (a) 30 to 50 parts by weight of triethylene diamine, (b) 30 to 50 parts by weight of at least one compound selected from the group consisting of bis(dimethylaminoethyl)ether and N,N',N'',N''-pentamethyldiethylene triamine, (c) 0 to 40 parts by weight of at least one compound selected from the group consisting of tetramethylhexamethylene diamine and trimethylaminoethylpiperazine, and (d) formic acid in an amount of 0.2 to 1.5 moles per mole of triethylene diamine.

5,006,502

HEAT TRANSFER SHEET

Hideo Fujimura, Kashiwa, and Hironobu Hanaki, Shinjuku, both of Japan, assignors to Dai Nippon Insatsu Kabushiki Kaisha, Japan

PCT No. PCT/JP88/00931, § 371 Date May 11, 1989, § 102(e) Date May 11, 1989, PCT Pub. No. WO89/02372, PCT Pub. Date Mar. 23, 1989

PCT Filed Sep. 14, 1988, Ser. No. 358,360

Claims priority, application Japan, Sep. 14, 1987, 62-228626; Sep. 30, 1987, 62-246811; Nov. 5, 1987, 62-280058; Dec. 18, 1987, 62-321098; Mar. 4, 1988, 62-51259

Int. Cl.[5] B41M *5/35, 5/26*

U.S. Cl. 503—227 16 Claims

1. A heat transfer sheet comprising:

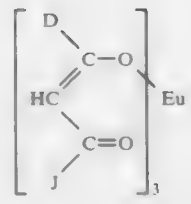
a substrate sheet;

an image-receiving layer formed peelably on the surface of said substrate sheet, said image-receiving layer comprising a dye dyeable resin; and

a heat migratable dye layer formed on a plane on which said image-receiving layer is formed.

5,006,503

THERMALLY-TRANSFERABLE FLUORESCENT EUROPIUM COMPLEXES



Gary W. Byers, and Derek D. Chapman, both of Rochester, N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Mar. 13, 1990, Ser. No. 493,076

Int. Cl.[5] B41M *5/035, 5/26*

U.S. Cl. 503—227 17 Claims

8. In a process of forming a transfer image comprising imagewise-heating a donor element comprising a support having on one side thereof a layer comprising a material dispersed in a polymeric binder, and transferring an image to a receiving element to form said transfer image, the improvement wherein said material is a fluorescent europium complex, said complex having the formula:

wherein:

D is a substituted or unsubstituted, aromatic, 5- or 6-membered carbocyclic or heterocyclic moiety; and

J is $-CF_3$, $-CH_3$, $-CH_2F$ or $-CHF_2$.

PREPARING SUPERCONDUCTING CERAMIC MATERIALS

Henry M. O'Bryan, Jr., Plainfield; Warren W. Rhodes, Raritan, and John Thomson, Jr., Spring Lake, all of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Aug. 28, 1989, Ser. No. 399,649

Int. Cl.[5] H01L *39/12;* C04B *35/64*

U.S. Cl. 505—1 5 Claims

1. The process of fabricating superconducting ceramic bodies comprising >99 percent $YBa_2Cu_3O_7$, which comprises the steps of

(a) wet milling an aqueous slurry comprising selected proportions of starting ingredients comprising yttrium oxide, barium carbonate and cupric oxide in an approximately 1:2:3 molar ratio to form a milled slurry, said aqueous slurry including a binder, a defoaming agent and a dispersant,

(b) continuously agitating the milled slurry after the wet milling step so as to avoid non-uniform sedimentation of starting ingredients in the slurry,

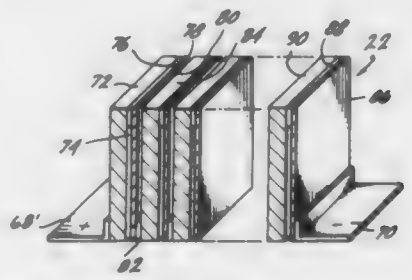
(c) spray drying the milled slurry into particulate material,

(d) calcining the spray dried particulate material to produce a calcined powder, said calcining step comprising ramping the temperature within a calcining furnace containing the spray dried particulate material to 900° C. in 4 hours, soaking the particulate matter at 900° C. for a period of 24 hours and, thereafter, ramping the temperature to about 450° C. in about 4 hours, the calcined powder comprising ≧95 percent $YBa_2Cu_3O_7$,

(e) forming the calcined powder into a body having a desired form, and

(f) sintering said body, said sintering including the steps comprising ramping the temperature of a sintering furnace to 900° C. in 2 hours, ramping the temperature from 900° to 975° C. in 6 hours, soaking the body at 975° C. for 6 hours, ramping the temperature from 975° C. to 450° C. in 1 hour, soaking the body at 450° C. for 4 hours, and ramping the temperature from 450° C. to room temperature in 1 hour.

5,006,505



PELTIER COOLING STAGE UTILIZING A SUPERCONDUCTOR-SEMICONDUCTOR JUNCTION

Matthew M. Skertic, Chatsworth, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

Filed Aug. 8, 1988, Ser. No. 229,883

Int. Cl.[5] H01L *25/04, 35/28;* F25B *21/00*

U.S. Cl. 505—1 20 Claims

1. A Peltier cooling stack comprising:

a first electrode;

a superconducting layer electrically coupled to said first electrode;

a semiconducting layer electrically coupled to said superconducting layer; and

a second superconducting layer electrically coupled to said semiconductor layer; and

a second electrode electrically coupled to said second superconducting layer, electrons flowing under an applied voltage from said first electrode through said first superconducting layer, semiconductor layer, second superconducting layer and second electrode, the electrical junction between said first superconducting layer and semiconductor providing Peltier cooling while the electrical junction between said semiconductor layer and said second superconducting layer providing Peltier heating,

whereby a cryogenic Peltier cooling stack is provided.

5,006,506

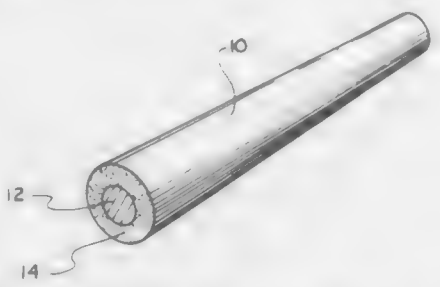
MODIFIED CHROMIUM-CONTAINING CATALYST COMPOSITION FOR POLYMERIZING OLEFINS AND METHOD OF PREPARING THE CATALYST COMPOSITION

John T. T. Hsieh, Warren, and Ann L. Pruden, Bellemead, both of N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Filed Dec. 21, 1989, Ser. No. 454,538

Int. Cl.[5] B01J *21/02, 21/06, 21/08, 23/26*

U.S. Cl. 502—204 40 Claims



1. A modified olefin polymerization catalyst composition comprising a mixture of a supported catalyst comprising a chromium compound and a catalyst modifier which is an oxide of an element of Group IIIA of the Periodic Table of the Elements, the modifier containing such an amount of water that the modified catalyst composition contains about 0.010 to about 0.3% wt. of water.

5,006,507

NICKEL-BASED SUBSTRATE FOR CERAMIC SUPERCONDUCTOR

Lawrence D. Woolf, Carlsbad; Frederick H. Elsner, Cardiff, and William A. Raggio, Del Mar, all of Calif., assignors to General Atomics, San Diego, Calif.

Filed Apr. 14, 1989, Ser. No. 339,013
Int. Cl.[5] B32B *9/00*
U.S. Cl. 505—1 **25 Claims**

1. A ceramic superconductor which comprises:
an aluminum containing nickel based alloy substrate wherein said substrate is identified as Nil-Alx and wherein x is greater than zero and less than or equal to twenty-five one hundredths ($0 \leqq X \leqq 0.25$); and
an oxygen-containing ceramic superconductor layer supported on said substrate.

5,006,508

PREPARATION OF COPPER ALKOXIDES AND SOL/GEL PRECURSORS OF SUPERCONDUCTING CERAMICS

Debra J. Treacy, Walpole, Mass., and Khodabakhsh S. Mazdiyasni, Alpine, Calif., assignors to General Atomics, San Diego, Calif.

Filed Feb. 3, 1989, Ser. No. 306,539
Int. Cl.[5] B01J *13/00;* **C01G** *3/02;* **H01L** *39/12*
U.S. Cl. 505—1 **13 Claims**

1. A method for the preparation of high purity copper (II) alkoxides comprising:
(a) reacting an alkali metal with an anhydrous, deoxygenated alcohol and recovering from the resulting reaction product an anhydrous, deoxygenated alcoholic alkali metal alkoxide solution;
(b) admixing anhydrous copper (II) fluoride with the alkali metal alkoxide solution;
(c) heating said mixture to a temperature of between from about ambient temperature and about 10° C. below the boiling point of the alcohol for between about 0.25 hour and about 8 hours to form a solution of alkali metal fluoride and copper (II) alkoxide;
(d) ammoniating said alkali metal fluoride and copper (II) solution with anhydrous ammonia to form a saturated ammoniacal alcoholic solution of ammoniacal copper (II) alkoxide in solution and an alkali metal fluoride precipitate; and
(e) recovering an alkali metal free ammoniacal copper (II) alkoxide solution.

6. A method for the preparation of a homogeneous sol/gel useful in the preparation of superconducting ceramics comprising:
(a) reacting an alkali metal with an anhydrous deoxygenated alcohol and recovering from the resulting reaction product an anhydrous, deoxygenated alcoholic alkali metal alkoxide solution;
(b) admixing anhydrous copper (II) fluoride with the alkali metal alkoxide solution;
(c) heating said mixture to a temperature of between about ambient temperature and about 10° below the boiling point of the alcohol for between about 0.25 hour and about 8 hours to form a solution of alkali metal fluoride and a copper (II) alkoxide;
(d) ammoniating said alkali metal fluoride and copper (II) alkoxide solution with anhydrous ammonia to form a saturated ammoniacal alcoholic solution of ammoniacal copper (II) alkoxide in solution and an alkali metal fluoride precipitate;
(e) recovering an alkali metal free ammoniacal copper (II) alkoxide solution;
(f) hydrating said ammoniacal copper (II) alkoxide solution by the addition of 2 moles of triply distilled deionized water for each such mole of ammoniacal copper (II) alkoxide present in said solution and stirring said water containing solution for a time in the range of about 0.5 hour to about 2 hours;
(g) adding a solution of barium alkoxide in excess alcohol, at a temperature of at least 55° C., to the ammoniacal copper (II) alkoxide solution obtained in (f), said amount of barium added being about ½ the amount, on a molar basis, of copper present and stirring the resulting barium-copper containing solution at a temperature from about 60° C. to about 70° C. for a time in the range of about 0.5 hour to about 2.0 hours;
(h) adding a lanthanide series metal alkoxide solution to the solution resulting from (g), the amount of lanthanide metal added being about ⅓, on a molar basis, the amount of copper present in (g) and heating the resulting lanthanide metal-barium-copper solution at a temperature in the range of about 50° C. to about 60° C. for a time in the range of about 8 hours to about 16 hours; and
(i) concentrating and ageing the lanthanide metal-barium-copper solution to produce a sol/gel.

5,006,509

USE OF HUMAN GROWTH HORMONE IN TREATING TOPICAL ULCERS

Harald Waago, Breisynvegen 23, N-7021, Trondheim, Norway

Filed Jun. 24, 1988, Ser. No. 211,359
Int. Cl.[5] A61K *37/36*
U.S. Cl. 514—12 **3 Claims**

1. A method for treating topical ulcers, in a patient in need of such treatment comprising:
topically applying to said patient a therapeutically effective amount of human growth hormone in a pharmaceutically acceptable carrier.

5,006,510

METHOD FOR RELIEVING CHRONIC PAIN WITH A SOMATOSTATIN ANALOG COMPOSITION

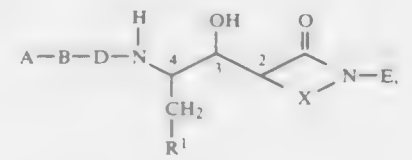
Wladislaw V. Ellis, 2445 Carleton St., Berkeley, Calif. 94704

Filed Jun. 20, 1989, Ser. No. 368,660
Int. Cl.[5] A61K *37/02*
U.S. Cl. 514—16 **6 Claims**

1. A therapeutic method for relieving burning pain or hyperesthesia at the site of topical administration comprising:
topically administering an antinociceptive composition to relieve pain in a patient experiencing burning pain or hyperesthesia, the antinociceptive composition including a peptide having the amino acid sequence

(D)Phe-Cys-Phe-(D)Trp-Lys-Thr-Cys-Thr-ol

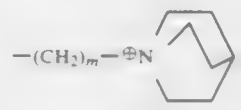
or a pharmaceutically acceptable acid addition salt or complex thereof, wherein the antinociceptive composition is a solution having from about 0.2 μg to about 2 μg peptide per unit dose and wherein the composition includes dimethyl sulfoxide that serves as a carrier to promote the passage of the peptide through the patient's skin.



5,006,511

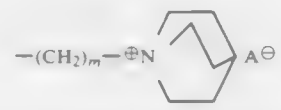
DI- OR TRIPEPTIDE RENIN INHIBITORS CONTAINING LACTAM CONFORMATIONAL RESTRICTION IN ACHPA

William J. Greenlee, Teaneck, N.J.; Daniel F. Veber, Ambler, and Peter D. Williams, Lansdale, both of Pa., assignors to Merck & Co., Inc., Rahway, N.J.

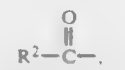


Continuation of Ser. No. 108,343, Oct. 14, 1981, abandoned. This application Aug. 26, 1988, Ser. No. 237,648
Int. Cl.[5] A61K *37/02;* **C07K** *5/02;* **C07F** *209/54;* **C07D** *207/12*
U.S. Cl. 514—19 **9 Claims**

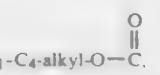
1. A peptide of the formula:



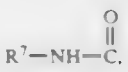
(I)



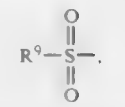
wherein:
A is hydrogen;
C_1–C_6-alkyl;
aryl, where aryl is unsubstituted or mono-, di- or trisubstituted phenyl, wherein the substituent(s) is/are independently selected from the group consisting of C_1–C_7-alkyl, phenyl-C_1–C_4-alkyl, amino, mono- or di-C_1–C_4-alkylamino, amino-C_1–C_4-alkyl, hydroxy-C_1–C_4-alkyl, mono- or di-C_1–C_4-alkylamino- C_1–C_4-alkyl, guanidyl, guanidyl-C_1–C_4-alkyl, hydroxyl, C_1–C_4-alkoxy, trifluoromethyl, halo, CHO, $—CO_2H$, $—CONH_2$, —CONH—C_1–C_4-alkyl, $—CON(C_1–C_4\text{-alkyl})_2$, —CO—$C_1$–$C_4$-alkyl $—(CH_2)_m—\oplus N(R^3)_2R^4\ A\ominus$, where R^3 is C_1–C_4-alkyl, $—(CH_2)_4—$, $—(CH_2)_5—$ or $—(CH_2)_2—O—(CH_2)_2—$; R^4 is C_1–C_4-alkyl, C_1–C_4-hydroxyalkyl, C_1–C_4-carboxyalkyl, or $—CH_2$-phenyl; $A\ominus$ is a counterion selected from the group consisting of single negatively-charged ions, and m is 0-to-3; $—CO_2—C_1–C_4$-alkyl, $—CO_2—C_1–C_4$-alkoxy-C_2–C_4-alkyl,



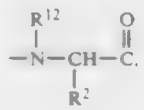
where $A\ominus$ and m are as defined above, and $—NR^5R^6$, where R^5 and R^6 are independently hydrogen, unsubstituted or monosubstituted C_1–C_4-alkyl, wherein the substituent is amino, mono- or di-C_1–C_4-alkylamino or $—\oplus N(R^3)_2R^4\ A\ominus$, where R^3, R^4 and $A\ominus$ are as defined above;
Het, where Het is an unsubstituted or mono- or disubstituted 5-to-7-membered mono- or bicyclic or 7- to 10- membered bicyclic heterocyclic ring, where the one or two heteroatoms are independently selected from the group consisting of N, O, S, NO, SO, SO_2 or quaternized N, and the substituent(s) is/are independently selected from the group consisting of hydroxyl, thiol, C_1–C_6-alkyl, CF_3, C_1–C_4-alkoxy, halo, aryl, as defined above, aryl-C_1–C_4-alkyl, amino, mono- or di-C_1–C_4-alkylamino, amino-C_1–C_4-alkyl, hydroxy-C_1–C_4-alkyl, mono- or di-C_1–C_4-alkylamino-C_1–C_4-alkyl, guanidyl, guanidyl-C_1–C_4-alkyl, CHO, CO_2H, $CO_2—C_1–C_4$-alkyl, $CONH_2$, CONH—C_1–C_4-alkyl, $CON(C_1–C_4\text{-alkyl})_2$, NR^5R^6,

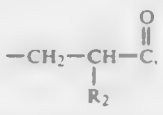


and $—(CH_2)_m—\oplus N(R^3)_2R^4\ A\ominus$, wherein R^5, R^6, $A\ominus$, m, R^3 and R^4 are as defined above, or when the heteroatom N is present, the substituents are alternatively $—(CH_2)_q—$ or $—(CH_2)_2—O—(CH_2)_2—$ and form a ring with the N-atom, wherein q is 3-to-6;

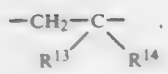


where R^2 is C_1–C_7-alkyl; hydrogen; Het, as defined above; aryl, as defined above; mono-substituted C_1–C_5-alkyl, wherein the substituent is selected from the group consisting of aryl, as defined above; Het, as defined above; hydroxyl; $—CO_2H$; CO_2R^7, where R^7 is C_1–C_5-alkyl, aryl, as defined above, and aryl-C_1–C_4-alkyl; $CONH_2$; —CONH—R^7 or $—S(O)_n—R^7$, wherein n is 0-to-2 and R^7 is as defined above; C_1–C_4-alkoxy; C_3–C_7-cycloalkyl; amino; mono- or di-C_1–C_4-alkylamino; —NH-aryl, —NH—CH_2-aryl or —CO-aryl, where aryl is as defined above; and —NH-Het, —NH—CH_2-Het or —CO-Het, where Het is as defined above;

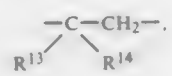




where R^7 is as defined above; or



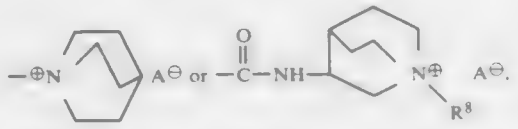
where R^9 is C_1–C_5-alkyl, aryl, as defined above, or Het, as defined above;
B and D are independently



where R^{12} is hydrogen, C_1–C_5-alkyl or CH_2-aryl, wherein aryl is as defined above; and R^2 is as defined above;

where R^2 is as defined above; or either B or D, but not both simultaneously, is absent;
R^1 is hydrogen;
C_3–C_6-alkyl;
aryl, as defined above;
unsubstituted, mono-, di- or trisubstituted C_3–C_7-cycloalkyl, where the substituent(s) is/are selected from the group consisting of C_1–C_4-alkyl, trifluoromethyl, hydroxyl, C_1–C_4-alkoxy and halo; or
unsubstituted or 4-monosubstituted 1,3-dithiolan-2-yl or unsubstituted or 4-monosubstituted 1,3-dithian-2-yl, where the substituent is $—(CH_2)_m$-aryl, where m and aryl are as defined above;
X is

where and R^{13} and R^{14} are independently hydrogen; C_1–C_7-alkyl; C_2–C_7-alkenyl; —CO_2H; —$CONH_2$; —CO_2R^7, —CO—NH—R^7or —CO—$N(R^7)_2$, wherein R^7 is as defined above; monosubstituted C_1–C_5-alkyl, wherein the substituent is selected from the group consisting of azido; halo; hydroxy; C_1–C_5-alkoxy; aryl, aryl—CH_2O—, aryloxy, aryl-COO—, aryl-CH_2—NH— or arylamino, where aryl is as defined above; C_1–C_5-alkyl-CO_2—; R^7NH—COO—, R^7—CO—NH—, R^7—NH—CO—NH— or R^7—$S(O)_n$, where n and R^7 are as defined above; amino; mono- or di-C_1–C_4-alkylamino; or Het, as defined above; or R^{13} and R^{14} are connected to form a polymethylene chain of the formula, —$(CH_2)_p$, where p is 2-to-6; or



where R^{13} and R^{14} are as defined above; and

E is hydrogen;

aryl, as defined above;

Het, as defined above;

C_2–C_7-alkenyl; or unsubstituted or mono- substituted C_1–C_7-alkyl or unsubstituted or mono-substituted C_3–C_7-cycloalkyl, where the substituent is selected from the group consisting of aryl, —CO-aryl, —NH-aryl or —O-aryl, wherein aryl is as defined above; Het, —NH-Het, —O-Het, —CO-Het, —NH—CO-Het, CO—NH-Het, —CO—NH—CH_2-Het or O—CO—Het, wherein Het is as defined above; azido; C_3–C_7-cycloalkyl; halo; hydroxyl; C_1–C_4-alkoxy; —COOH; —O—CO—R^7, —O—CO—NH—R , —NH—CO—R^7, —NH—CO—NH—R^7, —$S(O)_n$—R^7, —CO_2R^7 or —CO—NH—R^7, wherein R^7 and n are as defined above; amino; mono- or di-C_1–C_4-alkylamino; —CHO; and —$\oplus N(R^3)_2R^8$ $A^\ominus$,

where R^8 is C_1–C_4-alkyl, C_1–C_4-hydroxyalkyl, alkyl, C_1–C_4-carboxyalkyl, —CH_2-aryl, wherein aryl is as defined above, or —CH_2—Het, wherein Het is as defined above, and R^3 and $A^\ominus$ are as defined above;

or a pharmaceutically-acceptable salt thereof.

U.S. Cl. 514—53 **17 Claims**

1. An α,α-trehalose trimycolate represented by the formula:

(I)

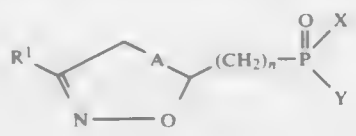
wherein each of R^1, R^2 and R^8 is the same or a different mycolic

acid residue, and each of R^3, R^4, R^5, R^6 and R^7 is a hydrogen atom.

5,006,515

PHARMACEUTICALS, PHOSPHORUS-CONTAINING 2-ISOXAZOLINES AND ISOXAZOLES CONTAINED THEREIN

Wilfried Schwab, Wiesbaden; Robert R. Bartlett, Darmstadt; Ulrich Gebert, Kelkheim; Hans U. Schorlemmer, Marburg; Gerhard Dickneite, Marburg, and Hans H. Sedlacek, Marburg, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany



Filed Oct. 26, 1988, Ser. No. 262,635

Claims priority, application Fed. Rep. of Germany, Oct. 26, 1987, 3736113

Int. Cl.[5] A61K *31/675;* **C07F** *9/653*

U.S. Cl. 514—89 **11 Claims**

1. A compound of the formula I, and/or one of its physiologically tolerated salts where appropriate,

(I)

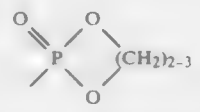
where

R^1 represents

(a) a straight-chain or branched alkyl or alkenyl group which has 1 to 6 carbon atoms and whose carbon chain can be substituted by halogen, hydroxyl, (C_1–C_4)alkoxy, (C_1–C_4)acyloxy or aryl which is optionally substituted by (C_1–C_4)alkoxy or halogen, or

(b) a mono- or binuclear aromatic or heteroaromatic group having 1 or 2 nitrogen atoms and/or one sulfur or oxygen atom in the ring system, it being possible for this group to be substituted one or more times and identically or differently by straight-chain or branched (C_1–C_4)alkyl, (C_3–C_6)cycloalkyl, hydroxyl, (C_1–C_3)alkoxy, unsubstituted phenoxy, (C_1–C_4)acyloxy or benzoyloxy, halogen, trifluoromethyl, nitro, optionally mono- or disubstituted amino, (C_1–C_4)alkoxycarbonyl, carboxyl, carbamoyl, (C_1–C_4)alkylcarbonyl, whose carbonyl group can in each case also be in ketalized form, or benzyl or phenyl which is optionally ring-substituted by (C_1–C_4)alkyl, halogen or (C_1–C_3)alkoxy, or

(c) carboxyl or alkoxycarbonyl having 1 to 4 carbon atoms in the alkyl moiety or

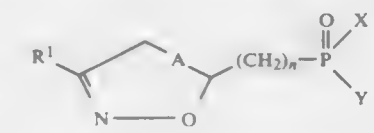


(d) arylcarbonyl which is optionally substituted in the aryl moiety by (C_1–C_4)alkyl, halogen or (C_1–C_3)alkoxy, or

(e) halogen,

A denotes a C,C single bond or a C,C double bond,

n denotes an integer from 0 to 2, and



X and Y, which can be identical or different, each denote, independently of one another, a straight-chain or branched (C_1–C_4)alkyl group, the radical —OR^2 or the group —NR^2R^3, where R^2 and R^3 represent hydrogen or optionally substituted (C_1–C_6)alkyl radicals which, in the group —NR^2R^3, can also form together with the nitrogen atom a five- to seven-membered ring or, in the structural element —$P(O)(OR^2)_2$, can form together with the phosphorus atom a heterocycle of the formula

which is optionally also substituted by (C_1–C_3) alkyl (C_1–C_4)alkoxycarbonyl or carboxyl,

and where the compounds of the formula I can, where appropriate, be in the form of pure stereoisomers or mixtures thereof, excepting the compounds 3-phenyl-2-isoxazolin-5-ylphosphonic acid, 3-methyl(and phenyl)-2-isoxazolin-5-ylphosphonate, dipropyl 3-(3-nitrophenyl)-2-isoxazolin-5-ylphosphonate, 3-methyl(and phenyl)-2-isoxazollin-5-ylphosphonic tetramethyldiamide, 3-phenyl-2-isoxazolin-5-ylmethylphosphonic acid and the diethyl ester thereof, diethyl 3-methyl(ethyl, isopropyl, tert.butyl, methoxymethyl, phenyl and ethoxycarbonyl)-5-isoxazolylmethylphosphonate, 3-(4-fluoro- and 4-chlorophenyl)-5-isoxazolyl(P-methyl)phosphinic acid and methyl 3-phenyl-5-isoxazolyl(P-methyl)phosphinate, where the racemic forms are being dealt with where appropriate.

8. A method of treating a person for protecting said person from diseases of the immune system, which comprises administering to said person an effective amount of at least one compound of the formula I, its stereoisomeric forms where appropriate or its physiologically tolerated salts where appropriate,

(I)

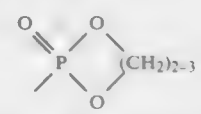
where

R^1 represents

(a) a straight-chain or branched alkyl or alkenyl group which has 1 to 6 carbon atoms and whose carbon chain can be substituted by halogen, hydroxyl, (C_1–C_4)alkoxy, (C_1–C_4)acyloxy or aryl which is optionally substituted by (C_1–C_4)alkoxy or halogen, or

(b) a mono- or binuclear aromatic or heteroaromatic group having 1 or 2 nitrogen atoms and/or one sulfur or oxygen atom in the ring system, it is being possible for this group to be substituted one or more times and identically or differently by straight-chain or branched (C_1–C_4)alkyl, (C_3–C_6)cycloalkyl, hydroxyl, (C_1–C_3)alkoxy, unsubstituted phenoxy, (C_1–C_4)acyloxy or benzoyloxy, halogen, trifluoromethyl, nitro, optionally mono- or disubstituted amino, (C_1–C_4)alkylcarbonyl, carboxyl, carbamoyl, (C_1–C_4)alkylcarbonyl, whose carbonyl group can in each case also be in ketalized form, or benzyl or phenyl which is optionally ring-substituted by (C_1–C_4)-alkyl, halogen or (C_1–C_3)alkoxy, or

(c) carboxyl or alkoxycarbonyl having 1 to 4 carbon atoms in the alkyl moiety or



(d) arylcarbonyl which is optionally substituted in the aryl moiety by (C_1–C_4)alkyl, halogen or (C_1–C_3)alkoxy, or

(e) halogen,

A denotes a C,C single bond or a C,C double bond,

n denotes an integer from 0 to 2, and

X and Y, which can be identical or different, each denote, independently of one another, a straight-chain or branched (C_1–C_4)alkyl group, the radical —OR^2 or the group —NR^2R^3, where R^2 and R^3 represent hydrogen or optionally substituted (C_1–C_6) alkyl radicals which, in the group —NR^2R^3, can also form together with the nitrogen atom a five- to seven-membered ring or, in the structural element, —$P(O)(OR^2)_2$, can form together with the phosphorus atom a heterocycle of the formula

which is optionally also substituted by (C_1–C_3) alkyl, (C_1–C_4) alkyoxycarbonyl or carboxyl,

and where the compounds of the formula I can, where appropriate, be in the form of pure stereoisomers or mixtures thereof, excepting the compounds 3-phenyl-2-isoxazolin-5-ylphosphonic acid, 3-methyl(and phenyl)-2-isoxazolin-5-ylphosphonate, dipropyl 3-(3-nitrophenyl)-2-isoxazolin-5-ylphosphonate, 3-methyl(and phenyl)-2-isoxazollin-5-ylphosphonic tetramethyldiamide, 3-phenyl-2-isoxazolin-5-ylmethylphosphonic acid and the diethyl ester thereof, diethyl 3-methyl(ethyl,isopropyl, tert.butyl, methoxymethyl, phenyl and ethoxycarbonyl)-5-isoxazolylmethylphosphonate, 3-(4-fluoro- and 4-chlorophenyl)-5-isoxazolyl(P-methyl)phosphinic acid and methyl 3-phenyl-5-isoxazolyl(P-methyl)phosphinate.

METHOD FOR THE PROPHYLAXIS OF CARDIAC INFARCTIONS AND THE PREVENTION OF REINFARCTIONS

Joachim Helbig, Tutzing, and Hans G. Classen, Stuttgart, both of Fed. Rep. of Germany, assignors to Verla-Pharm Arzneimittelfabrik Apotheker H.J.V. Ehrlich GmbH & Co. KG., Tutzing, Fed. Rep. of Germany

Filed May 1, 1989, Ser. No. 345,276

Claims priority, application Fed. Rep. of Germany, May 2, 1988, 3814856

Int. Cl.[5] A61K *31/60*

U.S. Cl. 514—163 **4 Claims**

1. A method for the prophylaxis of cardiac infarctions and for the prevention of reinfarctions in a mammal, comprising administering to said mammal a pharmaceutical agent comprising a pharmaceutically effective amount of a mixture of a magnesium compound and acetylsalicylic acid as the active ingredient and a pharmaceutically acceptable carrier, said

magnesium compound selected from the group consisting of magnesium amino dicarboxylic acid halides, basic magnesium amino dicarboxylic acid salts, magnesium halides, and combinations thereof.

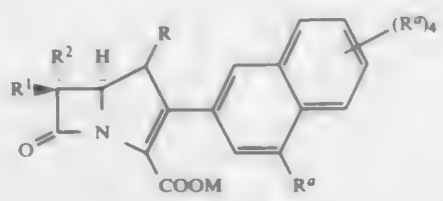
2-NAPHTHYL-CARBAPENEM ANTIBACTERIAL AGENTS



Frank P. DiNinno, Old Bridge, and Mark L. Greenlee, Rahway, both of N.J., assignors to Merck & Co., Inc., Rahway, N.J.

Filed Jul. 11, 1990, Ser. No. 551,707

Int. Cl.[5] C07D *487/04*; A61K *31/40*

U.S. Cl. 514—210 **10 Claims**

1. A compound of the formula:

wherein:

R is H or CH_3,

R^1 and R^2 are independently H, CH_3—, CH_3CH_2—, $(CH_3)_2CH$—, $HOCH_2$—, $CH_3CH(OH)$—, $(CH_3)_2C(OH)$—, $FCH_2CH(OH)$—, $F_2CHCH(OH)$—, $F_3CCH(OH)$—, $CH_3CH(F)$—, CH_3CF_2—, or $(CH_3)_2C(F)$—;

R^q are independently selected from the group consisting of hydrogen and the radicals set out below, provided that one to four R^a radicals are other than hydrogen:

(a) a trifluoromethyl group: $—CF_3$,

(b) a halogen atom: —Br, —Cl, —F, or —I;

(c) C_1–C_4 alkoxy radical: $—OC_{1-4}$ alkyl, wherein the alkyl is optionally mono-substituted by R^q, where

R^q is a member selected from the group consisting of —OH, $—OCH_3$, —CN, $—C(O)NH_2$, $—OC(O)NH_2$, CHO, $—OC(O)N(CH_3)_2$, $—SO_2NH_2$, $—SO_2N(CH_3)_2$, $—SOCH_3$, $—SO_2CH_3$, —F, $—CF_3$, $—COOM^a$ (where M^a is hydrogen, alkali metal, methyl or phenyl), tetrazolyl (where the point of attachment is the carbon atom of the tetrazole ring and one of the nitrogen atoms is mono-substituted by M^a as defined above) and $—SO_3M^b$ (where M^b is hydrogen or an alkali metal);

(d) a hydroxy group: —OH;

(e) a carbonyloxy radical: $—O(C═O)R^s$, where

R^s is C_1–C_4 alkyl or phenyl, each of which is optionally mono-substituted by R^q as defined above;

(f) a carbamoyloxy radical: $—O(C═O)N(R^y)R^z$ where

R^y and R^z are independently H, C_1–C_4 alkyl (optionally mono-substituted by R^q as defined above), together a 3- to 5-membered alkylidene radical to form a ring (optionally substituted with R^q as defined above) or together a 2- to 4-membered alkylidene radical, interrupted by —O—, —S— or —S(O)—, $—S(O)_2—$, to form a ring (where the ring is optionally mono-substituted with R^q as defined above);

(g) a sulfur radical: $—S(O)_n—R^s$ where n = 0–2, and R^s is as defined above;

(h) a sulfamoyl group: $—SO_2N(R^y)R^z$ where R^y and R^z are as defined above;

(i) azido: N_3

(j) a formamido group: $—N(R^t)(C═O)H$, where

R^t is is H or C_1–C_4 alkyl, and the alkyl thereof is optionally mono-substituted by R^q as defined above;

(k) a (C_1–C_4 alkyl)carbonylamino radical: $—N(R^t)(C═O)C_{1-4}$ alkyl, where R^t is as defined above, and the alkyl group is also optionally mono-substituted by R^q as defined above;

(l) a (C_1–C_4 alkoxy) carbonylamino radical: $—N(R^t)(C═O)OC_{1-4}$ alkyl, where R^t is as defined above, and the alkyl group is also optionally mono-substituted by R^q as defined above;

(m) a ureido group: $—N(R^t)(C═O)N(R^y)R^z$ where R^t, R^y and R^z are asdefined above;

(n) a sulfonamido group: $—N(R^t)SO_2R^s$, where R^s and R^t are as defined above;

(o) a cyano group: —CN;

(p) a formyl or acetalized formyl radical: —(C═O)H or $—CH(OCH_3)_2$;

(q) (C_1–C_4 alkyl)carbonyl radical wherein the carbonyl is acetalized: $—C(OCH_3)_2C_{1-4}$ alkyl, where the alkyl is optionally mono-substituted by R^q as define above;

(r) carbonyl radical: $—(C═O)R^s$, where R^s is as defined above;

(s) a hydroximinomethyl radical in which the oxygen or carbon atom is optionally substituted by a C_1–C_4 alkyl group: $—(C═NOR^z)R^y$ where R^y and R^z are as defined above, except they may not be joined together to form a ring;

(t) a (C_1–C_4 alkoxy)carbonyl radical: $—(C═O)OC_{1-4}$ alkyl, where the alkyl is optionally mono-substituted by R^q as defined above;

(u) a carbomoyl radical: $—(C═O)N(R^y)R^z$ where R^y and R^z are as defined above;

(v) an N-hydroxycarbamoyl or N(C_1–C_4 alkoxy)carbamoyl radical in which the nitrogen atom may be additionally substituted by a C_1–C_4 alkyl group: $—(C═O)—N(OR^y)R^z$ where R^y and R^z are as defined above, except they may not be joined together to form a ring;

(w) a thiocarbamoyl group: $—(C═S)N(R^y)(R)^z$ where R^y and R^z are as defined above;

(x) carboxyl: $—COOM^b$, where M^b is as defined above;

(y) thiocyanate: —SCN;

(z) trifluoromethylthio: $—SCF_3$;

(aa) tetrazolyl, where the point of attachment is the carbon atom of the tetrazole ring and one of the nitrogen atoms is mono-substituted by hydrogen, an alkali metal or a C_1–C_4 alkyl optionally substituted by R^q as defined above;

(ab) an anionic function selected from the group consisting of: phosphono $[P═O(OM^b)_2]$; alkylphosphono $\{P═O(OM^b)$-$[O(C_1$–C_4 alkyl)$]\}$; alkylphosphinyl $[P═O(OM^b)$-$(C_1$–C_4 alkyl)]; phosphoramido $[P═O$-$(OM^b)N(R^y)R^z$ and $P═O(OM^b)NHR^x]$; sulfino (SO_2M^b); sulfo (SO_3M^b); acylsulfonamides selected from the structures $CONM^bSO_2R^x$, $CONM^bSO_2N$-$(R^y)R^z$, $SO_2NM^bCON(R^y)R^z$; and SO_2NM^bCN, where

R^x is phenyl or heteroaryl, where heteroaryl is a monocyclic aromatic hydrocarbon group having 5 or 6 ring atoms, in which a carbon atom is the point of attachment, in which one of the carbon atoms has been replaced by a nitrogen atom, in which one additional carbon atom is optionally replaced by a heteroatom selected from O or S, and in which from 1 to 2 additional carbon atoms are optionally replaced by a nitrogen heteroatom, and where the phenyl and heteroaryl are optionally mono-substituted by R^q, as defined above; M^b is as defined above; and R^y and R^z are as defined above;

(ac) C_5–C_7 cycloalkyl group in which one of the carbon atoms in the ring is replaced by a heteroatom selected from O, S, NH or N(C_1–C_4 alkyl) and in which one additional carbon atom may be replaced by NH or N(C_1–C_4 alkyl), and in which at least one carbon atom adjacent to each nitrogen heteroatom has both of its attached hydrogen atoms replaced by one oxygen thus forming a carbonyl moiety and there are one or two carbonyl moieties present in the ring;

(ad) C_2–C_4 alkenyl radical, optionally mono-substituted by one of the substituents (a) to (ac) above and phenyl which is optionally substituted by R^q as defined above;

(ae) C_2–C_4 alkynyl radical, optionally mono-substituted by one of the substituents (a) to (ac) above;

(af) C_1–C_4 alkyl radical;

(ag) C_1–C_4 alkyl mono-substituted by one of the substituents (a)–(ac) above;

(ah) a 2-oxazolidinonyl moiety in which the point of attachment is the nitrogen atom of the oxazolidinone ring, the ring oxygen atom is optionally replaced by a heteroatom selected from S and NR^t (where R^t is as defined above) and one of the saturated carbon atoms of the oxazolidinone ring is optionally mono-substituted by one of the substituents (a) to (ag) above;

M is selected from:

(i) hydrogen;

(ii) a pharmaceutically acceptable esterifying group or removable carboxyl protecting group;

(iii) an alkali metal or other pharmaceutically acceptable cation.

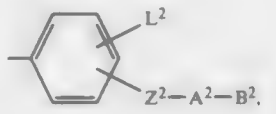
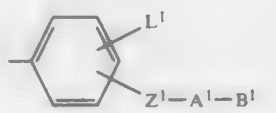
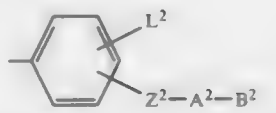
U.S. Cl. 514—212 **4 Claims**



1. A fused pyrazole compound of the formula

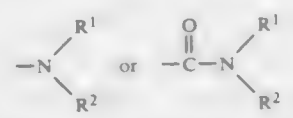


on a pharmaceutically acceptable salt thereof wherein in the above formula, X is =N—; R represents hydrogen, an alkyl group, an alkoxy group or a halogen; Y^1 represents a group of the formula:



phenyl group or a phenyl group substituted by one to three halogen(s), alkyl group(s) and/or alkoxy group(s), and Y^2 represents a group of the formula:

a group of the formula: $—A^2—B^2$, hydrogen, an alkyl group, a phenylalkyl group, a phenylalkyl group in which the phenyl nucleus is substituted by one to three halogen(s), alkyl group(s) and/or alkoxy group(s), phenyl group or a phenyl group substituted by one to three halogen(s), alkyl group(s) and/or alkoxy group(s), an alkoxyalkyl group, wherein either Y^1 or Y^2 represents or both of Y^1 and Y^2 represent a group of the formula:



or of the formula:

wherein, Z^1 and Z^2 are the same or different, and respectively represent —O—, —S— or $—NR^3$ (wherein R^3 represents hydrogen or an alkyl group); A^1 and A^2 are the same or different, and respectively represent an alkylene group; B^1 and B^2

are the same or different, and respectively represent carboxyl group, an alkoxycarbonyl group, a phenylalkoxycarbonyl group (in which the phenyl nucleous may be substituted by one to three halogen(s), alkyl group(s), and/or alkoxy group(s)), an acyl group, hydroxy group, an acyloxy group or a group of the formula:

(wherein R^1 and R^2 are the same or different and respectively represent hydrogen, an alkyl group, a dialkylaminoalkyl group or a hydroxyalkyl group or represent a group which combinedly forms, together with the adjacent nitrogen atom, a heterocycle) and L^1 and L^2 are the same or different and respectively represent hydrogen, a halogen, an alkyl group or an alkoxy group.

U.S. Cl. 514—215 **19 Claims**

1. A compound represented by the formula:

in which:

X is H, Cl, Br, F, I, CF_3, $C_{1\text{-}6}$alkyl, COR^{10}, CO_2R^{10}, $CONR^{16}R^{11}$, CN, NO_2, $Nr^{12}R^{13}$, OR^{12}, $SC_{1\text{-}4}$alkyl, $S(CH_2)_{0\text{-}6}$aryl, SCF_3, or any accessible combination thereof of up to three substituents;

R is H, $C_{1\text{-}6}$alkyl, or $C_{3\text{-}5}$alkenyl;

R^1 is W, $(CH_2)_{0\text{-}2}CWYZ$, or $C_{3\text{-}5}$alkenyl, except where the double bond is in the 1 position;

R^{10} is $C_{1\text{-}6}$alkyl or $(CH_2)_{0\text{-}6}$aryl;

R^{11} and R^{16} independently are H, $C_{1\text{-}6}$alkyl, or $(CH_2)_{0\text{-}6}$aryl;

R^{12} is H, $C_{1\text{-}6}$alkyl, COR^{14}, or SO_2R^{15};

each R^{13} independently is H or $C_{1\text{-}6}$alkyl;

R^{14} and R^{15} independently are $C_{1\text{-}6}$alkyl or $(CH_2)_{0\text{-}6}$aryl;

W is H, NO_2, $C_{1\text{-}6}$alkyl, CH_2CH_2OH, CN, $C(R^{13})_2(OR^2)$, CH_2OR^2, CH_2SR^2, COR^2, CO_2R^2, $CONR^3R^4$, $SO_2NR^3R^4$, SO_3R^2, SO_2R^5, SOR^5, SR^5, $P(O)(OR^3)(OR^4)$, $P(O)R^5(OR^3)$, $P(O)R^5R^6$, $P(O)(OR^2)NR^3R^4$, $P(O)(NR^3R^4)_2$, $P(O)R^5(NR^3R^4)$, Cl, Br, F, I, CF_3, or $(CH_2)_{0\text{-}6}$aryl;

Y and Z independently are H or $C_{1\text{-}6}$alkyl;

R^2, R^3, and R^4 independently are H, $C_{1\text{-}6}$alkyl, $C_{3\text{-}5}$alkenyl, or $(CH_2)_{0\text{-}6}$aryl; and

R^5 and R^6 independently are $C_{1\text{-}6}$alkyl, $C_{3\text{-}5}$alkenyl, or $(CH_2)_{0\text{-}6}$aryl; or a pharmaceutically acceptable salt thereof.

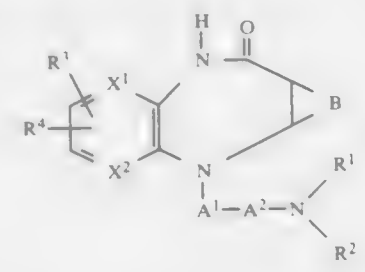
CONDENSED DIAZEPINONES, PROCESSES FOR PREPARING THEM AND PHARMACEUTICAL COMPOSITIONS CONTAINING THESE COMPOUNDS

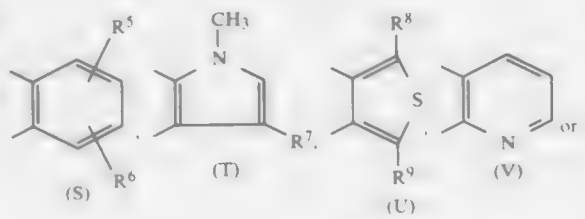
Wolfhard Engel; Wolfgang Eberlein; Gerhard Mihm; Gunther Trummlitz; Norbert Mayer, all of Biberach, Fed. Rep. of Germany, and Adriaan De Jonge, Driebergen, Netherlands, assignors to Karl Thomae GmbH, Biberach an der Riss, Fed. Rep. of Germany



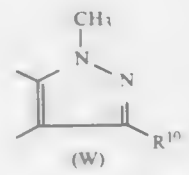
Filed May 30, 1989, Ser. No. 358,740

Claims priority, application Fed. Rep. of Germany, May 30, 1988, 3818299

Int. Cl.[5] **A61K** *31/55;* **C07D** *521/00*



U.S. Cl. 514—221 **17 Claims**



1. A condensed diazepinone of the formula:

wherein

B is one of the divalent groups

X^1 and X^2 each are a =CH— group; or, if B is the divalent group (S), (U) or (W), X^1 and X^2 each are a nitrogen or a =CH— group, with the proviso that only one of X^1 and X^2 can be a =CH— group;

A^1 is a methylene group, unsubstituted or substituted by one or two methyl groups;

A^2 is a straight-chained alkylene of 3 to 7 carbon atoms, unsubstituted or methyl-substituted; or A^2 is a straight-chained alkylene group of 3 to 7 carbon atoms comprising a double or triple bond, unsubstituted or methyl-substituted;

R^1 is a branched or unbranched alkl group of 1 to 4 carbon atoms;

R^2 is a branched or unbranched alkyl group of 1 to 7 carbon atoms, unsubstituted or substituted by a hydroxy group at its 2nd to 7th carbon atoms; or R^2 is a cycloalkyl or cycloalkylmethyl group with 3 to 7 carbon atoms in the cycloalkyl ring, which cycloalkyl ring is unsubstituted or substituted by a hydroxy group; or

R^1 and R^2 together with the intervening nitrogen atom, are a pyrrolidino or morpholino group, a piperido group, a piperidino group substituted with a dialkylaminomethyl or a cycloalkylmethylaminomethyl group, a hexahydro-1H-azepino group or a piperazino group substituted by an alkyl or phenylalkyl group, wherein the alkyl moieties comprise 1 to 4 carbon atoms and wherein the cycloalkyl moieties comprise 4 to 7 carbon atoms;

R^3 is hydrogen, chlorine, or an alkyl group of 1 to 4 carbon atoms;

R^4 is hydrogen or a methyl group;

R^5 and R^6 each are hydrogen, fluorine, chlorine, bromine, or an alkyl group of 1 to 4 carbon atoms;

R^7 is hydrogen, chlorine, or a methyl group;

R^8 is hydrogen or an alkyl group of 1 to 4 carbon atoms;

R^9 is hydrogen, halogen or an alkyl group of 1 to 4 carbon atoms; and

R^{10} is a hydrogen or a methyl group,

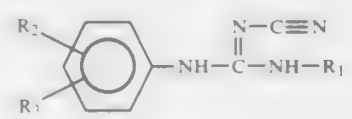
wherein, if B is the divalent group (T) and R^7 is a hydrogen atom, R^3 cannot be chlorine and A^2 cannot contain any double or triple bonds.

and the diastereomeric and enantiomeric forms thereof and the physiologically acceptable salts thereof and inorganic or organic acids.

7. A pharmaceutical composition useful as vagal pacemaker for treatment of bradycardia an bradyarrhythmia which comprises a therapeutically effective amount of the condensed diazepinone of claim 1.

5,006,523

ANTIARRHYTHMIC AGENTS: ARYL CYANOGUANIDINE POTASSIUM CHANNEL BLOCKERS



Karnail Atwal, Newtown, Pa., assignor to E. R. Squibb & Sons, Inc., Princeton, N.J.

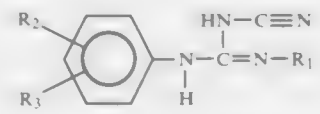
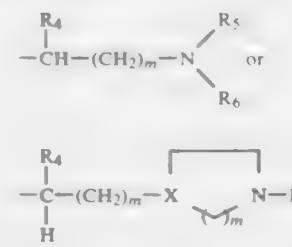
U.S. Cl. 514—227.5 **27 Claims**

1. Compounds having the formula



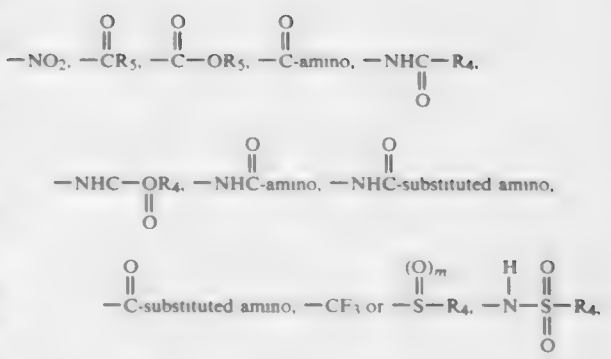
Ia

its possible tautomers



Ib

and



Ic

or a pharmaceutically acceptable salt thereof wherein R_1 is

R_2 is hydrogen, alkyl, halo, —C|N,

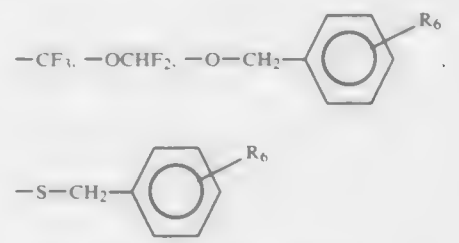
R_3 is hydrogen, alkyl, alkenyl, alkynyl, haloalkyl, halo, alkoxy, —NHalkyl, —N—(alkyl)$_2$, —S—alkyl, —O—arylalkyl or —S—arylalkyl;

R_4 is hydrogen, alkyl, alkenyl, cycloalkyl, haloalkyl, aryl, arylalkyl, cycloalkylalkyl;

R_5 and R_6 are each independently R_4 or together make a 5-7 membered ring consisting essentially of pyrrolidine, piperidene, morpholine, thiomorpholine, imidazoline, 2-alkylimidazoline, 1-azepinyl, with the proviso that if R_5 and R_6 are each hydrogen, one of R_2 and R_3 must be other than chloro;

R_7 is R_4, diphenylalkyl, pyridyl, pyridylalkyl wherein the pyridyl ring could be substituted with alkyl, arylalkyl, halo, haloalkyl;



m = 1 or 2; and

X is nitrogen or —CH—

wherein the term alkyl refers to straight or branched chain saturated hydrocarbon radicals of one to eight carbons; the terms lower alkoxy and lower alkylthio refer to said alkyl groups attached to an oxygen or sulfur; the term lower alkenyl refers to straight or branched chain hydrocarbon radicals having from two to eight carbons and one double bond; the term lower alkynyl refers to straight or branched chain hydrocarbon radicals having from two to eight carbons and one triple bond; the term cycloalkyl refers to saturated carbocyclic rings of 4 to 7 carbon atoms; the term halo refers to chloro, bromo and fluoro;

the term halo substituted alkyl refers to such alkyl groups described above in which one or more hydrogens have been replaced by chloro, bromo or fluoro groups;

the term aryl refers to phenyl or mono substituted phenyl, wherein said substituent is lower alkyl of 1 to 4 carbons, lower alkylthio of 1 to 4 carbons, lower alkoxy of 1 to 4 carbons, halo, nitro, cyano, hydroxy, amino, -NH-lower alkyl wherein alkyl is of 1 to 4 carbons, -N(lower alkyl)$_2$ wherein alkyl is of 1 to 4 carbons,

wherein R_6 is hydrogen, lower alkyl of 1 to 4 carbons, lower alkoxy of 1 to 4 carbons, lower alkylthio of 1 to 4 carbons, halo, hydroxy or CF_3), —O—CH_2-cycloalkyl, or —S—CH_2-cycloalkyl, and di-substituted phenyl, wherein said substituents are selected from methyl, methoxy, methylthio, halo, CF_3, nitro, amino, and $OCHF_2$; and

the term "substituted amino" refers to a group of the formula $—NZ_1Z_2$ wherein Z_1 is hydrogen, alkyl, cycloalkyl, aryl, arylalkyl, cycloalkylalkyl and Z_2 is alkyl, cycloalkyl, aryl,

arylalkyl, cycloalkylalkyl or Z_1 and Z_2 taken together with the nitrogen atom to which they are attached are 1-pyrrolidinyl, 1-piperidinyl, 1-azepinyl, 4-morpholinyl, 4-thiamorpholinyl, 1-piperazinyl, 4-alkyl-1-piperazinyl, 4-arylalkyl-1-piperazinyl, 4-diarylalkyl-1-piperazinyl, 1-pyrrolidinyl, 1-piperidinyl, or 1-azepinyl substituted with alkyl, alkoxy, alkylthio, halo, trifluoromethyl or hydroxy.

25. A method for the treatment of arrhythmia in mammalian species which comprises administering a therapeutically effective amount of a compound of formula I in claim 1 to a specie in need thereof.

26. A method for the treatment of atrial or ventricular fibrillation in a mammalian species which which comprises administering a therapeutically effective amount of a compound of formula I in claim 1 to a specie in need thereof.

27. A method for the treatment of supraventricular tachycardia and/or ventricular tachyarrhythmia in a mammalina species which comprises administering a therapeutically effective amount of a compound of formula I in claim 1 to a specie in need thereof.

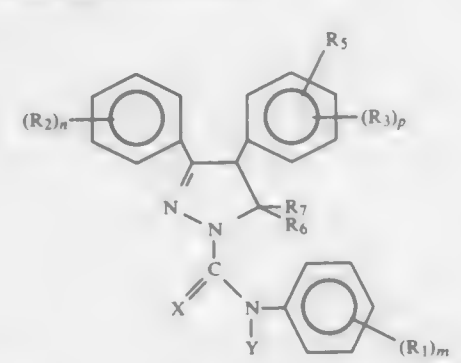
TRIPHENYL PYRAZOLINE COMPOUNDS WHICH ARE USEFUL AS INSECTICIDES

George P. Lahm, Wilmington, Del., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.



PCT No. PCT/US88/02335, § 371 Date Jan. 2, 1990, § 102(e) Date Jan. 2, 1990, PCT Pub. No. WO89/00562, PCT Pub. Date Jan. 26, 1989

Continuation-in-part of Ser. No. 74,795, Jul. 17, 1987, abandoned. This PCT application Jul. 15, 1988, Ser. No. 438,467

Int. Cl.[5] **A01N** *43/56;* **C07D** *231/06*

U.S. Cl. 514—232.2 **15 Claims**

1. A compound of the formula

wherein

R_1, R_2 and R_3 are independently selected from R_8, halogen, CN, N_3, SCN, NO_2, OR_8, SR_8, $S(O)R_8$, $S(O)_2R_8$, $OC(O)R_8$, $OS(O)_2R_8$, $C(O)OR_8$, $C(O)R_8$, $C(O)NR_8R_9$, $S(O)_2NR_8R_9$, NR_8R_9, $NR_9C(O)R_8$, $OC(O)NHR_8$, $NR_9C(O)NHR_8$ and $NR_9S(O)_2R_8$, or when m, n or p is 2, R_1, R_2 or R_3 can be taken together as OCH_2O, OCH_2CH_2O or CH_2CH_2O, to form a 5 or 6 membered ring, each of which can be substituted with 1 to 4 halogen atoms or 1 to 2 methyl groups;

R_5 is selected from $C(O)OR_{10}$, $C(O)R_{10}$, $C(O)NR_{10}R_{11}$, $C(S)SR_{10}$, $C(S)NR_{10}R_{11}$ and $S(O)_2NR_{10}R_{11}$;

R_6 is H or C_1 to C_4 alkyl;

R_7 is H or CH_3;

R_8 and R_{10} are independently selected from H, C_1 to C_4 alkyl, C_3 to C_4 alkenyl, C_3 to C_4 alkynyl, C_1 to C_4 haloalkyl, C_3 to C_4 haloalkenyl, C_1 to C_4 alkyl substituted with CN, $C(O)OCH_3$, $C(O)OCH_2CH_3$, OCH_3, OCH_2CH_3, SCH_3, SCH_2CH_3 and NO_2, and phenyl or benzyl, either optionally substituted with W, or R_8 and R_9 can be taken together as $(CH_2)_4$, $(CH_2)_5$ or $CH_2CH_2OCH_2CH_2$;

R_9 and R_{11} are independently selected from H, C_1 to C_4 alkyl, C_3 to C_4 alkenyl, C_3 to C_4 alkynyl,and C_1 to C_4 haloalkyl, or R_{10} and R_{11} can be taken together as $(CH_2)_4$, $(CH_2)_5$ or $CH_2CH_2OCH_2CH_2$;

m and n are independently 0 to 5;

P is 0 to 4;

W is selected from halogen, CN, NO_2, C_1 to C_2 alkyl, C_1 to C_2 haloalkyl, C_1 to C_2 alkoxy, C_1-C_2 haloalkoxy, C_1 to C_2 alkylthio, C_1 to C_2 haloalkylthio, C_1 to C_2 alkylsulfonyl and C_1 to C_2 haloalkylsulfonyl;

X is 0 or S; and

Y is selected from H, C_1 to C_6 alkyl, C_2 to C_6 alkoxyalkyl, CHO, C_2 to C_6 alkylcarbonyl, C_2 to C_6 alkoxycarbonyl, C_2 to C_6 haloalkylcarbonyl, C_1 to C_6 alkylthio, C_1 to C_6 haloalkylthio, phenylthio, and phenylthio substituted with 1 to 3 substituents independently selected from W.

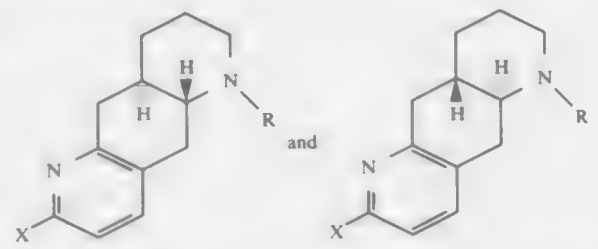
DOPAMINE AGONISTS METHOD



John M. Schaus, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind.

Division of Ser. No. 514,631, Apr. 25, 1990, Pat. No. 4,977,149, which is a division of Ser. No. 383,673, Jul. 24, 1989, Pat. No. 4,939,259. This application Sep. 21, 1990, Ser. No. 585,752

Int. Cl.[5] **A61K** *31/435, 31/445, 31/535*

U.S. Cl. 514—232.8 **24 Claims**

1. A method for treating sexual dysfunction, anxiety, depression, galactorrhea, glaucoma, hypertension, post-partum lactation, amenorrhea or prolactinoma in mammals which comprises administering a therapeutically effective amount of a compound of the formulae

wherein:

X is halo, hydroxy, hydrogen, C_1-C_4 alkyl or a group of the formula $-NR^1R^2$, wherein R^1 and R^2 are individually hydrogen, C_1-C_6 alkyl, C_2-C_6 acyl, or C_1-C_6 alkylphenyl, or where R^1 and R^2, taken together with the nitrogen atom to which they are attached, form a three- to eight-membered heterocyclic ring containing either one or two nitrogen atoms, or one nitrogen atom and one oxygen atom;

R is C_1-C_4 alkyl, allyl, or cyclopropylmethyl; or a pharmaceutically-acceptable salt thereof to a mammalian host.

5,006,526

METHOD OF TREATING A VERTEBRATE ANIMAL TO REDUCE PLASMA TRIGLYCERIDES AND CHOLESTEROL LEVELS AND TO ALLEVIATE AND PREVENT ATHEROSCLEROSIS

Albert H. Meier; Anthony H. Cincotta, both of Baton Rouge, La., and Donn D. Martin, Arlington, Tex., assignors to Louisiana State University, Baton Rouge, La.

Filed Oct. 17, 1988, Ser. No. 258,889

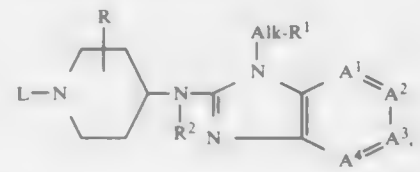
Int. Cl.[5] **A61K** *31/495, 31/50, 31/44*

U.S. Cl. 514—250 **18 Claims**

4. A method of suppressing and reducing the level of lipid plaques formed in the walls of the blood vessels of a vertebrate animal diagnosed as having an atherosclerotic condition which comprises administering to said animal an effective dosage of a prolactin-inhibiting compound sufficient to inhibit prolactin secretion and decrease the total plasma cholesterol and total triglyceride levels in the blood of the animal over a period of time sufficient to suppress and reduce the formation of lipid plaques in the walls of the blood vessels of the animal.

5,006,527

PHARMACOLOGICALLY ACTIVE N-(4-PIPERIDINYL) BICYCLIC CONDENSED 2-IMIDAZOLAMINE DERIVATIVES



Frans E. Janssens, Bonheiden; Joseph L. G. Torremans, Beerse, and Gasto S. M. Diels, Ravels, all of Belgium, assignors to Janssen Pharmaceutica N.V., Beerse, Belgium

Division of Ser. No. 182,814, Apr. 18, 1988, Pat. No. 4,897,401, which is a continuation-in-part of Ser. No. 63,899, Jun. 19, 1987, abandoned. This application Dec. 4, 1989, Ser. No. 445,812

Int. Cl.[5] **A61K** *31/495, 31/445;* **C07D** *401/14, 419/04*

U.S. Cl. 514—253 **12 Claims**

1. A compound of the formula:

(I)

a pharmaceutically acceptable acid-addition salt or a stereochemically isomeric form thereof, wherein:

A^1—A^2—A^3=A^4 represents a bivalent group of the formula.

—CH=CH—CH=CH— (a-1).

—N=CH—CH=CH— (a-2).

—CH=N—CH=CH— (a-3).

—CH=CH—N=CH— (a-4), or

—CH=CH—CH=N— (a-5);

wherein one or two hydrogen atoms in said groups (a-1) through (a-5) may, independently from each other, be replaced by halo, C_{1-6}alkyl, C_{1-6}alkoxy, trifluoromethyl, or hydroxy;

Alk represents C_{1-6}alkanediyl;

R represents hydrogen;

R^1 represent pyrazinyl, thiazolyl, or imidazolyl optionally substituted with C_{1-6}alkyl;

R^2 represents hydrogen or C_{1-4}alkyl; and

L is a group of the formula:

—Alk—R^3 (b-1).

—Alk—O—R^4 (b-2); or

—Alk—Z—C(=O)—R^7 (b-4)

wherein:

Alk represents C_{1-6}alkanediyl;

R^3 represents hydrogen, phenylthio, phenylsulfonyl, 4,5dihydro-5-oxo-1H-tetrazol-1-yl being optionally substituted in its 4-position with C_{1-4}alkyl; 2,3-dihydro-1,4-benzodioxin-2-yl, 4-morpholinyl, 1-piperidinyl, or 1-pyrrolidinyl;

R^4 represents C_{1-6}alkyl, phenyl, or substituted phenyl;

R^7 represents amino, mono- or di(C_{1-6}alkyl)amino C_{1-6}alkyloxy, phenyl, substituted phenyl, or C_{1-6}alkyl optionally substituted with phenyl or substituted phenyl; and

Z represents a direct bond or NR^8 wherein R^8 represents hydrogen or C_{1-6}alkyl,

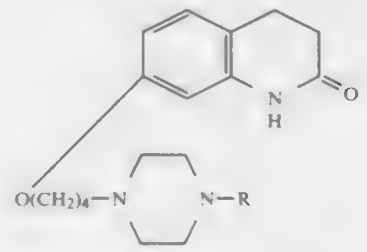
provided that A^1=A^2—A^3=A^4 is a group of formula (a-1) or (a-2) when L is a group of formula (b-4),

wherein said substituted phenyl is phenyl substituted with 1, 2, or 3 substituents, each independently selected from the group consisting of halo, hydroxy, nitro, cyano, trifluoromethyl, C_{1-6}alkyl, C_{1-6}alkyloxy, C_{1-6}alkylthio, mercapto, C_{1-6}alkylsulfonyl, C_{1-6}alkylsulfonylC_{1-6}alkyl, phenylC_{1-6}alkylsulfonyl, phenylsulfonylC_{1-6}alkyl, amino, mono- and di(C_{1-6}alkyl)amino, carboxyl, C_{1-6}alkyloxycarbonyl, and C_{1-6}alkylcarbonyl.

5,006,528

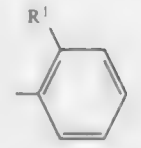
CARBOSTYRIL DERIVATIVES

Yasuo Oshiro, Tokushima; Seiji Sato, Itano, and Nobuyuki Kurahashi, Tokushima, all of Japan, assignors to Otsuka Pharmaceutical Co., Ltd., Tokyo, Japan



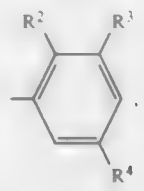
Filed Oct. 20, 1989, Ser. No. 424,719

Claims priority, application Japan, Oct. 31, 1988, 63-276953

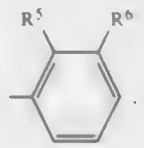


Int. Cl.[5] **A61K** *31/00;* **C07D** *401/12*

U.S. Cl. 514—253 **21 Claims**



1. A carboxtyril compound or salt thereof of the formula,



wherein R is a group of the formula

wherein R^1 is a C_1-C_3 alkoxy group; a group of the formula

wherein R^2 and R^3 are at the same time, both chlorine atoms, or both bromine atoms and R^4 is a hydrogen atom or a chlorine atom; a 2-methyl-3-nitrophenyl group; a 3,5-dichlorophenyl group; or a group of the formula

wherein R^5 is a chlorine atom or a bromine atom and R^6 is a methyl group; the carbon-carbon bond between the 3- and 4-positions in the carboxtyril skeleton being a single or a double bond.

16. A pharmaceutical composition for treating schizophrenia containing, as the active ingredient, a carbostyril compound or pharmaceutically acceptable salt thereof of claim 1 and a pharmaceutically acceptable carrier.

5,006,529

SOAP COMPOSITIONS OF ENHANCED ANTIMICROBIAL EFFECTIVENESS

Carol M. Resch, Rutherford, N.J., assignor to Lever Brothers Company, New York, N.Y.

Division of Ser. No. 322,858, Mar. 14, 1989, Pat. No. 4,954,281, which is a division of Ser. No. 199,568, May 27, 1988, Pat. No. 4,832,861. This application Jun. 20, 1990, Ser. No. 541,231

Int. Cl.[5] A01N *31/14;* C11D *3/48, 9/32;* A61K *31/075*

U.S. Cl. 514—721 5 Claims

1. A method for controlling the growth of bacteria on the skin comprising applying to the skin water and a toilet bar whose composition comprises:

(i) from 30 to 70% of a C_{12}–C_{22} fatty acid salt;

(ii) a non-soap anionic surface active agent which is a C_{10}–C_{22} acyl isethionate salt;

(iii) from 1 to 40% of C_{12}–C_{18} free fatty acid;

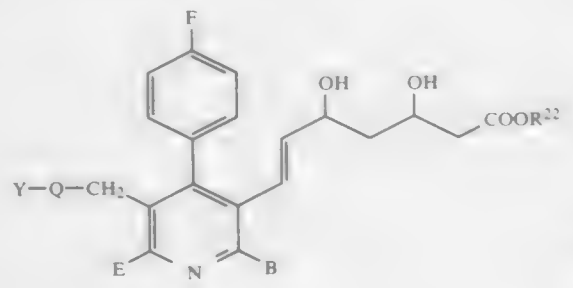
(iv) from 0.5 to 15% of sodium isethionate; and

(v) from 0.1 to 2% of 2,4,4'-trichloro-2'-hydroxy diphenyl ether in an amount effective to reduce body odor, the ratio of fatty acid salt to surface active agent being from 2.5:1 to 1.5:1.

5,006,530

CERTAIN 7-[2,6-DIISOPROPYL-4-PHENYL-5-LOWER ALKOXYMETHYL-PYRID-3-YL]-3,5-DIHYDROXY-6-ENOATES AND DERIVATIVES USEFUL FOR TREATING CIRCULATORY DISEASES

Rolf Angerbauer; Peter Fey; Walter Hübsch, all of Wuppertal; Thomas Philipps, Cologne; Hilmar Bischoff, Wuppertal; Dieter Petzinna, Duesseldorf; Delf Schmidt, Wuppertal, all of Fed. Rep. of Germany, and Günter Thomas, Arese, Italy, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Filed Jan. 17, 1989, Ser. No. 298,549

U.S. Cl. 514—278 23 Claims

1. A compound of the formula

(I)

where

n is 1;

p and q are each independently 1, 2 or 3;

each X and each Y are independently hydrogen, loweralkyl, loweralkoxy, halogen, hydroxy, nitro, amino, loweralkylamino, diloweralkylamino, trifluoromethyl or loweralkylthio;

R_1 and R_2 are each independently hydrogen or loweralkyl; and

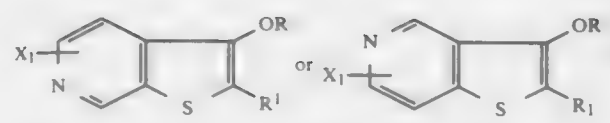
R_3 is hydrogen, loweralkyl, loweralkylcarbonyl, arylloweralkyl or aminocarbonyl;

or a pharmaceutically acceptable acid addition salt thereof.

23. A method of treating a patient in need of relief from convulsion which comprises administering to the patient an effective convulsion alleviating amount of a compound as defined in claim 1.

5,006,532

DERIVATIVES OF 3-HYDROXYAZABENZO(BETA)THIOPHENE USEFUL AS 5-LIPOXYGENASE INHIBITORS



Robert K. Baker, Cranford; Arsenio A. Pessolano, Colonia; Kathleen M. Rupprecht, Cranford, and Philippe L. Durette, New Providence, all of N.J., assignors to Merck & Co. Inc., Inc., Rahway, N.J.

Division of Ser. No. 187,170, Apr. 28, 1988, Pat. No. 4,904,672, which is a division of Ser. No. 8,881, Jan. 30, 1987, Pat. No. 4,767,766. This application Dec. 8, 1989, Ser. No. 447,989

Int. Cl.[5] A61K *31/435;* C07D *495/04*

U.S. Cl. 514—301 8 Claims

1. A compound of formula:

or a pharmaceutically acceptable salt thereof wherein

X_1 is elected from the group consisting of

(a) H,

(b) C_{1-6}alkyl,

(c) halo,

(d) halo-C_{1-6}alkyl,

(e) CN,

(f) —(CO)OR^3, wherein R^3 is C_{1-6}alkyl, and

(g) —OC_{1-6}alkyl;

R is selected from the group consisting of

(a) H,

(b) —(CO)R^3,

(c) —(CO)OR^3,

(d) —(CO)NR^3R^4 wherein R^4 is C_{1-6}alkyl,

(e) —(CO)SR^3, and

(f) —$(CH_2)_mOR^3$, wherein m is an integer from 1 to 6;

R^1 is selected from the group consisting of

(a) pyridyl, and

(b) optionally substituted phenyl, wherien the substituent is

(1) -methylenedioxy,

(2) haloC_{1-6}alkyl,

(3) halo,

(4) CN,

(5) —OC_{1-6}alkyl,

(6) —(CO)OR^3,

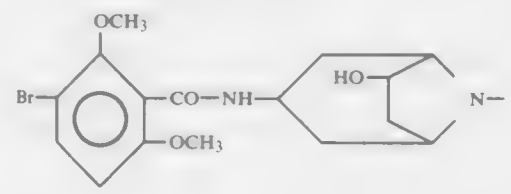
(7) C_{1-6}alkyl, or

(8) NO_2.

5,006,533

CERTAIN 3-BROMO-2,6-DIMETHOXYBENZAMIDES AND PHARMACEUTICAL USE THEREOF

Rainer Sobotta, Ingelheim am Rhein; Adolf Langbein, Gau-Algesheim; Herbert Merz, Ingelheim am Rhein; Rudolf Bauer, Wiesbaden, and Joachim Mierau, Mainz, all of Fed. Rep. of Germany, assignors to Boehringer Ingelheim GmbH, Ingelheim am Rhein, Fed. Rep. of Germany



Continuation of Ser. No. 294,852, Jan. 9, 1989, abandoned, which is a continuation of Ser. No. 90,866, Aug. 28, 1987, abandoned. This application Nov. 22, 1989, Ser. No. 440,917

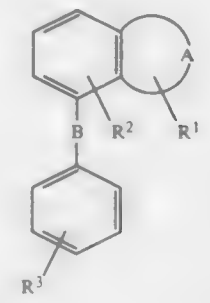
1. A compound of formula

wherein X is fluoro or chloro or a physiologically acceptable acid addition salt thereof.

5,006,534

SUBSTITUTED ETHERS, THIOETHERS AND AMINES FOR USE AS LIPOXYGENASE INHIBITORS

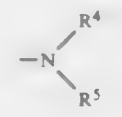
Klaus-Helmut Mohrs, Wuppertal; Romanis Fruchtmann, Cologne, and Christian Kohlsdorfer, Erftstadt, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Continuation of Ser. No. 923,775, Oct. 27, 1986, abandoned. This application Jan. 30, 1989, Ser. No. 304,895

Claims priority, application Fed. Rep. of Germany, Nov. 16, 1985, 3540743; May 22, 1986, 3617183

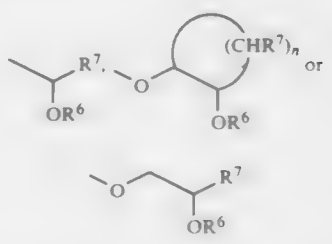
Int. Cl.[5] A61K *31/47, 31/425;* C07D *215/24, 21/702, 277/64, 277/76*



U.S. Cl. 514—311 6 Claims

1. A substituted benzyl ether, benzyl thioether or benzylamine of the formula

in which



R^1 and R^2 each independently represent hydrogen, C_1–C_{12}-alkyl, C_2–C_{12}-alkenyl, C_5–C_8-cycloalkyl, C_1–C_{12}-alkoxy, C_1–C_{12}-alkylthio, C_1–C_6-halogenoalkyl, C_1–C_6-halogenoalkoxy, C_1–C_6-halogenoalkylthio, C_1–C_{12}-sulphonylalkyl, C_7–C_{14}-aralkoxy, C_7–C_{14}-aralkylthio, halogen, nitro, cyano or hydroxyl, or represent a group of the formula

wherein

R^4 and R^5 each independently represent hydrogen, C_1–C_{12}-alkyl, C_2–C_{12}-alkenyl, C_5–C_8-cycloalkyl, phenyl, naphthyl, bisphenyl, benzyl, naphthylmethyl, phenethyl, phenylpropyl or C_1–C_6-acyl,

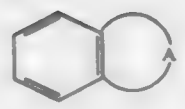
R^3 represents a group of the formula

in which

R^6 represents hydrogen, C_1–C_{12}-alkyl or C_1–C_6-acyl,

R^7 represents hydrogen or C_1–C_{12}-alkyl and

n represents a number from 3 to 10,



B represents —CH_2—X— or —X—CH_2,

wherein

X represents O, S or NR^7,

and wherein

R^7 has the abovementioned meaning and the group

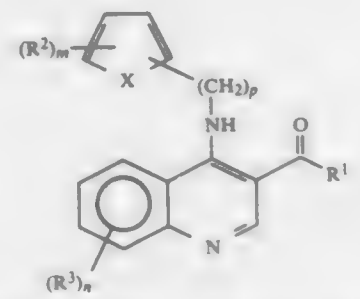
represents quinoline, 2-quinolone or quinoline-N-oxide.

5,006,535

SUBSTITUTED HETEROCYLIC 4-AMINOQUINOLINE DERIVATIVES AS GASTRIC ACID SECRETION INHIBITORS

Robert J. Ife, Stevenage; Thomas H. Brown, Tewin, and Colin A. Leach, Stevenage, all of England, assignors to Smith Kline & French Laboratories Ltd., Welwyn Garden City, United Kingdom

Filed Feb. 23, 1989, Ser. No. 315,368



Claims priority, application United Kingdom, Feb. 25, 1988, 8804447

Int. Cl.[5] **C07D** *215/44;* **A61K** *31/44*

U.S. Cl. 514—313 **13 Claims**

1. A compound of structure (I):

(I)

in which R^1 is hydrogen, C_{1-6} alkyl, C_{1-6} alkoxy, C_{1-6}alkoxyC_{1-6}alkyl, C_{3-6} cycloalkyl, C_{3-6}cycloalkylC_{1-6}alkyl, phenyl, phenylC_{1-6}alkyl, the phenyl group being optionally substituted from 1 to 3 times by members independently selected from the group consisting of hydrogen, C_{1-6} alkyl, C_{1-6} alkoxy, amino, C_{1-6} alkylthio, halogen, cyano, hydroxy, C_{1-6} alkanoyl and trifluromethyl;

R^2 is hydrogen, C_{1-6} alkyl, C_{1-6} alkoxy, CO_2H or CO_2C_{1-6} alkyl;

m is 1 to 3;

p is 0 to 4;

R^3 is hydrogen, C_{1-6} alkyl, phenyl, C_{1-6} alkoxy, C_{1-6}alkylthio, C_{1-6} alkanoyl, amino, C_{1-6}alkylamino, di-C_{1-6} alkylamino, halogen, trifluromethyl or cyano;

n is 1 or 2; and

X is S, or O,

provided that when X is oxygen, n and p are both 1, and R^1 is H or ethoxy, then R^3 is other than 6-chloro;

or a pharmaceutically acceptable salt thereof.

5,006,536

THIENOBENZOXEPINS AND ANALGESIC COMPOSITIONS THEREOF

Richard C. Effland, Bridgewater, and David G. Wettlaufer, Phillipsburg, both of N.J., assignors to Hoechst-Roussel Pharmaceuticals Inc., Somerville, N.J.

Filed Dec. 26, 1989, Ser. No. 457,132

Int. Cl.[5] **A61K** *31/445, 31/40;* **C07D** *207/08, 211/32*

U.S. Cl. 514—321 **6 Claims**

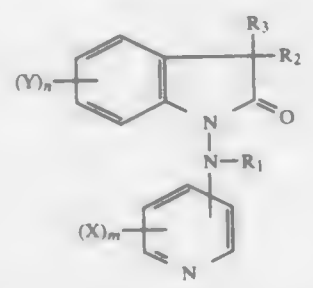
1. A compound of the formula

wherein R is loweralkyl or aryllowerlkyl; X and Y are independently hydrogen, loweralkyl, halogen, loweralkoxy, or trifluoromethyl; W is CH_2, CHOH, or C═O; and n is 1 or 2; an optical isomer or pharmaceutically acceptable salt thereof.

5. A method of alleviating pain in a mammal by administering to a mammal in need of pain alleviation a pain alleviating effective amount of a compound of claim 1.

5,006,537

1,3-DIHYDRO-1-(PYRIDINYLAMINO)-2H-INDOL-2-ONES



Richard C. Effland, Bridgewater, and David G. Wettlaufer, Phillipsburg, both of N.J., assignors to Hoechst-Roussel Pharmaceuticals, Inc., Somerville, N.J.

Filed Aug. 2, 1989, Ser. No. 388,437

Int. Cl.[5] **A61K** *31/44;* **C07D** *213/74*

U.S. Cl. 514—339 **35 Claims**

1. A 1,3-dihydro-1-(pyridinylamino)-2H-indol-2-one of the formula

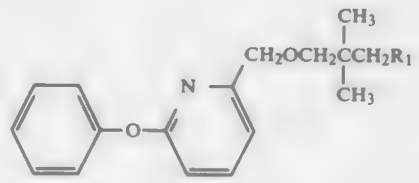
where R_1 is hydrogen, loweralkyl, aryl, aryllowerlkyl or heteroaryllowerlkyl selected from the group consisting of pyridinylmethyl, pyridinylethyl, thienylmethyl, thienylethyl; R_2 and R_3 are independently hydrogen, loweralkyl, aryllowerlkyl or heteroaryllowerlkyl selected from the group consisting of pyridinylmethyl, pyridinylethyl, thienylmethyl, thienylethyl; or R_2 and R_3 together form a cycloalkane ring of 4 to 6 carbons or a spiro fused arylcycloalkane, spiro fused pyridinylcycloalkane or spiro fused thiophenylcycloalkane, X and Y are independently hydrogen, halogen, hydroxy, loweralkyl, loweralkoxy, nitro, amino or trifluoromethyl; m and n are independently integers of 1 to 3, or the pharmaceutically acceptable acid addition salts thereof or, where applicable, the optical, geometrical or stereoisomers or racemic mixtures thereof.

33. A method of alleviating pain in a mammal which comprises administering to a mammal a pain alleviating effective amount of a compound as defined in claim 1.

5,006,538

CERTAIN INSECTICIDAL 6-(PHENOXY-2-PYRIDYL)-METHYL-NEOPHENTAL ETHERS

Kazunori Tsushima, Nishinomiya; Noritada Matsuo, Itami; Hiroshi Kisida, Takarazuka, and Toshihiko Yano, Ashiya, all of Japan, assignors to Sumitomo Chemical Company, Limited, Osaka, Japan



Filed Oct. 31, 1988, Ser. No. 264,865

Claims priority, application Japan, Nov. 7, 1987, 62-281834; Jun. 7, 1988, 63-141170

Int. Cl.[5] **C07D** *213/64;* **A01N** *43/40*

U.S. Cl. 514—345 **6 Claims**

1. An ether compound of the formula

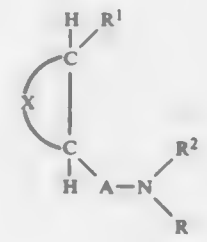
wherein R_1 represents halogen or methyl.

6. A method for controlling insects which comprises administering an insecticidally effective amount of the ether compound according to claim 1 to the insects.

5,006,539

PROSTAGLANDINS

Robert L. Jones, and Norman H. Wilson, both of Edinburgh, Scotland, assignors to National Research Development Corporation, London, England



Division of Ser. No. 869,735, Jul. 22, 1986, Pat. No. 4,837,234, which is a division of Ser. No. 531,899, Aug. 23, 1983, Pat. No. 4,628,061. This application Mar. 6, 1989, Ser. No. 319,052

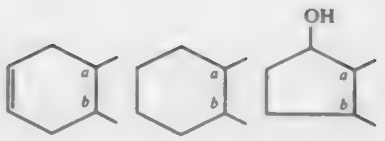
Int. Cl.[5] **C07C** *177/00;* **A61K** *31/557*

U.S. Cl. 514—357 **37 Claims**



1. A compound of formula (I)

wherein

represents one of the cyclic groups shown below:

the letters a and b indicating in each case the points of attachment of the substituents R^1 and A-NR^2R, respectively;

R^1 is a 6-carboxyhex-2-enyl group, or a modification thereof in which the group is altered by one, or an appropriate combination of two or more, of the following: (a) alteration of the position of the double bond from the 2,3-position to the 3,4-position, (b) reduction of the double bond, (c) replacement of a methylene group at position 2 or 3 by an oxygen or sulphur atom in conjunction with reduction of the double bond, (d) alteration of the chain length through a decrease or an increase of one or two methylene groups, and (e) formation of a derivative of the carboxy group in the form of a pharmaceutically acceptable salt, C_{1-10} alkyl ester or an amide containing a group $—CONH_2$ or such a group in which the nitrogen atom is substituted by one or two groups selected from C_{1-10}alkyl groups, phenyl and phenyl substituted by one or more substituents selected from C_{1-10} alkoxy, halogen, C_{1-10} halogen-substituted alkyl, sulfamyl, amino, hydroxyl, nitro and C_{1-10} alkyl groups, or by one group $—SO_2R^6$ in which R^6 is a C_{1-10} alkyl group;

A is an aliphatic C_{1-10} hydrocarbon group with a chain length between the points of attachment to the divalent cyclic group and to the group NR^2R of 1 to 5 carbon atoms or such a group substituted by a group Ar, where Ar represents a phenyl, naphthyl, fluorenyl, dibenzocyclohexyl, dibenzocycloheptyl, pyridyl, benzthiazolyl, dihydrobenzthiazolyl, N-methyldihydrobenzthiazolyl, benzoxazolyl, dihydrobenzoxazolyl or N-methyldihydrobenzoxazylyl group or such a group substituted by one or more substituents selected from C_{1-10} alkoxy, halogen, C_{1-10} halogen-substituted alkyl, sulfamyl, amino, hydroxyl, nitro and C_{1-10} alkyl groups;

R^2 is hydrogen, a C_{1-10} aliphatic hydrocarbon group, a group Ar or a C_{1-10} aliphatic hydrocarbon group substituted by one or more groups Ar; and R is a group $—CO.NR^3R^4$, $—CS.NR^3R^4$, $—CNH.NR^3R^4$, $—CO.R^4$ or $—CS.R^4$ in which R^3 is hydrogen, a C_{1-10} aliphatic hydrocarbon group, a group Ar or a C_{1-10} aliphatic hydrocarbon group substituted by one or more groups Ar, but with the proviso that both R^2 and R^3 may not be other than hydrogen, and R^4 is a C_{1-10} aliphatic hydrocarbon group, a group Ar or a C_{1-10} aliphatic hydrocarbon group substituted by one or more groups Ar and/or by a group OAr, SAr, OR^5 or SR^5 wherein R^5 is a C_{1-10} aliphatic hydrocarbon group substituted by one or more groups Ar.

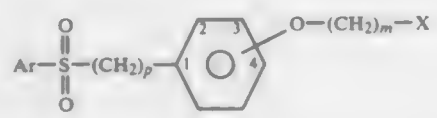
ARYLTHIOALKYLPHENYL CARBOXYLIC ACIDS, DERIVATIVES THEREOF, COMPOSITIONS CONTAINING SAME AND METHOD OF USE

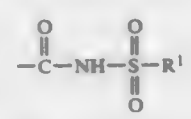


Steven E. Hall, Trenton, and Philip D. Stein, Princeton, both of N.J., assignors to E. R. Squibb & Sons, Inc., Princeton, N.J.

Filed Oct. 31, 1988, Ser. No. 264,939

Int. Cl.[5] C07C *321/00;* A61K *31/41*

U.S. Cl. 514—381 7 Claims



1. A compound having the structure

wherein

Ar is an aryl group which is unsubstituted or substituted with one, two or three of halogen, lower alkyl, lower alkoxy, phenyl, hydroxy, alkanoyl, aroyl, alkylamino, alkoxycarbonyl or carboxy;

X is COOR wherein R is hydrogen, alkali metal, lower alkyl or X is 5-tetrazolyl or

wherein R^1 is lower alkyl or aryl

p is 1 to 5;

m is 1 to 4;

and the $(CH_2)_m$ and $(CH_2)_p$ groups may be unsubstituted or optionally substituted with one or two lower alkyl groups and/or are one or two lower alkoxy groups.

1. A compound of formula (I)

(I)

or a pharmaceutically acceptable salt thereof wherein:
R_1 is selected from the group consisting of:
(a) hydrogen,
(b) C_{1-6}alkyl, and
(c) C_{3-6}alkenyl; and
M is
(a) a carbon-carbon bond,
(b) —C(H)═C(H)—,
(c) —CH_2C(H)═C(H)—, or

when
Ar is
(a) thienyl,
(b) halotheinyl,
(c) phenyl,
(d) halophenyl,
(e) benzyl,
(f) halobenzyl,
(g) n-methoxypyrrolidinoyl,
(h) γ-lactonyl, or
(i) pyridyl; and
M is —C(H)═, when
Ar is
(j) butyryl lactone, or
(k) cyclopentanone.

1. A method for reducing stress in piglets, fattening pigs and poultry which comprises administering a dose of magnesium dipropionate effective to achieve said reduction in stress.

5,006,559

METHOD OF USE OF BRANCHED-CHAIN AMINO ACIDS INFUSIONS TO INFLUENCE APPETITE

Jeffrey Askanazi, and Karen Gil, both of Haworth, N.J., assignors to Clintec Nutrition Co., Deerfield, Ill.

Continuation-in-part of Ser. No. 238,709, Aug. 31, 1988. This application Mar. 27, 1989, Ser. No. 328,842

Int. Cl.[5] A61K *31/195*

U.S. Cl. 514—561 7 Claims

1. A method to decrease the risk of aspiration of gastric contents as a result of the administration of anesthesia to a patient comprising:

parenterally administering preoperatively a therapeutically effective amount of an amino acid solution including branched chain amino acid.

5,006,560

USE OF GABA-B SELECTIVE AGONISTS AS ANTI-TUSSIVE AGENTS

William Krentzer, West Caldwell; Donald Bolser, Bedminster; Richard Chapman, Somerville, and Sultan Aziz, Woodcliff Lake, all of N.J., assignors to Schering Corporation, Kenilworth, N.J.

Filed Dec. 20, 1989, Ser. No. 454,786

Int. Cl.[5] A61K *31/66, 31/195*

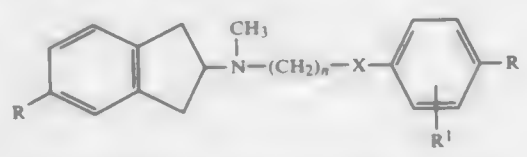
U.S. Cl. 514—114 5 Claims

1. A method for treating cough in a mammal comprising administering to said mammal an anti-tussive effective amount of a GABA-B selective agonist.

5,006,561

INDANE SULFONAMIDE ANTI-ARRHYTHMIC AGENTS AND USE

John E. Arrowsmith, Upper Walmer, and Peter E. Cross, Canterbury, both of England, assignors to Pfizer Inc., New York, N.Y.



Continuation of Ser. No. 164,310, Mar. 4, 1988, abandoned. This application Apr. 17, 1990, Ser. No. 510,370

Claims priority, application United Kingdom, Mar. 25, 1987, 870123

Int. Cl.[5] A61K *31/18; C07C 311/08*

U.S. Cl. 514—605 9 Claims

1. An organic amine compound of the formula:

or a pharmaceutically acceptable salt thereof, wherein R, which is the same in each ring, is $—NHSO_2(C_1–C_4$ alkyl); R^1 is hydrogen, halogen, $C_1–C_4$ alkyl or $C_1–C_4$ alkoxy; X is oxygen or a direct link; and n is one or two; with the proviso that when X is oxygen, n is always two.

9. A method for preventing or reducing cardiac arrhythmias in the treatment of a subject afflicted with an impaired cardiac pump function, which comprises administering to said subject an effective anti-arrhythmic amount of a compound as claimed in claim 1.

5,006,562

PROCESSES FOR REPELLING INSECTS BY MEANS OF N-ALKYL NEOALKANAMIDE INSECT REPELLENTS

Robert J. Steltenkamp, Somerset, N.J., assignor to Colgate-Palmolive Co., Piscataway, N.J.

Continuation-in-part of Ser. No. 894,985, Aug. 8, 1986, abandoned, and a continuation-in-part of Ser. No. 71,305, Jul. 16, 1987, Pat. No. 4,804,683. This application Nov. 4, 1988, Ser. No. 267,141

The portion of the term of this patent subsequent to Feb. 14, 2006, has been disclaimed.

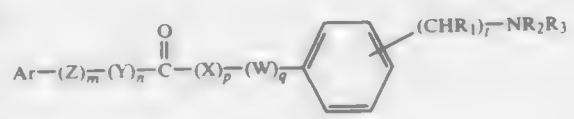
Int. Cl.[5] A01N *37/18*

U.S. Cl. 514—625 9 Claims

1. A process for repelling insects from an area, location or item which comprises applying to or near such area, location or item an insect repelling quantity of N-alkyl neoalkanamide(s), wherein the alkyl is of 1 to 2 carbon atoms and the neoalkanoyl moiety is of 7 to 14 carbon atoms.

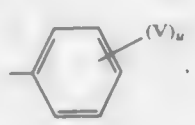
5,006,563

ALKYLAMINO- AND ALKYLAMINO ALKYL DIARYLKETONES



R. Richard L. Hamer, Lebanon; Brian Freed, Somerset, and Richard C. Allen, Flemington, all of N.J., assignors to Hoechst-Roussel Pharmaceuticals Inc., Somerville, N.J.

Continuation of Ser. No. 450,502, Dec. 14, 1989, abandoned. This application Jul. 31, 1990, Ser. No. 561,202



Int. Cl.[5] A61K *31/135;* C07C *211/27, 211/46, 215/74*

U.S. Cl. 514—646 23 Claims

1. An alkylamino-, alkylaminoalkyl diarylketone of the formula

where Ar is aryl of the formula

where V is hydrogen, halogen, loweralkyl, loweralkoxy, CF_3, NO_2 and u is an integer of 1 to 3; X and Y are independently $—CH_2—$, $—CF_2—$ or —CHF—; Z and W are independently $—CH_2—$, —O—, —CHOH—, or —CHF—; m, n, p, q and t are integers which are independently 0 or 1; R_1 is H or loweralkyl, R_2 and R_3 are loweralkyl; and the pharmaceutically acceptable acid addition salts thereof and where applicable the geometric and optical isomers and racemic mixtures thereof provided that when Z=oxygen n=1, or when W=oxygen p=1, or when both Z and W are simultaneously oxygen, n=p=1 or when W=—CHOH— and m=n=p=t=0 and u=1 then V is neither halogen nor loweralkoxy.

5,006,564

PROCESS FOR THE PRODUCTION OF FLAME-RETARDANT POLYURETHANE FOAMS

Heinz-Gerd Noonenbruch, Leverkusen; Ulrich Heltmann, Memmingen, and Heinrich Bormann, Dormagen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen and Metzeler Schaum GmbH, Memmingen, all of, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 244,874, Sep. 15, 1988, abandoned. This application Aug. 3, 1989, Ser. No. 389,081

Claims priority, application Fed. Rep. of Germany, Sep. 24, 1987, 3732199; Sep. 24, 1987, 3732239

Int. Cl.[5] C08G *18/82*

U.S. Cl. 521—54 17 Claims

1. A process for the preparation of a flame-retardant polyurethane foam comprising impregnating an open-cell polyurethane foam with a mixture of

(a) a cross-linkable elastomer latex, wherein the cross-linkable elastomer component is a polychloroprene containing carboxyl groups.

(b) a zinc salt of a metaboric or polyboric acid, and

(c) a cross-linking agent.

5,006,565

ANTI-CLUMPING AGENTS FOR EXPANDABLE VINYLAROMATIC-ACRYLONITRILE POLYMERIC MATERIALS

Martin H. Tusim, and James T. Grimes, both of Newark, Ohio, assignors to The Dow Chemical Company, Midland, Mich.

Filed Apr. 27, 1990, Ser. No. 516,020

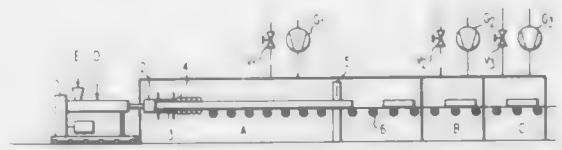
Int. Cl.[5] C08V *9/224*

U.S. Cl. 521—57 10 Claims

1. The method for reducing clumping together of expandable vinylaromatic-acrylonitrile copolymer particles comprising coating the exposed surfaces of said particles with particulate magnesium oxide in an amount in the range from 0.2 to 1.5 weight percent, based on the weight of expandable copolymer particles.

5,006,566

PREPARATION OF FOAMS HAVING A HIGH COMPRESSIVE STRENGTH



Reinhold Weber, Mutterstadt; Manfred Weilbacher, Frankenthal; Hermann Tatzel, Hirschberg; Ludwig Zuern, Bad Durkheim; Hans D. Zettler, Gruenstadt, and Klaus Hinselmann, Mutterstadt, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Dec. 2, 1988, Ser. No. 279,092

Claims priority, application Fed. Rep. of Germany, Dec. 4, 1987, 3741095

Int. Cl.[5] C08J *9/08*

U.S. Cl. 521—79 4 Claims

1. A process for the preparation of a foam having high compressive strength by extrusion of a mixture of a styrene polymer and from 3 to 9% by weight, based on the styrene polymer, of a blowing agent consisting of

(a) from 80 to 100% by weight of carbon dioxide and

(b) from 0 to 20% by weight of one or more halohydrocarbons or hydrocarbons which are gaseous at room temperature,

with or without conventional additives, wherein the mixture is extruded into a zone under from 0.1 to 2 bar gauge pressure and the foam is allowed to stabilize under this pressure.

5,006,567

PROCESS FOR FOAMING POLYMER COMPOSITIONS WITH HYDRAZONE COMPOUNDS AND COMPOSITIONS ASSOCIATED THEREWITH

Michael J. Fazio; Richard A. Wolf; Edwin J. Wilson, all of Midland, Mich., and Susan Wollowitz, Walnut Creek, Calif., assignors to The Dow Chemical Company, Midland, Mich.

Filed Oct. 11, 1988, Ser. No. 255,572

Int. Cl.[5] C08J *9/10*

U.S. Cl. 521—95 15 Claims

1. A process for foaming a thermoplastic polymer comprising the steps of:

(a) dispersing throughout the molten thermoplastic polymer a foaming amount of foaming agent which contains a hydrazone compound having:

(1) a hydrazone group having a first hydrazone nitrogen atom and a second hydrazone nitrogen atom joined by a single bond,

(2) a first organic moiety having a single bond from a carbon atom in the first organic moiety to the first hydrazone nitrogen atom,

(3) a hydrogen atom bonded to the first hydrazone nitrogen atom, and

(4) a second organic moiety having a double bond from a carbon atom in the second organic moiety to the second hydrazone nitrogen atom,

said first and second organic moieties being chosen such that said hydrazone compound is substantially stable with respect to thermal decomposition at temperatures up to at least 200° C. and such that said hydrazone compound substantially decomposes to liberate gas at a temperature at which the polymer does not undergo substantial thermal degradation; and

(b) subjecting the foaming agent to temperature conditions in excess of 200° C. under which said hydrazone compound substantially decomposes and foams the polymer.

5,006,568

VOLATILE FOAMING AGENT COMPOSITION

Hiromitsu Fukazawa, and Motosuke Ogawa, both of Shimizu, Japan, assignors to Dupont-Mitsui Fulurochemicals Co., Ltd.

Continuation of Ser. No. 291,584, Dec. 29, 1988, abandoned. This application Aug. 2, 1990, Ser. No. 562,410

Int. Cl.[5] C08J *9/14*

U.S. Cl. 521—98 4 Claims

1. A method of blowing a thermoplastic polymer comprising mixing a volatile blowing agent into the molten polymer and blowing the polymer; wherein said blowing agent comprises a mixture of 1,1,1,2 tetrafluoroethane with other volatile blowing agents having a permeability higher than air in the thermoplastic polymer and where the ratio of the 1,1,1,2 tetrafluoroethane to the other volatile blowing agents is regulated so that the overall gas permeability of the volatile mixture in the thermoplastic polymer is comparable to that of air; and wherein the thermoplastic polymer is selected from polyethylene, polypropylene, polybutadiene, or polystyrene.

5,006,569

DENSITY REDUCTION IN FLEXIBLE POLYURETHANE FOAMS

Herman Stone, Hazleton, Pa., assignor to PMC, Inc., Sun Valley, Calif.

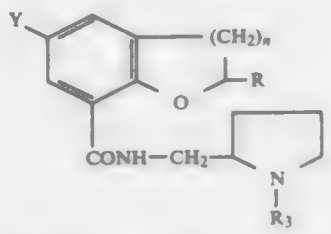
Filed Aug. 16, 1989, Ser. No. 394,548

Int. Cl.[5] C08G *18/14*

U.S. Cl. 521—118 42 Claims

1. An improved flexible, open-celled polyurethane foam produced in situ from the reaction, in the presence of a catalyst, of an isocyanate, a blowing agent, a foam stabilizer, a polyether polyol having a molecular weight from about 2000 to about 6500, and a liquid salt produced from the reaction of CO_2 with a water-soluble amine or amino alcohol, wherein the liquid salt is present in an amount greater than or equal to about

2 parts by weight per 100 parts by weight of polyol, the foam being characterized by reduced density as compared with a second foam of the same composition that was produced from a reaction mixture wherein the liquid salt was present in an amount less than about 2 parts by weight per 100 parts by weight of polyol.



5,006,570

DIHYDROBENZOFURAN- AND CHROMAN-CARBOXAMIDE DERIVATIVES, PROCESSES FOR THE PREPARATION THEREOF AND USE THEREOF AS NEUROLEPTICS

Jacqueline Franceschini, L'Hay-Les-Roses, and Josette Margarit, Paris, both of France, assignors to Laboratoires Delagrange, Paris, France

Filed Jan. 30, 1987, Ser. No. 8,916
Claims priority, application France, Jan. 30, 1986, 86 01279
Int. Cl.[5] A61K *31/40*; C07D *405/00*
U.S. Cl. 514—422 **12 Claims**

1. Dihydrobenzofuran- and chroman-carboxamide derivatives of formula (I):

in which R is hydrogen or methyl;
n is equal to 1 or 2;
R_3 is cyclopropylmethyl or cyclohexanylmethyl;
Y is chlorine, cyclopropylmethylsulphonyl, methylsulfamoyl or ethylsulphonyl, and their pharmacologically acceptable acid addition salts and their optical isomers.

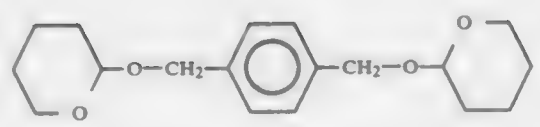
5,006,571

DENTURE ADHESIVE COMPOSITION

Lori D. Kumar, Princeton, and Alexander M. Schobel, Whitehouse Station, both of N.J., assignors to Warner-Lambert Company, Morris Plains, N.J.

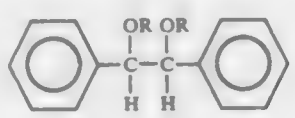
Filed Dec. 21, 1989, Ser. No. 455,703
Int. Cl.[5] C09J *101/26, 135/08*; A61C *13/23*
U.S. Cl. 523—120 **34 Claims**

1. A denture adhesive base composition comprising an adhesive copolymer matrix comprising a substantially anhydrous mixture of a mixed Na/Ca salt of methyl vinyl ether-maleic acid copolymer, sodium carboxymethylcellulose and a water soluble material which provides an amount of trivalent cations in water sufficient to crosslink said sodium carboxymethylcellulose and render said sodium carboxymethylcellulose insoluble in said adhesive copolymer matrix.



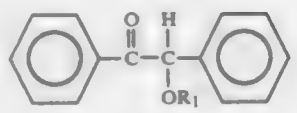
5,006,572

GAMMA RADIATION RESISTANT POLYCARBONATE COMPOSITION

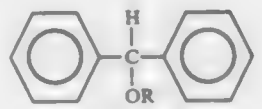


Charles E. Lundy; Roger J. White, and Sivaram Krishnan, all of Pittsburgh, Pa., assignors to Mobay Corporation, Pittsburgh, Pa.

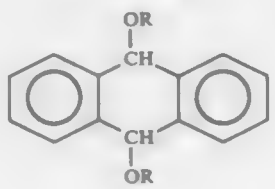
Continuation-in-part of Ser. No. 301,204, Jan. 24, 1989, abandoned. This application Sep. 5, 1989, Ser. No. 403,202
Int. Cl.[5] C08K *5/15, 5/06*
U.S. Cl. 523—136 **13 Claims**



1. A polycarbonate molding composition comprising a homogeneous blend of (i) an aromatic polycarbonate resin and (ii) about 0.01 to about 5.0% relative to the weight of the composition of a member selected from the group consisting of

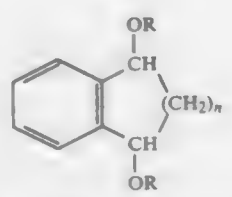


(a)



(b)

(c)



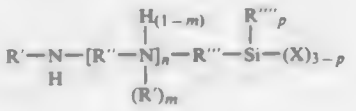
(d)

(e)

and

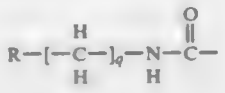
(f)

wherein R and R_1 denote a $C_{1\text{-}30}$ alkyl or aryl radical or a dihydropyran and n is 1 to 3.



5,006,573

SILANE COUPLING AGENTS



Edwin P. Plueddemann, Midland, Mich., assignor to Dow Corning Corporation, Midland, Mich.

Division of Ser. No. 803,043, Nov. 29, 1985, Pat. No. 4,650,889. This application Oct. 14, 1986, Ser. No. 917,950
Int. Cl.[5] C08K *9/08*
U.S. Cl. 523—214 **19 Claims**

1. A process for bonding a polymerizable material to a mineral filler comprising: (a) mixing an organosilane with a polymerizable material having aliphatic unsaturation and a filler having hydroxyl functionality thereon, to obtain a uniform dispersion of the components; and (b) polymerizing said material to form a solid composite, wherein said organosilane is represented by the formula

wherein R' is the group

and wherein R is selected from the group consisting of acryloxy and methacryloxy radical; R'' is a divalent hydrocarbon radical having 2 to 4 carbon atoms; R''' is a divalent hydrocarbon radical having 3 to 6 carbon atoms; R'''' is selected from the group consisting of methyl, ethyl, propyl, butyl and phenyl; X is a hydrolyzable species selected from the group consisting of methoxy, ethoxy, acetoxy and chlorine; n is 0, 1 or 2: q is 2, 3 or 4; p is 0 or 1; and m has an average value from 0 to 1.0 when n is at least 1.

5,006,574

CATIONCALLY DISPERSED SLURRIES OF CALCINED KAOLIN CLAY

Paul Sennett, Colonia, and Steven A. Brown, New Brunswick, both of N.J., assignors to Engelhard Corporation, Iselin, N.J.

Filed Feb. 10, 1989, Ser. No. 309,456
Int. Cl.[5] C08K *3/34*
U.S. Cl. 523—351 **5 Claims**

1. A method for preparing a fluid stable aqueous slurry of particles of a calcined clay pigment suitable for use in coating or filling paper or as an extender pigment in paint which comprises providing dispersant-free particles of calcined kaolin clay and adding said particles to a solution of a water-soluble polymeric cationic dispersant in amount sufficient to impart a positive zeta potential to said particles of said pigment and to result in a pH in the range of about 3 to 4, said dispersant being selected from the group consisting of alkyl diallyl quarternary ammonium salts, quarternary ammonium cationic polyelectrolytes obtained by copolymerizing aliphatic secondary amines with epichlorohydrin and poly (quarternary ammonium) polyester salts.

5,006,575

DIE ATTACH ADHESIVE COMPOSITION

Man-Sheung Chan, Aldan, Pa., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Continuation-in-part of Ser. No. 425,389, Oct. 20, 1989, abandoned. This application Apr. 26, 1990, Ser. No. 515,698
Int. Cl.[5] C08L *63/04*
U.S. Cl. 523—458 **12 Claims**

1. An adhesive composition for attaching IC chips to high surface energy inorganic substrates comprising:
(a) 60–80% by weight of flake silver particles dispersed in
(b) 40–20% by weight of a solid, homogeneous, amorphous polymeric halide-free matrix consisting essentially of 92–99.5% by weight thermoplastic phenoxy resin and 8–0.5% by weight thermally crosslinkable resin, the polymeric matrix having a Tg of 80°–160° C. and a tensile modulus of at least 1.0×10^5 psi.

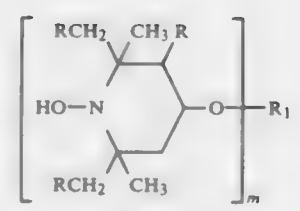
5,006,576

ION EXCHANGE MEMBRANE

Mordechai Pasternak, Spring Valley, and Tansukhlal G. Dorawala, Wappingers Falls, both of N.Y., assignors to Texaco Inc., White Plains, N.Y.

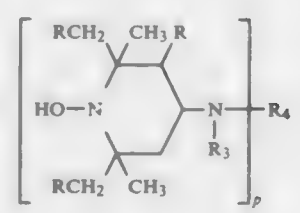
Division of Ser. No. 141,449, Jan. 7, 1988, Pat. No. 4,952,318. This application Feb. 16, 1989, Ser. No. 311,661
Int. Cl.[5] C08J *5/22*
U.S. Cl. 521—27 **5 Claims**

1. A non-porous ion exchange membrane comprising a high molecular weight non-porous ion exchange acid resin in membrane form having carbon atoms in the backbone, bearing a pendant acid group, said membrane having been contacted with a quaternary ammonium halide containing hydrocarbyl groups each of which contains at least four carbon atoms.



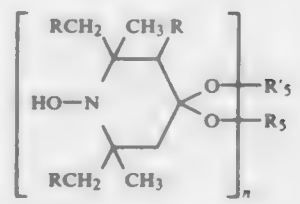
5,006,577

STABILIZATION OF AMBIENT CURED COATINGS WITH N-HYDROXY HINDERED AMINES



Rudolf A. Behrens, New Fairfield, and Andrew Mar, Norwalk, both of Conn., assignors to Ciba-Geigy Corporation, Ardsley, N.Y.

Continuation-in-part of Ser. No. 99,412, Sep. 21, 1987, abandoned. This application Oct. 19, 1988, Ser. No. 259,958
Int. Cl.[5] C08K *5/34, 5/35*
U.S. Cl. 524—95 **21 Claims**



1. An ambient curable, stabilized composition comprising
(a) a resin selected from the group consisting of unmodified or modified alkyd resins, acrylic resins, acrylic alkyl resins and polyester resins and crosslinked epoxide resins; and
an effective oxidative and light stabilizing amount of a substituted hindered amine derivative corresponding to the formulae A-O

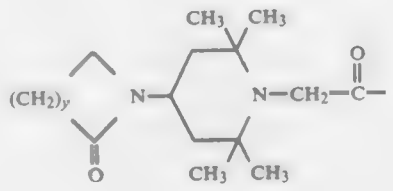
m is 1–4,

when m is 1,



R_1 is hydrogen, C_1–C_{18} alkyl optionally interrupted by one or more oxygen atoms, C_2–C_{12} alkenyl, C_6–C_{10} aryl, C_7–C_{12}-aralkyl, glycidyl, a monovalent acyl radical of an aliphatic, cycloaliphatic, araliphatic or aromatic carboxylic acid, or of carbamic acid; or

(J)

(K)

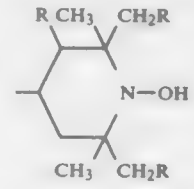
wherein x is 0 or 1, or

wherein y is 2–4;

when m is 2,

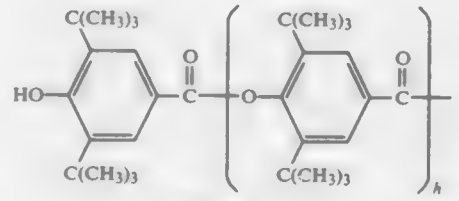
R_1 is C_1–C_{12} alkylene, C_4–C_{12} alkenylene, xylylene, a divalent acyl radical of an aliphatic, cycloaliphatic araliphatic or aromatic dicarboxylic acid or a dicarbamic acid;

(L) when m is 3, R_1 is a trivalent acyl radical of an aliphatic, unsaturated aliphatic, cycloaliphatic, or aromatic tricarboxylic acid;



when m is 4, R_1 is a tetravalent acyl radical of a saturated or unsaturated aliphatic or aromatic tetracarboxylic acid;

p is 1, 2 or 3,

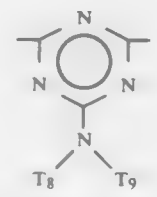


R_3 is hydrogen, C_1–C_{12} alkyl, C_5–C_7 cycloalkyl, C_7–C_9 aralkyl, C_2–C_{18} alkanoyl, C_3–C_5 alkenoyl or benzoyl;

when p is 1,

R_4 is hydrogen, C_1–C_{18} alkyl, C_5–C_7 cycloalkyl, C_2–C_8 alkenyl unsubstituted or substituted by a cyano, carbonyl or carbamide group, aryl, aralkyl, or it is glycidyl, a group of the formula $—CH_2—CH(OH)—Z$ or of the formula —CO—Z or —CONH—Z wherein Z is hydrogen, methyl or phenyl, or a group of the formulae

or



with h as 0 or 1;

or R_3 and R_4 together when p is 1 can be alkylene or 4 to 6 carbon atoms or 2-oxo-polyalkylene or the cyclic acyl radical of an aliphatic or aromatic 1,2- or 1,3-dicarboxylic acid,

when p is 2,

R_4 is a direct bond or is C_2–C_{12} alkylene, C_6–C_{12} arylene, xylylene, a $—CH_2CH(OH)—CH_2$ group, or a group $—CH_2—CH(OH)—CH_2—O—X—O—CH_2—CH(OH)—CH_2—$ wherein X is C_2–C_{10} alkylene, C_6–C_{15} arylene or C_6–C_{12} cycloalkylene; or, provided that R_3 is not alkanoyl, alkenoyl or benzoyl, R_4 can also be a divalent acyl radical or an aliphatic, cycloaliphatic or aromatic dicarboxylic acid or dicarbamic acid, or can be the group —CO—; or

R_4 is

where T_8 and T_9 are independently hydrogen, alkyl of 1 to 18 carbon atoms, or T_8 and T_9 together are alkylene of 4 to 6 carbon atoms or 3-oxapentamethylene;

when p is 3,

R_4 is 2,4,6-triazinyl

n is 1 or 2,

when n is 1,

R_5 and R'_5 are independently C_1–C_{12} alkyl, C_2–C_{12} alkenyl, C_7–C_{12} aralkyl, or R_5 is also hydrogen, or R_5 and R'_5 together are C_2–C_8 alkylene or hydroxyalkylene or C_4–C_{22} acyloxyalkylene;

when n is 2,

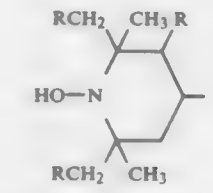
R_5 and R'_5 together are $(—CH_2)_2C(CH_2—)_2$;

R_6 is hydrogen, C_1–C_{12} alkyl, allyl, benzyl, glycidyl or C_2–C_6 alkoxyalkyl;

when n is 1,

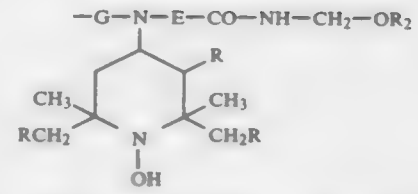
R_7 is hydrogen, C_1–C_{12} alkyl, C_3–C_5 alkenyl, c_7–C_9 aralkyl, C_5–C_7 cycloalkyl, C_2–C_4 hydroxyalkyl, C_2–C_6 alkosyalkyl, C_6–C_{10} aryl, glycidyl, a group of the formula $—(CH_2)_t—COO—Q$ or of the formula $—(CH_2)_t—O—CO—Q$ wherein t is 1 or 2, and Q is C_1–C_4 alkyl or phenyl; or

when n is 2,



R_7 is C_2–C_{12} alkylene, C_6–C_{12} arylene, a group $—CH_2CH(OH)—CH_2—O—X—O—CH_2—CH(OH)—CH_2—$ wherein X is C_2–C_{10} alkylene, C_6–C_{15} arylene or C_6–C_{12} cycloalkylene, or a group $—CH_2CH(OZ')CH_2—(OCH_2—CH(OZ')CH_2)_2—$ wherein Z' is hydrogen, C_1–C_{18} alkyl, allyl, benzyl, C_2–C_{12} alkanoyl or benzoyl;

Q_1 is $—N(R_8)—$ or —O—;



E is C_1–C_3 alkylene, the group $—CH_2—CH(R_9)—O—$ wherein R_9 is hydrogen, methyl or phenyl, the group $—(CH_2)_3—NH—$ or a direct bond;

R_{10} is hydrogen or C_1–C_{18} alkyl;

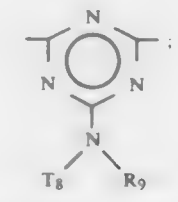
R_8 is hydrogen, C_1–C_{18} alkyl, C_5–C_7 cycloalkyl, C_7–C_{12} aralkyl, cyanoethyl, C_6–C_{10} aryl, the group $—CH_2—CH(R_9)—OH$ wherein R_9 has the meaning defined above; a group of the formula

or a group of the formula

wherein G can be C_2–C_6 alkylene or C_6–C_{12} arylene; or R_8 is a group $—E—CO—NH—CH_2—OR_{10}$;

T_3 is ethylene or 1,2-propylene, or is the repeating structural unit derived from an alpha-olefin copolymer with an alkyl acrylate or methacrylate;

k is 2 to 100;

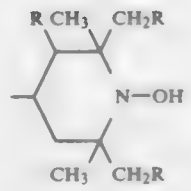


T_5 is methyl,

T_6 is methyl or ethyl, or T_5 and T_6 together are tetramethylene or pentamethylene;

M and Y are independently methylene or carbonyl;

T_7 is the same as R_7;



T_{10} and T_{11} are independently alkylene of 2 to 12 carbon atoms, or T_{11} is

T_{12} is piperazinyl, $—NR_{11}—(CH_2)_f—NR_{11}—$ or

where R_{11} is the same as R_3 or is also

a, b and c are independently 2 or 3, d is 0 or 1 and f is 0–20; e is 2, 3 or 4;

T_{13} is the same as R with the proviso that T_{13} cannot be hydrogen when n is 1;

E_1 and E_2, being different, each are —CO— or —N(E_5)— wherein E_5 is hydrogen, C_1–C_{12} alkyl or alkoxycarbonylalkyl of 4 to 22 carbon atoms;

E_3 is hydrogen, alkyl or 1 to 30 carbon atoms, phenyl, naphthyl, said phenyl or said naphthyl substituted by chlorine or by alkyl of 1 to 4 carbon atoms, or phenylalkyl of 7 to 12 carbon atoms, or said phenylalkyl substituted by alkyl of 1 to 4 carbon atoms;

E_4 is hydrogen, alkyl of 1 to 30 carbon atoms, phenyl, naphthyl or phenylalkyl of 7 to 12 carbon atoms, or

E_3 and E_4 together are polymethylene of 4 to 17 carbon atoms, or said polymethylene substituted by up to four alkyl groups of 1 to 4 carbon atoms, and

E_6 is an aliphatic or aromatic tetravalent radical.

SELF-BONDING CURABLE ORGANOPOLYSILOXANE COMPOSITION

Akira Kasuya, Chiba, Japan, and Toshio Suzuki, East Sussex, United Kingdom, assignors to Toray Silicone Company, Limited, Tokyo, Japan

Filed Jun. 5, 1989, Ser. No. 361,455

Claims priority, application Japan, Jun. 10, 1988, 63-142930

Int. Cl.[5] C08K *5/24*

U.S. Cl. 524—264 **8 Claims**

1. A curable organopolysiloxane composition comprising

(A) an organopolysiloxane having at least 2 silicon-bonded alkenyl groups in each molecule,

(B) an organopolysiloxane having at least 2 silicon-bonded hydrogen atoms in each molecule,

(C) a catalytic quantity of a platinum catalyst,

(D) a carbonyl complex of an element selected from the group consisting of molybdenum, tungsten, and chromium, and

(E) a compound containing a silicon-bonded alkoxy group selected from the group consisting of silanes and siloxane oligomers,

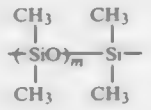
wherein the quantity of component (B) is sufficient to give a value of 0.5:1 to 1:5 for the molar ratio between the silicon-bonded hydrogen atoms in component (B) and the silicon-bonded alkenyl groups in component (A), component (D) comprises 0.0001 to 0.5 weight % of the total quantity of component (A) plus component (B), and component (E) comprises 0.01 to 10 weight % of the total quantity of component (A) plus component (B).

5,006,581

SYNTHETIC RESIN COMPOSITION

Toshio Nakane, Fuji; Kenji Hijikata, Mishima, and Yukihiko Kageyama, Fuji, all of Japan, assignors to Polyplastics Co., Ltd., Osaka, Japan

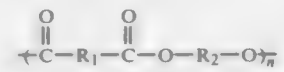
Filed Dec. 11, 1987, Ser. No. 130,907



Claims priority, application Japan, Dec. 26, 1986, 61-309870

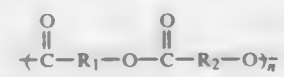
Int. Cl.[5] C08L *83/10*

U.S. Cl. 524—266 **7 Claims**



1. A synthetic resin composition which comprises a resin dispersion of a synthetic resin having a solubility parameter of 9.5 $cal^{\frac{1}{2}}cm^{-3/2}$ or higher, a modifier having a solubility parameter of 8.5 $cal^{\frac{1}{2}}cm^{-3/2}$ or lower, and a silicon-containing copolyester being a block copolymer consisting of

(a) 1 to 90% by weight of siloxane segment



wherein m is a number between 1 and 2,000, and

(b) 99 to 1% by weight of polyester segment represented by the following formula:

or

wherein n is a number between 1 to 1,000, R_1 is selected from aromatic divalent radicals having 6 to 12 carbon atoms, or aliphatic divalent radicals having 4 to 20 carbon atoms, and R_2 is selected from divalent radical shaving 6 to 20 carbon atoms, or aliphatic divalent radicals having 2 to 20 carbon atoms, and wherein

the degree of polymerization of the siloxane segment and the polyester segment is 1 to 2,000 and 1 to 1,000 respectively.

5,006,582

ACRYLIC HOT MELT PRESSURE SENSITIVE ADHESIVE COMPOSITIONS

Paul A. Mancinelli, Frazer, Pa., assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Continuation-in-part of Ser. No. 226,993, Aug. 1, 1988. This application Mar. 31, 1989, Ser. No. 332,262

Int. Cl.[5] C08L *33/08, 93/04, 25/02;* **C08K** *5/11*

U.S. Cl. 524—271 **15 Claims**

1. An acrylic hot melt pressure sensitive adhesive composition comprising

(a) 30 to 90% by weight of a thermoplastic comb copolymer of

(i) 2–35% by weight, based on the thermoplastic copolymer, of a macromonomer of the general formula X-$(Y)_n$-Z wherein X is a reactive vinyl end group capable of copolymerization under free radical conditions with acrylic comonomers to afford the comb copolymer having pendant macromonomer side chains along an acrylic backbone; Y is a divalent linking group in which n is zero or one; and Z is a poly(methacrylate) based polymeric moiety having a T_g greater than 20° C. and a weight average molecular weight of about from 2,000 to 35,000 and being substantially unreactive under copolymerization conditions; and

(ii) 65 to 98% by weight, based on the thermoplastic copolymer, of one or more monomers selected from the group consisting of monomeric acrylic or methacrylic acid ester of a non-tertiary alcohol, the alcohol having from 1 to 18 carbon atoms;

(b) about from 10 to 70% by weight of tackifier wherein the tackifier comprises a blend of about from 95 to 80%, by weight of the tackifier blend, of at least one hydrogenated poly(aromatic) copolymer and complementally about from 5 to 15%, by weight of the tackifier blend, of a second tackifier compatible with the acrylic backbone of the comb polymer; and

(c) about from 0 to 20% by weight of plasticizer.

5,006,583

FILLER AND WAX COMPOSITION FOR INVESTMENT CASTING

Peter G. Argueso, Waccabuc, N.Y., assignor to M. Argueso & Co., Inc., Mamaroneck, N.Y.

Filed Aug. 15, 1988, Ser. No. 232,476

Int. Cl.[5] C08L *47/00;* **B28B** *7/28*

U.S. Cl. 524—277 **14 Claims**

1. A composition comprising irregularly shaped particles of cross-linked styrene-divinylbenzene copolymer produced by attrition milling of cross-linked styrene-divinylbenzene copolymer, wherein at least about 90% by weight of the irregularly shaped particles passes through a 100 mesh screen and about 50% by weight of said particles passes through a 200 mesh screen.

5,006,584

POLYDIALKYLSILALKYLENE POLYMER USEFUL IN ENHANCED OIL RECOVERY USING CARBON DIOXIDE FLOODING

Bruce W. Davis, Fullerton, Calif., assignor to Chevron Research and Technology Company, San Francisco, Calif.

Continuation of Ser. No. 343,099, Apr. 25, 1989, abandoned, which is a division of Ser. No. 275,248, Nov. 23, 1988, abandoned. This application Feb. 22, 1990, Ser. No. 485,794

Int. Cl.[5] C08K *5/09*

U.S. Cl. 524—284 **10 Claims**

1. A composition comprising a solution of carbon dioxide, a polymer, and a cosolvent;

(a) wherein said polymer comprises a polydialkylsilalkylene polymer; and

(b) wherein said cosolvent is selected from the group consisting of:

(1) alcohols having from 1 to 8 carbon atoms,

(2) aromatics having a single ring and from 6 to 10 carbon atoms,

(3) ketones having from 3 to 10 carbon atoms,

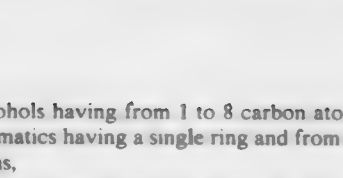
(4) carboxylic acid esters where the carboxylic acid portion has from 2 to 4 carbon atoms and the ester portion has from 1 to 10 carbon atoms, and

(5) hydrocarbons having from 2 to 20 carbon atoms.

5,006,585

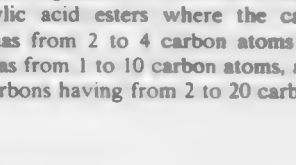
STAIN-RESISTANT PLASTICIZER COMPOSITIONS AND METHOD OF MAKING SAME

Eugene P. DiBella, Piscataway, N.J., assignor to Huls America Inc., Piscataway, N.J.



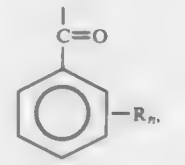
Filed Sep. 5, 1989, Ser. No. 402,570

Int. Cl.[5] C08K *5/09;* **C07C** *69/76*

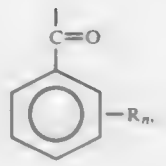


U.S. Cl. 524—293 **7 Claims**

1. Monoester compounds of the formula:



wherein X =



Y =

R is an alkyl group having from 1 to 4 carbon atoms, and n=0–5; with the proviso that when X is

Y is H, and when Y is

X is H.

5,006,586
HEAT RESERVE MATERIAL

Daijiro Touji, Kakogawa; Akihiro Nakahara, Ibaragi; Takefumi Nakashita, Kobe; Atsuko Mitsuba, Kobe; Yukiyasu Nakashio, Kobe, and Tsuneyuki Nagase, Takatsuki, all of Japan, assignors to Sumitomo Rubber Industries, Limited, Hyogo, Japan

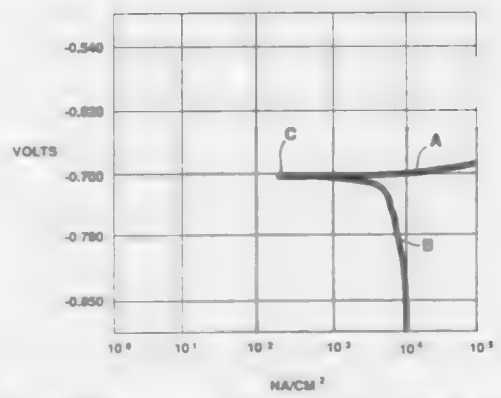
Filed Apr. 13, 1989, Ser. No. 337,750
Claims priority, application Japan, Apr. 15, 1988, 63-94239
Int. Cl.[5] C08K *5/04, 5/55*
U.S. Cl. 524—377 4 Claims

1. A heat reserve material consisting essentially of:
(A) a hydrophilic polymer having a hydroxyl group on a principal chain,
(B) borate glass, and
(C) water and/or a water-soluble alcohol, wherein an amount of component (B) is within the range of 1 to 50 parts by weight based on 100 parts by weight of component (A), and an amount of component (C) is 6 to 50 times larger than the total weight of components (A) and (B).

5,006,587
POLYPROPYLENE FORMULATIONS CONTAINING SMALL AMOUNTS OF FLUOBORATES TO IMPROVE COLOR AND WATER CARRY-OVER

Ivor R. Fielding, Naperville, Ill., assignor to Amoco Corporation, Chicago, Ill.

Filed Sep. 25, 1989, Ser. No. 412,172
Int. Cl.[5] C08K *5/3435*
U.S. Cl. 524—405 12 Claims



1. A polypropylene composition having improved color and water carry-over properties comprising about 0.01 to about 1.0 wt.% of a hindered amine light stabilizer and about 0.01 to about 0.5 wt.% of a fluoborate salt.

5,006,588
CORROSION AND CRACK GROWTH INHIBITING COMPOUND, COATING, AND SEALANT MATERIAL AND METHOD OF MAKING

Robert N. Miller, Acworth, Ga., assignor to Lockheed Corporation, Calabasas, Calif.

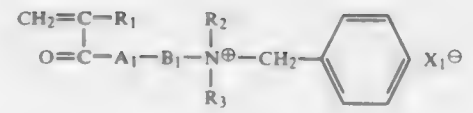
Division of Ser. No. 230,128, Aug. 9, 1988, abandoned. This application Jun. 30, 1989, Ser. No. 373,550
Int. Cl.[5] C08K *3/10, 3/34*
U.S. Cl. 524—406 6 Claims

1. A corrosion and crack growth inhibiting coating and sealing composition for application to metal surfaces comprising cerous molybdate blended with a resilient, curable elastomeric polysulfide in a concentration of from about 1% to about 5% by weight.

5,006,589
POLYESTER FILM FOR MAGNETIC RECORDING MEDIA

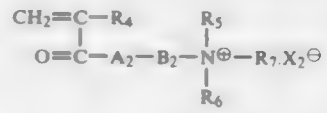
Seiji Sakamoto, Machida; Chikakazu Kawaguchi, Atsugi; Yoshio Meguro, Machida; Takashi Harada, Yokohama, and Toshifumi Takisawa, Nagahama, all of Japan, assignors to Diafoil Company, Limited, Tokyo, Japan

Filed Jun. 2, 1989, Ser. No. 360,781
Claims priority, application Japan, Jun. 4, 1988, 63-138051; Jun. 9, 1988, 63-142419; Jul. 14, 1988, 63-175452; Jul. 21, 1988, 63-182360; Jul. 21, 1988, 63-182362; Nov. 8, 1988, 63-281977
Int. Cl.[5] C08K *3/22*
U.S. Cl. 524—430 6 Claims



1. A polyester film for magnetic recording media, containing 0.05 to 5% by weight of inorganic particles (A) selected from the group consisting of particles of δ- aluminum oxide and particles of γ- aluminum oxide both having a Mohs hardness of 6 or above and an average particle size of 0.005 to 1.0 μm, and 0.01 to 2.0% by weight of inactive particles (B) having an average particle size which is greater than that of said particles (A) and in the range of 0.1 to 3.0 μm, the polyester film having an intrinsic viscosity in the range of 0.52 to 0.65.

5,006,590
PROCESS FOR THE PREPARATION OF DISPERSION OF WATER-SOLUBLE CATIONIC POLYMER



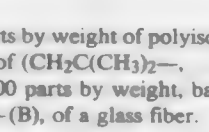
Hisao Takeda, Zama, and Mutsumi Kawano, Chigasaki, both of Japan, assignors to Kyoritsu Yuki Co., Ltd., Tokyo, Japan

Filed Sep. 28, 1989, Ser. No. 414,174
Claims priority, application Japan, Oct. 14, 1988, 63-257277
Int. Cl.[5] C08F *2/16*
U.S. Cl. 524—458 20 Claims

1. A process for preparing a dispersion of a water-soluble cationic polymer that is easily flowable and easily soluble in spite of its high molecular weight comprising: polymerizing a water-soluble monomer mixture containing at least 5 mole % of a cationic monomer represented by general formula (I) in an aqueous solution of a polyvalent anion salt, wherein said polymerization is carried out in the presence of:
(1) a water-soluble cationic polymer which is insoluble in said aqueous solution of a polyvalent anion salt; and
(2) a water-soluble cationic polymer which is soluble in said aqueous solution of a polyvalent anion salt, said water-soluble cationic polymer insoluble in said aqueous solution of polyvalent anion salt contains at least 5 mole % of cationic monomer units represented by following general formula (I) and said water-soluble cationic polymer soluble in said aqueous solution of a polyvalent anion salt contains at least 20 mole % of cationic monomer units represented by the following general formula (II):

(I)

(II)



wherein R_1 and R_4 are each H or CH_3; R_2, R_3, R_5 and R_6 are each an alkyl group having 1 to 2 carbon atoms; R_7 is a hydrogen atom or an alkyl group having 1 to 2 carbon atoms; A_1 and A_2 are each an oxygen atom or NH; B_1 and B_2 are each to 4 carbon atoms or a hydroxypropylene group and X1− and X2− are each a counter anion.

5,006,591
POLYARYLENE THIOETHER COMPOSITION AND MOLDED PRODUCT THEREOF

Makoto Fukuda; Ken Kashiwadate; Toshitaka Kouyama, and Zenya Shiiki, all of Iwaki, Japan, assignors to Kureha Kagaku Kogyo Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 104,990, Oct. 6, 1987, abandoned. This application Mar. 17, 1989, Ser. No. 325,008
Claims priority, application Japan, Oct. 9, 1986, 61-241047
Int. Cl.[5] C08L *81/04*
U.S. Cl. 524—502 11 Claims

1. A polyarylene thioether composition comprising the following ingredients (A), (B) and (C):
(A) 100 parts by weight of polyarylene thioether having the repeating unit of

(B) from 3–30 parts by weight of polyisobutylene having the repeating unit of $(CH_2C(CH_3)_2-$,
(C) from 25 to 200 parts by weight, based on 100 parts by weight of (A)+(B), of a glass fiber.

5,006,592
CORE-SHELL POLYMER, COMPOSITION CONTAINING THE POLYMERS AND ITS MOLDED ARTICLES

Junji Oshima, Toyonaka; Tatsuo Fujii, Nagaokakyo, and Minoru Yamada, Kawanishi, all of Japan, assignors to Takeda Chemical Industries, Ltd., Osaka, Japan

Filed Oct. 10, 1989, Ser. No. 418,632
Claims priority, application Japan, Oct. 7, 1988, 63-254553
Int. Cl.[5] C08L *51/04*
U.S. Cl. 524—504 11 Claims

1. A resin composition produced by melt-blending: (1) a core-shell polymer comprising (a) a core having epoxy groups on the surface, and (b) a shell on the core composed of monomers having neither epoxy group nor functional group that are reactive with epoxy group; and (2) engineering plastics; wherein (i) the glass transition temperatures of said core and said shell, (ii) the amounts of said core and said shell, (iii) the amount of epoxy group-containing monomers and (iv) the amount of the core-shell polymer are such that said resin composition exhibits improved impact strength.

5,006,593
CATENATED POLYMER SYSTEMS

Donald E. Brasure, Tonawanda, N.Y., and Eugene G. Sommerfeld, Mt. Laurel, N.J., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Jun. 16, 1988, Ser. No. 207,534
Int. Cl.[5] C08K *5/20;* C08L *27/12*
U.S. Cl. 524—520 4 Claims

1. A dispersion consisting essentially of a continuous phase of a compatible organic liquid carrier and a dispersed phase of a system of two or more normally incompatible polymers, the system comprising
(a) networks of polymer chains, segments of which are held together by physical interactions, and
(b) networks of chains of one or more chemically crosslinked polymers,
the networks of (a) and (b) being catenated.

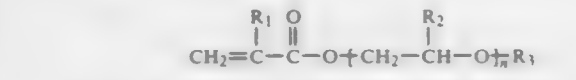
5,006,594
FLUORINATED THERMOPLASTIC ELASTOMERS CONTAINING POLYMERIC ADDITIVES AND PROCESS FOR PREPARING SUCH ELASTOMERS

Richard W. Rees, Geneva, Switzerland, assignor to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Continuation-in-part of Ser. No. 292,572, Dec. 30, 1988, abandoned. This application Dec. 6, 1989, Ser. No. 446,774
The portion of the term of this patent subsequent to Nov. 7, 2006, has been disclaimed.
Int. Cl.[5] C08L *27/12, 27/16, 27/18*
U.S. Cl. 524—520 17 Claims

1. A blend comprising:
(a) a two-phase composition having a continuous phase and a dispersed phase, the continuous phase consisting essentially of a melt-processible crystalline thermoplastic fluorocarbon resin containing a minimum of 38 percent by weight fluorine, said dispersed phase consisting essentially of an amorphous crosslinked fluoroelastomer containing a minimum of 50 percent by weight fluorine, said dispersed phase constituting between about 50 and 90 percent by weight of the two-phase composition; and
(b) 1–5 weight percent of a dispersion-process-produced, non-fibrillating, non-melt-processible tetrafluoroethylene copolymer comprising recurring units of tetrafluoroethylene and a comonomer selected from the class consisting of hexafluoropropylene, perfluoro(alkyl vinyl ether) where the alkyl group has 1–4 carbons, and a mixture of them with enough comonomer present to cause the copolymer to compound uniformly with said fluorocarbon resin and said fluoroelastomer without forming visible agglomerates.

5,006,595
SOLUBILIZATION OF COMPLEXES OF WATER-INSOLUBLE ORGANIC COMPOUNDS BY AQUEOUS SOLUTIONS OF POLYVINYLPYRROLIDONE



Terry E. Smith, Morristown; James R. Cho, Oakland, and Ian W. Cottrell, Kinnelon, all of N.J., assignors to GAF Chemicals Corporation, Wayne, N.J.

Division of Ser. No. 161,888, Feb. 29, 1988, Pat. No. 4,900,775. This application Sep. 29, 1989, Ser. No. 414,673
Int. Cl.[5] C08L *37/00*
U.S. Cl. 524—548 17 Claims

1. A method for preparing a water-soluble complex of a water-insoluble organic compound selected from the group consisting of furosemide, chlorhexidine, and trifluralin consisting essentially of heating an aqueous solution of polyvinylpyrrolidone to a temperature between about 40° C. and 100° C., admixing the insoluble organic compound to the heated polyvinyl-pyrrolidone solution and maintaining the mixture at the heating temperature until the organic compound is dissolved.

5,006,596
SELF-INVERTING, WATER-IN-OIL EMULSIONS
Fu Chen, Newtown, and Edward J. Connors, Blue Bell, both of Pa., assignors to Betz Laboratories, Inc., Trevose, Pa.
Filed Feb. 9, 1990, Ser. No. 477,697
Int. Cl.[5] C08F *2/32*
U.S. Cl. 524—555 **14 Claims**

1. Composition of a self-inverting, water-in-oil emulsion comprising a water-soluble copolymer which contains acrylamide, a cationic monomer and a third monomer having the structure:

wherein R_1 is hydrogen or methyl; R_2 is hydrogen, methyl or ethyl; R_3 is hydrogen or C_1–C_4 alkyl; and n is from 1 to 100.

5,006,597
BLACK TOPCOATING COMPOSITION
Arthur A. Luecke, Kirtland, and Terry E. Dorsett, Chardon, both of Ohio, assignors to Metal Coatings International Inc., Chardon, Ohio
Continuation of Ser. No. 104,998, Oct. 6, 1987, abandoned. This application Jun. 12, 1989, Ser. No. 364,314
Int. Cl.[5] B32B *9/06*
U.S. Cl. 524—556 **16 Claims**

1. A shelf-stable, black-pigmented coating composition for providing a smooth, uniform, baked-on coating especially adapted for use as a corrosion resistant topcoating over a previously coated base metal substrate having a coating containing chromium in non-elemental form, said coating composition being adapted as a one-package, chromium-free and particulate-metal-free composition having a pH of less than about 10, said composition comprising an aqueous colloidal dispersion of carbon black providing at least about 0.5 weight percent carbon black pigment to said composition, thickening agent in an amount of less than about 2 weight percent of thickening agent, basis weight of said composition, from about 1 to 40 weight percent of an aqueous silica sol having a pH of not above about 10, above about 0.2 percent by weight of amorphous silica and from about 4 to 40 weight percent of aqueous acrylic resin dispersion.

5,006,598
WATER-DISPERSIBLE POLYESTERS IMPARTING IMPROVED WATER RESISTANCE PROPERTIES TO INKS
Linda J. Adams, and George J. O'Neill, both of Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N.Y.
Filed Apr. 24, 1990, Ser. No. 513,724
Int. Cl.[5] C08L *67/00*
U.S. Cl. 524—601 **28 Claims**

1. A linear, water-dissipatable polyester having an inherent viscosity of at least about 0.1 as measured in a 60/40 parts by weight solution of phenol/tetrachloroethane at 25° C. and at a concentration of 0.5 gram of polyester in 100 ml of solvent, the polyester containing substantially equimolar proportions of acid moiety repeating units (100 mole %) to hydroxy moiety repeating units (100 mole %), the polyester comprising repeating units of components (a), (b), (c) and (d), as follows wherein all stated mole percentages are based on the total of all acid and hydroxy moiety repeating units being equal to 200 mole %:
(a) about 90 to about 97 mole % isophthalic acid,
(b) about 3 to about 10 mole % 5-sulfoisophthalic acid,
(c) about 70 to about 85 mole % 1,4-cyclohexanedimethanol, and
(d) about 15 to about 30 mole % diethylene glycol.

5,006,599
USE OF 3,5-DI-TERT-BUTYL-4-HYDROXYPHENYLPROPIONIC ACID FOR STABILIZING POLYETHER POLYOLS
Pramod Gupta, Bedburg; Hans-Wilhelm Engels, Kerpen, and Hanajürgen Rabe, Leverkusen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany
Filed Dec. 14, 1989, Ser. No. 450,894
Claims priority, application Fed. Rep. of Germany, Dec. 21, 1988, 3842945
Int. Cl.[5] C08L *75/08*
U.S. Cl. 524—740 **7 Claims**

1. A method for stabilizing a polyether polyol having a molecular weight of from about 300 to about 10,000 comprising adding an antioxidant stabilizer in an amount of about 0.01 to about 4% by weight to said polyether polyol, wherein said stabilizer comprises 3,5-di-text-butyl-4-hydroxyphenylpropionic acid.

5,006,600
PREPARATION OF PROPYLENE/ETHYLENE POLYMERS
Oskar Buechner, Dudenhofen, and Wolfgang Gruber, Frankenthal, both of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Fed. Rep. of Germany
Continuation of Ser. No. 148,641, Jan. 26, 1988, abandoned. This application Apr. 12, 1989, Ser. No. 338,419
Int. Cl.[5] C08F *4/14*
U.S. Cl. 525—53 **2 Claims**

1. A process for the preparation of propylene/ethylene polymers with high impact strength, in which
(A^1) in a polymerization zone Z1, propylene is homopolymerized by gas-phase polymerization in the presence of hydrogen as a molecular weight regulator, in a reaction medium of a stirred bed of finely divided polymer by feeding into said polymerization zone Z1 a Ziegler-Natta catalyst system selected from the group consisting of systems
(1) a titanium catalyst component and
(2) an organoaluminum catalyst component of the formula AlR_mX_{3-m}, where X is OR, chlorine bromine of hydrogen, R is a C_1–C_{18}-hydrocarbon radical and m is from 1 to 3,
and systems consisting of components (1) and (2) with
(3) a further catalyst component, with the proviso that, in said polymerization zone Z1 (i) the reaction is carried out under a total pressure of from 20 to 35 bar and at a temperature of from 60° to 90° C., and (ii) the ratio of the propylene partial pressure to the hydrogen partial pressure is from 100:0.1 to 100:15, and
(A^2) in a polymerization zone Z2, ethylene is homopolymerized by gas-phase polymerization in the presence or absence of hydrogen as a molecular weight regulator, in a reaction medium of a stirred bed of finely divided polymer with the proviso that, in this further polymerization zone, (i) the reaction is carried out under a total pressure of from 20 polymerization to 45 bar and at a temperature of from 80° to 120° C., (ii) where relevant, the ratio of the ethylene partial pressure to the hydrogen partial pressure is from 100:0.01 to 100:20, and (iii) the ratio of the weight of the propylene converted to polymer in said polymerization zone Z1 to the weight of the ethylene converted to polymer in said polymerization zone Z2 is in the range of from 100:5 to 100:40,
(B) the reaction products obtained in polymerization zones Z1 and Z2 are fed to a polymerization zone Z3, in which a mixture of propylene and ethylene is polymerized by gas-phase polymerization in the presence of hydrogen as a molecular weight regulator, in a reaction medium of a stirred bed of finely divided polymer in the presence of the reaction products of polymerization zones Z1 and Z2 with the provisos that, in said polymerization zone Z3, (i) the reaction is carried out under a total pressure of from 10 to 20 bar and at a temperature of from 50° to 80° C., (ii) the ratio of the propylene partial pressure to the ethylene partial pressure is from 100:10 to 100:70 and the ratio of the propylene partial pressure to the hydrogen partial pressure is from 100:2 to 100:70, and (iii) the ratio of the weight of the propylene converted to polymer in polymerization zone Z1 to the weight of the propylene/ethylene mixture converted to polymer in polymerization zone Z3 is in the range of from 100:10 to 100;60.

5,006,601
IMPACT RESISTANT BLENDS OF THERMOPLASTIC POLYAMIDES, POLYOLEFINS AND ELASTOMERS
Robert G. Lutz, Spring; Richard Gelles, and William P. Gergen, both of Houston, all of Tex., assignors to Shell Oil Company, Houston, Tex.
Continuation of Ser. No. 133,178, Dec. 11, 1987, abandoned, which is a continuation-in-part of Ser. No. 911,558, Sep. 25, 1986, abandoned. This application Jul. 20, 1990, Ser. No. 554,956
Int. Cl.[5] C08L *77/00*
U.S. Cl. 525—66 **12 Claims**

1. Impact resistant polymeric compositions comprising:
(a) from 1 to 59 percent by weight of a polyamide having a number average molecular weight of at least 5000; and
(b) from 1 to 95 percent by weight of an isotactic propylene homopolymer;
(c) from 1 to 50 percent by weight of an elstomeric olefin copolymer to which has been grafted an acid compound or its derivative selected from the group consisting of carboxylic acids and their derivatives.

TIRE WITH RUBBER TREAD
John K. Clark, Copley, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio
Filed Mar. 28, 1990, Ser. No. 500,629
Int. Cl.[5] C08L *7/00, 9/00, 9/02*
U.S. Cl. 525—233 **1 Claim**

1. A pneumatic tire having an outer circumferential tread where said tread is a sulfur cured rubber composition comprised of, based on 100 parts by weight rubber (phr), (A) about 55 to about 70 parts by weight cis 1,4-polybutadiene rubber; (B) about 15 to about 30 parts by weight of isoprene/acrylonitrile copolymer rubber comprised of from about 20 to about 40 mole percent units derived from acrylonitrile and about 60 to about 80 mole percent units derived from isoprene in which the glass transition temperature of the rubber is from about −40° C. to about −5° C.; and (C) about 15 to about 35 parts by weight of cis 1,4-polyisoprene rubber.

5,006,607

DISPERSANT SYSTEM FOR MAKING POLYVINYL CHLORIDE WHICH PRODUCES LOW COLOR CHLORINATED POLYVINYL CHLORIDE

Zaev Sharaby, South Euclid, and Robert G. Vielhaber, Avon, both of Ohio, assignors to The B. F. Goodrich Company, Brecksville, Ohio

Filed Oct. 2, 1989, Ser. No. 416,203
Int. Cl.[5] C08F 8/22
U.S. Cl. 525—356 17 Claims

1. A method for producing a chlorinated vinyl chloride polymer comprising:

polymerizing 100 parts by weight vinyl chloride, or vinyl chloride and vinyl component monomer in the presence of

from about 0.03 to about 5.00 parts by weight of a chain transfer composition comprising at least one mercaptan chain transfer agent and at least one non-polymerizable material which is characterized by being miscible with said mercaptan and substantially insoluble in water, and from about 0.02 to 0.5 parts by weight of at least one surfactant characterized in that the surfactant is a hydroxypropyl methyl cellulose ether having a methoxyl substitution of from about 15 percent to about 35 percent and a hydroxypropoxyl substitution of from about 4 percent to about 35 percent to form an intermediate, and

chlorinating said intermediate to obtain a chlorinated vinyl chloride polymer having improved color.

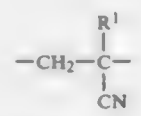
PREPARATION OF CYANO-CONTAINING COPOLYMERS BASED ON ETHYLENE



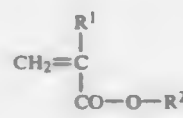
Michael Buback, Bovenden, and Stefan Rohde, Goettingen, both of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Jan. 9, 1990, Ser. No. 462,705
Claims priority, application Fed. Rep. of Germany, Jan. 27, 1989, 3902389
Int. Cl.[5] C08F 8/30
U.S. Cl. 525—378 1 Claim

1. A process for preparing a cyano-containing copolymer A based on ethylene which is composed of

(a) predominant proportions of the structural unit of ethylene,

(b) minor proportions of the structural unit of the formula Ia



Ia

where R^1 is hydrogen or C_1–C_4-alkyl, and

(c) optional structural units derived from other comonomers,

which process comprises; reacting a base copolymer B formed from predominant proportions of ethylene, minor proportions of an α,β-unsaturated carboxylic ester of the formula Ib

Ib

where R^2 is C_1–C_8-alkyl, and further, optional comonomers, with ammonia at 120–280° C. and 150–2,500 bar.

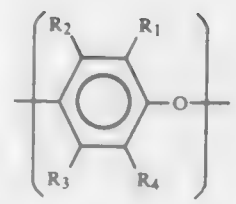
COMPOSITION OF AROMATIC POLYESTER, MODIFIED POLYPHENYLENE ETHER AND DIGLYCIDYL DICARBOXYLATE

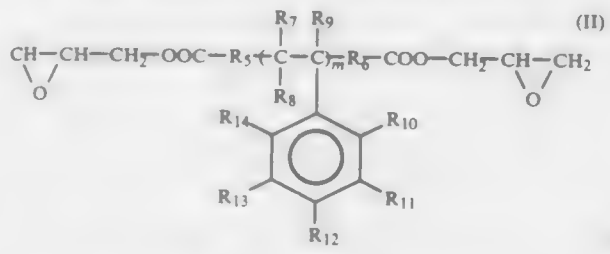
Kiyokazu Nakamura; Kiichi Kometani, both of Nagoya; Akihiko Koshino, Obu, and Kenjiro Horiuchi, Oaza-Usaka, all of Japan, assignors to Toray Industries, Inc., Tokyo, Japan



Continuation of Ser. No. 189,314, Mar. 31, 1988, abandoned.
This application May 11, 1989, Ser. No. 350,507
Claims priority, application Japan, Aug. 4, 1986, 61-181881; Oct. 2, 1986, 61-235297; Oct. 9, 1986, 61-240358
Int. Cl.[5] C08L 67/02, 71/04
U.S. Cl. 525—396 9 Claims

1. A resin composition comprising:

100 parts by weight of polyester composition comprised of (A) and (B) as follows



(A) 5–95% by weight of an aromatic polyester having an inherent viscosity of 0.7–2.5 dl/g by measurement of a 0.5 g/100 ml solution of o-chlorophenol by an Ostwald viscometer at 25° C.,

(B) 95–5% by weight of a modified polyphenylene ether obtained by reacting to a polyphenylene ether having an inherent viscosity of 0.10–1.5 dl/g by measurement of a 0.5 g/ml chloroform solution by an Ostwald viscometer of 25° C. and a repeating unit of a formula

(I)

where R_1 to R_4 each independently represent hydrogen, chlorine and bromine atoms, a hydrocarbon, substituted hydrocarbon, cyano, alkoxy and phenoxy radicals, 0.5–20% by weight of an active functional-group containing monomer having in the molecule both of (a) a carbon-carbon unsaturated double bond and (b) at least one functional group selected from the group consisting of carboxyl, acid anhydride and epoxy radicals reacted with the polyphenylene ether, and (C) 0.05–30 parts by weight of an epoxy compound represented by the formula

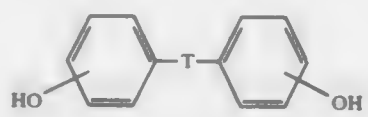
(II)

(where R_5 and R_6 each independently represent a substituted or unsubstituted hydrocarbon radical having 1–40 carbon atoms, R_7 to R_9 each independently represent a hydrogen atom, or a methyl radical, and R_{10} to R_{14} each independently represent a hydrogen atom, a halogen atom, substituted or unsubstituted hydrocarbon, cyano, alkoxy, phenoxy and nitro radicals; and m being an integer of 0–20.

5,006,611

CURABLE EPOXY RESIN COMPOSITIONS OF MATTER CONTAINING A THERMOPLASTIC WHICH HAS PHENOLIC END GROUPS

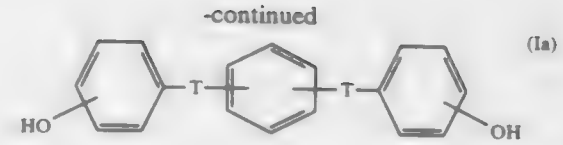
Rolf Schmid, Schwarzenburg, and Sameer H. Eldin, Fribourg, both of Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.



Filed Jan. 11, 1990, Ser. No. 463,044
Claims priority, application Switzerland, Jan. 20, 1989, 178/89
Int. Cl.[5] C08L 63/00
U.S. Cl. 525—423 15 Claims

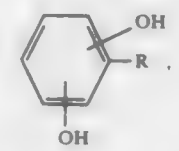
1. A heat-curable composition of matter which is stable on storage and which comprises

(a) 5–70 parts by weight of an epoxy resin having a functionality of at least 3,



(b) 95–30 parts by weight of an epoxy resin having a functionality of 2–2.5,

(c) a diphenol (c), the amount of the diphenol being so chosen that 0.6–1.2 hydroxyl equivalents of the diphenol (c) are employed per epoxide equivalent of the epoxy resins (a) and (b), which diphenol is a compound of formula I, Ia or II



(I)

-continued

(Ia)

(II)

in which T is a direct bond, methylene, isopropylidene, O, S, CO or SO_2, and R is hydrogen or C_1–C_4-alkyl, or

said diphenol is a dihydroxynaphthalene; or a mixture of these compounds, and

(d) 10–150 parts by weight, relative to 100 parts by weight of the components (a) to (c) of a thermoplastic having phenolic end groups and having a glass transition temperature of at least 150° C. which is compatible with the composition of the components (a) to (c) and which is a polyimide, a polyether imide, a polysulfone, a polyether sulfone, a polyether or a polyether ketone.

5,006,612

POLYESTERS FOR POWDER COATING RESINS USING AN INTERMEDIATE HAVING LOW PROCESS VISCOSITY

Charles Danick, Plymouth, and K. P. Panandiker, Shorewood, both of Minn., assignors to Cargill, Incorporated, Minneapolis, Minn.

Filed Oct. 18, 1989, Ser. No. 423,270
Int. Cl.[5] C08G 59/42, 63/46
U.S. Cl. 525—438 15 Claims

1. A polymeric vehicle suitable for a powder coating composition which polymeric vehicle when cross-linked provides a coating binder with a Tg greater than 50° C., the polymeric vehicle comprises:

from about 82.4 to about 96.6 weight percent based upon the weight of the polymeric vehicle, of a carboxylated polyester resin which has an acid value in a range of from about 25 to about 40 and a number average molecular weight in the range of from about 2500 to about 4500,

from about 3.4 to about 17.6 weight percent based upon the weight of the polymeric vehicle, of a polyepoxide which has an average epoxy functionality of not more than about 4 and an average epoxy equivalent weight in the range of from about 80 to about 300;

the carboxylated polyester resin comprises the carboxylation reaction product of an aliphatic dicarboxylic acid which has 2 to 9 carbon atoms and a first polyester which has a hydroxyl value from about 60 to about 100, the first polyester having an ICI cone and plate viscosity in the range of from about 8 to about 16 poise at about 175° C., the aliphatic dicarboxylic acid and first polyester being in amounts effective for carboxylation of the first polyester to an acid value in the range of from about 25 to about 40; and

the first polyester comprises the esterification reaction product of an aromatic acid selected from the group consisting of terephthalic acid, isophthalic acid and mixtures thereof, and a diol selected from the group consisting of neopentyl glycol, cyclohexane dimethanol and mixtures thereof, the aromatic acid and the diol being in amounts effective for providing the first polyester with a hydroxyl value in the range of from about 60 to about 100.

5,006,613

TRICOMPONENT POLYMER BLENDS OF POLY(ETHYLENE TEREPTHOLATE), POLY(ETHYLENE NAPHTHALATE) AND A COPOLYESTER

Freddie A. Shepherd, and Ronald R. Light, both of Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Jul. 30, 1990, Ser. No. 560,653
Int. Cl.[5] C08F *20/00*
U.S. Cl. 525—444 **20 Claims**

1. A clear polymer blend containing less than 10% haze comprising

(A) about 15 to about 80 weight % of poly(ethylene terephthalate),

(B) about 80 to about 5 weight % of poly(ethylene naphthalenedicarboxylate), and

(C) about 5 to about 15 weight % of a copolyester which comprises

(1) an acid component comprising repeating units of from about 10 to about 20 mole % terephthalic acid and about 80 to about 90 mole % naphthalenedicarboxylic acid, and

(2) a glycol component comprising repeating units of ethylene glycol,

wherein the total mole % of acid component and glycol component in the copolyester are each 100 mole %.

5,006,614

EPOXY RESIN COMPOSITION AND SEMICONDUCTOR DEVICE ENCAPSULATED THEREWITH CONTAINING POLYMALEIMIDE AND (ALLYL-EPOXY)NOVOLAC/SILOXANE GRAFT COPOLYMER

Kunio Itoh; Toshio Shiobara, and Koji Futatsumori, all of Annaka, Japan, assignors to Shin-Etsu Chemical Co., Ltd., Tokyo, Japan

Filed Jan. 29, 1989, Ser. No. 373,286
Claims priority, application Japan, Jul. 5, 1988, 63-167117
Int. Cl.[5] C08L *63/02, 63/04*
U.S. Cl. 525—476 **9 Claims**

1. An epoxy resin composition comprising:

a curable epoxy resin selected from the group consisting of epoxy resins synthesized from epichlorohydrin and novolak resins, alicyclic epoxy resins, bis-phenol epoxy resins, halogen substituted derivatives thereof and mixtures thereof;

a curing agent; and

an inorganic filler,

characterized in that the composition further comprises:

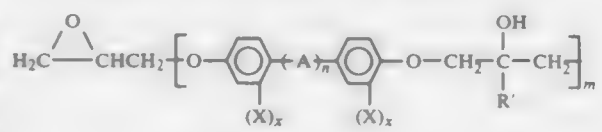
(a) a copolymer obtained through addition reaction between an alkenyl group of an alkenyl group-containing epoxidized novolak resin and a SiH group of an organopolysiloxane represented by the general formula:

$$H_aR_bSiO[4-(a+b)]/2 \quad (I)$$

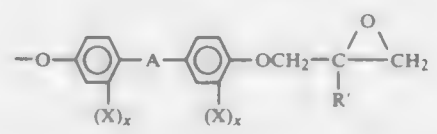
wherein R is a monovalent substituted or unsubstituted hydrocarbon group, the letter a has a value of from 0.01 to 0.1, the letter b has a value of from 1.8 to 2.2, and $1.81 \leqq a+b \leqq 2.3$, and having 20 to 400 silicon atoms and 1 to 5 SiH groups per molecule; and

(b) a polymaleimide resin having a melting point of up to 150° C.

5,006,615

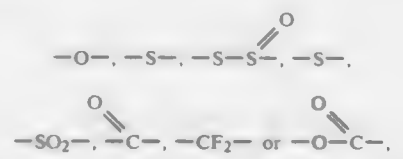


HYDANTOIN OR BARBITURIC ACID-EXTENDED EPOXY RESIN COMPOSITION



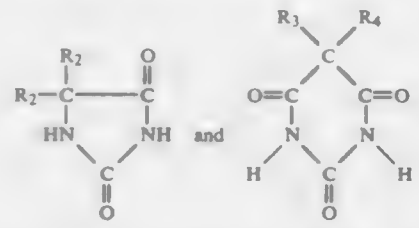
Tzong-Ming Lee, Tainan, and Ker-Ming Chen, Hsinchu, both of Taiwan, assignors to Industrial Technology Research Institute, Hsinchu, Taiwan

Filed Jun. 15, 1990, Ser. No. 538,904
Int. Cl.[5] C08L *63/02*
U.S. Cl. 525—526 **1 Claim**



1. A resin composition for making a printed circuit board comprising:

(1) a modified epoxy resin obtained by reacting (a) a low molecular weight epoxy resin having at least two epoxide groups which have the following formula,



where A denotes a divalent hydrocarbon with 1–10 carbon atoms or a group represented by

X denotes a monovalent hydrocarbon with 1–10 carbon atoms or a halogen, m is 1–10 on average, n is 0 or 1, x is 0 to 4, R′ represents H or a hydrocarbon group with 1–4 carbon atoms, (b) a mono-nucleus chain extending agent containing N-heterocyclic fatty groups and at least two active hydrogen atoms or represented by the formula

and (c) at least one catalyst for catalyzing the reaction between components (a) and (b), the amount of the modified epoxy resin being 10–70% by weight based on the total weight of the cured resin composition,

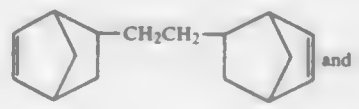
(2) 5–40% by weight based on the total weight of the resin composition, of at least one polyfunctional epoxy resin having at least 3 epoxy groups per molecule,

(3) 20–40% by weight based on the total weight of the resin composition, of at least one bromine containing-epoxy resin having an equivalent of 330–1500 with a bromine content of 10–50% based on the bromine containing-epoxy resin,

(4) at least one curing agent selected from the group including anhydrides, amines, acids, Lewis acids, imidazoles, complex salts of Lewis acid and phenols, the amount of the active reactive groups in each mole of the curing agent being 0.5–1.5 per epoxide equivalent,

(5) 0.001–5% by weight, based on the total weight of the resin composition, of at least one accelerator for catalyzing the curing reaction of the components (1), (2), (3) and (4).

5,006,616



METATHESIS POLYMERIZED COPOLYMER

Shigeyoshi Hara; Zen-ichiro Endo, and Hiroshi Mera, all of Iwakuni, Japan, assignors to Hercules Incorporated, Wilmington, Del.

Filed Feb. 16, 1988, Ser. No. 155,798
Claims priority, application Japan, Feb. 16, 1987, 62-31495
Int. Cl.[5] C08F *236/20*
U.S. Cl. 526—75 **16 Claims**

1. A process of producing a cross-linked copolymer, which comprises metathesis polymerizing in the presence of a metathesis polymerization catalyst system a monomer mixture comprising:

(a) 3–100 mole % of a mixture comprising the following monomers:

(II-a)

(II-b)

(b) 97-0 mole % of at least one of metathesis polymerizable cyclic compounds.

5,006,617

EMULSION POLYMERS FREE FROM EMULSIFIERS AND PROTECTIVE COLLOIDS, A PROCESS FOR THEIR PREPARATION AND THEIR USE

Dieter Engel, Kelsterbach, and Helmut Rinno, Hofheim am Taunus, both of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany

Continuation of Ser. No. 931,436, Nov. 12, 1986, abandoned, which is a continuation of Ser. No. 767,244, Aug. 20, 1985, Pat. No. 4,665,142, which is a continuation of Ser. No. 600,325, Apr. 13, 1984, abandoned. This application Sep. 20, 1988, Ser. No. 248,348
Claims priority, application Fed. Rep. of Germany, Apr. 16, 1983, 3313922
Int. Cl.[5] C08F *236/00*
U.S. Cl. 526—87 **14 Claims**

1. A pulverulent organic polymer free from emulsifier and protective colloid and substantially free from any stabilization additive which is not fixed by a covalent bond to the polymer,

the polymer being in dry-powder form or in finely-dispersed form in a liquid medium,

the polymer comprising particles having a distribution of particle size $D_w/D_n \leqq 1.2$ within a particle diameter range between 0.02 μm and 5 μm,

the polymer being a free-radically-initiated copolymerized emulsion copolymer, having units of monomer (a) and units of monomer (b), which is the same as that prepared by a polymerization comprising:

a preliminary polymerization, in a polymerization medium, of poly-(ethylenically unsaturated) monomer (b) by itself or together with a partial amount of mono-(ethylenically unsaturated) monomer (a); the preliminary polymerization comprising that of at least 0.01 percent by weight, based on the total amount of monomers, of poly-(ethylenically unsaturated) monomer (b);

metering into the polymerization medium remaining mono-(ethylenically unsaturated) monomer (a) or that together with any remaining amount of poly-(ethylenically unsaturated) monomer (b) and any remaining amount of initiator;

completing polymerization of the resulting mixture to obtain a polymer dispersion;

the mono-(ethylenically unsaturated) monomer (a) being a member selected from the group consisting of acrylic acid ester, methacrylic acid ester, a vinyl aromatic monomer, a vinyl ester, an ethylenically unsaturated monocarboxylic acid, an ethylenically unsaturated dicarboxylic acid, an ethylenically unsaturated halogen compound and sodium vinyl sulfonate; and the poly-(ethylenically unsaturated) monomer (b) being a member selected from the group consisting of divinylbenzene and butanediol dimethacrylate,

the polymer having no more than 15% by weight of hydrophilic monomer units, based on the total amount of monomer units, and

the amount of poly-(ethylenically unsaturated) monomer units being in the range of from 0.02 to %5 by weight, based on the total amount of monomer units.

PROCESS FOR PREPARING HIGH DENSITY OR MEDIUM DENSITY POLYMERS

Nemesio D. Miro, League City, Tex., assignor to Mobil Oil Corporation, Fairfax, Va.

Division of Ser. No. 253,803, Oct. 5, 1988, Pat. No. 4,912,074, which is a continuation-in-part of Ser. No. 144,821, Jan. 15, 1988, Pat. No. 4,831,000. This application Jan. 31, 1990, Ser. No. 473,076
Int. Cl.[5] C08F *4/646*
U.S. Cl. 526—116 **22 Claims**

1. A process for polymerizing at least one olefin comprising conducting the polymerization in the presence of a catalyst composition prepared by a method comprising the steps of:

(I) preparing a catalyst precursor by a method comprising:

(a) contacting a solid, porous carrier with an aluminum compound of the formula

$$R_kAlZ_{(3-k)} \quad (I)$$

where R is a C_1–C_{10} alkyl group, Z is a halogen and k is 1,2, or 3;

(b) contacting the product of step (a) with a mixture containing a vanadium compound of the formula

$$VO_mX_{(n-2m)} \quad (II)$$

where X is a halogen, m is 0 or 1 and n is 2,3,4 or 5, and a titanium compound of the formula

$$TiX'_4 \quad (III)$$

where X′ is a halogen;

(c) contacting the product of step (b) with an ether selected from the group consisting of an alkyl ether having 2 to 18 carbon atoms, an alkyl/aryl ether having 2 to 18 carbon atoms, or a silane ether of the formula

$$R''Si(OR''')_mR^{IV}_{(3-m)} \quad (IV)$$

where R″, R‴ and R^{IV} are the same or different alkyl or aryl groups and m is 1,2,or 3; and (II) activating the precursor by combining it with an olefin polymerization catalyst activator.

5,006,619

POLYMERIZATION CATALYST AND METHOD

Thomas J. Pullukat, Hoffman Estates, and Raymond E. Hoff, Palatine, both of Ill., assignors to Quantum Chemical Corporation, Cincinnati, Ohio

Filed Feb. 27, 1984, Ser. No. 583,482

Int. Cl.[5] C08F *4/658, 10/00*

U.S. Cl. 526—128 **30 Claims**

1. The method of making polymers from polymerizable 1-olefins which comprises polymerizing at least one of said 1-olefins under polymerizing conditions with a catalyst system comprising an alkyl or aryl aluminum compound cocatalyst and a solid catalyst prepared by:
